A Dialogue.

1874 & 1875.

NEW YEAR.

O Reverend Father crowned with snow!
We meet one minute: ere you go,
Tell me a thing that I would know.

Which nation is the first to greet
My coming? Does it love to meet
The year with laughters swift and sweet?

OLD YEAR.

The Darling of the Sun is first;
A lovely land in brightness nursed,
Her joy like April buds shall burst.

Oak leaves above the orange twine
With fronds of fern, and gaily shine
The glories of the plum and pine.

From house to house the "Manzai" dance,
The one with staid and solemn glance,
The other's wit as light as lance.

They summon health and wealth, and drive
All evil far. What harm can thrive,
When dance and song with darkness strive?

NEW YEAR.

A joyous people! In your sight
Lies there a single shadow slight
To mar the scene that seems so bright?

OLD YEAR.

Not one dark planet on their sun
But many: what to seek or shun
They know not: like blind men they run.

NEW YEAR.

What power their erring steps can guide,
O'er barren moorlands waste and wide,
To rest and peace at eventide?

OLD YEAR.

Heardst thou the pealing bell that sent
Its sweet notes to the firmament,
Like prayer when gentle hearts are rent?

NEW YEAR.

Methought it was a voice that told
Of welcome. Over wood and wold
In mellow waves its gladness rolled.

OLD YEAR.

That was the Christmas bell. It wakes
Most tender thoughts, its music breaks
With healing on the heart that aches.

One softly-shining Silver Star
Has cast its splendour near and far,
And made great nations what they are.

Men differ, but I deem no loss
Would follow if to souls that toss
Were borne the lessons of the Cross:

Then might this land in strength arise,
Her heart grow pure, her thoughts grow wise,
And large hope light her eager eyes.

KAJIN.

BIRTH.

On the 27th instant, at No. 1, Yamato Yashiki, Tokio, the wife of C. A. McVEAN, Esq., of a Son.

Notes of the Week.

AT about a quarter past eight o'clock on Thursday evening a fire broke out on the premises of Messrs. Schwartz & Co., jewellers, No. 80, to which attention was at once directed. The fire bell summoned the assistance of the engines of the various brigades and Fire Companies, which took up a position in the rear of the burning block, availing themselves of the water supply afforded by the creek. Meanwhile the fire had obtained a hold upon the building first attacked and rapidly spread to that next adjoining it in the occupation of Mr. Orny on the one side and to the residences of the Roman Catholic Clergy in the rear, and it was apparent from its volume that the light sea-breeze which at the time prevailed, would further its progress, and that that portion of the block terminating in the Chinese houses on Homura Road would in all probability be embraced by it, involving also, possibly, the Roman Catholic Church. But the abundant supply of water available permitted of the fire being confined within the area of the block in which it had originated and at half past nine o'clock the safety of the adjoining buildings was assured.

THE origin of the fire which would seem to have begun in one of the upper rooms of Mr. E. Schwartz's house, cannot be traced. Mrs. Schwartz was confined to her room by a serious indisposition, and was only by accident made acquainted with its outbreak whether arising from an over heated flue, or an explosion of kerosene, the most easily conceived causes of fire. She at once summoned assistance which was fortunately at hand, but was so overcome by weakness and fright that it was necessary to bear her from the house insensible. Mr. Orny had fortunately sufficient time allowed him to make a hurried escape from his house, and to remove a small portion of the more portable of his effects. The Roman Catholic Missionaries have not been so fortunate in this latter respect, and but little of their property has been rescued. The early hour at which the fire occurred permitted of a large force being assembled for the purpose of assisting in extinguishing it. The various foreign Fire Companies met in full force and a large party of the English and French Marines, and detachments from the foreign and Japanese ships were in attendance, and did good service in protecting property and effecting salvage. The supply of water was in the first instance ample, but as the fire abated so did the means of extinguishing it visibly dwindle, and it may be doubted if the supply had much outlasted the necessity for it.

The old question of the necessity of a supreme direction for the divided and only partly organized forces for contending against fire which we possess, is presented on the occasion of each important conflagration with special pertinency, and while allotting due praise to the various *corps* (each emulous to do its work well) on the ground last night, we cannot abstain from echoing the generally expressed regret that they were not subject to an undivided organization.

The following would seem to be the losses: The houses on Lot No. 80 the property of the Roman Catholic Mission, viz, those lately in the occupation of Messrs. Schwartz and Orny, and of the clergy themselves; insured.

The stock-in-trade &c. of Mr. Schwartz: partly insured; about one third in value saved.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The stock-in-trade &c. of Mr. Orny: partly insured; a fair proportion of the former saved.

The household furniture, plate &c. of the clergy, uninsured; only a slender portion, including the plate, has been saved.

The building in Homura Road occupied by Cockeye, outfitter, was very slightly injured and he reports that he has sustained no loss.

MR. SCHWARTZ desires to express his warm appreciation of the kindness of a party of gentlemen who assisted in the escape of Mrs. Schwartz from the fire in his dwelling house on Thursday night last.

THE *New York Evening Mail* gives us the credit of the statement that Yedo is a "miracle of cleanliness" and proceeds to quote:—

"Notwithstanding the thousands of feet which tread the streets, they are as clean as the seldom-visited parks of the aristocracy. No person throws paper or any refuse in the streets."

This encomium was certainly published in the *Japan Mail*, and so far we are responsible for it. But, as we intimated in our introductory remarks, the *tirade* in which it occurred is the offspring of a dreamer, published originally in the *Vossische Zeitung* of Berlin, and only reproduced by us to show the extent to which indiscriminate adulation may be pushed. The heading under which it appeared ("Bunkum") was quite sufficient to warn off the most credulous.

THE following remarks are intended as a contribution towards the fuller understanding of some matters which were discussed at the Church Meeting on the 23rd instant.

"The yearly grant of £800"—is referred to more than once; while in the "Accounts" the sum of £800 is stated as the "Government grant for 1873 and 1874." This latter is correct.

"The rents received from other than British subjects are more likely to diminish than increase."

The grounds of this opinion are not stated; but there is a strong probability to the contrary; for the reason that when the American residents have, as pew-renters, a voice in the management of Church affairs, they will be more disposed to join forces than now, when they cannot participate even in the choice of Trustees.

"If the pew rents were raised, many people who now held sittings would either give them up, or only hold half a sitting."

It is not easy to understand what this last clause means. The rent of sittings is now fixed at twenty dollars each. There are 344 available sittings in the Church—of which, if 144 are allowed to choir seats and free pews, there still remain 200 sittings for rent; which at $20 each, would yield a revenue of $4,000 per annum—or a surplus of $400 instead of a deficit of $600 as one of the speakers estimated. This seems a simple enough scheme of finance, and one quite adequate to the requirements.

In regard to the statement that the present chaplain was supposed to be not satisfied with the existing salary, it may be announced, as by his authority, that he is entirely satisfied with the arrangement now existing between himself and the Trustees. As to the actual amount of salary received during the past year by the Chaplain, a glance at the accounts will shew that he is debited with $2,625, and credited with $235.29, leaving net amount received by him $2,389.71, or a little under $200 a month. In the resolutions adopted the expression "Church Members" is used, and they are regarded as the constituency for the election of the Committee of management, consisting of four. The question might arise as to who are to be considered "Church Members" for the purposes contemplated. All baptized members of the Church of England? or all members of the congregation—*i.e.* pew-renters, or regular attendants?

The position of the Church at Shanghai was compared with that at Yokohama. At Shanghai the Trustees have two churches to care for—Trinity, whose chaplain receives Tls. 3,290 (say $4,200) as salary, with free use of parsonage; and the Seamen's Church, for whose chaplain a salary of £600 is provided.

THERE is nothing the average sportsman is more anxious to convey to you than that he is not a crack shot: there is nothing that he is himself so reluctant to believe. This makes the application of what is to follow somewhat difficult. We apprehend that neither he who drops his mark "as if he loved it," so that its expiring gasp escapes it as it touches Mother Earth, nor the atrocious impostor whose bungling justifies the Irish compliment that "if he doesn't hit his bird he *sends him out of that*" need fear an appeal to conscience in its concluding lines. But if there be any who find the cap to fit them, (and unless our pheasant be as truthless a bird as it is unfortunate, such, we take it, there must be) may we plead for the pheasants this much? What is sport to us is necessarily death to them, but let it be death immediate, not death protracted by suffering or famine. He to whom the gift of killing his game outright has been denied should cease to mangle that which he cannot slay. The chase is not for him, and he but shows fair play to his more skilful fellows and humanity to the inferior creation when he once and for ever abandons its pursuit.

"SIR,—I am a Pheasant, a this year's bantling, and was—or thought I was—a handsome bird. Intoxicated with my youth—for I am, as is inferred above, but a few months old—and beauty, and joyous with the priceless elasticity and vigour which health and strength alone confer, I stood one fatal morning lately, in this present month, pluming and caressing my shining feathers in the glorious sunlight, and wonderingly admiring their varying sheen as the rosy beams glinted and glimmered upon them through the frost-tipped leaves of the variegated bamboo grass which fringed the bank whereon I had taken my stand. A nameless something mingling with these lighter emotions stirred within my breast—a love of admiration was it—or a wish to be esteemed by———? Ah me! I know it now too late. T'was surely love's first thrill which tingled in my bounding pulses! When rudely wakened from my pleasant reverie by the sound of crackling leaves I became aware that I was being regarded with fixed and sullen ferocity by an animal with bloodshot eyes and heavy hanging jowl. For a moment, paralysed with fear, I stood with neck outstretched not knowing what to do, till, my presence of mind returning, I bethought me of my wings and almost laughed to myself to think as I rose into the air how easily I could elude the intrusive monster below. I scarce had time, however, to shape my course for a neighbouring wood, when a loud report so startled me that I fell, to find, when I essayed to rise again, a broken wing prevent my further flight, and a splintered leg refuse to aid me in my efforts to escape by running. Excited by the sounds of shouting in my rear, however, and impelled by the instinct of self-preservation, I continued—battered, bruised and bleeding as I was—to roll and scramble down the bank and reach the hole in which I've found a refuge, a damp, unwholesome excavation on the borders of a marsh, where the sun we pheasants love so well can never penetrate; where no kindred fowl is likely to alight, and where, for want of sustenance, I must die a lingering and painful death. I cannot walk. I cannot fly. The hole I find my shelter in is deep and slippery, and I cannot drag my shattered body to its mouth. Why was I not killed outright? I had then no cause for murmur, nor need to curse the inexperienced sportsman who, unmindful of the agony his want of skill might cause, has doomed me to misery and want, and has left me, in darkness worse than death, untended by a friend, to die a dreadful death.

A WOUNDED BIRD."

MR. George Pauncefort announces that he will take his farewell benefit on Wednesday evening next, the 6th instant, when, with the assistance of several amateurs, he purposes giving "Delicate Ground," "The Unwarrantable Intrusion" and a Musical Mélange. Mr. Pauncefort has evinced a kind spirit in adding the stores of his *répertoire* to entertainments provided for the benefit of local societies, and we trust that a remembrance of this good feeling, and his own sterling merits as a comedian, will procure him the support of the Public on the occasion of his last performance before them.

We hear that the P. & O. Steamer *Orissa* which was compelled to put into Nagasaki, disabled, was expected to leave for Yokohama last night.

We are compelled to hold over until our next issue the letter of X. Y. Z. upon the proposed harbour works.

(From the Japan Mail Daily Advertiser.)

As there is a great deal of uneasiness felt in regard to the presence of small-pox in the settlement, it may be well to say that the measures taken by the local authorities to prevent its spread have been prompt, vigorous and very successful. There has been a house to-house visitation throughout the native town which has brought all actual cases to light, and it may be remarked that the number of people attacked is very small, only one fresh case per day on an average having been reported during the past week. The mildness of the attack is undoubtedly due to the promptitude with which vaccination on a large scale has been adopted. It may be as well to state that foreigners can send their native servants to the Hospital in the native town under charge of Dr. Simmons, where they will be examined and vaccinated should it be considered necessary. A document will be handed to any such applicant embodying the result of the investigation made into his special case, and foreigners employing Japanese can by this means satisfy themselves that they are not harbouring persons in any state or danger of infection.

It was reported yesterday evening that another of the teachers of the Imperial College at Yedo, had succumbed to small-pox. The gentleman in question was known to be in a critical condition.

General Saigo attended by a large staff of officer, slanded on the 27th inst. under a salute from the Japanese man-of-war in harbour. After having received the congratulations of the local authorities he left for Yedo by the 1.15 train, and was received at the Shinbashi station by some of the high officers of State, who welcomed him cordially on his return and his successes. A troop or two of cavalry and about fifteen hundred foot soldiers were drawn up in and around the enclosure of the railway station, and received the General, whose soldierly yet modest bearing was the theme of much remark, with military honours.

A Notification issued from H. M. Consulate draws attention to the Government regulation under which compulsory vaccination is prescribed to Japanese subjects, and the means which should be taken to render it operative.

We have been requested to publish the following letter which has been addressed by the Governor of Kanagawa to the Consuls of the various nationalities in Yokohama:—

(Translation.)

KANAGAWA KENCHO,
December 19th, 1874.

SIR,—I have the honour to inform you that the Government intends adjusting the affairs of Ono's house which failed lately.

I would, therefore, request you to inform me, at your earliest convenience, whether any of your countrymen have outstanding business with it, and if so to furnish me with full particulars thereof.

I have the honour to be,
Sir,
Your obedient servant,
(Signed) NAKASHIMA NOBUYUKI,
Kanagawa Ken no Kami.

Mr. Abbott, riding *Ivanhoe*, was first to come in in yesterdays' paper hunt, Messrs. Tyler and Glennie were second and third to arrive.

THE following translation of the Government proclamation prescribing the ceremonials of New Years day, and the days following is published by the *Japan Herald.*

1ST JANUARY.

At 5 a.m., prayers will be offered at the four cardinal points.

At 8 a.m., all the officials above the third grade residing in Tokio will visit His Imperial Majesty.

At 9 a.m., the same officials will visit Her Highness the Mother of the Emperor.

Between 8 and 9 a.m., all the officials above the seventh grade residing at Tokio, will assemble at the Kunaisho (Ministry of the Imperial Household), to wish a happy new year.

At 9 o'clock, the Imperial Princes will be allowed to see His Majesty in the saloons of Ziakonoma.

At 10 o'clock, the Imperial Princes will have the honour to wish a happy new year to Her Highness the Mother of the Emperor.

Between 9 and 10 o'clock, all the Daimios residing in Tokio will assemble at the Kunaisho, to wish a happy new year to the Imperial family.

At 10 o'clock all the officials below the seventh grade will present themselves at the prefectures to wish a happy new year.

At 10 o'clock all the Ministers of the foreign powers will be received by the Emperor.

At 2 o'clock p. m., all foreigners in the service of the Japanese Government, and who have the right to be considered as officials above the seventh grade, will assemble at the Kunaisho to wish a happy new year.

3RD JANUARY.

At 9 a.m., the festival of Guensisai. On this day His Imperial Majesty will personally *fête* his Imperial ancestors, and generally all the great men of the Empire.

4TH JANUARY.

At 9 a.m. His Majesty will go to the Dai-jokuan, and will preside at the opening of the discussion of political affairs. Before proceeding to the Council of State, His Majesty will address a prayer to the god Zingu, the creatorof Japan.

5TH JANUARY.

At 11 a.m. a great festival of the new year, in honour of Sin-non-yen. The Imperial Princes and the officials above the third grade will have the honour of assisting at the feast at Ziakonoma.

Officials above the seventh grade will be invited to the prefectures to which they belong.

Officials above the seventh grade, residing in the interior, will be invited to the prefecture of each department.

Daimios will be invited to the prefectures to which they belong.

Officials below the seventh grade will be invited to the Kencho to which they belong.

8TH JANUARY.

At 10 a.m. the Minister of War will open his offices for the first time in the year, with great ceremony.

9TH JANUARY.

At 10 a.m. the Minister of Marine will do the same thing.

20TH JANUARY.

At 10 a.m. the Shintô priests above the second grade will be received by His Imperial Majesty.

At 11 o'clock the Shintô priests below the second grade will visit the Kunaisho to wish a happy new year.

SHIPPERS OF SILK.

1874.

THE important events which have taken place in this country during the past year, and which have so absorbed public attention that their history is virtually the history of the Empire for that period, are rivetted into the annals of 1873 by an occurrence recorded in the very number of this Journal which summarised the events of that year. This was the attempted assassination, on the night of the 14th of January, of the Udaijin, IWAKURA, on his return from the Palace. The attempt failed indeed, but there can be no question that it exercised an important influence upon the history of the year 1874. IWAKURA was known to be strongly opposed to all projects for the invasion of Corea or a descent on Formosa, schemes which the discontent or restless ambition of the *samurai* of the southern provinces had fostered and given consistency to. That the relations between Japan and Corea had fallen into an unsatisfactory state, and that contumelious communications from Corea had reached this country, cannot be doubted, and the sense of insult produced by these was further inflamed by recollections of barbarous outrages perpetrated upon the crews of certain Loochooan vessels by the savages of the Formosa coast. Both circumstances excited a desire for revenge in the breasts of a section of the *samurai*, whose loyalty to the Government had previously been shaken by a scheme for the commutation of their hereditary incomes or life pensions which had deeply wounded their sense of justice. In such a temper the opening of the year found large numbers of this powerful class, nor was it long before reports from the interior, like the low rumbling of distant thunder, announced the coming storm. In the middle of February the provinces of Hizen and Saga burst out into a state of insurrection, and the alarm created by this was increased by the announcement that in the first collision between the rebels and the Imperial troops the latter had been forced to retire. It was known, however, that reinforcements were at hand, and entire confidence was felt at Yedo that the Government could cope successfully with the insurrection. The insurgents marched upon the town of Saga, stormed and burnt the castle, and were reported to be advancing upon Nagasaki, where preparations were made by the native inhabitants for a general flight. From Higo intelligence arrived that a movement similar to that at Saga was expected, and well-informed persons believed that a general rising in the province of Kiushiu was probable. But if the innovations of the Government were to some extent the cause of these disturbances, they also furnished the means for suppressing them. The telegraph and steam power were called into requisition, troops were despatched to the rebellious provinces with a speed of which the insurgents had no experience, the town of Saga surrendered to the Imperial forces, and, by the first week in March, order was restored. There is no reason to believe that the punishment due to the great crime of rebellion was awarded with undue severity. Some of the ringleaders paid with their heads for their share in it, but, for the most part, the Government regarded the punishment dealt out to the rebels in the field as sufficient to vindicate its authority and confirm the impression of its power. But a special example was made of ETÔ SHIMPEI, whose share in the outbreak had been prominent, and whose high rank made his conduct alike more conspicuous and reprehensible. It is impossible for any foreigner to estimate the degree of provocation and the exact nature of the motives which induced ETÔ to head the rebellion. It may be doubted whether he was not more animated by a sense of the wrongs of the *samurai* class than by any feelings of personal ambition, and there is evidence of his having taken part, just before the outbreak of the rebellion, in a moderate and constitutional protest to the Government against the too arbitrary nature of its action. In a memorial to the Throne, dated the 17th January, to which his name was attached, in company with those of several other prominent men in the Empire, urgent representations were made that the Crown was in danger of losing its prestige and authority, on account of the want of harmony visible between the acts of the Government and the wishes of the people, and adducing this as a valid and cogent argument for the establishment of representative institutions, by means of which the popular will could be more clearly ascertained. It is impossible to doubt that the men associated with ETÔ SHIMPEI in this memorial must have largely shared the views and feelings which subsequently led him into active measures in which their own greater prudence or loyalty prevented them from participating. But every man who heads a rebellion against an established government stakes his life on the event, and OKUBO, the Minister of the Interior, who was sent down with full powers to deal with the insurrection, cannot be blamed for having decreed the death of ETÔ SHIMPEI. His head was severed from his shoulders and exposed near the principal scene of his last prominent acts. If common report speaks truly, he met his fate with dignity and fortitude, and lamented in his last words the troublous times in which the fate of his Imperial master was cast.

And here it may be well to make a passing remark on the tendency among foreigners, from which we ourselves have been by no means free, to judge of the acts of Japanese statesmen or prominent men as we should of similar acts among ourselves. Increasing experience and larger reflection upon political affairs in this country have convinced us that this tendency must be far more guarded against than has hitherto been the case. So widely do the political conditions and the customs of office in this country differ from those of Europe, that any criticism which applies what is, after all, an arbitrary common measure, to the two, may do grave injustice to the motives which animate the Japanese in any given course, and entirely mislead readers either here or at a distance from Japan in regard to such course, its relation to the individual, or its bearing on the state. There is little or nothing in this country answering to what we understand by the words 'party government,' in which men are content to waive minor convictions and unimportant differences of opinion in order to secure some more grand and fundamental principles which they consider essential to the welfare and progress of the nation in the government of which they are associated. Foreigners are apt to forget this, and to characterize as disloyal acts which might deservedly earn the reproach conveyed by this term were they committed by the statesmen of a constitutional country, but which are the only methods known to the Japanese for marking their dissent from the policy of those who have been their colleagues. The institutions and modes of thought which characterize our own civilization and political systems have a strong tendency to destroy that individuality of mind and action which are the characteristics of men living under less highly developed conditions of social and political life. We are strongly inclined that the operations of our own minds, guided as they are by books or more

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ephemeral literature which we all read in common, deposit conclusions far more conventional than those of the Japanese, and that the mechanical process which we are so apt to pursue of measuring their minds, estimating their motives, and placing valuations on their acts, precisely as we should do with those of our own countrymen, is unsound and misleading. These remarks do not, of course, apply to open acts of rebellion such as that of ETÔ SHIMPEI; but attentive followers of Japanese politics during the past two years will hardly fail to recall one or two occurrences which seem to demand the reflections we have made.

Immediately subsequent to, and, in some sense, consequent upon, the suppression of the Saga rebellion, an expedition was fitted out to avenge, upon the aboriginal tribes inhabiting the south-eastern parts of the Island of Formosa, the murder of a crew of Loochooans shipwrecked on those shores late in the year 1871. This outrage had long rankled in the breasts of the Japanese, whose treatment of the mariners of all countries under similar circumstances has been in a marked degree humane and hospitable, a fact attested by many examples of which the records may be found in these columns. It is well known that the Government had long had the question of these outrages under discussion, and it may even be questioned whether, about two years ago, they were not intended to form the ground of demands upon the Chinese Government of a very formal and serious nature. Our own firm conviction is that this was the case. The original purpose of the Japanese Government was to demand redress for these outrages from the Court of Peking, and, in the event of its being refused, to declare war against China. The course was a bold one, and involved an issue of vast weight. But the resolve to pursue it was taking a very firm consistency, when suggestions were made to the Government, that it would at least be well, before taking steps of so serious a nature, to ascertain whether the Chinese actually claimed jurisdiction over that part of Formosa on which the outrages were perpetrated, and acknowledged any liability for the commission of those acts. The suggestion was, without doubt, a sound one. In whichever way the Chinese answered such questions as the Japanese might put to them in regard to the matter, the latter must necessarily be the gainers in the certainty which so important a course of procedure demanded. In accordance with this plan instructions were given to the Japanese Envoy who left for China on the 12th March 1873, to ascertain the views of the Court of Peking on this question, and the records of the American Legation bear witness to a conversation which took place between him and Mr. Low, in which he very distinctly stated the views, if not the intentions, of the Japanese Government in regard to it. But it is much to be deplored that the communications which passed between the Envoy and the Chinese Ministers for Foreign Affairs were not so explicit. The question at issue was one of cardinal importance. It involved the friendly or hostile relations of the two Courts; it was certainly one of the most important questions with which the Envoy had to deal; and a clear understanding upon it was in the highest degree desirable. But no such clear understanding was arrived at. The Chinese were, indeed, somewhat informally questioned as to their jurisdiction over the aboriginal tribes of Formosa, and disclaimed all responsibility for the acts of which the Japanese complained. The intention of Japan to despatch a mission to the savage tribes was also communicated to them; but the nature of this mission was left undefined, and the Envoy quitted Peking leaving the Chinese in ignorance of the consequences which their disclaimer of responsibility would entail on them.

The fact would seem to be that the Japanese themselves were not fully aware of that condition of feeling among the *samurai* which subsequently shaped the action of the Government on this question. The Cabinet was certainly divided upon it. IWAKURA, on his return from Europe, pronounced firmly against any such intentions as those which had taken shape and acquired consistency during his absence. But it is no imputation on his personal courage to say that the attempt on his life shook his resolution. It demonstrated the strength of the feeling arrayed against him, and, very probably, led him to further discoveries as regards its extent, so that when the Saga insurrection broke out, all doubt was dispelled in regard to the existence of a great body of discontent in the country requiring either to be conciliated or permitted to explode elsewhere. But the task of conciliation was more easily proposed than executed. The *samurai* were inflamed by the scheme proposed for the commutataion of their incomes, and the financial condition of the country did not permit of more liberal terms being offered by the Government They had already felt the decline of their social status, and were bearing that which is almost as hard to bear as wounded pride, the pangs of poverty. The swords of many of them, the last relics of a waning prestige, had been pledged to afford temporary sustenance for their wives and children. The old homes had been broken up. One by one the small but cherished ornaments or necessaries of domestic life had been sold, and each fresh sacrifice renewed the bitterness caused by a revolution which was fast sweeping away privileges all the more fondly clung to because they represented the spirit of a departing age. With many phases of the temper and disposition of the *samurai* we have no sympathy. But great allowances must be made for men so brought up as to see life through a false and distorting medium, to whom nothing appears wise which ignores or lightly regards their class, and who cannot be expected to acknowledge the wisdom of a course which threatens not only their pride but even their very sources of livelihood.

But, beneath the discontent of the *samurai* which the promise of a foreign expedition was put forward to allay, and the legitimate desire felt, certainly by the Government, and probably by a section of the people, to avenge the murders of the shipwrecked Loochooans, lay another sentiment which stimulated the preparations for the Formosa expedition. This was nothing less than a desire to possess at least that portion of Formosa which was not actually claimed by the Chinese. It is possible the Government may have regarded this as a convenient place for the disposal of the turbulent *samurai*, and as the presence of this class within the limits of the Empire is an unquestionable source of trouble and danger, such a surmise is not without a fair support of probability. It is also possible that the desire to indemnify the country for the loss of Saghalien—for in this the joint occupation of that Island with the Russians must end—moved the Government to cast a covetous eye upon Formosa. But, whatever the immediate reason for desiring this territory, certain it is that Japan regarded it with a longing desire, and when the apple has once attracted the lust of the eye, there is never wanting a tempter to show how desirable a fruit it is, and to urge a thousand good reasons for plucking and eating it. The Japanese were told that, by the provisions of international law, no nation could claim possession of a territory unless they fulfilled towards its inhabitants those

obligations which possession imposes. The Chinese, it was urged, had utterly neglected all the duties of control over the aboriginal tribes of Formosa. That the people of these tribes were not without such rudiments of culture as showed the possibility of their ultimate reclamation from barbarism, was manifest from records existing among them, from certain virtues they were alleged to possess, and certain acquisitions of knowledge they had made at the hands of Europeans who had formerly visited or sojourned among them. It was therefore clearly the duty of China to reclaim, educate, enlighten and control them, and her neglect of these duties was evidence of the right of any other nation to take possession of the territory and discharge them itself. The country should be surveyed, roads should be cut, settlements laid out and friendly relations opened up with the various aboriginal tribes and thus it was imagined that a right by international law could be established to the desired territory.

That the Chinese had neglected their duties towards these aborigines was clear. That the coasts towards which the Expedition was destined were the terror of this part of the Eastern seas, was undeniable; and that the international law which regulates the relations of the western nations does impose such duties as those just mentioned upon the occupiers of inhabited territory, cannot be gainsaid. It was monstrous that the coasts of Formosa should remain in this state, and equally monstrous that the Chinese should disclaim all responsibility in regard to them, But the project of the Japanese to occupy the eastern coast of Formosa was a practical not an abstract question, and, until the actual point arose by what arguments the Japanese could justify their permanent occupation of this territory, it is certain that neither they nor the Chinese had ever given the smallest heed to any such provision of international law. As a practical question it might fairly have been asked whether the Chinese would not inevitably, however tardily, resent an occupation of territory which they believed to be theirs *de facto*. The provisions of a code practically unknown to them might involve certain responsibilities not hitherto brought home to them, and never hitherto insisted on in their case by the western nations, whose subjects had from time to time met with the same fate as that which had overtaken the shipwrecked Loochooans. But the alternatives of the discharge of these obligations, or the occupation of the Island by those who could and would discharge them, ought surely to have been placed before the Chinese Cabinet, and all further steps have been suspended until a definite understanding on the subject had been arrived at. On the other hand, the Japanese may have felt that it was idle to imagine that the Chinese would hold themselves bound by any promise they made. Their duplicity and supineness had passed into a proverb. They would do, as they always have done, sign anything under the pressure of the moment, and, before the ink was dry, rack their brains for an excuse to evade the obligations they had just contracted. There was but one way of carrying their point, and this was to act promptly. Nor were the domestic reasons for this course other than cogent. The attempted assassination of IWAKURA in January, and the insurrections in Saga and Hizen in March, were evidences of a pent-up force which might be directed, indeed, but could not be ignored or allowed to escape within the limits of the Empire without danger to the very existence of the Government. The simple fact would therefore seem to be that the Japanese had a great wrong to avenge, and that it was just that it should be avenged. But the necessities of their domestic policy determined the expediency, and dictated the mode, of avenging it, and the Expedition was resolved on on these grounds.

If we look back to our own history we may find a period which furnishes a curious analogy for the course pursued in this case by the Japanese. Like England, Japan was indebted to foreign influences for the chief sources of her enlightenment and civilization. The Conquest which, with us, was an actual invasion and conquest of territory by a race of men far more advanced in civilization than ourselves, was, in this country, a moral and intellectual wave which brought Chinese learning, laws, religion and art to the shores of Japan. And as the English were elevated by the politeness, the chivalrous spirit and superior refinement of the Normans who conquered them, so the Japanese were indebted to the Chinese for their entrance into a higher world of thought than any they had created or, possibly, could create, for themselves. But the late marvellous movement in this country has brought its people into something of that condition of mind. relatively to China, which characterized the English of the fourteenth and fifteenth centuries in regard to France. The torpor of the French was at times the cause, and at times the effect of the splendid victories gained by English armies, against great odds, over those who but a few centuries before had made themselves their masters. These victories had imparted to the English a confidence in themselves and a sense of superiority over their former conquerors, analogous to that felt at this moment by the Japanese towards the Chinese; and precisely as the discontent of the English was at times quelled, or their blood fired, by the promise of an expedition to France, the promise of an expedition to Formosa allayed the turbulent spirit of the Japanese *samurai* and saved the country from the spread of the flames of civil war.

And now everything was ready. The embarkation of the troops had been effected. Numerous transports had been taken up and loaded with stores and war material of all kinds. Ample provision had been made for the erection of barracks, for the comfortable hutting of the men, for the making of roads and for wheeled locomotion on them, the latter chiefly represented by an ample provision of *jin-riki-shas*—the unpretending but efficient means by which during the past three years an absolute revolution has been made in the mode of personal conveyance in this country. But various circumstances had occurred to delay the actual departure of the Expedition. Vessels belonging to English and American owners had been chartered to take part in it, and, in view of its warlike nature, the Representatives of the two nationalities rightly considered it their duty to forbid the employment of such vessels in what could not be considered otherwise than an act of war committed against a friendly power. The Cabinet, too, was undoubtedly still divided upon the whole question. The more it was discussed, the greater seemed the probabilities that the proceeding would lead to serious complications, if not to immediate war, with China, and orders were transmitted to Nagasaki to stop the departure of the Expedition. But whether they arrived after the vessels were actually out of the harbour, or whether the authority under which they were transmitted was considered invalid to override the Imperial sign-manual under which all these proceedings were undertaken, certain it is that they arrived too late to effect their purpose. The Expedition left Nagasaki beyond the power of recall, and for good or for evil was bound to fulfil its destinies. There was now but one course open to the Government, that of endorsing proceedings which otherwise would have been regarded as mere filibustering movements; and this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

course was pursued. The transports and men-of-war made Amoy their first place of rendezvous, and communications were opened up with some of the inferior local authorities, which, however, did not touch on the objects of the Expedition or the anomalous relations in which it involved the two countries. Making straight from Amoy to the point in southern Formosa fixed upon for the commencement of operations, the troops were landed, and towards the middle of May had inflicted severe punishment upon the savage tribes.

But, by this time, the slow mind of China had awakened to the fact that an invasion had been made of her territory, and acts of war undertaken against those whom, in some vague manner, she regarded as subjects, little heeding her control, indeed, yet under it, if under any. The Viceroy of Fokhien accordingly despatched the Hiptai, or Brigadier-General, of Formosa to the Japanese Commander-in-chief to remonstrate against the proceedings of the Yedo Government. The Taontae of Shanghai also made the same representations to YANAGIWARA, who had been sent as a special Envoy to China to confer with the Court of Peking on the question, and requested him to order the withdrawal of the Japanese troops from the position they were occupying. But the replies of the soldier and the civilian were to the same effect. The troops, they said, had been despatched by the orders of His Imperial Majesty THE MIKADO, and he alone could order their withdrawal. Meanwhile the proceedings of the Japanese had thrown the Court at Peking, the Chinese on the coast, and especially those at Hong Kong and the open ports, into a state of such feeble excitement as the Chinese mind seems capable of under such circumstances. Troops were despatched in considerable numbers to the ports on the Western side of Formosa, and it was feared that they might at any moment be massed against the handful of Japanese occupying the south-eastern portion of the Island, and who, to do them justice, never faltered in their determination to hold their ground against all comers. The strategical position they occupied was excellently well chosen. They were strongly intrenched, and though only poorly supplied with stores, they had not yet felt the enervating effects of that cruel climate and were full of military spirit and ardour. By their orderly conduct and punctual payment for all such supplies as they required, they had also contrived to ingratiate themselves with the Chinese inhabitants of that part of the Island occupied by them. A correspondent of one of the leading Hongkong papers, whose testimony we adduce as most likely to be impartial, and who was then on the spot, wrote:—"The Chinese inhabitants are both delighted and astonished at this slaughtering of their enemies. They are on excellent terms with the Japanese, who, with equal justice and wisdom, pay well for everything they want..... In the Chinese portions of the Island the enterprise is regarded with favour." Thus acting, thus supported, and thus disposed, they were little inclined to heed the threats or remonstrances of the Chinese, who were, as usual, full of bluster and impotent demonstration. It is true that they had reason and justice to a great extent on their side. The real intentions of the Japanese had never been truly put before them. An act, which was clearly an act of war, had been undertaken against them. Their sovereign rights had been assailed, their dignity wounded, their authority mocked and superseded. Every organ of foreign public opinion within their territory derided them for their supineness and torpor, and every representation made to them at Pekin must have convinced them that however much they had previously neglected their duties in regard to the control of the Formosan savages, the steps taken by the Japanese could not be justified either by the previous negotiations which had taken place on the subject, or by the provisions of international law. Public opinion among foreigners in this country was undoubtedly arrayed against the Japanese, and this, for a great variety of reasons, some good, some indifferent, some bad. The first were urged by those who felt that the Chinese had not been treated with that spirit of frankness which should have pervaded the early negotiations on the question, and that vast mischief might easily result to the yet unconsolidated condition of the new civilization of the country by so great a collision as that which the despatch of the Expedition threatened to produce. They knew that the finances required the most careful management, that the grants for public works, for educational purposes, for roads, and for those measures which are necessary to bring the provinces into greater harmony with the almost too eager desire for advance manifested by the Central Government, would all be stopped and the money directed into channels of unproductive expenditure. They knew that the reserves of gold in the treasury were necessary as a support to the paper currency, and that a very considerable portion of these reserves consists of money furnished by the last English loan, which was contracted for a special purpose. They dreaded further issues of paper money, which, superadded to the quantity at present afloat, might be too heavy for the Government to support at par, and, in case of actual war breaking out, might decline in value and produce panic and ruin throughout the Empire. Animated by these views and relying on these reasons, they opposed the action taken by the Government by every argument and with every weapon at their command; and, on a calm retrospect of the whole question we cannot doubt that they were entirely justified in so doing. Neither shall we be careful to conceal our suspicions, we might almost say, our convictions, that the steps directed against China were partly instigated by those who imagined that an active participation in them would surround their names or nationality with an aureole of reputation not the less prized because artificial and specious. That views of this nature were intermingled, in the earlier stages of the question, with counsel which was not without substantial value, is not to be doubted; and a just and natural indignation was excited by the thought that the welfare and happiness of a nation should be made the playgrounds of any such hopes or unhealthy ambitions.

Objections of less weight were urged by those who seem to imagine that Japan has almost resigned the rights of independent sovereignty because she has entered into formal relations with the Western Powers, a position demanding but to be stated clearly to ensure its rejection. Of course, to those who see either folly or iniquity in every thing done by the Japanese, and who will make no allowances for perplexities and difficulties which embarrass this Government at every important step it is called upon to take, the movement to Formosa opened a fine field for the display of the vulgar vituperation and detraction which constitute the lower forms of public opinion in their crude state, and even for that more acute and intelligent criticism which quite rightly apprehends that the times are out joint and require setting, but does not see all the difficulties of the operation.

YANAGIWARA, for reasons which have not transpired, lingered long in Shanghai, but at length proceeded to Peking. The punishment of the Bootans having been

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

effected, and steps having been taken to provide for the future security of the Formosan coast,—so far, that is, as the fear of punishment on the one hand, and, on the other, agreements made with the chiefs of the various savage tribes could effect this object—it may be presumed that the negotiations with the Cabinet at Peking were chiefly directed towards the justification of the Japanese for the course they had pursued, and the terms on which they were willing to quit the Island. Rightly regarding the former point as of primary importance, because the Expedition was certainly tainted with an equivocal origin, the Envoy represented that the Cabinet at Peking had certainly been informed of the intention of his Government to despatch a mission to Formosa, and there was only one mode of doing this which could have the desired effect of securing the future safety of the coast. The action of the Bootans demanded that steps should be taken to prevent the possibility of its repetition. Such steps had been taken, and it was for China to recognize their justice. If she would do this, and herself guarantee that the engagements made with the savage tribes were kept, Japan would withdraw her troops, but not otherwise. It was manifest, however, that the difficulties presented by the negotiations in Peking required a more experienced diplomatist than the young officer who had been entrusted with them, and the Government accordingly despatched OKUBO, Minister of the Interior and a trusted Member of the Cabinet whose vigorous action in the events of the early part of the year had proved him an able administrator, as Envoy Extraordinary to the Chinese Court.

A short time before OKUBO's departure, Mr. LE GENDRE, formerly U. S. Consul at Amoy, in which position he had acquired a considerable knowledge of the relations existing between the Chinese Government and the savage tribes of Formosa, and whose assistance the Japanese Government had secured, left Yedo for the purpose of using such influence as he possessed with the Chinese to disentangle the threads of this ravelled skein of events. His object was peaceful, the prosecution of it at the moment was of undoubted importance to the Japanese Government, and whatever may have been the value of the influence he proposed to exert, his errand was perfectly legitimate and unexceptionable. But some one of the U. S. authorities in China thought otherwise, and issued a warrant of arrest against Mr. LE GENDRE, who was apprehended in spite of his protests and his appeal against the obvious violation of law which this arrest involved. The question was promptly referred to the American Minister at Peking, who at once ordered Mr. LE GENDRE's release. But we have never heard that any apology for this singularly arbitrary and unjust act was ever tendered for it to Mr. LE GENDRE, or to the Japanese Government whose servant he was, while no question can exist that it was wholly unwarranted, and might have been greatly detrimental to the interests of the Japanese at that critical moment. Our own unceasing opposition to the part assumed by Mr. LE GENDRE in the Formosa affair induces us to record our protest against the manner in which he was treated at this time, as we would not willingly give any colour for a charge against ourselves that this opposition was animated by lower motives than apprehension lest the welfare and peace of this country should be endangered by a course which we were unable to regard as sound or advisable.

Meanwhile, intelligence was freely arriving from China that active preparations were being made for a war by this time generally regarded as inevitable. Large bodies of troops were moved to Taiwan; Amoy, it was said, was to be strongly fortified; and the Chinese fleet—if it may be so called—was set in unusual motion. There was, too, as we have already seen, much stir and excitement among the people at the open ports, and abundant searchings of heart at the capital. But there was no exhibition of martial or patriotic spirit, no enthusiasm excited by the idea of repelling an aggression and avenging an insult, no effective popular desire to stand by and support the Government.

Far different was the attitude of Japan. There was, indeed, much misgiving as to the wisdom of the course which had led to these dangers. The Cabinet was notoriously divided on the whole question which had been raised and the line of action which had been adopted. Prominent men in the country, outside the ranks of office, looked grave when they spoke of the troubles which seemed impending over the nation, and every class foresaw that war would impose heavy additional burdens on it. But an ardent spirit of patriotism was manifest throughout the country, which was excited and indignant at what was believed to be a treacherous breach of faith on the part of the Chinese. Applications were made to the Government by the nobles and the *samurai* from every corner of the country for permission to devote their means or their swords to the national cause. They appealed to the unbroken dynasty of their Rulers as evidence of the unity and concord which characterized the national mind, and were impatient for the acceptance of their services by the Ministers of their insulted master. The prospect of war gave animation to the faces, and regularity to the steps, of the troops. Men who had gained their military experience on the fields contested during the Revolution pressed forward in the hope that their arms might be employed in the better cause of chastising a foreign enemy. A special conference of the nobles was held in the month of September at which they agreed to set aside a large moiety of their respective revenues in the Imperial cause, and to bear cheerfully whatever hardships and privations might be demanded of them in order to ensure the success of their country's arms. A tight rein was at once drawn by the Treasury upon all expenditure and all projects unconnected with the military and naval departments. Large quantities of grain, the surplus stores of the abundant harvests of previous years, were relied on for the maintenance of the troops. No special additional taxes were imposed, or fresh issues of paper put into circulation. Extensive orders for arms and military equipments were despatched to England, and numerous steamers were purchased for the conveyance of stores and troops to the probable seat of war.

Towards the end of October, tidings arrived from Peking of the increasing difficulties which attended OKUBO's negotiations. The interviews at the Tsung-li-yamên were said to be more and more unsatisfactory, and China, in reliance on the justice of her cause, had laid before the Foreign Representatives in Peking all the correspondence which had passed between herself and Japan on the subject of the Formosan aggression. In the face of this she found it difficult, almost impossible, indeed, to make the acknowledgment Japan so urgently demanded, and was the more disinclined to take this course on account of the large demands for the cost of the Expedition which she feared would be the diplomatic corollary of the admission she was desired to make. The fear was unnecessary. It is within our knowledge that the only point about which the Japanese were really solicitous, and which they made a *sine quâ non*, was the acknowledgment of their right in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

acting as they had done. All else was subsidiary, and they were little likely to press for the repayment of their expenses when undoubtedly one of their main objects was to avoid a war.

Early in November intelligence reached Yedo that the negotiations between the Japanese Envoy and the Tsungli yamen had been broken off, and there seemed to be no escape from the prospect of a war which, however it might result, could not fail to inflict grievous injury on both countries.

Yet it seemed hard that a case so manifestly susceptible of adjustment should terminate so disastrously. The large weight of combined right and wrong on both sides invited some friendly intervention strong and authoritative enough to raise the balances and pronounce how an equipoise should be produced. If China was wrong in having neglected her obvious duties of control over the savage tribes of Formosa, and permitted, without remonstrance or effort to suppress them, a succession of barbarous murders to be perpetrated on that coast, Japan was also wrong in having harboured, at whatever instigation, schemes for the occupation of the Island, and sent an armed expedition thither in place of the more peaceful mission of which she had spoken in her preliminary negotiations at Peking. If China was right in resenting an aggressive movement upon her territory, surely Japan was right in the determination to avenge the blood of her murdered children, and, rather than leave it to the hollow promises of the Chinese, to undertake it herself. Both were right in certain points: both wrong in certain points. There was no deep-seated enmity between the two nations; there were no ancient wrongs to avenge; no jealously watched and menacing boundary lines to be adjusted—for all intention of remaining in the Island had long been abandoned by the Japanese as at once inexpedient and warranted only by a strained intrepretation of international law such as would never have stood in any court of arbitration. Both nations, too, were anxious, if possible, to avoid war. But the case had become desperate. The Chinese felt that to admit the justice of the Japanese course of action was to abandon everything for which they had stood out on such excellent grounds. The Japanese, on the other hand, would accept nothing less than this admission and cared for nothing else. Negotiations were therefore broken off, and part of the suite of the Envoy left for Tungchow to complete the necessary preparations for his descent of the Peiho on the following day.

It need hardly be said that the Foreign Representatives at Peking had closely watched the proceedings of the two contending parties, and it is not inconceivable that, in view of the possible advantages which might accrue to the western nations from their collision, all of them had not been greatly solicitous as to the result of the pending negotiations. To the British Minister, Mr. WADE, it appeared otherwise, and,—whether at the solicitation of the Chinese or not is not known to us—it seemed good to him to make the offer of his friendly offices to adjust the quarrel. The offer was accepted, we may be sure with heart-felt, though perhaps silent, gratitude by both sides; the two Powers were once more brought into communication, and a convention was ultimately signed by which Japan agreed to evacuate the Formosan territory within a stated time, on the payment by China of half a million of taels, the estimated value of works and barracks constructed in the Island, and her guarantee to provide for the future security of the Formosan coast.

The news that war was averted, and that Japan had gained—as she undoubtedly had by implication—the admission of the rightfulness of her course of action, caused the liveliest satisfaction throughout the country, and the relief produced by it was apparent in every department of the Government and every section of society. The dreaded prospect of war had depressed trade, had paralysed many of those springs of action which in this country are entirely in the hands of the state, and had threatened the dislocation of all that intricate and costly machinery which has been put together during the past seven years with the view of enabling the country to assume the place to which it aspires among the other nations of the world. Nor can it in justice be denied that though the action of the British Minister at Peking was the proximate cause that war was averted, the *causa causans* was the firm attitude of the Japanese Government, the patriotic spirit exhibited by its people, and the unswerving tenacity of purpose with which OKUBO rejected all proposals from the Chinese which might tend to obscure the claim made by Japan that she had pursued a just course of action.

It would, however, ill become those who pretend, however feebly, to represent in this country the voice of an opinion which claims to be founded on higher ethical principles than any known among the pagan nations, to endorse the admission which the fears of the Chinese, at least as much as their sense of right, extorted from them. In our opinion, they had just cause for complaint and anger. The secrets neither of the Japanese nor the Chinese Cabinets are revealed to us, and we can only judge from such facts as are open to all who care to seek them. We must also confess, that in accepting from the Chinese as true any version of events which it is obviously their interest to colour so as to suit their own purpose, we do more than experience warrants. For, to their shame be it said, they are, as a nation, profoundly untruthful; and if we say so in this harsh and odious form, it is only that we may the more strongly enforce our subsequent argument. But making every allowance for this fact, all the evidence tends to prove that they had no intimation of the steps the Japanese intended to take in Formosa. They were supposed to have given their sanction to a course of action, which, by the very surprise and anger it excited, proves how little ground there was for anticipating it. There were certainly no records of any serious conversations on the subject between the Tsung li Yamên and the Japanese Envoy, and the only allusion to it was far too informal to afford sufficient justification for the steps subsequently taken by Japan. We must therefore continue to hold that Japan was not justified in the course she adopted, and that however much to her credit was the attitude she subsequently assumed to avert the just consequences of her conduct, she cannot be acquitted of a want of candour in those negotiations which preceded her course. It may be pleaded, as it has been before, that no blame attaches to one who deceives a deceiver. We shall not attempt to confute this position in our own words. A great English historian has treated the question in a most conclusive manner, and we must be pardoned for giving at length the passage from his works in which he does so.

That honesty is the best policy is a maxim which we firmly believe to be generally correct, even without respect to the temporal interests of individuals; but, with respect to societies, the rule is subject to still fewer exceptions, and that, for this reason, that the life of societies is longer than the life of individuals. It is possible to mention men who have owed great worldly prosperity to breaches of private faith. But we doubt whether it be possible to mention a state which has on the whole been a gainer by a breach of public faith. The entire history of British India is an illustration of the great truth, that it is not prudent to oppose perfidy to perfidy, and that the most efficient weapon with which men can encounter falsehood is truth. During a long course of years, the English rulers of India, surrounded by allies and enemies whom no engagement could bind, have generally acted with sincerity

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and uprightness; and the event has proved that sincerity and uprightness are wisdom. English valour and English intelligence have done less to extend and to preserve our Oriental empire than English veracity. All that we could have gained by imitating the doublings, the evasions, the fictions, the perjuries which have been employed against us, is as nothing, when compared with what we gained by being the one power in India on whose word reliance can be placed. No oath which superstition can devise, no hostage however precious, inspires a hundredth part of the confidence which is produced by the "yea, yea," and "nay, nay," of a British envoy. No fastness, however strong by art or nature, gives to its inmates a security like that enjoyed by the chief who, passing through the territories of powerful and deadly enemies, is armed with the British guarantee. The mightiest princes of the East can scarcely, by the offer of enormous usury, draw forth any portion of the wealth which is concealed under the hearths of their subjects. The British Government offers little more than four per cent; and avarice hastens to bring forth tens of millions of rupees from its most secret repositories. A hostile monarch may promise mountains of gold to our sepoys, on condition that they will desert the standard of the Company. The Company promises only a moderate pension after a long service. But every sepoys knows that the promise of the Company will be kept; he knows that if he lives a hundred years his rice and salt are as secure as the salary of the Governor-General: and he knows that there is not another state in India which would not, in spite of the most solemn vows, leave him to die of hunger in a ditch as soon as he had ceased to be useful. The greatest advantage which a government can possess is to be the one trustworthy government in the midst of governments which nobody can trust. This advantage we enjoy in Asia. Had we acted during the last two generations on the principles which Sir John Malcolm appears to have considered as sound, had we, as often as we had to deal with people like Omichund, retaliated by lying, and forging, and breaking faith, after their fashion, it is our firm belief that no courage or capacity could have upheld our empire.*

Now, it is a very observable and most remarkable fact connected with the new phase of thought and feeling which recent events have developed in this country, that the Japanese have contracted a strong dislike to have the word 'Asiatic' applied to them. They have so constantly found it employed by Europeans in connection with sentiments of censure or disdain, that they shrink from its application to themselves. An instance of this was presented some few weeks ago to our readers in a translation of an Essay of marked ability extracted from one of the Yedo journals, and, on two or three occasions since our attention was drawn to the fact, we have encountered other examples of it. Admitting that in those who must be profoundly ignorant of the higher manifestations of the Asiatic mind this repudiation of geographical affinity is foolish and ignorant, and savours of a vanity which knows little of its own weakness or of the strength of others, the feeling may yet be turned to good account in this country, if it leads the Japanese to the conviction that there is one sure road by which they may rise above all the Asiatic nations, viz, by perseverance in a course of honourable frankness. They claim the distinction of long lines of ancestry, not only for their nobles and gentry but for the lower ranks of their society. Though they despise trade, the names of many of their old banking houses have been preserved for hundreds of years, and are represented by the lineal descendants of the men who founded them. They are affable, amiable and polite, and have many claims on our interest and our admiration. But, as a nation, they have not yet learnt to act on the saying *Bon sang ne peut mentir*, and if they should now add it to their stock of national proverbs, the money spent on the Formosa Expedition will have been well bestowed. By this course they can give security to their loans, infuse vigour into their trade and add a new lustre to their name; and if their insular position in Asia prompts them to repudiate, as of rightful application to them, the term 'Asiatic,' with all that belongs to it, they can justify themselves before the world for an assumption which has in it something of paradox, by showing that they are honourable exceptions to a rule which has hitherto been of lamentably general application.

The experiences gained by the Japanese in Formosa have not been without lessons which will probably leave some permanent impressions behind them. The troops were cruelly wasted by fever brought on by bad food, bad water and an intolerable climate. It may be doubted whether more than one fourth of the men who left Japan in April were among those who returned in December. The hospitals at Nagasaki were crowded with pale fever-stricken men, whose sunken eyes and tottering gait betokened only too plainly the hardships they had undergone, and who will now return to their respective provinces with something of their ardour for foreign expeditions damped or evaporated.

The return of OKUBO, the Envoy Extraordinary to Pekin, and of SAIGO, the general in command were celebrated with suitable rejoicing in Yedo.

We have thus sketched the history of this expedition, partly because it was an event of great importance to this country, and partly because it is well that the Japanese should know the general impression produced by it on the minds of foreigners. That they will derive credit from it, and that it has, on the whole, tended to raise their standing in the world, cannot for an instant be questioned. But they will do well to make the errors with which it was associated the keys of less alloyed successes in the future.

And now that we have trespassed so long on the patience of our readers, we shall touch but lightly on matters which otherwise would have demanded more notice at our hands. It may be generally stated that the Government is more powerful that it has been for many years, possibly, even, for some centuries. In olden times it used to be said, during periods of vigorous administration, that such and such a man was powerful; but this involved nothing more than the presence of an active and able ruler at the head of affairs. The vigour depended or him, and on him alone. But now men say "The Government is powerful," and the partisans of the old Tycoonate acknowledge this as freely as the partisans of the Restoration claim it. Nor can it be questioned that much of the discontent existing in the Empire prior to the outbreak of the Saga rebellion has disappeared. But for all this, the Government is not popular. The people sigh under it as if in bondage. The taxation is too heavy, and the remonstrances against it are unheard in Yedo, because the officers who collect it, being appointed by the Central Government, are anxious to ingratiate themselves with their patrons, and transmit the revenue with no record of the wail which accompanies its collection. Then, the spirit of centralization is too strong. The blood is, as it were, all demanded for the service of the brain; the other organs and the limbs have not their fair share of it, and thus they decline in strength and vigour. To give one instance. The roads in olden times were maintained by the Daimios out of their revenues; now these revenues are paid into the central treasury, and are diverted towards the general purposes of government. But the roads have largely fallen into disrepair; every year they become worse; and this causes great complaint. The unpopularity of the Government is witnessed by the undoubted fact that the lower orders of people in the provinces of Saga and Hizen strongly sympathized with the insurgents in the late rebellion, and this is attributable to excessive taxation, together with a disposition on the part of the State to interfere irritatingly and unceasingly with the habits and customs of the people. Both causes of alienation demand attention.

Another cause of annoyance is the promulgation of edicts in a character which the common people cannot understand. The object of this is not quite clear, but is supposed to be the desire of the higher authorities to impress the people with a sense of superiority arising from the possession of great literary attainments.

* Macaulay's Essays, "Clive"

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The administration may rely that one edict in the language of the people announcing the abolition of one—only one—odious impost, would impress the people far more favourably than a thousand edicts which they cannot understand stuffed with 'Enlightenment and Civilization.'

The desire for representative institutions, which is now gaining daily in strength, is at once the evidence and the consequence by the too arbitrary and unsympathetic exercise of power of the oligarchy which constitutes the Government. The proposal for assembling the Kenrei to deliberate and advise upon the affairs of the Empire has proved altogether ineffectual, and the protests of ITAGAKI against the project which cost him his place among the Sanghi had, as the event proves, a large wisdom in them. The simple fact is that the Japanese mind has travelled faster than those who set it in motion imagined it would travel. An appetite for the acquisition of Western knowledge, altogether astonishing, and known only to those who take pains to observe it, has become the passion of the day. We have been told on excellent authority that there are sixty thousand persons in Yedo alone who are giving more or less time to the study of the English language, and though we should not have ventured to estimate it at anything approaching this, we are convinced that it is far larger than is generally imagined. That much of the knowledge acquired through this medium is superficial and produces superficial manifestations, cannot be wondered at; indeed, it could not be otherwise. But is this any reason for deriding a movement so vigorous and healthy? Assuredly not.

Among the most prominent and hopeful signs of the times is the activity of the press, and the large freedom permitted to it by the Government. While we trust that this freedom will not be abused, we hope that all those questions which are freely exercising the minds of the Japanese at this moment may continue to be discussed in the liberal spirit which has already extorted our commendation.

The attention bestowed in the columns of this journal on the question of National Education, and the remarks we made upon it last year, demand that we should, however cursorily, direct attention to the subject again on this occasion.

First, then, we must notice the recall of the students sent abroad to Europe and America for their education. This scheme, undertaken in the early and most ardent days of the new Government, involved the country in an enormous expense, and was only attended with very partial success. Both theory and practice united to demonstrate its defects, and the order for recall was agreed on, reluctantly, indeed, yet unanimously, by the Cabinet. Of course it involved serious personal hardships and disappointments. Beside the many young men who had misused their time and gained but small advantages from their residence abroad, there were also many whose minds had become thoroughly awakened to the privileges they were enjoying, and who prosecuted their studies with ever increasing ardour. It was a question whether some discrimination could not be exercised under these circumstances; the idle recalled, and the industrious suffered to remain. But any such plan would have caused endless jealousies and heartburnings. How could the selections have been made? What youth, or the parents of what youth, could be expected to acquiesce in a decision which involved a slur on his intelligence, if not on his character? Any such selection was rightly deemed impossible. The choice of the Government evidently lay between educational institutions on a large scale at home, and the maintenance of a few favoured students abroad. A decision on so definite an issue was easily arrived at and the students were recalled. But care was taken, so far as this could in the nature of things be done, that the acquisitions gained abroad should not be thrown away; and the advantages of foreign travel and study were so far recognised that provision was made for them in the form of what we should call scholarships, to be awarded to those who most successfully prosecuted their studies in this country.

As regards Normal Schools; in addition to those at Yedo and Osaka others have been established at Nagasaki, Hiroshima, Nagoya, Niigata and Miyagi, and their influence is felt powerfully throughout the country. Graduates of these schools are sent into various *kens*, and are employed to train the teachers in the University schools.

As regards schools for the acquisition of foreign languages; these now also exist at the cities and towns abovementioned; English is chiefly taught in them, and a graduated course of instruction is employed in all. But the crying want in all of them is a work laying down a systematic and progressive method of teaching the English language to the Japanese—a want which we have reason to think will be supplied during the next few months. Too much has hitherto been left to the discretion of teachers often incompetent and inexperienced, and this has produced bad results. One of the main objects of these schools is to qualify young men to serve as interpreters and translators in the numerous public and private positions in which foreign languages are required.

The plans for the development of the Imperial University of Yedo are being gradually unfolded. Students in a sufficiently advanced state of preparation are here entered for special courses of study in Law, Chemical Technology and Engineering, and a school for teaching useful arts and manufactures has been established. It is with regret that we have to record the recent loss of two of the most distinguished Professors of the University, M. H. MAILLOT and Dr. RITTER, Ph. D. both teachers of Chemistry and Physics.

Less has been done for Female Education than was hoped, on account of the recent imminence of war and the economy this enforced. But the idea of it makes manifest progress in the country. In many places, notably in Kioto and Osaka, the number of girls in the schools equals that of boys. In Kioto several flourishing institutions for female education exist. One, entirely under specially instructed native management, has over five hundred pupils. Elsewhere many private schools are devoted to the education of girls.

Speaking generally, it may be said that medicine has made more progress than any science in Japan. Its first impulse was long ago derived from the Dutch, and many prominent native physicians pursue their studies in that language. The Medical College at Yedo under German auspices is in a prosperous condition, though the disadvantage to the pupils of pursuing their studies in a language which can never be the dominant foreign tongue of the East, is a drawback uncompensated even by the ability of the Professors whose presence in this country has done so much to instruct its youth, and added so much to our stock of knowledge concerning it. In most large cities hospitals have been erected, where classes of medical students are taught by foreign or native instructors. A system of inspection of medicines has also now been established in all the more important towns of the Empire.

As regards special schools, the Army and Navy Departments have each prosperous establishments, and the De-

partment of Public Works has its large and well equipped Engineering College, to which are attached a laboratory and machine work-shops.

Lastly: a bureau of translators is at work preparing books and charts for the elementary schools. Those already prepared have been extensively introduced, and have done much to improve the character of the instruction.

The public works have been prosecuted during the year with vigour. The Railway between Osaka and Kobe has been opened to traffic. The line between Osaka and Kioto is now making rapid progress, and the surveys are completed for the section between Kioto and the southern end of Lake Biwa. Other surveys are in progress. The administration of the Telegraphs has notably improved during the past six months, and the lines have now been placed in the hands of a gentleman whose reputation is a guarantee that they will do efficient public service.

The Lighthouses maintain the reputation they have always enjoyed for efficiency and beneficent usefulness.

And now, we must draw our imperfect narrative to a close. We have pretended to do no more than sketch in rude outline the history of the country, so far as it is known to foreigners, during the year which expired yesterday. Much remains unsaid, and more is unknown. The year closes somewhat gloomily, for the commercial embarrassments among the Japanese are serious, and it may be some time before they are surmounted. But it must be said that the advance made by the country during this period is certain and indisputable. Those who fail to recognize this at some moment of special discouragement—and there are many such moments—should look back to its condition five years ago, when it was just emerging from the weakness consequent on the Revolution. It is idle to draw the two pictures. The contrast must be patent to every honest mind, and must be acknowledged by every candid mind. But the clearing of the land prior to sowing the new crop is hard and thankless work. Abundant hindrances are visible in all directions, and abundant errors are made both by overseers and workmen. Yet as the task progresses, the new crop springs up, and effaces the recollections of toil, and mistakes, and previous disappointments. If the Japanese are too often dilatory, capricious and uncertain, and betray inherent faults which can hardly be eradicated without a change in their whole nature, the foreign critic has his own errors, and should learn from these by how dim a light he walks in his attempts to judge truly, and with the generous consideration we all demand for our own shortcomings, the steps of a career so unexampled as that on which the people of this Empire have now entered.

ENGLAND'S FIRST TREATY WITH JAPAN.

(The following is the text of the first treaty made between England and this country, and can hardly fail to prove of interest, if only for the liberal and truly courteous spirit which animates it).

Privileges of Trade.

1.—*Imprimis.* We give free license to the subjects of Great Britain viz: Sir Thomas Smith, Governor, and the Company of the East India Merchants and Adventurers, for ever, safely to come into any of the ports of our Empire of Japan, with their ships and merchandises, without any hinderance to them or their goods, and to abide, buy sell and barter, according to their own manner with all nations: to tarry here as long as they think good, and to depart at their pleasures.

2 *Item.* We grant unto them freedom of custom for all such merchandises as either now they have brought or hereafter they shall bring into our kingdoms, or shall from hence transport to any foreign part, and do authorize those ships that hereafter shall arrive and come from England to proceed to present sale of their commodities without further coming or sending up to our Court.

3 *Item.* If any of their ships shall happen to be in danger of ship-wreck, we will our subjects not only to assist them, but that such part of ship and goods as shall be saved be returned to their captain or cape merchant, or their assigns; and that they shall or may build one house or more for themselves, in any part of our Empire where they shall think fittest, and at their departure to make sale thereof at their pleasure.

4 *Item.* If any of the English, merchants or others, shall depart this life within our dominions, the goods of the deceased shall remain at the disposal of the cape merchant: and all offenses committed by them shall be punished by the said cape merchant according to his direction; our laws to take no hold of their persons or goods.

5 *Item.* We will that ye our subjects, trading with them for any of their commodities, pay them for the same according to agreement, without delay, or return of their wares again unto them.

6 *Item.* For such commodities as they have now brought, or shall hereafter bring, fitting for our service and proper use, we will that no arrest be made thereof, but that the price be made with the cape merchant, according as they may sell to others, and present payment upon the delivery of the goods.

7 *Item.* If in discovery of other countries for trade, and return of their ships, they should need men or victuals, we will that ye our subjects furnish them for their money as their need shall require.

And that without further passport they shall and may set out upon the discovery of Yeadzo (Jesso, otherwise called Matsmai, the island North of Niphon), or any other part in and about our Empire.

The Tycoon's Letter.

Your Majesty's kind letter sent me by your servant Captain John Saris (who is the first that I have known to arrive in any part of my dominions) I heartily embrace, being not a little glad to understand of your great wisdom and power as having three plentiful and mighty kingdoms under your powerful command. I acknowledge Your Majesty's great bounty in sending me so undeserved a present of many rare things, such as my land affordeth not, neither have I ever before seen; which I receive not as from a stranger, but as from Your Majesty whom I esteem as myself. Desiring the continuance of friendship with your Highness, and that it may stand with your good liking to send your subjects to any part or port of my dominions, where they shall be most heartily welcome, applauding much their worthiness in the admirable knowledge of navigation, having with much facility discovered a country so remote, being no whit amazed with the distance of so mighty a gulf, nor greatness of such infinite clouds and storms, from prosecuting honorable enterprises of discoveries and merchandising, wherein they shall find me to further them according to their desires. I return unto Your Majesty a small token of my love (by your said subject) desiring you to accept thereof as from one that much rejoiceth to your friendship. And whereas Your Majesty's subjects have desired certain privileges for trade and settling of a factory in my dominions, I have not only granted what they demanded, but have confirmed the same unto them under my broad seal, for better establishing thereof. From my castle in Suranga, this fourth day of the ninth month in the eighteenth year of our Diary, according to our computation.

Resting your Majesty's friend, the highest commander in the kingdom of Japan.

(Signed) Minna, Montono, Yer, Ye, Yeas.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Society was held on Wednesday evening, 23rd December, at the Grand Hotel. C. W. Goodwin, Esq., V.P. in the chair. The minutes of the last meeting were approved, and A. O. Gay, Esq. of Kobe, was announced as having been elected an ordinary member.

The Committee on the Library reported that a new room had been engaged at No. 28, which would be open daily from 4 to 6 P.M. Whereupon Professor Ayrton suggested that although the Librarian might only attend from four to six o'clock, so that books could only be obtained during those hours, he would suggest that the room itself should be open all day and furnished with pens, ink and paper so that it might be used by the members as a room for writing letters in, &c. He would add that the small room at the Grand Hotel which formerly was used as a Library by the Society, had been found by himself as well as by other members residing in Tokio, very convenient for such purposes.

Mr. Brunton read the following explanatory remarks, as supplementary to his statement made at the last meeting, in regard to the discharge of water from the rivers Rhine and Shinanogawa respectively:—

At the last meeting of the Society during the discussion which followed the reading of Mr. Lindo's paper on a trip to Niigata I made a statement giving some particulars concerning the Shinanogawa, which river has its mouth at Niigata. I then compared the discharge of the Shinanogawa with that of the Rhine, and I have received from Mr. Lindo a letter taking exception to that comparison and asking me to make a correction of my statement in such a manner as I deem most suitable. As the matter occurred at the last meeting of this Society, and has appeared as part of its proceedings I think that this is the proper time and place to bring the matter forward.

Mr. Lindo informs me in his letter, that his paper, read by Mr. Boyle, contains statements relative to the discharge of the Shinanogawa; and also a comparison between it and that of the Rhime, but that that gentleman, in reading the paper, passed these over. His comparison and mine he says are antagonistic, not as regards the discharge of the Shinanogawa, because on that we agree, I may say, quite remarkably, but as regards the discharge of the Rhine; and he has been good enough to send me very elaborate tables of the discharge of the Rhine which were, of course, not previously known to me but which place that matter beyond a doubt. From these I find that the ordinary summer discharge of the Rhine near its mouth is over five millions cubic feet per minute, that its maximum discharge in floods is over twenty-three millions cubic feet per minute, and its minimum discharge is 2,700,000 cubic feet per minute. In my statement I gave the ordinary summer discharge as 900,000 cubic feet per minute, and the flood discharge as ten millions cubic feet per minute; that is to say the summer discharge as given by me is between one-fifth and one-sixth of what it actually is, and the flood discharge between one-half and one-third of what it actually is. In justice to myself I must say that I procured my information from Beardmore's Manual of Hydrology, which book is considered as good authority by all English Hydraulic Engineers, but it is also necessary to say that on more carefully investigating the matter, I find that Beardmore's ganging was not taken at the mouth of the Rhine, but at Lauterbourg which is some distance below Strasbourg. It is necessary, therefore, for me to correct the statement I formerly made to the extent that the Shinanogawa discharges the same amount of water at its mouth as the Rhine does at Lauterbourg and that therefore the size of the two rivers cannot fairly be compared. In reference to the actual discharge of the Shinanogawa, it may be useful to have on the records of the Society a comparison of the results obtained by myself and Mr. Lindo as these are so close that they assuredly leave no room for uncertainty regarding it.

On the 21st June 1871 I ganged the discharge of the river and found it to be 1,500,000 cubic feet per minute. During the months of June and July 1873 Mr. Lindo took a succession of observations the mean result of which was 1,320,000 cubic feet per minute, the difference between this and mine being so trifling as almost to appear extraordinary. I calculated the basin of the Shinanogawa from government maps which were necessarily more or less inaccurate making it to be 10,000 square miles in area. And taking the discharge of that area at seventy cubic feet per minute per square mile, which is the average discharge of twenty-five rivers in different parts of the world gives the discharge of the Shinanogawa as 700,000 cubic feet per minute. Mr. Lindo has calculated the low water discharge at 720,000 cubic feet per minute, which two results verify each other surprisingly. From data procured from a comparison with other rivers I estimated that the maximum flood discharge of the Shinanogawa would probably be about twenty times the latter-mentioned discharge, viz: fourteen millions cubic feet per minute. Mr. Lindo from actual measurements has calculated the flood discharge to be 12,000,000 cubic feet per minute. Those calculations, made perfectly independently on different systems, and verifying each other so closely, conclusively determine the size of the Shinanogawa, and I, therefore, thought it well to give the Society the information which I do with Mr. Lindo's sanction.

Professor Ayrton then read a resumé of Dr. Geerts' paper on Lead and Silver; and in reply to a question from the chair, stated that he believed little or no quicksilver was found in Japan. As far as he was aware all the quicksilver used in this country was imported from China to which country it had been brought from Europe. Consequently the price of quicksilver in Japan was far higher than in England.

Mr. Brunton here remarked upon the black colour on the bronze image at Nara.

Professor Ayrton said in regard to the dark colour on Japanese bronze images referred to by Mr. Brunton, he believed this was produced *not* by any admixture of quicksilver but by the bronze containing a considerable percentage of lead in consequence of which the bronze was soft. After the vase, or other bronze ornament, was finished, the outside was strongly heated, and when on the point of liquefaction it underwent a rapid oxydation and thus a dark uniform coat closely adherent to the rest of the metal was formed. For the particulars of this process he would refer the society to the careful analysis of Japanese bronze, made some months back by M. Morin and communicated by that gentleman to the French Academy.

Mr. Syle mentioned the New Almaden mines, near San José in California, as furnishing a large supply of quicksilver.

A Paper, contributed by Mr. Gribble of Nagasaki, on the Production and Manufacture of Vegetable Wax in Japan, was read by Mr. W. H. Smith, who exhibited specimens and diagrams illustrative of the subject.

Mr. Syle remarked on the similarity of the process employed to that used in China for the extraction of oil from the bean. As to the employment of the wedge rather than the screw, it was noteworthy that although the Chinese were acquainted with the latter and used it for some purposes, they never seemed to employ it as a mechanical power. The experiment made at Newchwang for obtaining the bean-oil by foreign machinery had not been successful.

Professor W. E. Ayrton said, he could see why the wedge was used in preference to the screw both in China and Japan for extracting oil as stated by Mr. Syle, since theory showed that in the absence of very great power a greater crushing effect could be produced by sudden blows on a wedge than by the continued pressure of a screw. He thought that probably the considerable initial expense necessary to be incurred in the purchase of a hydraulic press might be the reason why they were so rarely used in this country for the extraction of wax; since as far as he could judge from the diagrams lying on the table the apparatus at present employed was of the rudest description and therefore cost but very little. He would be glad if Mr. Smith could inform them in what way Japanese vegetable wax differed from Chinese wax.

Mr. W. H. Smith expressed his surprise that the hydraulic press was not more used; and read the following remarks of Sir H. Parkes from a note written on the subject of the paper;

I am sorry to see that the wax cannot be produced at a paying price, but this must be partly attributable to the very high charges of manufacture. I cannot help thinking that it might be produced at a much less cost with more industry and real hard work on the part of the Japanese. I was told in England that it could be largely used in the process of printing manufactures (cottons) if a large and steady supply could be reckoned on, but as it came to market only by fits and starts and in unreliable quantities, manufacturers were obliged to use other material. I am sorry if this industry should fail, for the Japanese have but few available products for export, and they must work harder before they increase them.

PALMERSTON AND THE SPANISH MARRIAGES.*

[SECOND NOTICE.]

The most important part of Lord Dalling's book is the chapters in which he tells the sad and infamous story of the Spanish Marriages. As he was our Minister at the Court of Madrid during the time of the chief negotiations, and as he was the chief opponent of the French Court, he could speak with more authority than any other English statesman. Guizot gave his version of the story with much fullness of detail and with consummate skill in his *Mémoires pour servir à l'Histoire de mon Temps*. Lord Dalling now gives his, and it forms a State-paper of much value. Lord Palmerston did not take part in the negotiations until nearly the end, when he succeeded Lord Aberdeen at the Foreign Office. By that time Guizot had cast his net over the Spanish Court, and all but caught the Queen in its toils. Palmerston might still have defeated the intrigue, if he had been as sagacious as he was bold; but he knew so little about the real feelings of the Spanish Court that he blundered at the outset, and his error ruined everything.

The attempt of France to increase her influence over Spain by providing a husband for Queen Isabella began when that unfortunate Sovereign was only twelve years old. Louis Philippe was eager both to increase the power of France, and to make good matches for his sons; and Guizot, who was then his Minister of Foreign Affairs, was fanatically anxious to keep the Peninsula in leading-strings. He argued that the union of Spain, Germany, and the Low Countries under the sceptre of Charles V. and of Philip II. had placed France in peril; and that she had not been lifted out of danger until Richelieu, Mazarin, and Louis XIV. had isolated Spain from the enemies of France. The same argument was used by Napoleon III. as a pretext for declaring war against Prussia when the Prince of Hohenzollern was allowed to become a candidate for the Spanish Crown. Thus Guizot only acted in accordance with the traditional spirit of French diplomacy when he tried to give away the Queen of Spain's hand. He found it the more easy to interfere because, although the nation resented any interference with its domestic affairs, the moderate party in the Cortes and the Queen-mother were eager that the young sovereign should marry the Duc d'Aumale. Such a project was naturally alarming to the English diplomatists of the old school, and indeed to the whole Continent. Louis Philippe's shrewdness told him that it would not do, and so Guizot energetically declared that the King would allow none of his sons to become candidates for the Queen's hand. But he also made known that France would not permit her to marry any prince who did not belong to some branch of the House of Bourbon. She was free, he said, to marry a Prince of Naples or of Lucca, a son of Don Carlos or a son of Don Francisco; but she might not go outside that sacred circle. Lord Aberdeen opposed that arrogant pretension with much amiability and astonishing feebleness, when it was made by M. Pageot, the French Chargé d'Affaires at our Court. He was shocked by such an attempt to limit the choice of the young Queen in a matter of essential importance to herself. The French diplomatist replied that in any case, the choice would be made not by herself, but by her Ministers; and that, as they would be guided by purely political motives, so, in self defence, must France. Lord Aberdeen went back to his first statement, that the marriage was a purely domestic affair, with which England had no right to meddle. In that case, it was urged, England could not object if the Queen should marry her cousin, the Duc d'Aumale. "Ah!" replied Lord Aberdeen, "I do not say that; such an alliance would disturb the equilibrium of Europe; that would be different." Lord Aberdeen was clearly no match for the diplomatist who was pouring out the arguments with which he had been primed by Guizot. By opposing the marriage of the Queen with the Duc d'Aumale on purely political grounds, he was acting in accordance with precisely the same principles as France herself. Palmerston committed the same mistake when he took the negotiations in hand; for in one breath he said that England would neither exclude nor support any of the candidates for the hand of the Queen, and in the next, he distinctly declared that he would oppose the claims of any prince belonging to a powerful reigning family. Thus England showed that she was hostile to the Royal house of France, and Guizot had an excuse for saying that he must act in self-defence.

By far the wisest course would have been to declare that the Queen should be left absolutely free to marry whom she liked, and to have protested in the face of Europe against the arrogant claim that she must marry a Bourbon. Had Lord Aberdeen done so, and had he encouraged Spain to defy the menaces of France, the worst infamy of the Spanish Marriages would never have been perpetrated, and the Court might have been spared the domestic scandals that ended in revolution. For when the marriage of the Duc d'Aumale had put him beyond the reach of Spain, the Queen-mother would gladly have braved France, if England had given her encouragement. Our Minister, Sir Henry Bulwer, would have used all his influence to defeat the intrigues of the French Court, if he had but been free to act; but he was fettered by his superior, Lord Aberdeen, who was the slave of Guizot's imperious intellect. He was told to keep strictly neutral, and he could do so only at the price of allowing the poor young Queen to fall into the toils of her enemies.

The motives of the French Court were suspected at the time to be very sinister, and subsequent events deepened the idea of its guilt. Louis Philippe, it was thought, wished to gain supreme influence over the Peninsula at any price. He dared not awaken the alarm of Europe by marrying the Queen to one of his own sons, but he hoped, it was thought, to gain his ends by indirect means. If her husband were to be a feeble nobody, and if his own youngest son, the Duc de Montpensier, were to marry her sister, France could thus, perhaps, control the political destinies of the Peninsula. Such a plan was cunning rather than farseeing, but it was skilfully pursued, both by the opposing of some candidates and the suggesting of others. The Prince de Metternich was anxious that the rival families of Spain should be united by the marriage of the Queen with the son of Don Carlos, and that exiled pretender was so favourable to the arrangement as to formally hand over his shadowy rights to his heir. But Guizot objected to such a match, because Don Carlos did not abandon the pretension to be the legitimate King of Spain, and because his son would act as such. Then he would be aided by the clerical and the reactionary party, while the Queen might gather round her the Liberals, and there would be war in the palace itself. At any rate, such a marriage would not have suited the designs of France, and the idea of it was set aside. Then he would be aided by the clerical and the reactionary party, while the Queen might gather round her the Liberals, and there would be war in the palace itself. At any rate, such a marriage would not have suited the designs of France, and the idea of it was set aside. Then Guizot made the astonishing proposition that the Queen should marry the Comte de Trapani, a brother of the King of Naples and of the Queen-mother herself. Thus he was Isabella's uncle. He was a young man, a pupil of the Jesuits, very bigoted, very weak in mind and equally weak in body. It would have been difficult to find a more despicable, and therefore a more suitable candidate. On the other hand, the Duc de Montpensier should marry the Infanta; but the King promised that the marriage should not take place until children should be born to the Queen herself. The Queen-mother gave a reluctant consent, merely, perhaps, to gain time, the Comte himself was taken from the Jesuit house in which he was passing through the theological mill; and arrangements were made in Spain for the wedding. But the nation was hostile to such a match; there were rumours of resistance in the Cortes; and the Queen-mother had set her heart on getting the Duc de Montpensier for her daughter. So the Comte de Trapani had to be sent back to the Jesuits. On the other hand, Louis Philippe had given Queen Victoria so solemn a pledge when she visited the Château d'Eu that the Duc de Montpensier would not marry the Queen, and Guizot had so explicitly given the same pledge to Lord Aberdeen on the same occasion, that the wish of the Queen-mother could not be fulfilled. But then the French Court played its best card by saying that the most suitable husband would be either of the two sons of Don Francisco de Paulo, the brother of the late King. Both were, therefore, cousins of the Queen. One of them, Don Francisco, Duke of Cadiz, was so notoriously a feeble bigot, that Lord Palmers

ston called him an "absolute and absolutist fool." He was likewise so poor a physical specimen of humanity, that as Lord Palmerston also said, it was a scandal to recommend him at all. His brother, Don Enrique, had more energy; but he was wild and reckless, and he had made himself the enemy of the Queen-mother by leaguing himself with her enemies. Such were the two precious young men between whom Guizot invited Isabella to choose. So hostile was the mother to Don Enrique, that while her party were in power, the Queen could not choose him, and thus Guizot had virtually decreed that she should give her hand to a man whom she openly despised. On the other hand, he secretly agreed that if the Queen should marry the Duc de Cadiz, the Duc de Montpensier should become the husband of her sister.

There was another candidate in the field, Prince Leopold of Saxe-Coburg. Being the cousin of Prince Albert, he was regarded as the representative of English influence. Guizot made himself believe that the Nestor of the Coburgs, the King of the Belgians, and the English Court were plotting to set the young prince on the throne of Spain. Lord Aberdeen assured him that he was mistaken, and also urged that, as the Prince was the brother of the Duchesse de Nemours, one of Louis Philippe's own sons, while he was only the cousin of Queen Victoria's husband, he might fairly be regarded as a French rather than an English candidate. Lord Aberdeen himself was guiltless of any attempt to push the claims of the young Prince. On the other hand, Queen Christina did act on the assumption that he was favoured by the English Court, and Sir Henry Bulwer did encourage her. In the present volume, he tries to show that he held aloof from the contest, even when he was urged by the Queen-mother to aid her in the attempt to rescue her daughter from the meshes of the French Court; but we are happy to say that he fails to clear himself. So far as an honourable man could, he did obey the command of Lord Aberdeen to remain neutral, but an English gentleman could not stand perfectly still when he saw the French Minister, Count Bresson, drawing Guizot's net tighter and tighter round the poor young Queen. He shows that he did encourage her mother to make overtures to the Coburg Prince. He did quite right, and but for the weakness of Lord Aberdeen, he might have succeeded. Lord Aberdeen, however, was so much under the influence of Guizot as to tell him all that Bulwer had done, and to send Bulwer himself a severe censure for not having acted in concert with Bresson. Lord Dalling curtly says that if he had betrayed Queen Christina's confidence to the diplomatist who was striving with all his might to entrap her, he would have played the part of a French spy instead of an English gentleman. So he sent his resignation to Lord Aberdeen; but it was not accepted, and immediately afterwards the seals of the Foreign Office passed to Lord Palmerston, a man who was not to be cowed by Guizot's "magisterial manner" Lord Palmerston soon showed his teeth in a long despatch to Bulwer, setting forth the duties of the English Government with respect to Spain. It would remain neutral, he said, unless the successor of a powerful reigning house should become a candidate for the hand of the Queen. But there were three eligible suitors, he added, the Prince of Coburg and the two sons of Don Francisco de Paulo. Any of the three, he said, would be acceptable to England. Guizot held that the English Government had broken a pledge given by Lord Aberdeen in thus placing the Prince Leopold in the ranks of the candidates, and indeed giving him the first place. It was now clear, he said, that England sought to make the Coburg Prince King of Spain. Lord Aberdeen, he contended, had promised that England should have given no countenance whatever to the claims of the Coburg Prince; but Lord Dalling justly says that Guizot's assertion is destitute of any proof. Still the French Minister held that Lord Palmerston's words had freed him from the pledge that the Duc de Montpensier should not marry the Infanta until the Queen should have children, and he instantly proceeded to urge that the marriage of the Queen to the Duc de Cadiz and of the Duc de Montpensier to her sister should be celebrated on the same day. The design might still have been defeated, if Lord Palmerston's private instructions to Bulwer had not destroyed the chances of the Coburg Prince. There is good reason to believe that the Spanish Court would gladly have accepted him as a suitor, if he had really been backed by the influence of England; but Palmerston privately wrote to Bulwer that the better plan would be to give Don Enrique to the Queen and Prince Leopold to the Infanta. Such instructions displayed an astonishing ignorance of the Spanish Court. It could not afford to give mortal offence to France for the sake of marrying the Infanta to a Coburg. It could run such a risk only to get a Coburg for the Queen. And the marriage of Don Enrique with the Queen was simply out of the question. He and the chiefs Were he to become King, the Queen-mother herself would, in all probability, be again obliged to quit Spain, leaving all the sweets of the power that she loved much, and perhaps much of the wealth that she loved more. Her friends must also surrender office to rivals who were eager for revenge, and who might have driven them into exile. Lord Palmerston, then, simply invited them to ruin themselves. Sir Henry Bulwer saw the scheme to be so preposterously absurd, that he held back the despatch until he should warn Palmerston of the ruin which it would bring; but Palmerston had closed his ears to all advice, and he sent the characteristic reply that the best title of an agent to the confidence of his chief was obedience to his commands. So Bulwer gave the message to the Ministers, and they saw that all was over. Bresson was sent for, and it was instantly agreed that the Queen should marry the Duc de Montpensier. The Duc d'Aumale speedily came with his brother to Madrid; the marriages were celebrated; Guizot had won; and the Queen was ruined. Thus ended the five years of diplomatic craft.

Palmerston was furious when he saw the effect of his blundering He called Louis Philippe at detected pickpocket. He plainly accused Guizot of fraud and falsehood, and worse. He tried to prevent so scandalous a marriage as that of the Queen with the Duke of Cadiz. But Guizot smiled at his wrath with the serenity of a gambler who has won an enormous stake.

Meanwhile, strange events were happening in Madrid, which then, as now, was a wild place. The Ministers had often behaved like furies. Prime Minister, Olozaga, is said by his enemies to have once compelled the young Queen by sheer force to sign a decree for for the dissolution of the Chambers. Another Prime Minister, Narvaez, being asked on his death-bed to forgive his enemies, replied that he had none, for he had killed them all. He used to threaten that he would blow out his own brains unless his colleagues would agree with him. The populace were still wilder. Some working-men intended to shoot the Duc de Montpensier and the Duc d'Aumale when they should enter Madrid, and fancying that the deed would please the English Government, one of them came to Sir Henry Bulwer, to ask whether they might take shelter in the British Embassy after they should fire the shots. The Court was equally original. Isabella so despised her husband, that she treated him with ostentatious disdain, and proceeded to choose a favourite of her own with an openness that is sadly well-known to history. The effects of the marriage were so shocking, that proposals for a divorce were freely mooted. "But," says Lord Dalling, "the Spaniards are a decorous people. Some very respectable and respected men discussed very gravely the propriety of putting the King quietly out of the way by a cup of coffee, but the scandal of a divorce shocked them." Meanwhile the Ministry had to play the difficult part of Duenna to the Queen; and they tried to keep her in a kind of confinement, but the were baffled by her and her favourite, who was the General Serrano, Serrano, and who is now the President of the Spanish Republic. There was a forcible change of Ministry at three o'clock one morning. General Serrano's friends were lifted into power. General Serrano himself became the greatest man in Spain; and poor Don Francisco, the Queen's husband, quitted the royal palace to live in the Prado. He was virtually dethroned; and it is needless so describe the mingled profligacy and religious devotion by means of which the Court rode swiftly to Revolution.

Such is the saddest and most shameful chapter of modern diplomacy. The guilt of it lies, first, on the Queen-mother and the Ministers, who knew well what they were doing in giving such a woman as Queen Isabella such a husband as Don Francisco. It lies next on Louis Philippe and Guizot. The one heartlessly trifled with the happiness of a woman and the peace of a nation, in obedience to his diseased eagerness to make his family great. The other stifled his conscience and his religious instincts, in his determination to increase the influence of France and lower that of England. The feebleness of Lord Aberdeen made him the tool of France. The ignorance of Lord Palmerston completed the work of ruin. Lord Dalling's book shows, what we might have guessed from Guizot's *Mémoires*, that if he had been unfettered at Madrid, or if Lord Palmerston had conducted the negotiations from the beginning, and thus been guided by a real knowledge of Spanish feeling, not only would the records of diplomacy have now been free from a shameful chapter, but Spain and Europe might have been spared some of the most lamentable convulsions of recent years.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JANUARY 2ND, 1875.

IMPORTS.

Cotton Fabrics.—Although during the past fortnight the holidays have much interfered with business in imports, more has been done than might have been expected at this season. *Shirtings*, 7 and 8¼-lbs. have changed hands freely, but at weak rates, and transactions have been chiefly for inferior makes; 9-lbs. are light in stock, and are wanted. In *Turkey Reds*, a few sales of light weights have been made at firm rates. A few sales of *Velvets* are reported, with somewhat decreased stocks and light arrivals. The New Year should open with some hope for an increase of demand and a better range of prices than we have of late seen but as against this hope, we have to notice distrust and difficulties amongst the dealers, caused by the failure of two large native banks. Active business will probably be hardly resumed before the middle of next month.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce.	$1.95 to $2.15
8 lbs.	38½ yds.	44 in.	„ nom	
8 lbs. 4 to 8 lbs. 6	„	39 in.	„	2.25 to 2.55
9 lbs.	„	44 in.	„	2.70 to 3.00
Taffachelass Single				2.70 to 2.85

White Shirtings:—				
56 to 60 reed	40 yds.	35 in.	nom. per pce.	2.50 to 2 60
64 to 72 „	„		„	2 70 to 2 85
Turkey Reds	25 yds.	30 in.	2¼—3 lb. per lb.	1.50 to 1.60
Black Velvets				8.75 to10.00
English Drills				3.20 to 3.40
Canvas, Navy, Red Stripe				7.50 to 8.00

Cotton Yarns.—There has been some demand for Nos. 16/24, but without any change in prices.

No 16 to 24	per picul	34.00 to 37.50	
Reverse	nom.		
No. 28 to 32	per picul	39.00 to 42.50	
„ 38 to 42	small stock nom.	„	42.00 to 48.00

Woollens.—The business has been of so limited a nature as to be undesersing of mention. We make no change in quotations.

Plain Orleans	40—42 yds.	32 in.	6 25 to	7.75
Figured Orleans	29—30 yds.	31 in.	4 50 to	5.25
Italian Cloth	30 yds.	32 in.	0 25 to	0.36
Camlet Cords	29—30 yds.	32 in.	6.25 to	7 00
Camlets Asstd.	56—58 yds.	31 in	18 50 to	19.00
Lastings Japan	22—30 yds.	32 in.	13 00 to	14.50
Plain Mousseline de Laine	30 yds.	30 in.	0.18½ to	0.19½

Figured Mousseline de Laine	30 yds.	30 in.	0.28 to	0 32
Multicolored „	30 yds.	30 in.	0 30 to	0.40
Cloth, all wool plain or fancy	48 in. to 52 in.		1.00 to	1 30
Presidents	54 in. to 56 in.		0.80 to	0.90
Pilots	54 in. to 56 in.		0.45 to	0.55
Union	54 in. to 56 in.		0.70 to	0.85
Blankets, scarlet & green 7 to 8 lbs.			per lb.	0.45 to 0.50

Iron and Metals.—The depression incidental to the New Year holidays has influenced the market for all classes of metals and there is no business to report. Heavy shipments, it is said, may be expected from China if tonnage should offer on favourable terms.

Iron flat and round	per picul	$4 00 to	$4.75
„ nail rod	„	4 20 to	4.80
„ hoop	„	4 80 to	5.20
„ sheet	„	5.00 to	7.00

Iron wire	per picul	$8 00 to	$9 00
„ pig	„	2.00 to	2.25
Lead	„	7.00 to	7.50
Tin Plates	„	8.50 to	9.50

Sugar.—The market is very bare of Formosa descriptions and an advance upon late quotations has been established. There are large stocks of China sugar on hand.

Kerosine.—There are no stocks in first hands and dealers exhibit considerable disinclination to enter into contracts for the purchase of the cargoes now afloat.

Sugar:—Formosa in bag	per picul	4.75 to	4 90
in Basket	„	4.60 to	4.70
China No. 1 Ping fah	„	8.40 to	8.60
„ No. 2 Ching-pak	„	7.70 to	7.90
„ No. 3 Ke-pak	„	7.30 to	7 40
„ No. 4 Kook-fah	„	6.70 to	7 00

China No. 5 Kong-fuw	per picul	6.30 to	6 50
„ No. 6 E-pak	„	5.50 to	5.90
Swatow	„	4.20 to	4.30
Daitong	„	4 40 to	4.50
Japan Rice	„	3 15	
Kerosine Oil	„	3.50 ot	360

EXPORTS.

Silk.—Since the 19th instant arrivals are 180 bales and purchases about 300 piculs.

There are now but few good parcels offered for sale and most holders remain firm at our previous quotations which we repeat below. Concessions, however, to the extent of $10 to $20 on those rates are reported to have been obtained in the course of last week.

	Laid down and sold in London Ex. 6mos. at 4s. 3d. & Lyons, 5.33.			*Laid down and sold in London Ex. 6mos. at 4s. 3d. & Lyons, 5.33.*		
Hanks—						
Best (No. 1/2)	540 to 560	20s. 6d. to 21s. 3d.	frs. 57 to 59	Medium (No. 2½)	480 to 500	18s. 5d. to 19s. 1d. frs. 51 to 53
Good (No. 2)	510 to 530	19s. 6d. to 20s. 2d.	frs. 54 to 56	Common No. 3	450 to 470	17s. 4d. to 18s. 1d. frs. 48 to 50

Tea.—Our market has been rather excited during the past fortnight, principally owing to telegraphic advices of some fiscal alteration likely to occur in the United States. Settlements since the departure of last American mail amount to piculs 7,400 and supplies are in a poor ratio with these figures. Stocks remain still full but native holders by no means press sales. Business for the ensuing week will be small owing to the observance of New Years festivities.

Common	*nearly nominal.*	$23.00 to	27.00

FIRST PRIZE MEDAL—Dublin Exhibition, 1872.

Official Report, London International Exhibition, 1871.

"Mr. Bailey exhibits samples of well-made chemical ware, highly vitreous and durable, consisting of acid tanks, retorts, receivers, condensing worms, and other vessels. His contribution comprises among many other things, an ingenious ascension Filter, in which, by a certain arrangement of stoneware discs in the interior, the water is more exposed to the filtering material than in ordinary filters.

N.B.—No Prizes were offered at this Exhibition.

Yokohama, November 22, 1873. S. 26ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, 25th June, 1874.

DEATH.

At the House of Walsh, Hall & Co., on the 8th instant, of inflammation of the stomach, ALEXANDER M. DINESS, of St. Petersburg, aged 26 years.

Notes of the Week.

THE *Hiogo News* seems hopelessly confused about the reversal by Sir Edmund Hornby of Mr. Acting Consul Annesley's late decision in the case of Messrs. Heimann and Valentine. It peeped about Mr. Annesley's huge legs to find itself a dishonourable grave and supported his decision—a decision, be it remembered, against which the very instinct of every Englishman must have rebelled. Bishops are said to be gratified by a dropping-down-deadness of manner in curates who appear before them, and Mr. Annesley seems to have imagined that his playful unpunctualities would be regarded as gracious gambols by the gentlemen whose assistance as assessors the law permitted him to request. But from this dream he has been rudely awakened, first, by their protest, and second, by the reversal of his decision in their case.

As regards the course taken by the Chief Judge, which the *Hiogo News* fails to understand, it is explainable by the fact that the decisions in all cases given in courts under his appellate jurisdiction come under his revision, and it is open to him to reverse them even without an appeal being made to him. Any glaring perversion of justice meets with this fate, and hence Sir Edmund Hornby's action. The Cousens case was one of assault. It was punished, in our opinion, with wholly unncessary severity, and Sir Edmund Hornby's ungracious reply to the memorial on the subject sent to him from this community will not have been forgotten here. But this was a mere question of taste, while the decision was doubtless strictly legal. For Mr. Annesley's decision, as we have elsewhere remarked, there was not a shadow of law, and this is precisely what constituted the enormity of the affair.

THE *Invalide Russe* says that England, having failed to involve Japan in a war with China is now trying to humil.. te the Mikado by refusing to withdraw his garrison from Yokohama? So far from this being true, the fact is that English opinion has been very much opposed to those steps which threatened to bring on war between Japan and China; that the good offices of the British Minister at Peking were exercised to prevent this war and did prevent it; and that the Japanese Government has made no demand for the withdrawal of the British troops from Yokohama.

The same journal says that England is annoyed to think that Japan is fast becoming a naval power! Is this said seriously? Certainly, if only said in joke, the wit is poor enough. Our own earnest shall be more to the mark. Is it not Russia rather than England which has reason to regret the increase of the naval force of Japan? The passage between Saghalien to Yezo is not very broad, and the lower island is somewhat of a Naboth's vineyard to those inhabiting the next plot of land. Why should England fear the increase of the Japanese navy? But eight or ten ships of war would make the passage between Saghalien and Yezo a hot one. It is curious to remember that when Ahab wanted Naboth's Vineyard, the first thing Jezabel did was to send for false witnesses.

IN Yedo there is little stirring this week, the New Year's rejoicings not yet being fairly terminated. A review of about four thousand men was held on Thursday by the Mikado on the Parade before the Gaimusho, the manœuvres, which were of the simplest character, being directed by H.I.H. Prince Fushimi. His Majesty arrived in an open carriage which he continued to occupy throughout the spectacle. His suite occupied five other vehicles. The movements comprised an advance in line, and the usual march past. Very few Europeans were present, and not many Japanese.

WE regret to have to announce the death from small-pox of Mr. Johnson, one of the teachers of the English Department of the Gai Koku Go Gakko (School of Foreign languages). Mr. Johnson had rallied and his recovery was fully expected, but he had a relapse yesterday and expired last night.

TWENTY cases of small-pox are reported among the foreigners residing in Yedo. Seven of these, we regret to learn, have ended fatally, two Eurasian children being comprised among the sufferers. Mr. Francis, an employé of a steamship company, has also succumbed to the disease.

YESTERDAY the Spring term of the Imperial College began, on which occasion the Yigo-Gakko, a section created from the former English Department of the Go Gakko was inaugurated. The teachers of the new Department being assembled were entertained at luncheon by Mr. Tanaka, Vice Minister of Education, who was accompanied by Dr. Murray, after which Mr. Hida proposed the healths of the teachers, to which in the absence of Mr. Weiller, Mr. F. Bevill replied on behalf of those engaged in the Yigo Gakko, Mr. Pigeon and Mr. Witkowsky for the Go Gakko, the latter concluding by proposing the healths of Messrs. Tanaka, Hatakáyama, Dr. Murray, and Mr. Hida.

Dr. Murray in acknowledging the compliment, observed that he had but recently returned from a trip into the interior of of the country where he had inspected the various existing schools, and desired to express his great gratification at finding that not only had great progress been made by the scholars, but that the desire for the means of education was eager, and that all classes manifested the keenest anxiety to receive the benefits of foreign tuition. This was specially observable in the purely Japanese seminaries, where, as yet, no foreign language is taught, but where through the instrumentality of young men, who had formerly been eagerly availed of there as teachers, Western ideas, Western habits, Western thought and Western modes of education—especially as regarded arithmetic—were being rapidly introduced. And not alone over the schools with which they had thus become connected did these teachers exercise a wholesome influence, but other teachers of local schools, conducted on the old system, who had not shared the benefits of normal training, flocked to them in crowds to receive from them instruction in the Western

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

acknowledged and sought to turn to account in their own schools. The geographical charts which had been prepared by direction of the Monbusho, and other educational works were sought with avidity by the people of the country, and indeed, in his opinion, their desire for education far exceeded the facilities which the Government had as yet found at its disposal. He would ask the teachers to bear in mind that they not only thus exercised influence over the scholars now under their tuition, but through them possessed vast future influence on the educational and therefore national progress of the Empire of Japan. By their efforts the educational principles of the Western world, with their resultant benefits and blessings, might rapidly be spread throughout its length and breadth. He thanked them for their past exertions in the laborious field wherein they were engaged, and trusted they would devote their energies anew towards securing this happy end as soon as might be.

Mr. Tanaka (who replied in Japanese) expressed himself intensely pleased with the favourable reports which came to him from all parts of the country in regard to the progress of Education. As we had just entered on a New Year, so had Japan entered upon a new era of her existence; and as to the sad winter months would quickly succeed the tender green and beauteous flowers of Spring, so to the receding Past would succeed a period irradiated by quick-spreading general enlightenment of the people, making this beautiful Empire more happy and more glorious.

Mr. Hatakayama, in responding, remarked that he had accompanied Dr. Murray in his excursion, and fully concurred with all that he had said. He was gratified to find that the cause of education in the country had progressed far more rapidly than either the Monbusho or he himself had anticipated. He thanked the foreign teachers for their efforts, which he begged them to continue.

Mr. Hida, in reply, considered that education in Japan was simply an affair of time, but it should go on quietly. Before, however, there could be education there must be good schoolhouses, of which the Go Gakko stood much in need.

The Chinese Professor recited a New Year's poem, which was written on vermillion paper, eulogistic of everything and everybody, and the proceedings terminated.

THE bleat of applause with which the last statement of the Hongkong and Shanghai Bank directors was met by the assembled shareholders has found a curiously gruff echo in London. The shareholders there roundly express their "grievous disappointment at the position of the Bank." And they are right. The last report disclosed a most shameful amount of bad management, which has received far less attention than it deserved at the hands of the Press in China. The time is now past when we should do any service by taking up the matter, but there is one question we should extremely like to see answered on official authority. The report said that some of the Yokohama exchange operations of last year, which promised well, were frustrated by an unusual and unexpected issue of Japanese paper currency. We have taken some pains to enquire into this and cannot find the slightest justification for the statement. No such issue is traceable, and until we have sufficient evidence to substantiate the statement, we shall continue to regard it as entirely without foundation.

THE annual meeting of the Amateur Athletic Association was held last night at the Public Hall for the purpose of submitting the report and accounts of the past year to its members. The Chair was taken by Capt. Hill, R. M. The report recapitulated the fortunes of the Society during the closing year and terminates with the following announcement which cannot fail to satisfy its well wishers.

Accounts of receipts and expenditure are attached to this report, and show a balance in favour of the association of $110.49. Your Committee started on their duties with the Association considerably in debt; they can therefore congratulate the members on the flourishing state of the finances, as it must be borne in mind that none of the subscriptions for this year have been collected; and as the association now numbers 60 active and 28 honorary members, a farther sum of $500 is at disposal of the incoming Committee.

Some discussion took place on the [illegible] modifications in the regulations of the Association, [illegible]ings were closed by the election of a new Committee to serve for the forthcoming year and consisting of Messrs. Hungerford, Reid, Tripp, Longford and A. H. Dare.

A Japanese is about to start an English newspaper in Yedo

(From the Japan Mail Daily Advertiser.)

New Year's day was celebrated in Yede with the usual, perhaps more than the usual, rejoicing, and we may hope that the splendid weather under which 1875 was ushered in will be of good augury for Japan and all connected with it. H. M. The Mikado received the Cabinet at a very early hour and the Foreign Ministers at half-past nine. The Heads of the various Departments received the visits of the subordinate officials throughout the day.

The city was gaily decorated with flags and the large number of soldiers abroad in the streets gave colour and animation to the crowd.

A Court of Enquiry into the circumstances attending the loss of the *Japan* began its investigation on the 24th instant at Hongkong. Copious evidence has been given by Captain Warsaw and his officers.

President Grant's message proposes the following mode of dealing with the indemnity paid to the United States by this country.

"I submit the propriety of applying the increase of a part, if not the whole, of this fund to the education in the Japanese language of a number of young men, to be under obligations to serve the Government for a specified time as interpreters at the legation and consulates in Japan. A limited number of Japanese youths might at the same time be educated in our vernacular, and mutual benefit would result to both governments."

The importance of having our own citizens competent and familiar with the language of Japan to act as interpreters and in other capacities connected with the legation and consulates in that country cannot readily be overestimated.

THE Agent of the P. & O. Company informs us that the firing of the 12 o'clock gun from the Tiptree will be resumed. The signal will be the same as before.

NEWS has been received that the S. S. *Berlin*, an iron steamer which for some years past has been running under native management between Osaka, Hiogo, and certain ports in the Inland Sea, was completely destroyed by fire on the 24th ultimo. The scene of the disaster is in the vicinity of Onoichi. All the crew and passengers are reported to have been lost. The accident is supposed to have been occasioned through the catching fire of a paper lantern.—*Hiogo News.*

THE P. & O. steamer *Bombay* with the London mails to the 27th November, left Hongkong for this port on Wednesday afternoon, the 6th instant, at 3 o'clock p.m.

ACTING under instruction from Sir Edmond Hornby Mr. Acting Consul Annesley has written to Messrs. Heimann and Valantine returning the fine and fees levied in a recent case of contempt of court brought against them, and apologizing in his mistaken views of the law in the case.

An extract from the *Hiogo News*, which we publish elsewhere, appears to us to exhibit a complete missapprehension of the bearing of the two cases.

THE annual meeting of the Yokohama Rifle Association was held at the Y. U. Club yesterday afternoon, Mr. Benson being voted to the chair. The report and accounts were read and passed, and a new committee, consisting of Capt. Hill, R.M., and Messrs. Tripp, Benson, Townley and Dalliston, were elected to serve during the ensuing year: The Hon. Sec., Mr. A. Barnard, then tendered his resignation consequent on his approaching departure from Yokohama. A warm vote of thanks to Mr. Barnard for his valuable and efficient services as Hon. Sec., which extend over some years, was unanimously passed, and that gentleman was elected an honorary member of the Association for life. The meeting then dissolved.—*Herald.*

SMALL pox, thanks to the want of a compulsory system of vaccination, is again prevalent in the native town, and a foreigner resident upon the Concession is, we regret to learn, suffering from this terrible scourge. Those persons who have not been vaccinated within the last few years will do well to submit to the, in most cases, trifling inconvenience which it entails, as, small as the proportion of fatal cases of small pox is amongst those who have been once vaccinated, that of those who have a second time undergone the operation is even very much less. And if this double precaution is proved to be advisable in England, where people are prohibited by a stringent statute from exposing themselves or those under their control, whilst suffering from this malady, to the chance of conveying the contagion to others, how much more must it be necessary in a country like this, where every one appears to be at liberty to ride in any public conveyance, or to walk through the most crowded thoroughfares, in any stage of the disease, without let or hindrance from the authorities.—*Hiogo News.*

THE LOSS OF THE *JAPAN*.

(China Mail.)

The following was issued as an extra from our office yesterday afternoon.

This afternoon the S. S. *Yesso*, Captain Ashton, arrived from Swatow, bringing the Captain, and 1 cabin passenger, 29 Europeans of the crew, 60 Chinese of the crew, and 34 Chinese passengers, saved from the burning of the *Japan*. The following is the

STATEMENT OF CAPTAIN E. R. WARSAW, late Commander of that vessel:—

"The P. M. S. S. Company's steamer *Japan*, 5,351 $\frac{22}{100}$ tons, E. R. Warsaw, Commander, left San Francisco on Saturday, November 14th, 1874, at noon, with 24 cabin passengers, 5 Europeans steerage, 8 Japanese, 422 Chinese, 975 tons of cargo, 168 boxes treasure value $358,508, 21 packages mails; had pleasant weather with variable winds during the passage to Yokohama; arrived Dec. 10th, at 10 a.m., landed 22 cabin passengers, 4 Europeans steerage, 8 Japanese, 400 tons cargo, 16 packages mails. Received on board 1 European steerage passenger, 3 Chinese, 45 tons cargo, 600 tons coal, 1 bag mails, stores, &c. Sailed from Yokohama, Dec. 11th, at 4 p.m. for Hongkong. Experienced pleasant weather up to noon Dec. 17th when the wind freshened into a strong breeze from N.E. with rough sea. At 9 p.m. passed Lamock light distant 5 miles, ship under sail and steam. At 11.25 p.m. Breaker Point bearing West ½ South distant 26 miles. Strong N. E. monsoon with rough sea. Fire first discovered engines stopped, ship headed in shore, ventilators turned from wind, all fire engines working in perfect order, every effort made to subdue the fire, at same time officers detailed to swing all boats preparatory to saving life. All efforts to save the mails proved useless. Finding it impossible to subdue the fire, abandoned the ship with last boat at 1 o'clock a.m., December 18th, the ship then being enveloped in flames amidships, directly in engine and fire rooms, all communication being cut off between forward and aft part of the steamer. Remained until noon in the vicinity of the wreck, saving life. Engaged a fishing junk to assist. Cruised in the vicinity of the wreck, and succeeded in saving 117 souls from boats and water. Seeing no more life stood in for Cape Chi point. At 6.30 p.m. intercepted English steamer *Yottung*, Captain Kock, who kindly took us on board, and conveyed us to Swatow: thence transferred to steamer *Yesso* for Hongkong. I beg to to convey on behalf of my officers, crew, and self, our sincere thanks to English and American Consuls at Swatow, Captain Kock, and officers of steamer *Yottung*, and Captain Ashton and officers of the steamer *Yesso*, for their kindness is rendering every possible assistance.

(Signed) E. R. W

AMERICAN DISPOSAL OF THE SHIMONOSEKI INDEMNITY.

IT is not very long since the American residents in this country—chiefly those, we think, who are engaged in the Educational Department of this Government—transmitted a memorial to Congress on the subject of the share of the Shimonoseki Indemnity to which America became entitled by the arrangement made between the four Powers to whom it was paid or due. We are not aware that any copy of this Memorial was ever published, nor do we know the exact terms of the request contained, or the recommendations made, in it, regarding the disposal of this sum of money. But it is generally supposed that the Memorialists urged that it should be placed in some form of trust, and administered jointly by Americans and Japanese for the furtherance of national education in Japan. If this proposal was praiseworthy, it was also natural. Its root lay in a conviction that America had no moral right to the share of the Indemnity claimed by Mr. BIGLOW in Paris, where the negotiations on the subject took place, and that, as the actual damage done to American property had been paid for, and the expenses to which America was put to join the Shimonoseki squadron amounted only to $30,000, it was monstrous that Japan should have to pay her $750,000. The matter to be settled with the PRINCE of CHOSHIU demanded, not the passive appearance of a chartered steamer bearing the American or any other flag, one gun and a dozen marines, but a large and effective naval force, to which England contributed seven ships and over three thousand men. In other words, she had nearly double as much force and therefore was put to nearly twice as much expense, as the three other Powers united. After the amount of Indemnity had been agreed upon, the question of its division had to be settled. France, always delicate in money matters, was of opinion that it should be divided rateably according to the expenses incurred. But America urged that the co-operation of her flag entitled her to an equal share with the other Powers, and claimed her fourth on this ground. To this England and the other Powers assented. But the conscience of the Americans is far more delicate than that of their governing class, and there was not one in this country who did not feel that the nation had no right to the money. Hence their memorial.

The Cabinet of General GRANT has once or twice submitted to the consideration of Congress the release of the Japanese Government from the remaining instalment of the Indemnity which was paid during the year just closed. But Congress took no action in the matter, and Mr. BINGHAM remitted to his Government this year $392,500 on this account. We may state, in passing, that the amount received by England as her share of this instalment was only $322,500, because she accepted a share of the Indemnity on which a first charge for actual damage done to the vessels of other nationalities in the Straits of Shimonoseki had already been made. The fact is a trifle, but it belongs to the history of the affair.

When the last report to Congress was made on the subject, the amount to the credit of the Indemnity Fund in the U. S. Treasury amounted, principal and interest together, to about $800,000 (we have not the precise figures at hand.) This added to the $392,500 makes about $1,200,000, or, say, £250,000 of English money, which, at 5 per cent. interest, represents an income of £12,500 a year.

But let us suppose that the memorialists only referred to the accumulated interest of the money received in 1874 and to that received during 1874. This would amount to between five and six hundred thousand dollars—let us say $550,000. This, capitalized, and charged with interest at 5 per cent—a low rate in the States—would give nearly £6,000 a year.

General GRANT's suggestion for the disposal of this money is as follows :—

"I submit the propriety of applying the increase of a part if not the whole of this fund to the education in the Japanese language of a number of young men to be under obligation to serve the Government for a specified time as interpreters at the Legation and Consulates in Japan. A limited number of Japanese youths might at the same time be educated in our vernacular and mutual benefit would result to our Governments."

In other words, money which even the American Government feels that it cannot place with a good conscience into the public Treasury, and which every American in this country feels ought to be devoted to purely Japanese purposes, is to be used to defray an expense which ought to fall upon the nation just as much as the President's allowance does!

Now, we shall so far presume on the sense of right possessed by the Americans in this country—and we may fairly do so in view of their own memorial—to say that this proposal is one of altogether incredible meanness and baseness. If, however, they refuse their support to us in saying this, we must take leave to say it for ourselves. We think that nations should not do what individuals would not do, and certainly no decent man would do this. Try for a moment to imagine anyone speaking to his neighbour in the following fashion. "My good friend, some years ago difficulties arose between you and myself about a matter in which three of my other neighbours sided with me against you. We were put to heavy expense by your course of action, and for this you indemnified us. I am much a man of peace, and am bound to tell you that I did little towards the coercive measures taken by my friends. More than this, I generally disapprove of such measures, and am perpetually urging my friends on the other side to be more persuasive and less violent. You ask, "why then do you claim a fourth share of the sum extorted from me"? My answer is that it would be affectation in me to stand alone in magnanimous isolation. We are bound to act together. You see, you do not pay more because they receive less. As you agreed to pay a certain sum for your offence, the money I claim comes out of their pockets, not out of yours. Comfort yourself on this score. The money is no consideration to me. But I cannot stand alone and *must* take it. Be so good as to observe my blushes. Besides—to tell the honest truth—my balance at my banker's just now is deplorably low. But do not imagine I am without a conscience. I have some growing boys and so have you. They must be educated, and we may just as well learn each others' ways. I have not the slightest right to the money which, to speak frankly, has undoubtedly come out of your pocket. I acknowledge it fully. But I will keep it for the education of my boys in your ways, and will make you an allowance for teaching your boys some of our ways. The amount at my disposal is large and we shall be mutually benefited. What! you think I ought to pay for the education of my own boys? Unreasonable person! Am I not going to teach them some of your ways? And am I not willing to pay something towards the education of your boys in our ways? There will be a large balance over? Of course there will, but some one must have this, if only to pay for the custody of

Digitized by Google UNIVERSITY OF CALIFORNIA

it, and I may just as well have it as you. You must be reasonable, and, above all things, just."

The despoiled man would most probably rejoin—"Monster of perfidy and hypocrisy! You acknowledge that you have no right to the money. Your own sons, knowing this, have begged you to restore it, so that no curse may fall on them. They, at least, have no wish to finger any one of these forty pieces of silver. And, now, you presume to come to me with a proposal to pay your own school-bills with it and to dole out something towards the education of my boys, after you have done which you will keep a handsome balance at your banker's for your wife's pin-money. I was told that you Christians had a better moral code than we pagans: but, by the Lord above us! it is little our custom to call rotten things by fine names, and we call this stealing. You keep money that does not belong to you, and propose to serve a quarter of it out in primers and manuals of moral philosophy to your brats and my boys! Never!"

And, now, good apothecary, an ounce of civet!

THE CONSULAR COURT AT KOBE.

ACTING under instructions from Sir EDMUND HORNBY, Mr. Acting Consul ANNESLEY has written to Messrs. HEIMANN and VALENTINE, returning the fine and fees in which he cast them on a charge of contempt of court, and apologising for his mistaken view and course of action in the case.

We should not have added a word to this statement of fact—for we have no wish to give Mr. ANNESLEY unnecessary pain—had he shewn, during the prosecution he was so ill-judged as to institute against these two gentlemen, the slightest consideration for their feelings or the feeblest perception of his own relations to them. But he did neither. His language and demeanour towards them were overbearing and offensive in a high degree; he entirely forgot himself as a gentleman; and, having mistaken an explosion of mere personal touchiness for a righteous jealousy of the Law, embodied and insulted in his own person, he invoked its presence and employed its arm to redress an imaginary injury, and to assuage the pain which the slightest self-knowledge would at once have traced to wounded vanity. The genii, however, whom he invoked has torn him to pieces, and he may now, with entire propriety exclaim in the penitential words of the psalmist "Our bones lie scattered over the pit's mouth, like as when one heweth wood upon the earth."

Apart from the question whether a consul has the power to commit for contempt of court,—which we largely doubt—it is not easy to imagine greater and more deplorable confusion of thought than that to which Mr. ANNESLEY's conduct may be traced. It is perhaps not quite so bad as that of an abject who half pleaded that Mr. ANNESLEY, being the nephew of an Irish peer, must be considered entitled to use languge such as he did use in court towards the defendants in the case. But with this exception—which was, as the 'Berliner im Schwarzwald' said the other night, "*reine, blosse, blanke, pure*" idiocy—we have no experience of anything like the mental condition which prompted Mr. ANNESLEY's course of action. The theory of course is that when a man is made a consul or acting-consul, he should summon such good sense as he may possess to guard him carefully against falling into mistakes which it is impossible for him to make without bringing Her Majesty's commission into contempt. Inverting this excellent theory, Mr. ANNESLEY did precisely the opposite, and tried his best to make the office with which he must be identified, so long as holds it, an object of ridicule and a cause of offence.

The Assessors, whose advice and assistance the law bids him seek, but cannot compel them to give, act with him in cases such as that which led to Mr. ANNESLEY's deplorable error, and every consul of experience fully recognizes the value of such assistance. Men of extraordinary gifts and insight may be able to dispense with it; but it is only men of extraordinary deficiencies who contemn it. Instead of treating the gentlemen who voluntarily rendered him these services with that courtesy of which punctuality to appointments is an essential feature, Mr. ANNESLEY in several instances grossly abused his claim on their time, dragged them up before him on a charge of contempt of court because they remonstrated against this impertinent unpunctuality, rated them when before him in language fit only for an angry cook to use to a scullery maid, and fined them to the utmost extent permitted by the clause in the Order in Council which provides for the punishment of violent, threatening and abusive conduct in court. There was not only no shadow of law for the decision, but the Assessors were quite right in remonstrating against the Acting-Consul's unpunctualities. Indeed, they would have neglected their own duties had they done less,—duties owed to themselves and their fellow British subjects Men are not unwilling to give their time to the discharge of public business, provided they are fairly met half-way by those who regulate the machinery which demands such attention. But they will refuse to give services involving not only an expenditure, but a waste, of time. They regard with respect the authority and position of their Consuls; but they laugh at their airs. A people claiming preeminence in the gift of common sense has agreed to call its officials public *servants*, and it is alike a tribute to the honourable nature of their employment, and to that healthy and well-regulated ambition which animates our civil service, that its members, who count among them thousands of men of good birth, high education and great accomplishments, are content to live and die on moderate and even narrow means, provided they can earn the epithets of 'able, honest and hardworking.' The yare little known beyond the immediate sphere of their work, and if they do not fill the world with their fame, they generally have wit or good sense enough to avoid such silly blunders as that which has just distinguished Mr. ANNESLEY. The explosion of a righteous anger may, under certain circumstances, extort respect, while nothing but contempt is excited by the exhibition of trumpery passions.

FU SO MIMI BUKURO.

A BUDGET OF JAPANESE NOTES.

SUPERSTITIONS.

A full description of the superstitions of any nation involves no easy task, and the delineation of those of such a nation as this, in such a manner as to enable the reader to realize their hold over the native mind, is more than we can expect to accomplish. In giving a sketch of some of the most common, we are only selecting exemplars from a thousand forms that are either local, temporary or of but slight consideration. An instructive and amusing essay on this subject might be written, which would throw no little light on the real depth of the religious feeling of the Japanese and of their capacity for entertaining a higher form of faith than any they now possess. There is a large class of young students growing up who sneer at any thing and everything native; but the great

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

majority still resort, as did their ancestors, to all kinds of charms, prayers, incantations, amulets &c. to bring good luck, or ward off evil. In Shintooism, as we term it, there is but little room for superstition or ghost-stories, so that we are thrown upon the conclusion that the Buddhist priesthood are more or less the supporters of the gross follies which, in the form of superstitions, exist among all classes in this country.

Fortune-telling is much practised, and two forms of it are so common that they deserve a few words.

Omanai-sangi, is practised with six pieces of hard wood marked in a prescribed manner; then with fifty-one pieces of bamboo like knitting-needles, of which one is laid down. The incantation is recited, the fifty are divided at random into two lots, one for each hand, these are then counted out into lots of eight each, and the odd ones left determine the order in which the sticks are to be placed. This is repeated twice, and the third time the standing needles *(medoji)* are counted out six at a time. The means by which the solution is ultimately arrived at is extremely complicated.

If a person, going to visit a sick friend or on other business, determines that the first word he hears accidentally, of conversation between any strangers he meets coming towords him in the direction in which he is going, are to be omens of the friend's recovery or death, or of the success of the business, this method is called *tsujii-oura*.

Another kind of *tsujii-oura* is to have mottoes rolled up in pastry, in little bags of comfits, sugared peas or such sweet stuff, not unlike our style of bon-bon and cracker mottoes.

Girls try to divine the future by dropping a long hair pin from their head into the matting, and counting from the end of the pin, yes or no, yes—no, alternately, like Göthe's Margarethe as she pulls the leaves of the flower.

In building houses the lucky plan is to have the door to the South-East; the fire-proof store-room on the North-East; and the closets on the South-West,—the kitchen along side of the store-room. There are, of course, ways by which the necessity for this may be explained away when it is not convenient that the house should be thus built.

The best position for the *kamidana* (shelf for the gods)—the household Buddhist altar;—where to place a temple to Inari Sama;—on what day to send the bride home;—when to set out on a journey, and so on, all have special rules to be observed, so that ill fortune may be avoided and success and prosperity ensured.

Physiognomy and palmistry are universally practised. These could not be described here without elaborate plates and explanations, but they could not be omitted from these notes. Launcelot Gobbo's "line of life" and "small trifle of wives," thus find their counterpart in Japan.

A box containing one hundred slips of bamboo, all numbered, is well shaken, and from a small hole in one end, one of the slips is shaken out. The number on this corresponds with the number of a paper on which the drawer's fate is written, often, it must be confessed, in the most ambiguous language.

Spirit-rapping in Japan has usually been practised by women. Their stock-in-trade consists of a small box (supposed to contain some mystery only known to the craft) of somewhat less than a foot square. It is said that, in the south, a dog is buried alive, the head only being left above ground, and food is then put almost within its reach, exposing it thus to the cruel fate of Tantalus. When in the greatest agony and near death, the head is chopped off and put in a box. To return, however. Only the craft know what the box really contains. The medium has also a small bow made of soft wood called *adzusa*, the string of which she twangs incessantly on the box, and a small cup of water placed in front of her, which is at the same time splashed out towards the enquirer. If the person to be 'interviewed' is living, a small piece of stick is used, and if a departed friend is to be summoned, a leaf from a grave-yard offering called *shikimi* is employed to splash the water out of the cup. The only question asked by the medium is whether the enquirer wishes to raise the dead or the living. Then after a half prayer, half incantation, the spirit commences to speak through the medium. The mediums may be recognized by their invariably carrying, while out of doors, a small bundle of a peculiar shape, and also a light bark hat either on the head or in the hand.

Prayers for health or success in one's plans, for good fortune and so on, either by the priest of some *miya (kan-nushi)*, or the Buddhist priest of some shrine or temple, are still common, and innumerable as to form, place, and occasion.

Pilgrimages to Shintô and Buddhist shrines, from whence amulets, always exposed for sale there, are brought back, are very common. Such pilgrimages are made to numerous places, and every district has its own special place of resort, frequented by the devout or covetous. The places most generally visited by pilgrims from all the provinces and islands of Japan are Fuji, Ise Dai Jin Gu, Sanuki Kompira, Musashi Suii Ten Gu in Yedo, Aki Miyajima, Shinano Zen kô jie, each of which places will find mention elsewhere.

Men generally wear an amulet from Isé, besides those o local or special favourite shrines—the *bettoes'* (grooms) and servants' being suspended by a string round the neck. But gentlemen are ashamed of doing this and conceal them in some part of their dress, or in their tobacco-pouches and purses. Women carry their amulets in a girdle specially made for the purpose and with which they never part for an instant except in the bath-house. Night and day it is on or near their persons. The most common amongst numerous others which swell the bundle to the dimensions of a good old-fashioned lady's bustle are the *Kannon*, to give them ability and good fortune through life:—the *Gozo*, to bestow the gift of children and enable them to rear them;—the *Suii Tengu*, to save them from drowning and other harm, and, if choking, to swallow the paper of the amulet is a certain cure;—the figure of *Nichiren* and of *Kôbôdaishi*, to carry them to paradise;—*Sei sh ko*, for good luck;—*Benten*, for the gift of beauty, accomplishments and attractiveness to their lovers; *No se no Kuro fuda*, to save them from the wiles of the *kitsune* (fox); *Chiriu Gongen*—of San Shiu—to protect them from snakes, the greatest aversion of the Japanese woman;—*Aizen*, to cause her children to be loveable, and a host of others, local or selected for some special gift or power. Girls when very young have some of these suspended from the girdle in a small square pouch, Space does not admit of our enlarging further on this subject at present.

Ghosts and ghost-stories are innumerable and generally believed in. The greatest and most generally known Yedo ghost-story is that of Kohada Kohejie, an actor of the last century. His wife was unfaithful to him, and she and her lover wished to be rid of her husband. The lover took advantage of Kohada being on a tour in a provincial town, murdered him and returned to Yedo, to discover, however, that the ghost of his victim had preceded him; the ultimate consequence of Kohada haunting the guilty couple being, of course, the discovery of the crime.

An older tale than the foregoing is told of Oiewa, the wife of Tameya Iyemon of Yotzuya. Iyemon fell in love with his neighbour's daughter who was as beautiful as she was frail and criminal. By administering a potion which destroys beauty, and makes wives repulsive to their husbands, she contrived to disfigure Oiewa. Iyemon then treated his wife harshly and neglected her entirely now that she had ceased to attract and charm him. She bore him a child, but, after its birth, she became a maniac and destroyed it by biting its throat and died raving mad. Her ghost haunted the guilty pair, and killed the girl in the same way as Oiewa had killed her own child.

SPIRIT OF THE JAPANESE PRESS.

A House of Commons.

I must inform the public of a fact of great importance, which is, that if a House of Commons is to be constituted, the laws it passes will produce a necessary conformity in the acts of the people. This is something we have not yet had, and it is very different from the effects produced by the oppression to which we have been accustomed from ancient times. It will be a great improvement for the people; but they will no longer have the power of doing just what they please as it may please them to do it. But I shall be asked, why not then leave them as they are? My answer is, certainly not, because if we look into the actual proceedings of the people we find them pursuing their customs of marriage, the adoption of children, the lending and borrowing of money, the transfer of securities, the despatch and delivery of goods, and so on, without the exchange of formal contracts, and, even when this is observed, they are illegal because they repose upon no law. There are some villages in the interior which have their own regulations, made in conformity with the minds of the people there. There are men among them of sufficient common sense to know that these regulations are absurd, but as the majority think exactly the reverse, the few are unable to speak against them. It sometimes happens that some of these villagers are arrested and punished for certain actions which are condemned by the regulations of the majority, but they are puzzled to know in what they have offended and why they should be punished. Deplorable events like this occur every day, so that the passing of good laws is a matter of the greatest importance.

Some of our learned men have brought over laws from France and America, and are unjustly trying to make these the laws of Japan. But as these are all taken from foreign books and have no application to the people and customs of this country, they are perfectly useless to us. Some of my countrymen who have been abroad in Europe and America speak with great pride of what they know about these civilized states. But as we may rely that they have only seen the outside of these states and know nothing of the inside, we cannot depend on their teachings. Our task it to make the people obey laws which are the offspring of their own minds, and this can only be done through the means of a House of Commons. The Representatives may elect a man from among themselves to write out these regulations, or choose him from where they will, and then they can assemble and pass the measure, which then becomes the law of the land. Such laws need not be difficult or perplexing; they should, indeed, be simple and only such as are necessary for the people. But as the national mind cannot take a determinate form all at once, we must not make such laws or regulations unalterable, but try them first just as experiments, and, if fault is found with them, the Representatives must again assemble, and should they come to the conclusion that a change must be made, it must be made but not as the Government changes laws and notifications viz, without cause or explanation. Even then, if fault should be found with it for the reason that it is against the sense of the people, and therefore would only be obeyed because it is law, and not because it thus conforms to the sense of the people, and if it should thus obstruct the rapid administration of justice, the Representatives must assemble again and again and amend it until no such fault can be found with it. This is the real duty of a House of Commons. Up to the present time we have not had laws made in conformity with the mind and wants of the people, and therefore important matters are often omitted and agreements are signed by people who are not aware of the injustice of that to which they have set their names. Among these future regulations will be the amount due from us as taxes, the sums appointed for the support of the Army and Navy, and so on. And as all these things will follow upon the establishment of a House of Commons, let us make haste and constitute it. *(Hochi Shimbun.)*

DESCRIPTION OF A TRIP TO NIIGATA ALONG THE SHINSHIU-ROAD AND BACK BY THE MIKUNI-PASS.

By J. A. Lindo, Esq.

Read before the Asiatic Society of Japan
18th November 1874.

(Continued from the "Japan Weekly Mail," No. 51.)

Between Okodz and Niigata the course of the river is generally speaking parallel to the sea coast at about 5 or 9 *ri* distance from it. This comparatively narrow strip of land between the river and the hills along the sea coast, is irrigated by the Nishikawa and the Naka no kuchikawa, whereas at this side there are no feeders of the Shinanogawa. There are many of them at the right side of the river, all proceeding from the hills which are at some distance from the right bank. The principal of these confluents are:—1, The Imamatshikawa, also called Karyada-kawa, coming from Nagaska, length about 8 *ri*, mouth at Wosaki; 2, The Igarassikawa, length about 8 *ri*, mouth at Sanjo; it discharges a good quantity of water; 3, The Kamokawa, coming from Takemura over a length of 4 *ri*, mouth at Kamosinden; 4, The Kuagagawa, connecting the Agakawa with the Shinano mouth at Sakayamatshi.

Owing to these additions the discharge of the Shinanogawa varies naturally between the points of confluence with the different tributaries. The following itinerary may prove interesting. To facilitate comparisons I have added the corresponding figures for the Rhine at the Netherlands frontiers:—

	Discharge per second in cubic feet.		
Name of River.	*Low Water.*	*Ordinary Circes.*	*High Water.*
Shinano at Okodz	9,000	15,000	170,000
Shinano at Niigata.....	12,000	22,000	200,000
Rhine in Netherlands Frontiers.....	47,000	86,000	396,000

In ordinary circumstances the water level is at Okodz 38 feet above the sea level; but the water has been known to rise there to 10 feet above this normal state.

The following are the principal places situated on the Shinano between Okodz and Niigata, beginning from upwards, we have:—

Sanjo (r)	distant	3	*Ri*	from Okodz.
Kosdo (r).....	„	5	„	Sanjo.
Lakayamatshi (r)..	„	2½	„	Kosdo.
Ono (e).....	„	2	„	Sakamatshi.
Niigata (e).....	„	3	„	Ono.
Okodz to Niigata..		15½	*Ri*	measured along the river.

They have in general a poor appearance; the chief industry consists in cotton weaving.

All along the Shinanogawa rice is caltivated, also, though in a lesser degree, corn, beans, *ai* plants (of which a kind of blue pigment is made, used in colouring dresses), cotton, rape-seed, etc. These latter articles are cultivated on higher parts of the ground, bordering the different rivers, while the interjacent lower parts are used as paddy-fields. Probably the higher situation of those parts which immediately border the river embankments, may be accounted for by the absence of embankments in previous years, when all the sediments which the river, when inundating its banks in high flood, carried along, settled nearest to those banks, while the more distant parts only received clear water.

Niigata is situated on the alluvial ground between the river mouth and a range of low sandy hills or downs, W. of it; it is regularly built and has a neat appearance; the population, it is said, amounts to 60,000. It is, or was, renowned for its beautiful "tea-houses," and princes from several parts of the country used to visit the place for the sole purpose of amusing themselves. Like Takada, the houses are provided with covered ways or verandahs, which offer an agreeable shelter, in winter against the snow, in summer against the burning sun. The lowest temperature occurs at the end of January or the beginning of February, the thermometer falling to—9° C. (15⅘° F.); the highest temperature in the shade, during the last days of July 1873, amounted to 33.5° C. (about 92° F.) When the weather is settled, in summer time

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

during the night always a land breeze blows, while daily at about 9 a.m., a sea breeze sets in. In winter N. and N. W. winds prevail, interrupted by storms from S.W. to N. W., when as soon as the wind changes to N. fine weather is re-established. I am indebted for the above data to Mr. Weber, who is a resident at Niigata and who makes daily meteorological observations.

To all appearances Niigata is splendidly situated for trade ; the Shinanogawa being almost the only high-way for goods-traffic in Echigo, all goods which now go by pack-horses overland from the staple-places of trade, would be sure to go to Niigata if only that place were provided with good harbour accommodation. The bar which now lies before the mouth of the river and which has this year even silted up in such a degree that only 5 feet of water remains in the channel, is the cause that the trade of Niigata has in the last few years almost entirely disappeared ; and there can be little doubt that the construction of suitable piers over the bar would prove, in every respect, a profitable undertaking. Echigo, is as the Japanese say, one of the richest provinces of Japan, boasting indeed of never having suffered by famine, while all other provinces have done so. The export trade from Niigata would certainly become important. The undernamed are the chief productions of this rich province :

Rice, throughout the province, but particularly at Suyebara.

Tea, at Muramatshi, Murakami and Midzu.

Ai (blue pigment), at Suyebara.

Copper, at Yashiko, Toish, Otani.

Coal, at Akatani

Petroleum, at Midzu, Kanaya, Garameki Kogutshi, Tatemura, Yoshimisu, Aida, Mishooji, &c.

At Midzu there is a jet of gas issuing from the ground, which is lighted to the general amusement of the visitors to a tea-house, built expressly for the purpose, on the spot.

Silk is cultivated at Goshen and Joshiu.

Hemp, at Chiujo and Manoshiro.

Moreover fish is much exported, of which in the first place, I mention salmon, which abounds in the Shinanogawa between Ono and Hesima ; and wooden clogs are exported by long files of pack-horses.

Besides the common fruits and crops a small kind of apple is grown in Echigo, which, if not plucked before being half-ripe according to Japanese custom, is very savoury and fragrant.

Following the coast N. E. of Niigata over a length of about 3 *ri* we come to another large river mouth, being that of the Agakawa. This river, though generally much wider than the Shinano, does not discharge such a large volume of water as the latter ; a good portion of its water flows from Sawa-umi, situated at about 4 *ri* from the mouth, through the Kuagawa into the Shinano. In former years the Agakawa had no separate mouth but flowed through what is now called the Sinkawa, parallel to the coast, to unite with the Shinano opposite Niigata, while both rivers flowed into the sea by one single mouth. The consequence was that, a much larger volume of water being discharged, the channel over the bar had always a sufficient depth for navigation, being in fact never less than 20 feet, as is reported. But probably in order to prevent inundations along the Agakawa, it was resolved upon 170 years ago, to lead its water directly to the sea, by cutting through the hills which border the sea-coast, near the place where the Agakawa bended to the S.W. to unite with the Shinano.

Echigo was divided between several princes (I believe there were 11 of them) ; to one of whom belonged the Shinanogawa-mouth, while the new Agakawa-mouth came into the possession of another. In order to prevent the trade of Niigata from being transferred to Matsugasaki, which lies at the mouth of the Agakawa, and of which fear existed (as, owing to the greater velocity of the current at the Agakawa-mouth, its depth would probably be greater than that of the Shinanogawa-mouth), a treaty was concluded between the two princes, in which it was stipulated that junks would never be allowed to load or unload at Matsugasaki, and would only be permitted to anchor in the Agakawa-mouth in case of bad weather. A guardhouse was built near the coast to watch the interests of Niigata, which was only removed last year, though the junks are not yet officially permitted to trade at Matsugasaki. This place is built against the slope and on the top of the downs ; it is a fishing-village of very poor and dilapidated appearance, but with its red-painted temple and large *torii*, projecting above the houses on the top of the hill, it is nicely situated, when looked at from the river. The trade along the Agakawa is by no means so important as that along the Shinano ; the river is navigable up to Tsugawa, twelve or thirteen *ri* from its mouth. The part of the river I visited, over a length of 3 *ri* upwards from the mouth, is very shallow, the greatest depth being for a great part not more than 2½ or 3 feet. But as the river is very broad, it could surely be made navigable for ships of 5 or 6 feet draught up to the mouth of the Kanagawa, and probably still higher up.

A great portion of the lands between the different rivers which run through this part of Echigo, is situated much below the ordinary level of the surrounding rivers, which causes every year great injury to the crops ; several lakes or pools of greater or lesser extent lie in this otherwise prosperous district, which might, when properly drained, add a considerable portion of paddyfield to the existing one. Much is to be done here in the course of time ; unfortunately money has hitherto been wanting.

A remarkable instance of Japanese engineering skill may be seen at Uchino, which is about 2½ *ri* S. of Niigata, between the Nishikawa and the sea, which are here close to each other. At this place a considerable area of the lands between the Shinano, Nakanokuchi and Nishikawa, and moreover the extensive lakes which are situated in this part, throw their superflous water into the sea, the water flowing on through several channels. The Hishikawa, serving for irrigation, for which purpose from distance to distance a dam is laid through its bed, its level is much higher than that of the lands around it ; so that the superfluous water coming from the low lying lands, has to pass underneath the bed of the Nishikawa. For this purpose a large wooden lock, shut at both sides by self-acting gates, is constructed ; there are 5 of these gateways adjoining each other ; each of them has a length of 210 feet, and 18 feet in width ; 4 of them have a height of 6 feet and one of 4 feet. Perhaps some more will be constructed, as after heavy rain-falls the locks prove not to be sufficiently large.

I believe I have now sketched the chief features of the lower part of the Shinanogawa valley, partly in connection with the commercial interests which adhere to it.

I will now give a description of the home-road which led over the *Mikuni-pass*. I reached Okodz on foot along the Nishikawa embankments, passing through a very prosperous district. From Okodz I went by boat up the Shinanogawa to Nagaoka, which is a distance of nearly 6 *ri*. About half way between those two places, and situated at 5 or 6 *cho* from the left bank of the river, is Yoïta, a very large, but poor-looking town, with a beautiful Honjin or Daimio's hotel. The river between Okodz and Nagaoka and down Okodz as far as the separating point of the Nakanokuchi, is very broad, but full of sandbanks and islands. About 1 *ri* upwards of Yoïta the sandbanks are covered with heavy gravel, which becomes larger and larger, until, before Nagaoka is arrived at, the pieces reach the size of pebblestones. Nagaoka 40 miles above Niigata is the most important place in Echigo ; it is renowned for its silk manufactures and is the staple-place of trade from Echigo overland to the South. It is not situated directly on the Shinanogawa, but its suburbs extend to it. Formerly it was the seat of a Daimio, who was Minister to the Taicoon ; afterwards it became the capital of the Nagaoka-ken, which was united last year with the Niigata-ken. The town is spaciously built with wide streets ; about the number of the inhabitants or of the houses I could not get any information, but judging from the extent of the place, it must be considerably greater than that of Niigata.

Here follow the distances of the different places along the Mikuni Road. I have added the height above the sea level, as I determined it by means of an aneroid-barometer, but these observations were very roughly made, as I had neither the time, nor the means of making them with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

accuracy; they may serve, however, to give a general contour of this part of the road.

Total distance between Niigata and Yedo along Mikuni Road.....	94	*Ri*	32	*Chô.*	

After leaving Nagaoka the road runs over a distance of 3 *ri* through tolerably flat land, the hills enclosing us at a distance from all sides, and the circle narrowing as we advance; afterwards, at Miokin, the road begins to ascend very steeply. Between Nagaoka and Miokin rice and corn are cultivated, and the country has generally a prosperous aspect; but the road is not wider than 10 or 12 feet, excepting some parts where it was in the course of being widened in an entirely unnecessary degree.

From Miokin the Shinanogawa-valley is followed along the slopes of the hills, in which the road is cut, having no more width than a footpath; two or three times, indeed, it passes under the straw pent-house of a coolie's tea-house, the outside uprights of which stand on the edge of the sleeply descending mountain slope. The valley is picturesque, the river winding its way in the depth between gravel and pebble-banks, and forming waterfalls everywhere.

At Kidzu, to which place the road ascends with a steep incline, (as may be seen in the above-mentioned itinerary) a small tea-house is situated on a beautiful spot, where ice-cold water is to be had from a deep well. From here to Kawakuchi is 1½ *ri*, at which place the Owedagawa flows into the Shinano; this Owedagawa is the principal right tributary to the Shinanogawa; it is navigable for small boats up to Muikamachi, at which place it alters its name in Owonogawa.

Kawakuchi is the first place along this road where silk-industry is again met with, and from here throughout the way till Takasaki, it seems to be the chief traffic of the population.

After crossing the Owedagawa at a little distance above Kawakuchi by means of a ferry-boat, a steep hill, called Tobisaki, is ascended; the slopes of this hill are grown with beautiful *sugi*-trees, and on the top are two very good tea-houses, from whence the road descends to Horinooji. This is a very prosperous looking and nice place with broad streets; it is situated at a little distance from the left Owedagawa bank; the valley is principally cultivated with rice; and the narrow road leads through the paddy-fields, and being unshaded and rugged, it is rather uncomfortable. But the Japanese were hard at work to improve it, every village having to provide the necessary coolies for the part of the road lying within its limits.

From distance to distance sets of about 20 or 30 people were met with, consisting of men, women and girls who were repairing the road by filling up the numerous gaps with the clay from the adjoining paddy-fields, burying under it the blocks of stone which now formed part of the rugged road, and widening it to about 9 to 12 feet. Besides the spade, every workman or woman was invariably provided with a fan, which gave them a very quaint aspect; to shelter against the burning sun, instead of being naked, they wore a kind of dress; commonly their legs were enwrapped with cotton and over their *kimonos* they wore the ordinary straw raincoats.

After leaving Horinooji, over a distance of 1½ *ri* the valley of a streamlet is followed, which is about parallel to the Owedagawa-valley, and throws its water into the Owedagawa near Horinooji after which the Tochiwaratoge is then ascended, the top of which is the boundary between the villages of Horinooji and Urasa, which latter is situated again in the valley of the Owedagawa, over which a fine view is to be had from the tea-house on the top of the hill. Ascending the hill the Owedagawa is then followed, along an easy, but always ascending, road to Seki. The whole district seems to be prosperous all the places are neat looking; the principal one being Muikamatshi, which may be called a town, and the chief trading-place of the district.

On this part of the road women again were engaged in carrying our luggage over the mountains. From Seki the Owedagawa, or Owonogawa, as it is called upwards of Muikamatshi, and in which delicious salmon is here found, is followed to Yusawa, where we leave it to our left, after having passed over a steep hill, on the top of which the tea house of Akasaka is situated. We travelled now in company with a long file of cattle, on its way to Yedo.

From Yusawa the road goes over the mountains, which form the boundary between the lands draining into the Owedagawa and those draining into the Kiodzugawa, another right tributary to the Shinanogawa,; the valley of the Kiodzugawa is reached at Mitsmatta, which is a lovely situated village. The Kiodzugawa, enclosed by the densily clothed mountains, rushes here with its clear blue ice-cold water over large blocks of stone, the white foam formed by the numerous water-falls, embellishing the light-blue water, and contrasting, as it does, with the dark hue of the old *sugi*-trees here bordering the road, gives an almost enchanting aspect to the scenery from the top of the hill, from where the road steeply descends into the valley. In many places the water turned off from the river and led through the gardens and through several of the houses, and hastening back along the streets on

Digitized by Google UNIVERSITY OF CALIFORNIA

its way to the river, sounds almost like music through the village. I think Mitsmatta is one of the most charming spots on the Mikani road. Leaving Mitsmatta the road becomes very bad, great sharp stone points issue everywhere, and the ascending of the steep inclines is very difficult. Before F'tai is reached two high hills have to be crossed, which are separated from each other by a deep valley. The road is here seen over all the length of the valley, winding zig-zag along the slope of the hills through the dense verdure; on the top of the second one a fine view is to be had over the village of F'tai, lying nearly 600 feet below. This village consists of one street only, with some 40 houses; it has, like Asakai, quite a modern aspect; for during the last war both places were durnt down by the Tycoon's troops, and are now being slowly rebuilt. From F'tai the road gradually ascends to a spot named Kiridos, where a narrow passage is cut through two hills, and from where it descend rapidly to the valley of the Yogawa, a left feeder of the Klodzu sawa, the last named river having been crossed at F'tai. This Yogawa-valley was seen from F'tai upwards, but the road remained at a considerable distance from the river, while it streams along the foot of the hills over which the road led, hid under the dense shrubs which cover the slopes, and only heard in the rushing sound of its water.

Very slowly ascending through the Yogawa-valley, through which the road is comparatively so low situated that it is often submerged, when after heavy rainfalls, the river is in high flood. Asakai is reached, where the properly named Mikuni-pass begins, which continues to Nangai, the total length between those places being 3 *ri* 16 *cho*.

At Asakai the road begins to ascend tolerably slowly to Taske-goya, from where it goes by zig-zag, and with heavy inclines to the small temple of Gogén, which is at the highest point. It is all over not broader than 6 feet, and as it winds up the mountains, now from one side, then from another, a superb view is to be had into the valley of the Yogawa from which we ascend. The mountain slopes are all covered with thickets, through which everywhere a patch is broken, uniting two branches of a zig-zag, and shortening the way considerably if made use of, which is only possible to unburdened travellers, who, moreover do not care for their clothes.

The small temple of Gogén at the highest point of the road, I found to be situated about 4,000 feet above the sea level. Here is the boundary of the three Provinces of Echigo, Joshiu and Shinano, and from the fact that those 3 Provinces unite here the mountain derives its name of *Mikuni* (3 countries). The temple is a small wooden building, and always closed; there is only a small hole in the door, through which however nothing is to be seen. A large wooden *torii* with an *ichitoro* on each side, is placed before the entrance; on this *torii*, the Japanese try their fortune in the usual way by attempting to throw small stones on the cross-beam. After all I had heard about the renowned temple on the top of this mountain, I was very much disappointed in seeing this wretched place.

Though the scenery N. of the Mikuni was superb, it cannot be called charming; it was in all too green; excepting a lovely white Japanese lily on the mountain-slopes, no flower was to be discovered; and in this respect I think the Shinshiu-road is to be preferred to the Mikuni road. Perhaps, however, it was the fault of the time of the year, and that in May blooming azalias and *fuji* flowers will give to this road an equally, if not more charming aspect than to the Shin shiu-road.

The road now enters the Province of Joshiu; the first resting place is a large but dirty tea house, at a place called Gogen-no-betto, the road alternately descending and ascending to nearly the same height as the Gogen-temple. The scenery is finer here than on the northside of the Mikuni top; many cascades, coming from the mountain slopes on one side, cross the road and fall into the deep valleys leading to the Tonegawa.

After Gogen-no-betto the road descends, to Nangai; it is broader and shaded by high trees; the mountain slopes are grown with the "Kojiwa" (a kind of low, knotty oak), with a tree which has some resemblance to a beech, and with a kind of w... tree, all rising amidst thickets and encircled by i...

Nangai was also destroyed during the war in 1868; from this place to F'see the valley of the Nishikawa is followed along its left bank to Kayabara, where it is crossed by a bridge. The Nishikawa is a right tributary to the Tonegawa; it has quite the aspect of a mountain stream, and viewed from the hills with its clear water, with wooden bridges of a particularly clever and quaint construction leading over it, the whole enclosed by hills covered with fresh verdure, it furnishes a pleasant sight. As far as can be seen the valley is moreover covered with villages.

Between F'see and Nakayama a new road has lately been opened, shortening the distance as it formerly was, by 1½ *ri*. But this part is certainly the most trying one of the whole road. The ascent of these hills is steep along the slopes of which it has been cut; at most places it is not broader than five or six feet, this width being sometimes obtained by trunks of trees, supported by props or by large stone-blocks against the descending mountain-slopes, and covered by branches of trees over which one has to go. It looks very dangerous, and I think will be wholly impracticable, and in many parts liable to be destroyed by heavy rainfalls. After the highest point has been attained, at a place called Kirigakubotoge, the road descends more slowly to the valley in which Nakayama is situated, being for a great part an uncultivated and solitary grassland with a tree scattered on it here and there, and with a gently undulating soil. Nakayama itself is a place of very poor appearance, quietly situated in the midst of the valley.

Leaving Nakayama the road gradually ascends for about 1 *ri*; the highest point is reached here between the Minami, and the Komochiyama, two grass-grown hills on both sides of the road, at a little distance from it; in clear weather Asama-yama is to be seen from this in an about S.W. direction. From here to Yokobori the road descends rapidly; about half way there is a splendid view between the mountains into the Tonegawa valley, and the whole silk-districts around Mayebashi. The road is for the greatest part not shaded, tolerably smooth, but steep. Yokobori consist of a row of houses on both sides of the street. One *ri* further on, at Kitamoku, the Agatsuma-gawa is crossed by a large wooden bridge; this river is another right feeder of the Tonegawa. After climbing the hill which rises here directly at the right bank of the river, for the last time, on the home road one of those beautiful views is to be had of the river valley and over the villages lying scattered in it, such as one often sees in the interior of Japan.

The road leads now through a very fertile district to the large town of Shibukawa, where for the first time from Niiguta *jinrikishas* were again met with; this town is situated at a little distance from the right Tonegawa bank, and about 3 *ri* from Mayebashi; it is an important trading town.

While from Shibukawa one road goes S. E. to Mayebashi, another goes generally ascending S., over Kaneko, to Takasaki. Almost uninterruptedly the road is on both sides lined with houses and very prosperous looking farms; the intervals being occupied by temporary small booths, in which fruits, such as *suikas, makuas*, pears and cucumbers are sold.

On this part of the road, women and girls were always industriously occupied in reeling off the silk cocoons; while the chief business of the men seemed to be sleeping; there was, at least, scarcely any house in which one or two were not laid stretched in the arms of Morpheus, while their wives and daughters were cheerfully at work.

At Kaneko is the finest *honjin* I have seen, but it now belongs to a silk-merchant; from this place to Takasaki the road slowly descends through the fields, and Takasaki itself, as it is seen from this side, stretching over a considerable extent with its castle walls and numerous white plastered buildings, projecting against the green hills, gives a pleasing impression.

Throughout both roads between Yedo and Niigata, in every place of importance, there was a house, belonging to the "Rikugun-kai" (an overland transport company), which is, as far as I could see, very well organised. Here we were provided with *jinrickshas, kagos*, pack-horses and coolies, after a fixed tariff, which differed slightly

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

according to circumstances, so, in the mountains it was a trifle higher than on the flat parts of the road.

A *jinrickisha* was paid for 1 "ishu" per *ri*; if with 2 coolies about 10 cents. In the mountains the weight which a man had to bear, was 7 quanine (about 57 pounds), he was paid for that 5.2 tempo per *ri*, if carrying more, his wages were increased in proportion. A *kago*, borne by two men, pays for 2½ men, as a compensation for wear and tear. On an average the Kai-offices were 3 or 4 *ri* apart; taking 3½ *ri*, a coolie's wage in the interior should be something between "*Sanshu*" and "*ich bu.*" Very often the Kai-offices were at the same time the municipal officers of the villages, with the "*Koshiduka*" (or official notice-board) before the entrance. The distances which separate the villages are measured from notice board to notice board.

By this company, all merchandise is despatched by pack-horses from office to office. The horses are often led by little girls; when arriving at the different stations the packages are at once taken from the horses, and thrown upon the ground, where they remain lying till fresh horses are ready to carry them to the next station; while the other horses immediately return.

In order to assemble the necessary number of coolies, in some of the villages, a kind of roll had to be beaten with a wooden hammer on a hollowed-out piece of wood, hanging in front of the Kai-office. This operation had often to be repeated 10 or 12 times before the required number arrived; they came on very slowly and drowsily, but after having weighed their load and prepared to start, they become jolly and good-humoured, and all over the way there is no end to their talking and laughing.

In general they are a very good-natured kind of people, and though "uncivilized," as some call them, I think many of our own civilized races in Europe might take them as an example for their kind and polite manners towards each other; I remember a young coolie inviting an "O-ji-san" (old man) who walked before him, to change burdens, his, (the O-ji-san's) being far the heavier of the two, which offer was gratefully accepted after the necessary courtesies and compliments.

However not only the coolies, but all other people I came in contact with, seemed to me equally kind and well-disposed to foreigners; all over the way I never met with the least ill-will.

It struck me that the inhabitants of Echigo and particularly of Niigata were generally better loking and of larger stature than those of Yedo, many of them having the Jewish type; the girls too, are undoubtedly better looking, and Echigo used to be the principal recruiting-place to fill the Yoshiwaras at Yedo and Osaka.

I have had much assistance during this trip from 2 Japanese maps; one is the generally known: "Fujimi Jusan Shiu Yochi Zènsu" (map of the 13 Province, which are to be seen from the top of the Fuji-Yama); the other is named "Echigo Shiu Shikiyenshi" (being the Echigo-sheet of a map of the whole of Japan). I found the first to be pretty accurate as to the direction of the road and the distances from place to place; the second one is merely descriptive and has not the least claim to any accuracy as to measures or directions.

For the rest, though I have given here some details which may prove interesting, I could have given many more if I had been acquainted with the Japanese language. This not being the case, I entirely depended upon my interpreter, who never told me anything I did not ask for, and whose answers I had, as it were, to draw from his mouth, though I must do him the justice to say that he took more interest in the incidents of the journey than Japanese generally do.

For any one acquainted with the Japanese language, I think no trip can be more interesting than the one here roughly sketched out.

J. A. LINDO,
Lieut. Royal Engineers,
(Dutch Army).

AMERICA.

(From an Occasional Correspondent.)

New York, November 21st, 1874.

The arrival in port, on the day before yesterday, of the steamer *City of Tôkiô*, reminds me of the fact that your humble servant was formerly a dweller in that city, and that possibly some of those who still sojourn in the Japanese capital might wish to know how the home world feels and looks to the *quondam* denizen of the Land of the Gods. People in America, as, possibly in England, are beginning to realize that Japan and China are two distinct countries, and that there is such a place as Tôkiô. When the good ship was christened *City of Tôkiô*, not a few persons were unaware that there was such a city: some were sure that it was a port in China, others declared it was a quarter in the city of Yedo, indeed, some intelligent people believe to this day that Yedo is a different place from "Jeddo." Do not the cyclopaedias and dictionaries, to a book, declare with all the solemnity of type that Yedo, with the accent on the second syllable, is the only correct spelling of the "Capital" of Japan whose population is still put down as 2,500,000? What a bequest those Deshima Dutchmen did give to the world! How completely old Kaempfer's mantle of mistakes fell on subsequent bookmakers, not excepting Mr. Mossman! Would that the mantle of his industry had fallen also! Is it not passing strange that even people who live in Japan, travellers to a man, and newspaper correspondents, pens to a quill, persist in helping to stereotype mistakes that seem hopeless to correct? I believe the average westerner is still ready to echo amen to Dr. O. W. Holmes' prayer, so pleasantly uttered in presence of the embassy—"God bless the Mikado, Long live the Tycoon."

There is some hope however, that people at home will by and bye learn that Japanese ladies do not bind their feet, and that the Japanese do not smoke opium, and that language and history differ from those of China. I note the issue, this week, of the ninth volume of Appleton's New American Cyclopaedia, which contains the articles "JAPAN," "LANGUAGE OF JAPAN," "LITERATURE OF JAPAN." As they were all written "on the spot," they may be effectual, to some extent, in informing people who desire to know, and help to bring in the new era of a correct knowledge of the nearest western neighbor of the United States, excepting, of course, the lunch-suggesting kingdom of Hawaii. Few countries in the world, probably none, have been so misrepresented in "standard" works, as Japan, some of the school text-books being not only "standard," but quite stationary in their statements about eastern countries. In this new cyclopaedia, the article of "JAPAN" was written by a gentleman resident in the country several years. That upon the "LANGUAGE" is from the pen of Dr. J. C. Hepburn, and of course, any commendation of it would not add to its worth in the eyes of those who dwell in Japan and know the ability of the writer. The only fault one can find with it is its brevity, and for the sake of interested readers, it ought to have been longer. The most valuable of the three articles is on the "LITERATURE OF JAPAN." It is a perfect mine of luxuriant information on the subject of which it treats, and even industrious and wide-reading students of Japanese will hail it with delight. It gives in condensed language a list of the principal works of native authors, with a summary of the contents of the most important works, and running notes of criticism. Though one familiar with the published catalogues can see that much of the article is simply a translation of the titles and notes of the Japanese works, yet the writer's own comments are of very great value, and the article is, without doubt, the very best presentation of the subject that has yet seen the light. A faithful study of it will give even one who has never seen a Japanese book, or read a translation of one, a very fair idea of the intellect of Japan as mirrored in its literature. The article is from the pen of Mr. Ernest Satow.

The American Oriental Society met at the Bible House in this city on the 28th October and continued its sittings during two days. Among the papers read was a very interesting one on the Cypriote inscriptions found upon the various articles, from the rudest pottery to the exquisitely-finished vases in the Cesnola collection in the Metropolitan Museum of Art in this

Original from UNIVERSITY OF CALIFORNIA

city. A lecture by the well-known Rabbinical Hebrew Scholar of Cornell University, on the Talmud and the Pharisees, in which he pleads that the Talmud might be incorporated into the ordinary curricula of theological study, was among the most interesting features of the meeting. He strove to show in detail that the Pharisees were not universally hypocrites and impostors, as the Christian world has so long believed, but that they were the democrats of their day, who strove to make religion and religious privileges the right and possession of all, and not of the Levites and priests only. Two papers were read on Japanese subjects. The object of one was to show the causes of the recent political revolution in Japan, which was brought about by the study of the ancient literature and Japanese history; and that the impulse to enter upon the of path modern civilization arose from within, and was not the result of outside pressure. A scholarly paper on the "Identity of the Japanese Noun and Verb," was read by Mr J. A. Van Name, of New Haven, the Japanese and Chinese scholar. There was some lively merry-making over the profound attention given by German antiquarians to that thoroughly exposed humbug "The Cardiff Giant." It seems that the German scholars still believe him to have been a genuine Phœnician relic.

We can hardly complain of any lack of representatives of the Orient among us. The last detachment of thirty Chinese lads arrived last week, and are already in Connecticut and Massachusetts homes, eating bread and butter, drinking coffee and using knives and forks, but retaining cap-costume and *queue*, as in the flowery land. What a pity that the powers that be in Peking compel the little fellows to wear the pigtail! They coil it under their caps, wrap it round their necks and do all they can to hide it from the average Yankee, or more so, the Irish boy, whose fingers naturally itch to pull it. I have seen some of these Chinese boys in their new homes, and a few weeks ago, I attended an examination of a number of them in mathematics and the English language at Southington, Connecticut. I need hardly say that their progress had been rapid and their acquirements thorough. All the boys are in excellent health having stood our much-abused climate admirably. I could not help wishing, as I looked at these Chinese boys that the Japanese Government had executed an equally good system of sending students abroad. Mr. Lai Sun, one of the Chinese Commissioners, superintending the education of the lads frequently lectures on Chinese History, Geography and Literature. He has his wife and family with him. Mr. Yung Wing has already cut his *queue*, cultivated his hair and is to marry an American lady. A Chinese refugee is now lecturing on the doctrines of Confucius of which he is a devout believer. We have also a Parsee lecturing us on his religion. As for the Chinese, there are few cities in the United States in which some of them do not reside. One can now walk out on Broadway and see Jizo, and Kuanon and Amida in the tea and curiosity shops. Japanese fans are seen everywhere, and are such a drug in the market that one can buy them here at less than their cost in Japan. Few houses of cultivation but now have a Japanese vase, cabinet or bronze, and at the sale of the effects of a family "about to remove from the city," or who have suffered from financial embarrassment, or other causes, more or less Japanese curios are to be found ready for disposal under the auctioneer's hammer. As for the retail tea-business, it is very different from the old days when Japan tea was unknown, and 'Oolong' and 'Young Hyson' and 'Gunpowder' were kept in the regulation red canisters on the grocer's shelf, flanked by bags of coffee, the spices above, the sugar beneath, and the miscellaneous groceries around it. Then, tea was simply one among a thousand articles of standard food. Now, tea has been graduated to the dignity of a commodity that claims a special shop and dealer for itself alone. Now, there are in all our American cities, a number of "tea-stores," in which nothing else is sold. In a scrupulously clean, light and airy room, will be found chests of tea fresh from the shop with their overcoats of matting not yet unstrapped. Others, with their lids off, occupy the rear portions of the store or 'shop.' In the [illegible] windows are opened boxes, dishes or cups [illegible] stands of China and Japan, while on the shelves, which are purposely low, stand the canisters, of great size and gorgeous colors. The entire walls of the store are occupied by fresco-pictures of Chinese or Japanese scenes. These pictures may do for the stay-at-home tea-drinker. It is curious to notice how true is the statement of a famous European artist, whose name I cannot recall, that an Asiatic, (especially a Chinaman or Japanese) countenance always assumes under the painter's hands, however painstaking and conscientious he may be, the cast of features characteristic of the nation to which the artist belongs. Hence, these frescoed Chinamen and Chinawomen resemble "white folks" to a degree astonishing to the knowing one who has lived in the Celestial Empire or the Land of the Gods. Japanese coloured pictures painted in Yokohama are now common in the shops, and the tea-packages are of silvered paper, on which Beato's photographs have been copied. Thus, we have a group of Japanese *yakunin* served with the universal *cha* by a *musume*. The *musume* with her pipe, *hibachi* and *kobuku* sits lifelike and smilingly in another picture. In another the pompous *yakunin* strides along in conscious dignity. Lastly we have the scene of Nogé or Suzugamori, with the kneeling victim, the executioner grasping the naked sword, the blood pit near, and, of course, Fuji in the distance. I am unable to say whether such a picture adds to the relish with which the tea is sipped. I should add also that these rival tea-companies advertise extensively with highly chromatic posters, adopt the jewelled lamp for night-advertising, and spare no expense that will make the merits of Japan tea known. In addition to the attractions of their lamps, signs, pictures, counters, burnished scales and general fitting-up of their shops, they rival the express companies in the richness of their wagons, the magnificence of their superb horses and harness, and in the *tout-ensemble* of everything connected with their business which can in any way impress the public eye. Further, the competition is so keen between the rival firms and companies, that runners and canvassers are now regularly employed to call at the houses and places of business of the people, and I have known instances of families being solicited by no less than five or six competing firms in one week. I do not know that any dealer has offered chromos to subscribers to and purchasers of his teas, but I expect something of the sort will be done. I am of the opinion that the comparatively sudden creation of such a wide-spread demand for Japanese tea in America is in a large measure the direct result of advertising by horse, shop, printer's ink, and canvassers.

I do not pretend to give you any news in this letter. The papers can do that to repletion. I shall simply note the fact that art has begun to idealize Japanese subjects. I noticed in one of the stores on Broadway a few days ago a pair of bronze statuettes representiug the typical *yakunin* as he existed before the days of boots, dress coats and tall hats. The *samurai* of the holy country in those days was content with sandals, and gloried in gun-hammer topknots and a straw or rush hat as big as an umbrella, and either flat as a pancake or round as a washbowl. The traditional two swords, and the dragon-embroidered, buttonless *haori*, the fan, pipe and pouch, pen-and-ink case, are all represented in the bronze with great spirit. The *musume*, or the *hime* as the bronze is meant to represent has her paper umbrella in hand, is robed becomingly and appears to be *tripping* along. Now, if vulgar truth instead of ideal art were sought, shuffling would be the motion represented still. I am really glad to see this, perhaps the first attempt of the foreign artist to idealize Japanese characters. In the general ferment of society in the Japan of to-day, and the destruction of the old picturesque costumes and characters, it will be a real loss to art, if these by-gone glories of an age for ever past should not be preserved in bronze, or marble, or on the painter's canvass, for the delight of the cultured people of Europe and America who can never see Old Japan. To Mr. Mitford, must be awarded the praise of having led the way by his pen in "Tales of Old Japan," of which I notice that a new and cheaper edition has been issued in England. Let me close by sending my thanks to "Kajin" who has been treating us to those delicious morsels of poetry in the *Mail* for months past. They have won delighted readers in America. While I thank the

Digitized by Google UNIVERSITY OF CALIFORNIA

poet, let me not forget to thank also the industrious workers who give so generously the fruit of their studies in Japanese literature. I consider the series of papers on the "Revival of Pure Shinto" a vast gain to the encyclopædia of the growing knowledge of the religions of the world, as well as a mass of information which no historian of Japan can dare to do without studying, or writer on the religions of Japan can dispense with reading. Of course the quondam dweller in Japan, as he toasts his feet, and opens his *Mail*, stiff and hard with the folding and pressure of a four week's incarceration in the mail bags, wishes to know the latest goings on in "Our Neighborhood." We, who keep Japan green in our memories still claim the whole country, especially Yokohama and Tôkiô, as our neighbourhood (without capitals) and were dreadfully shocked by the irreverent paragraph in the New York *Evening Mail* which condensed the news from China and Japan in regard to Formosa, by saying that "That tempest in two tea-pots, the Formosan trouble, is settled." Think of the Land of the Gods being called a tea-pot! It is enough to make Japan boil over with rage.

Thanksgiving week is at hand. In spite of hard times, the turkeys are usually fat, the cranberries plump and round, and the pumpkins almost burst their girths with fatness. There will be good sleighing up North, and "down" East, for already the snow lies several inches deep. I suppose my letter will reach you too late for Christmas greetings. If so I hope you will receive my sincerest greetings in the ever-appropriate *O meidetô gozzrimasû*.

G.

Correspondence.

THE PROPOSED HARBOR SCHEME.

To the Editor of the "Japan Weekly Mail."

Yokohama, 27th December, 1874.

SIR,—In continuation of my letter of the 18th instant I propose to show

1st.—The good natural qualities of the Bay as a safe and sheltered anchorage:

2nd.—That the proposed work is not a necessity, and with the present trade of the port it will not pay a fair interest on outlay on the lowest estimated cost.

First.—The Bay was originally surveyed by Lieut. Maury, U.S.N. when attached to Commodore Perry's expedition (a man whose reputation is universally acknowledged). In his general report of the Bay he describes it "as being 12 miles wide by 30 deep with excellent holding ground and capable of sheltering the fleets of the world." Subsequent experience has justified this commendation and shipping ride out the heaviest gales without damage or serious accident.

The security of this anchorage is probably caused by the Bay being open to a quarter not subject to the heaviest gales, and also to there being no mountainous obstructions in such positions as to make the wind bear on one point more than another, and any formidable sea is prevented from rising by the Kuro-siwa running athwart the entrance, and by the Saratoga Spit forming a natural breakwater; the Spit off Treaty Point forming an additional breakwater to the harbor.

Secondly.—By reference to Mr. Consul Robertson's Report for 1873, the trade of the port will be found to be represented by—

Imports value	$19,535,758
Exports value	$15,095,218
Total Imports and Exports	$34,630,976

Total foreign ships entered, 350 vessels with tonnage of 427,694 tons, including 216,418 tonnage of P. M. S. S. Co. Taking the wharfage dues at 10 cents per ton (which I believe is the charge at the river ports in China,)

The total receipts would be	$42,769.40
Deduct 15 per cent. for cost of management and maintenance	$ 6,41541
Total nett receipts	$36,353.89
Against 7 per cent. interest on *lowest* estimated cost of $1,000,000	$70,000.00

By the above calculation it will be seen that the proposed works would not pay more than 3½ per cent. on the lowest estimated cost and that half the income from the Pier would be paid by the P. M. S. S. Co., and it hardly appears probable that this Company are likely to contribute to such an extent, when with their present facilities they are able to turn over 4,000 tons of cargo and despatch a vessel in three days and it is seldom that their steamers meet with any unusual delay.

The tariff for cargo boats at Hongkong is fixed by Government Regulation (a first-class cargo boat carrying 800 piculs) $3 per day or about six cents per ton. In Yokohama the tariff is $6 for a cargo boat carrying 1,000 piculs.

It is not probable that sailing vessels would make use of the proposed Pier; the rates of freight ruling would not admit of any such charge, and there is no inducement in the shape of an export trade to make vessels exercise any extraordinary despatch.

After a long voyage it is not only necessary for the health of the crews that vessels should have time in harbour to recruit, but it is also necessary for the safety of the ship that she should have time to refit. Then again, sailing vessels in terms of their Bills of Lading can enforce delivery to be taken of cargo as fast as it comes to hand, or can land the cargoes at the risk and expense of the owners, if after due notice the cargo impedes their discharge. They only have to deliver the cargo from the ship's tackles, therefore it is quite evident that sailing vessels will have no object in paying wharfage dues, when they have it in their power to discharge their ships as fast as it suits them without incurring any additional expense.

In addition to the expense of wharfage a sailing vessel would probably have to pay towage to and from the pier.

The Pier would therefore have to depend for support on the mail companies and the few outside steamers, and especially upon the P. M. S. S. Co., which is already supplied with proper facilities for landing and shipping.

Experience has shown in adjacent countries that until a trade has well developed in both import and export branches it will not bear any extraordinary imposts, and I will refer to Shanghai in a tidal river, where only within the last few years have the wharves returned a fair profit on outlay, and even now they are mostly used by steamers employed in the local coast trade, the large mail steamers with the exception of the P. M. S. S. Co. now load in the river, and sailing vessels invariably both load or discharge in the river. In Hongkong also I am not aware that the Piers are made of very general use, or that they have proved very profitable to the shareholders. The wharves and piers in Hongkong are of recent construction.

Again, referring to India I find the following in a minute dated 16th October, 1858, by Sir Frederick Halliday, K.C.B., Lieutenant Governor of Bengal, "The existing plethora in the port of Calcutta is so pressing that the Chamber of Commerce has been driven to recommend that ships should be only allowed to tenant moorings for a given time and then give them in turn to others."

And in 1864 Mr. Thomas Page, C.E., reports "That 160 years after the establishment of the port, Calcutta remains as destitute of appliances for facilitating commerce as the most barbarous island of Polynesia," and it was only in the year 1867, that the community turned their attention to providing pier and wharf accommodation in Calcutta. The returns of trade for British India to the 30th April of that year are represented by

Imports	value	£30,639,282
Exports	,,	46,551,256
Re-exports	,,	1,178,356
Total	,,	£78,368,894

or about $400,000,000, or nearly one-fifth of the trade of Great Britain for same year.

In Bombay about the same period, with a harbor in many respects similar to that of Yokohama, I find a report as follows.:—

"Bombay possesses a spacious and safe harbor and although the emporium of a great empire its quayage and wharfage ac-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

commodation for shipping and unshipping goods is on a par with that furnished by an English seaport of the humblest pretensious." The value of trade at Bombay at this time may be estimated at $200,000,000, conveyed in 7,000 vessels of all descriptions with a gross of 1,000,000 tonnage, the Customs receipts being upwards of $3,500,000. All cargo as a rule was loaded and unloaded by boats, at a cost of 6d. to 7d. per ton during N.E. monsoon, and 9¾ to 10½d. per ton during S.W. monsoon.

I have endeavoured to show clearly the state of the harbor works in India down to a very recent date. Although great influence has been brought to bear, the Government of India has steadily refused to assist in works which they considered should be undertaken by private enterprise, and that they acted rightly in this is subsequently proved by the requirements of trade in India being supplied in this manner.

That a Pier such as proposed (providing it is constructed in the most suitable position) would be a great convenience to the Port I allow, but I hardly think it right to saddle the Japanese Government with an unprofitable work, as the evident result will tend to make them disinclined to undertake works of more general benefit.

What Yokohama requires is proper conveniences for landing and shipping cargo, and for this private enterprise should have supplied the want of money long since. It was remedied at once by the P. M. S. S. Co. and also by the P. & O. Co., as far as their own requirements were concerned. That the present system, although faulty, is neither expensive nor greatly injurious to trade, may be accepted as a fact, for the trade of the port has not been so remunerative as to allow any extraordinary charge to remain unremedied on either the import or export trade.

o o o o o o o

Since writing the above I have read the letter of your correspondent A in your issue of yesterday. With regard to his first paragraph I would inform him that it is quite possible to over estimate trade or traffic and prematurely to provide facilities, which instead of acting as intended, prove a burden and drag upon trade. Numerous instances of this are on record in England and the extensive harbor works at Marseilles are the most suitable illustration of this.

With regard to Holt's steamers, it is idle to state that they do not come to Yokohama on account of the defective landing and shipping arrangements of the port. The fact is there is no export or intermediate trade to speak of to make it worth their while running on to Japan, although it has been stated that at no distant date we shall see these steamers competing on the Pacific.

I am glad to find from A that the intended scheme is a "complete and a perfect one" and that it is not intended to be very costly, but comparing other similar works I am afraid it is likely to cost nearer $2,000,000 than $1,000,000 and it is to be observed that A puts the estimate as *over* a million dollars which may mean anything, and we know that even the estimates of the most experienced harbor engineers are not infallible. With regard to the allusion to Southampton I do not think it a happy one, as the trade in that place was in a large degree due to its being the terminus of the P. & O. Co. This is not now the case, as the steamers go direct to London, and I am afraid the shareholders will look in vain for the profitable return A states they receive.

The Japanese steamers will not make use of the Pier, in my opinion, for the simple reason that Yedo and not Yokohama is their terminus and there is no difference in the rate of freight of the two places. How is it possible for any goods to bear an intermediate transit of twenty miles, and the expense of cartage at the end when they can be carried to their destination with only a light charge for boatage to deliver the goods at the godowns of the owners? In fact the Japanese coast steamers will take cargo from godowns and deliver at destination at rates which conclusively prove they could not make use of the proposed Pier.

It is a mistake to suppose Yedo a dangerous anchorage. It may be somewhat inconvenient, but all the large steamer companies keep their own cargo boats, and apparently for the present requirements of the Japanese trade the coast steamers are run expeditiously enough.

In conclusion, all I would ask is that the scheme should be fairly investigated before undertaken. This appears to me to be the more necessary, as we have it on A's authority that the Japanese Government are being pressed in the matter.

Now, it is the first time I have heard of the urgency of this requirement, and can only say that if the Japanese are really being pressed to undertake a scheme of such doubtful results the responsibility of the measure, if it proves unsuccessful, will rest with those who, in my opinion, so injudiciously advise them.

Your obedient servant,

X. Y. Z.

INQUIRY INTO THE LOSS OF THE *JAPAN*.

China Mail, 24th and 26th December.

An investigation was held this morning, at the office of the American Consulate, into the circumstances attending the recent disaster to the P. M. S. S. *Japan*.

The Court was composed of H. S. Loring Esq., Vice-Consul, President; Commander Lewis, U. S. N. *Yantic*; Lieut. Gillpatrick, U. S. N. *Yantic*; and Captain Clough, mercantile marine, American ship *Malay*; Mr J. W. Torrey, acted as clerk of the Court.

Edward R. Warsaw, late Commander of the *Japan*, sworn, said:—I have been a master mariner for 18 years, out of which I have commanded steamers for seven years, during six of which I have commanded Pacific Mail Steamers The *Japan* was my last command. I was in command when that vessel was destroyed by fire, on the night of the 17th inst. The fire broke out at 11.25 p.m. I first heard a muffled sound among my passengers on the main deck, which intimated to me that something was wrong. I was by the pilot house. A minute later I heard a cry of fire. Upon hearing the confused noise I sprang towards the pilot house the door was open. When I reached the door step, the 2nd officer who was officer of the deck, cried out 'fire." I rang the jingling gong to stop the engine, and at the same time sounded the fire alarm, and ordered all ventilators to be turned from the wind, ported my helm, and ordered the topsail halliards to be let go, in order to bring the ship to the wind. At this time I had been running before the wind. My object was to prevent the smoke from being carried fore and aft the ship. I next went to where the fire was, right amidships. Fire was issuing from the fire-room ventilator and ash-shoot. I then immediately ran to the stairs at the fore hatch, in order to descend to the main deck, the nearest point to the ash-shoot from which large volumes of smoke were issuing. This ash-shoot was situated forward of the smoke-stack and directly over the fire-room. Smoke, in large quantities was issuing from the fire-room. Immediately on the alarm of "fire" being given, three streams of water were brought to bear upon the fire room, and three streams were directed upon the engine room from which also dense volumes of smoke were found to be issuing. All the available hose and connections were brought into use (we throw 24 streams from the main engine.) We could, however, only bring 20 to play on the fire, in the places indicated and on the steerage, and these were all brought to bear within ten minutes from the time of the first alarm. We cut holes in the steerage deck on the port side abreast of the engine and fire rooms. We directed three streams here and covered the holes with blankets. I then instructed the officers who were with me to cut holes in the after steerage hatch, communicating with the freight deck. I saw large volumes of smoke but no fire. About that time the fourth officer took off the fore hatch to see if he could make out the fire. He did not. The chief officer and myself went on the after freight-deck to see if we could discover any fire, We did not but saw considerable smoke. I returned forward to the place where the fire was supposed to be, in the fire room, The first blaze that I saw was issuing from the ventilator, over the forward fire room. During this time all available hose and connections were laid, to bring all the hydrants to bear fore and aft, making in all 20 streams. I now gave orders to my messenger to tell the chief officer to detail men to swing out and clear all boats ready for lowering. That messenger is not here. I never saw him afterwards. His name was Sutton, quartermaster. I then went below again to the steerage, cut a hole abreast of the foremast through the deck, and saw fire. I applied a hose to it, and then went aft on the port side, pulled the butt out of a hole which we had cut before and saw fire. This was directly under the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ash-shoot. Apparently all the deck below and the bulk head between the engine room, fire room, and wing bunkers on the port side, were on fire. I inserted the hose again into the hole, covered it up, went up on the hurricane deck, and saw the third officer and a gang of men swinging the forward boats, and the second officer and another gang swinging the after boats. During the whole of this time every effort was being made by the white men on board to extinguish the fire. I advised Dector Tyndal then to make ready to leave the ship, and placed the women in his charge, telling him that I thought he would be compelled to leave. I then went back to the site of the fire where my officers and men were doing their utmost to extinguish it. At this time a man ran by me, named, Denham, an oiler, crying out, "every man for himself!" I caught him and asked him who gave him that order. He replied the chief engineer. I told him that if he repeated it, I'd blow his brains out, and ordered him to his work with the rest. We fought the fire for about fifteen minutes after this. Finding that all efforts proved unavailing, and that the fire was rapidly gaining upon us, and that the water was evidently failing in supply from the fire engines, caused by the fire and smoke issuing from the fire room and engine room, and that it would have been impossible for any man to enter that part of the ship, I then started with a view of saving life. I went aft as far as the engine room door on the port side, when the flames cut me off. I turned and ran forward, passing through the smoke abreast of the ash-shoot, passing round on the starboard or weather side, aft through the store room and pantry, and thence to the hurricane deck by the saloon stairs. I took a general survey of the weather side of the ship, saw that all boats were lowered, and away from the ship, on that side, the people forward apparently having life preservers on them. I passed along the port or lee side, abaft the social hall, and saw two boats hanging by their davits. At that time I saw several Chinamen, together with Mr Cropper, a saloon passenger, and the ship's storekeeper. These I advised to get into a boat. Not seeing any one on that deck to assist me to lower a boat, I put Mr Cropper at the forward tackle to assist. myself lowering the after tackle. When the boat was down, I sent him into it down the fall, cast off, and did not see him again till next day when we picked him up. A few moments afterwards I saw the second officer standing by the forward tackle of the only remaining boat, abaft the wheel on the port side. I assisted him to lower the boat. In this boat were all the Europeans and Chinese passengers abaft the fire, which was now right across the ship at the engine room. (I should have stated that when I escaped from below on to the hurricane deck the flames took possession of the centre of the ship and precluded any further communication with the forward part of the ship, even on the hurricane deck.) I gave orders to the second officer to wait alongside the ship for me, and I returned to the weather side of the quarter deck, took a general survey of the ship, saw that the metallic life raft forward was overboard, saw that the captain's gig was gone, that the nonpareil raft was gone, and that all the settees on the quarter deck had gone I opened the engineer's room door, and called him. Receiving no response, I went aft and lifted the sky-light, called out to see if there was any more life on board aft, and, not hearing any response, concluded to leave the ship. I went over the ship's side at a quarter to one a.m., on the 18th. I shoved our boat clear of the ship, came round under the stern and used every endeavour to save life, and picked up a number of Chinese, all of whom had life preservers on, or were on pieces of wreck, or hatches, chairs &c. Remained to windward of the wreck until the daylight, when we went in search of the other boats. I fell in with and engaged a Cape Chi fishing smack, in which I cruised about in the vicinity of the wreck material, and succeeded in picking up 5 boats, and saving 117 souls from boats and water. At about 2 p.m. on the 8th, seeing no more life, I stood in for the land. At 6 30 p.m., about a mile from land, communicated with the steamer *Yottung*. The Captain took us on board and conveyed us to Swatow, whence we took passage in the steamer *Yesso* for this port, and arrived at 2 p.m. on the 20th.

Cross-examined by Captain Lewis:—I think the fire originated in the forward bunker.

Q.—After making your trips back and fore, what do you generally do with your surplus coal?

A.—We have it in the bunkers.

Q.—Is fresh coal heaped upon it?

A.—Yes, it is.

Q.—Is any care taken to place the surplus coal in such a position that it can be burned first?

A.—There is not. Fresh coal is heaped on the new and both are used together.

Q.—Was any damp or wet coal taken on board at San Francisco or Yokohama.

A.—At San Francisco, no. At Yokohama, yes. At this latter place we took in some 600 tons, 140 tons of which was said to be Sydney coal, and 480 tons, about, of Takow coal. It rained in torrents all night while we were coaling, and consequently the coal was put into the bunkers wet.

Q.—Were any of the bunkers leaky?

A.—No.

Q.—Was this fresh coal or any portion of it put in the bunker in which you imagine the fire originated?

A.—It was fresh coal. I cannot say which kind it was.

Q.—Were the boats of the steamer always kept provisioned and watered and fitted with oars and sails, compass and so forth complete?

A.—They were perfectly equipped and fitted, and inspected every day. The boats were ready to be lowered at a moment's notice.

Q.—Had you any station drill on board your vessel?

A.—I had fire station, but not boat station drill; nor do I know that it is customary on board the other vessels of the line. Such and such officers were detailed to the charge of the boats. The third officer and boatswain had charge of the four forward boats with crews to swing and lower. The second officer and quarter-master Harris, had charge of the eight after boats, also with crews.

Q.—Were the officers instructed to tell off passengers in filling the boats after they had been lowered?

A.—They were not.

Q.—Were officers appointed to see the rafts got overboard?

A.—The second officers had charge of the after rafts with the boats, and the third officer had charge of the forward ones.

Q.—State the full capacity of the boats and rafts for saving life in a rough sea.

A.—620. On the night in question the third mate's boat, which is one of our largest, held 62 people. The above estimate is allowing for the capacity of the rafts at a low rate. 650 would be the life saving capacity under ordinary circumstances.

Q.—How many life preservers had you on board?

A.—1,500.

Q.—Do you take the temperature of the bunkers?

A.—No, but the chief engineer does.

Q.—Were you in the habit of examining the chief engineer's log daily to see that all his regulations had been complied with, and that he had taken the temperature of the bunkers?

A.—No. I looked the log over to see the quantity of coal consumed.

Q.—What was the nature of your cargo stowed in the vicinity of the spot where the fire is supposed to have originated?

A.—Flour and fish.

By on Col. Loring.—What is the position of the chief officer the outbreak of fire?

A.—He immediately proceeds to the scene of the fire.

Q.—Were the officers at their posts?

A.—Every one, with the exception of those who were compelled to leave the fire and engine room by the flames and smoke. The crew—the white people—worked remarkably well, and there was no disposition on the part of any individual to disobey orders.

Q.—Was fire drill constantly practised, according to regulations?

A.—It was. Every night I used to have my fire hose laid, fore and aft, on all three decks. It has been remarked by my passengers, and among others by the General Agent for the Company, that they could not move about the deck by night without tumbling over the hose.

Q.—When was the last fire drill?

A.—On the passage from San Francisco to Yokohama.

Q.—When did you last inspect the ship before the fire?

A.—About half-past eight that evening.

Q.—How many boats had you on board?

A.—12 metallic life boats, 1 wooden gig, and two rafts:

Q.—Were they all available for use?

A.—They were.

Q.—Were they all in the water?

A.—No, only eleven metallic boats and one gig. The twelfth life boat it was impossible to swing, on account of the fire and smoke which surrounded it.

Q.—Were the life preservers accessible to all the passengers?

A.—They were, and the Chinese passegers got to them. Every Chinamen we picked up had on one, and some had two or three.

[Captain Lewis, here remarked, incidentally, that it was the duty of the Court to see that every precaution had been taken to preserve the lives of the Chinese passengers. He said that, perhaps, a Chinese

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

life was not thought of much account, but that it was a human life after all.]

Q.—Were the Chinese passengers selfpossessed?

A.—They were remarkably collected and well-behaved.

At the conclusion of the Captain's evidence the Investigation was adjourned from 1 to 2 p.m.

On the reassembling of the Court, the Captain was recalled at his own request to amend a point in his evidence. He said that in addition to the hole cut abreast the foremast, two holes were also cut in the fore hatch, and that he got 21, and not 20 streams to bear upon the various points from which he could approach the fire. 24 streams from the engine and two small hand pumps, one at each end of the ship, were available in case of fire. It was impossible, from want of sufficient hose, to connect with three of the aftermost hydrants. The hose of the hydrant in the after main saloon, that in the after steerage, and that in the after lower saloon, were connected with hose from other parts of the vessel to be concentrated on the fire.

The next witness called was Frank William Hart, late Chief Officer of the *Japan*, who having been sworn, said that the fire broke out some time after 11, on the night of the 17th instant. At the time he was lying down in his room. On the alarm, he saw all the men and officers to their respective stations. He opened the valves of the fire hose, and directed them down to the engine and fire room, bringing about eight streams in all to bear. He took off the hatches, and saw nothing but smoke, coming from forward. He ordered the carpenter to open the steam valves which led to the hold and freight deck. Went in to the fore steerage and took off the fore hatches. Found very little smoke and replaced the hatch, opened the steam valves, which led to the hold and freight deck. His object was to smother the fire. His opinion was that the fire was in the port bunker, or forward bunker, or somewhere in that vicinity. The smell led him to believe that it was coal that was burning. There were fifty feet of hose on each hydrant. He cut holes where he thought they were needed and directed streams through them. Went to the fore hatch, lifted it, and found that some flour sacks were on fire. Replaced the hatch, cut holes, and directed jets of water towards the fire. Ordered the chief officer to swing the fore, and the third officer the after boats, and placed a quartermaster at each to keep off the Chinese passengers. Went below and found all the pumps working well. Went down to the steerage on the port side, and found the casing round the steam chest all on fire. Found the fire was likely to cut him off, and ordered others whom he saw there to leave the steerage and left himself. When he went on deck found that the hose lay flat, having no pressure on them, the pumps having given out, through being heated by the fire. He made his escape through the fire on the port side. The fire was coming up from the engine room, and the rooms on deck were on fire. The only people he saw were a quartermaster and the second steward. He went along the after guard up the after stairs and on the hurricane deck. He saw that all the boats, but one, on the after deck had been lowered. The Captain and second mate were lowering that boat. Communication between the fore and after part of the deck was closed. Witness did not see a soul on deck, opened doors of rooms, but found no one, so went on board the boat himself.

Cross-examined by Captain Lewis:—witness gave as his opinion that the fire arose from spontaneous combustion in the coals, and corroborated the last witness' testimony as to the wet condition in which the coals were loaded at Yokohama. He said that some of this coal was stowed in the bunker where he thought the fire originated.

By Colonel Loring:—Witness never saw the Captain's messenger Sutton, and did not receive any order from the Captain through Sutton about swinging the boats. Every night at 8 o'clock, witness had a general inspection of the ship, seeing the hose all right and in place, and afterwards made his report to the Captain. Had inspected the ship at 8 on the evening of the fire, and found the fire apparatus ready for immediate use. There were twenty streams of water brought to bear on the fire. He left the ship about an hour and three quarters from the time the fire declared itself. He had taken every precaution against fire. Witness corroborated the Captain's statements as to the efficiency of the boats, and the obedience and willingness of the officers and crew. The opinion of the witness as to why more of the Chinese passengers were not saved, in consideration of the calmness of the Chinese and the accessibility of the life preservers, was that the sea was very rough, that very many of them had overburdened themselves with money, and that others trusted themselves to pieces of wreck and not life preservers.

At 4 p.m. when this witness' examination was concluded, the Court adjourned to 9 a.m. on Saturday.

The inquiry into the loss of the vessel was resumed this morning, at the American Consulate, at 9.30 a.m. Lieut. Gillpatric of the U. S. S. *Yantic*, and not Lieut. Killpatric as stated in our issue of Thursday, was one of the members of the Court. The Court was summoned for 9 a.m., and all the members were present at that hour; but proceedings were delayed owing to the non-appearance of the first witness, who was suitably rebuked on his arrival by the President.

The Chief Engineer, John Henry Cosgrove was called and sworn. He deposed as follows:—I was chief engineer, on board the steamer *Japan*. I have been chief engineer between seven and eight years, and in the employ of the Company for eighteen years. The first intimation I had of the fire was from the engine room gong, which signalled to stop the engines. It is connected with the pilot house. I was in my room. I went directly to the engine room, and found that there was fire. I next went to the steam pumps. I had a difficulty in getting to them. I could not reach the midship pumps at this time on account of the fire and smoke. After I had started the forward pumps, and brought two streams of water to bear, I was able to get at the midship pumps and started them. My station in case of fire is at the steam pumps. I was calm and collected. (Captain Warsaw:—I have no doubt you were, but it is just as hard to get a man to confess he is excited as to confess he is drunk.) I know that all the outward discharges were attended to. The third assistant engineer, James Henry, was in charge when the first alarm was given. I gave no orders. I asked Henry if the pumps were started, He said, No; so I immediately made for them myself. Not two minutes had elapsed from the time of the first alarm to when I started the pumps. The room was full of smoke when I got there, and all the lights were out but one. I saw flames coming from the fore and aft bulkhead, dividing the engine room from the freight deck close to the port steam-pump. I know that the pumps and gear were in readiness and effective. I inspected and reported on the fire apparatus to my commander before I left San Francisco, My last inspection was made on the evening of the 17th at 8 o'clock, when I found the fire apparatus in perfect order. I reported to the captain at about 15 minutes past eight. I saw fire coming through a door 25 feet aft from the bulkhead, communicating with the engine-room. I next saw it on the felt lagging round the steam cylinder, and then the whole engine room was on fire in less than a minute. I next saw fire coming up through the fire room skylight on to the upper deck. Every man was at his post as far as I know. The conduct of both officers and men in my department, at least of all those I saw, was good. I never gave the order, "Every man for himself!" I sent my messenger to Mr. Bennett, the first assistant engineer, to come on the upper deck to speak to me, and that he (Bennett) had better look out for himself.

By Captain Lewis:—Was fresh coal taken on board on the arrival of the Japan from San Francisco at Yokohama?

A.—There was.

Q.—What kind?

A.—140 tons Sydney coal, and 480 tons Japanese coal called Tako.

Q.—Was it wet or dry?

A.—The Tako coal was dry. I did not know the condition of the other until I saw it in the bunkers. I did not see it when it came on board.

Q.—Where was this coal stowed.

A.—The Sydney coal was stowed in the forward and after athwartship bunkers. The Tako coal in the side bunker.

Q.—When surplus coal happened to be left after a voyage, was it your custom to heap the fresh coal down upon it.

A.—Sometimes we did do so.

Q.—Was any care taken that the surplus coal should always be used first?

A.—No, Sir.

Q.—Was there any surplus coal on board when you arrived in Yokohama?

A.—There was none in the forward bunkers but about 5 or 6 tons in the after bunker.

Q.—How often did you take the temperature of the coal bunkers when steaming?

A.—We never took it at all.

Q.—Where, in your own opinion, did the fire originate and from what cause?

A.—My opinion is that it originated on the freight deck. The cause I do not know.

Q.—When you first became aware that the ship was on fire, what

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

kind of smell did you perceive? Was it that of burning coal or wood?

A.—That of burning wood.

Q.—How is the freight deck, where you suppose the fire originated, separated from the coal bunkers?

A.—It is directly over the forward athwart-ship bunker.

Q.—At what stage of the fire did you leave the engine room?

A.—When I saw there were no hopes of saving the ship.

Q.—Could you have remained any longer at your post?

A.—I could not.

Q.—What was the pressure of steam at the time of the fire?

A.—I do not know, but I suppose 20 lbs.

Q.—For how long would there be sufficient steam to keep the steam pumps going from the time of trimming the fire?

A.—About half a day.

Q.—How often are the fires trimmed?

A.—On an average about once an hour.

Q.—How soon after the fires were seen was the alarm given?

A.—I do not know.

Q.—How long did the pumps work?

A.—As near as I can say about 2 hours.

Colonel Loring.—In your opinion, why did the pumps stop working?

A.—From the action of the fire.

Captain Lewis.—At what stage of the fire, and at what hour, did you desert the vessel?

A.—When I left the ship, I had already seen four or five boats pulling away to windward. I do not know the hour.

Q.—Who gave the order to lower the boat in which you reached Hongkong?

A.—I gave no order. Seven Chinamen lowered the boat on their own account. It was half lowered when I saw it, and I got into it by the forward tackle.

Q.—What was the capacity of that boat, and how many had you in it?

A.—Capacity fifteen or twenty. There were 9 in it, 7 Chinese an old lady, and myself.

Q.—Did you take charge of the boat, and order her to be shoved off?

A.—No. I simply got into the boat, and tried to shove her clear of the ship.

Q.—Did she immediately after shoving off desert the wreck and steer for Hongkong?

A.—No.

Q.—Did she render any assistance in rescuing passengers or crew?

A.—None.

Q.—For what reason?

A.—The boat was unmanageable. There were but three oars.

Q.—Did any one seem to assume command of the boat?

A.—A Chinaman. I myself was too sick to give any directions.

Q.—How many streams from the steam pumps were brought into use in the endeavor to subdue the fire?

R.—8 streams round the engine-room, where I remained all the time, were all I saw.

Q.—How many streams were available for the stream pump altogether?

A.—24.

Lieut. Gillpatrick.—What time did your both leave the vicinity of the wreck?

A.—As near as I can say about half past 5 on the 18th.

Q.—Did you assume charge of the boat at any time?

A.—No.

Colonel Loring.—Did you have any difficulty in reaching the deck from the engineroom?

A.—No.

Q.—What was your condition when you reached the deck?

A.—I was suffering severely from the inhalation of smoke.

Q.—How long were you on deck before you left the ship?

A.—About 10 or 13 minutes.

Q.—What was the condition of the ship as regards the fire?

A.—Hopeless. The whole of the midship section of the ship on the port side was on fire.

Q.—What was the cause of your incapacity to take charge of the boat?

A.—I was suffering from the effects of having inhaled so much smoke, and the motion of the boat made me sea sick.

Q—Do you still feel any ill-effect from the smoke?

A.—I do. I have been under the Doctor's treatment ever since I have been in Hongkong.

Q.—Was there any surplus coal in the bunkers when you coaled at San Francisco for your last trip?

A.—All the bunkers were clear except the after one.

Lieut. Gillpatrick.—What kind of lights are you allowed to take into the coal bunkers?

A.—Common open petticoat lamps.

Q.—Are they always uncovered in the bunkers?

A.—They are.

James Henry, third assistant engineer, sworn, said:—I have been an engineer for 19 years. Off and on I have been in the service of the Pacific Mail Company for 23 years. On the night of the 17th, the first intimation I had of fire was flame coming from the freight deck in part of an empty coal-bunker on the port side, I was in the engine room, in charge. I called out "fire," and almost simultaneously the jingling gong sounded to stop the engines. I did so. Not more that half a minute, had then passed from the time when I first saw the fire. I eased two safety valves, and shipped the starting bar. I did not see the chief engineer at this time, nor did I receive any orders from him. It might have been seven or eight minutes before I saw him, and then he was on the upper platform. He could not have got down to where I was. I tried to get at the other two safety valves, but was driven out by the smoke. I afterwards attempted to regain the engine room, but could not. No water was being pumped into the engine room at this time. I saw water running through the hoses within two or three minutes of the first alarm. The smoke from the fire smelt like that of pine wood. I had ample time to do all the duty that fell to my share. I know that all the four principal pumps were at work. The engines were, as far as I know, working when I left the ship. In my opinion the fire originated on the freight deck somewhere forward. I was on duty at Yokohama when we coaled, but I did not take in the coal and do not know whether it was wet or dry.

By Captain Lewis.—Were the bunkers at any time prior to the breaking out of the fire, visited by any one, and was an unusual heat noticed.

A.—Yes, a few minutes before the out-break of the fire my watch was working on the port side, in the bunkers, and reported no extraordinary heat.

Q.—Was there any sulplus coal in the bunkers in which the coal was put which was taken on board at Yokohama?

A.—I do not know.

Q.—Was the Sydney coal taken in at Yokohama in the forward athwart-ship bunker exhausted when the fire occurred?

A.—At that time there was Sydney coal in that bunker, but I do not know whether it was taken in at Yokohoma.

Q.—What was the pressure of steam at the time?

A.—20 lb, previous to the fire.

Q.—How long before the alarm of fire had the fires beem trimmed?

A.—A short time; about 11.15 p.m. we fired.

Q.—What kind of lamps do you use in the bunkers?

A.—Sometimes covered, sometimes uncovered lights.

Q.—Were any of the bunkers leaky?

A.—I think not. The ship was remarkably light.

Q.—How many streams are available in case of fire?

A.—20 or 21.

Q.—How many were used at this fire?

A.—I cannot say.

Q.—At what time did you desert the vessel.

A.—I cannot say; but when the order was passed along.

Q—How did you receive this order?

A.—It came to me, from the second engineer who said he had received it from the captain.

Q.—Did you consider the saving of the ship hopeless at this time?

A.—I did.

Q—Who gave the order to lower the boat in which you escaped?

A.—I do not know. The third officer was lowering it.

Q.—How many people had you in the boat—her full capacity?

A.—I believe so. 65 people, I think, namely 4 Europeans and 61 Chinese. The third officer had charge, and she was equipped with oars, sails, bread and water.

Q.—When you left the ship, did you see Captain Warsaw?

A.—I did not. I had not seen him for several minutes before. I had seen him and received orders from him during the fire.

By Lieut. Gillpatrick. You say you received no order from the chief engineer. Did he question you about the pumps?

A.—He did not.

Q.—Did you see him on deck during the fire.

A.—I did. He was working very hard.

Q.—Have you suffered from the effects of the smoke?

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A.—Yes, I was sick, but have recovered.

Colonel Loring. So far as you know, did officers and men do their duty?

A.—They did.

Q.—Where did you first see flames?

A.—In a line with the main galley. I was standing on the main deck, and the flame came from the same place as that where I first noticed smoke.

At 15 minutes past noon the Court adjourned till 1.30 p.m. On its reassembling.

Michael Jordan, sworn, stated:—I am employed on the *Japan* as fireman and this is my 10th voyage in that ship. The first alarm of fire was at 25 minutes past 11 p.m. on the 17th. I was in the fire room and I smelt wood burning overhead. A Chinaman said it was in the donkey engine-room but before I could get there the engine was stopped. I was on watch at the time. We shut down the dampers and opened the fire room doors. I did not see fire, but directly the ship stopped I saw the smoke. I tried to get to the donkey room. The smoke came through the door on the freight deck and all along the baulk deck. The bunkers were about half full. Water was brought to bear directly. The water was on when I got on deck. Seven or eight streams were brought to bear. I went to see if the donkey engine was all right. A Chinaman told me that the donkey engine was alright. I could just get on deck. I picked up a lamp and saw that the steam guage registered 24 lbs., the lamp went out directly I got it to the steam gunge. I next went to my station on deck as I knew it well without being shewn. I did not receive any orders. I always went into the coal bunkers whenever men were working there. The bunkers are at the side abaft the boilers. I noticed no high temperature in them. There was coal from San Francisco in them. I took a lamp by request of the chief engineer. I assisted the engineer in taking a hose aft. I know the chief was at the pumps himself. I heard no one cry out" Every one for himself." I saw Captain Warsaw several times and heard him give orders about the fire. I do not know how long I was on board after the fire broke out, but was as long as most of the others. I got away in the 2nd port aft boat. We had no officer. I lowered one end of the boat and another man lowered the other. The fire was coming up through the engine rooms. I might have gone out forward. I went aft. We had no one to steer our boat so I steered; none of us were sailors. It was only a small boat, there were 13 in it. I do not know the full complement. The last man I saw was the chief engineer. I do not know whether he went into his cabin or not. There were 3 boats lowered together. It was very difficult to leave the ship. I know of three boats that had left. We had to go to the stern to leave. I saw no men in the water. We stayed round the ship. The boat had everything in her, sails, bread, water &c. The water was running through the hose when I left the ship. We had no orders. We saw every one deserting the ship. I do not know when the captain left. He might have been on board when I left but I do not know.

Henry Harrison Andrews, 2nd officer, was next examined, and stated:—I have been in the employ of the Company about 5 months. On the 17th at 25 minutes past 11 at night the fire took place. At the time of the alarm I rang the fire bell. I was the officer on watch. I was relieved by quartermaster Harris, and went aft to call the chief officer, and then turned the ventilators from the wind. I cleared away all the boats aft. I left the ship in the last boat with the captain and chief officer. We saved some ten or fifteen passengers, and stayed by the ship all night. Next morning we were picked up by a Chinese fishing junk. I was about an hour and a half on board from the time the fire occurred before leaving the ship. The fire was in the fire room. The freight stowed in the bunkers was flour which was dry. The coals taken on board at Yokohama were wet. I could not tell which bunker the fire broke out in. The smell came from the bunkers and it was certainly not wood burning Most of the coal was very damp.

I do not know how many streams were brought to bear on the fire I think the pumps had not ceased working, when I left the ship I received no orders. I saw the captain once aft. We went in the 1st port boat aft. The captain lowered it at one end and I at the other. We left the ship together. All communication was cut off by the flames. All was done to save the ship that possibly could be done. There were 700 people on board. There were about 1,500 life preservers, which were so placed that passengers could get at them. The fire and smoke prevented many people from getting to the life preservers. A great many of the Chinese passengers were burnt to death. Many did not use the life preservers. There was a cross sea running, so that a good many were drowned, and some were paralysed with fear.

David Fulton, late assistant engineer on board the *Japan* corroborated the testimony of previous witness. He said he smelt smoke like wood smoke. There were 12 in all in the boat in which he escaped when she left the ship and they picked up two more. They were all too sick to make any further effort to save life,

Harry Laster, who was steerage watchman, was sworn. Nothing further was elicited from this witness than had been stated by those previously examined, as to the origin of the fire. He stated however that Captain Warsaw was the last man to leave the ship.

This witness' testimony was concluded at 4 30 p.m., when the Court adjourned till Monday, the 28th, at 10 a.m.

COREA AND ITS INFLUENCE ON CHINA, AND THE INFLUENCE THAT RUSSIA HAS ON BOTH.

To the Editor of the

NORTH-CHINA HERALD.

Sir,—Having been in a position which enables me to make a few observations on the above subject, I send these to you, in the hope that they may prove of some little interest to your readers, and possibly of value in our commercial relations.

The mainland of Corea forms a peninsula, of which the southern part lies in lat. 34.20 N., and long. 127. E., and it extends into the Japan Sea, or Gulf of Tartary, as far as 42.40 N., and 130.10 E. Of the numerous small islands which surround it, the largest is that of Quelpart, to the south of the mainland; it is about 40 miles long, and gradually rises to a peak 6,548 feet in height. Quelpart is used by the Corean Government as a convict station, and its inhabitants live by agriculture and fishing. Up till within five years ago, the island was also visited by fishermen from Shantung, who used its harbours as fishing stations, where they could land to prepare their dried fish, which were afterwards sent to Shanghai for sale. In consequence, however, of a serious disturbance created by unruly fishermen—the people of the Shantung coast are very free and independent, not to say offensive, in their bearing—the Chinese were, about the time mentioned, interdicted from fishing in Corean waters.

The capital and seat of Government, as your readers are no doubt aware, is Seoul; and though the Government is tributary to China, it is, within its own dominions, perhaps the most thorough-going despotism in the world. Every Corean has to work for it, and it can take for its own use, if it choose, all that any of its subjects may acquire beyond what is necessary for daily wants. So completely does this destroy all tendency to enterprise in the individual that when a number of Coreans, to escape famine—which was largely brought about by the same repressive system—fled to Passiet, the frontier town between Corea and Russian Manchuria, they could not at first be prevailed on to work for more than their daily needs. When they learned, however, that industry under an alien government like that of Russia, received its reward in present improvement of their worldly condition and ultimate independence, they became valuable labourers and excellent colonists, proving in those respects superior as a race to the Chinese, or at least, the Chinese of the northern provinces.

Corea is very rich in minerals, and in woods, which are well filled with game; she has a fertile soil, and her waters abound in fish To the north, in the Gulf of Tartary, seals are hunted for their fur and the sea otter is also found on the coast and in the mouths of the rivers. Twice a year, at the boundary fairs between China and Russian Manchuria, the Corean traders exchange furs, ginseng, horses, &c., for shirtings and other foreign and Chinese goods. The trade is altogether with the Chinese, and the articles received in barter are all supposed to be the product of China; since the visit of the American fleet to Corea, anything bearing the semblance of trade with other foreign nations is strictly prohibited, and I have heard it reported that even the possession of a European article was a crime punishable with death.

In conversation with an intelligent Corean in Passiet, I asked him what he thought of the visits of the French and American fleets,—whether his countrymen were not taught by them that foreigners could take Corea if they wanted, even with a small show of men and ships, if it were worth the trouble. Exile though he was, my friend laughed at the possibility; and declared that not only had his countrymen come off victorious in the encounters with both the expeditions sent against them, but that they were ready and able equally to repel all foreign attempts to open Corea. He admitted, however, in answer to a further question, that the Coreans feared one western nation, the Russians—whose power extends from the rising to the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

setting of the sun, and, viewed from the Corean standpoint, is irresistible. I then asked him why Corea paid tribute to China, and he replied that it was in compliance with an ancient custom, the Emperor of China being regarded as the Son of Heaven, whose gracious blessing was necessary even for the prosperity of the seasons. I give what I understood to be the effect of his remark, and it is one illustrative of the superstitious reverence which the Chinese Rulers have been able through long ages to exact from the weak and ignorant nations around them. One may judge from it why they are so anxious to misrepresent the power, the intelligence, and the intentions of foreign nations, not only in their own country, but in those over whose politics they have any control.

Corea, although it occupies a very insignificant place on the map, is the only country with a seaboard which is now closed to foreign intercourse, while on the other side it forms a bar between China and Russian Manchuria. Both its neighbours would be considerable gainers if it were opened up. The trade with China would receive an impetus which would be felt in the foreign commerce of the East; while the vast domains of Russia in that part of the world which are little known, and put still less to account, would be developed by the surplus population of both Corea and China, and become of some importance to the Empire which holds away over them, and to the world at large.

I am convinced that the untoward result of the visits of the French and American fleets to Corea had a most pernicious influence in the North of China, and that to the former was indirectly to be attributed the massacre of June, 1870, at Tientsin. The Chinese, naturally, though mistakenly, regarded the retirement of the expeditions as a sign of weakness; if it were otherwise, they said, why did not the foreigners remain in Corea as they have done in China; and it is a bitter pill for them that their own attempts to do as that little tributary State did, only resulted in defeat. An attempt would not improbably have been made to expel foreigners from China, after the seeming success of the Coreans, were it not for the fear of Russia which is felt both in China and Corea. The former, we know, watches with a jealous and an anxious eye the advances of Russia on the north and north-west; while Corea has always been very careful to avoid getting into any trouble with the same powerful neighbour, the vicinity of whose empire has inspired her with a feeling the reverse of what she has for those nations which have assailed her on the seaboard. It is to be hoped that Russia will ere long use this influence to induce the Corean Government, under the more liberal administration which is reported to have been recently instituted, to open up the country to foreign intercourse. I think there is some reason to hope that judicious pressure from that quarter would now lead to the desired result; and it would probably be the means of saving Corea from disasters and bloodshed consequent upon a better organied effort to enter the country from the sea, which sooner or later will surely be made.

Yours fatihfully,

A NORTHERN RESIDENT.

November 27th, 1874.

REUTER'S TELEGRAMS.

London, 3rd January, 1875.

By Pronuncimiento at Madrid Alfonso, son of Queen Isabella, has been proclaimed King and has been recognised by the Armies.

The Conference of party leaders convened by MacMahon was unanimous as to discussing the constitution laws integrally, but there was a divergence concerning the transmission of power.

London, 30th December, 1874.—The Lesbia of London has resigned (!) Vanlausberghe, the German minister at Brussels, is appointed successor to Count Arnim, who is condemned to three months' imprisonment.

The Reichstag yesterday passed by 199 to 74 a vote of confidence in Bismarck. The Emperor refused to accept his resignation.

London, 24th December, 1874

The Senate have passed the Bill for the redemtion of Greenbacks.

The Great Western Express, near Shipton, left the rails, and the carriages were precipitated into the Canal. There are thirty killed.

At an explosion at a colliery in Stafford-shire, twenty were killed.

Hongkong, 22nd December, 1874.

The U. S. S. *Saco*, which went in search of further survivors of the *Japan*, returned to-day, with Tyndal, the Doctor, and nearly 150 Chinese.

London, 21st Dec., 1874.

Count Arnim has been condemned to three months' imprisonment.

The Reichstag yesterday passed a vote of 199 to 74 of confidence in Bismarck. The Emperor has refused to accept his resignation.

GERMANY.

London, 18th Dec., 1874.

There is a wide-spread report that Bismarck will resign. The ostensible cause is a vote of Parliament condemning the arrest of the Editor of the *Germania*. It is expected that the Emperor will refuse to accept his resignation.

London, 17th Dec., 1874.

Count Arnim's case has been closed. The defendant maintained his right to retain the documents. The prosecutor demands a sentence of 2½ years' imprisonment. Judgment will be given on Saturday.

The reply of Decazes refutes lengthily the complaints of Spain, and reiterates the friendliness of his Government.

London, 15th December, 1874.

The publication of the Arnim documents has caused great sensation in Paris, because in rebutting Arnim, Bismarck lengthily demonstrated that Republican France was not dangerous to Germany, and that he would rather act as a political deterrent than prejudice Monarchical institutions elsewhere.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Aug. 1. 26ins.

Shipping Intelligence.

ARRIVALS.

Jan. 1, *Nevada*, American steamer, Williams, 2,145, from Shanghai and Ports, Mails and General, to P. M. S. S. Co.

Jan. 3, *Orissa*, British steamer, Pockley, 1,089, from Hongkong December 22nd, Mails and General, to P. & O. Co.

Jan. 4, *Hokaido*, British schooner, Schulze, 100, from Shanghai, December 20th, KerosineOil, to China and, Japan Trading Co.

Jan. 6, *Courier*, Russian steamer, Lemascheffsky, 491, from Shanghai, December 31st, General, to Walsh, Hall & Co.

Jan. 6, *Vancouver*, British steamer, Shaw, 1,917, from San Francisco, December 12th, Mails and General, to P. M. S. S. Co.

Jan. 7, *Altona*, German steamer, Hore, 1,179, from Hongkong December 28th, General, to P. M. S. S. Co.

Jan. 8, *Oregonian*, American steamer, Harris, from Shanghai and Ports, December 31st, Mails and General, to P. M S. S. Co.

Jan. 9, *Estepona*, British steamer, Hubback, 676, from Shanghai, General, to Hudson, Malcolm & Co.

DEPARTURES.

Jan. 5, *Menzaleh*, French steamer, Pasqualini, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.

Jan. 7, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, General, despatched by P. M. S. S. Co.

Jan. 8, *Parmenio*, British barque, Abbot, 369, for Takow, Ballast, despatched by Captain.

Jan. 8, *Bellona*, German steamer, Schultz, 707, for London and Hamburg via Manilla, General, despatched by Simon, Evers & Co.

Jan. 8, *Vancouver*, British steamer, Shaw, 2,200, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Jan. 9, *Altona*, German steamer, Horse, 1,179, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per American steamer *Nevada*, from Shanghai.—Mr and Mrs Godfrey and family, E. Whittall and servant, M. Manichall, Hiver Boer, Miss McDonald, Mr and Mrs Day, W. Rogers, 13 Japanese, and 35 in the steerage. For America.—Mr W. W. Newlin, Rev. H. H. Levitt, Mr and Mrs Finch and family.

Per British steamer *Orissa*, from Hongkong.—Mr and Mrs Roper, Messrs Pollock, A. Young, De Silva, Seki, and 7 Chinese.

Per French steamer *Menzaleh*, for Hongkong.—M. M. R. Wright, Parker and boy, Mme. Parker, child and servant. For Saigon.—

Digitized by Google UNIVERSITY OF CALIFORNIA

M. M. Connet, Poissat, Poissel, and Cotté. For Marseille.—M. M. Meazza, A. Segrist, Quellien, and N. Aravandinu.

Per British steamer *Vancouver*, from San Francisco.—Messrs J. Macpherson Grant, Martin Cohen, F. D. Bush, N Tamekichi, A. Kirby, Robert Smith, E. Wiegan and wife, Mrs Deville, Mrs Varnum and child, and Mrs Drylin. For Shanghai.—Messrs E. Cunningham, and N. Shaw. For Hongkong.—Hely d'Oissel.

Per German steamer *Altona*, from Hongkong.—Mr Hurlbut.

Per American steamer *Nevada*, for Shanghai and ports.—Messrs Cunningham, Busby, A. Kirby, V. R. Swooney, H. Lyons, K. B. Paul, H. Loftus, E C. Kirby, R. Endicott, M. Gergen, Alexander Warden, Yates, Chas. Cadart, and 1 Japanese in the cabin, and 46 others in the steerage.

Per P. M. S. S. *Oregonian* for Yokohama.—Messrs. W. H. Harries and servant, M. Vernon, M. Glassenop, M. Wlasselberg, J. A. Repenu, C Frank, M. Pehosky, W. T. Driscoll and servant, T. J. Grooves and servant, W. G. Shipworth, T. Harris, M.D., Louis Sonlie, Pay. Shelding, U.S N., 2 Japanese Officers and 55 in steerage. For San Francisco: G. Cohen, Esq.

Per British steamer *Vancouver*, for Hongkong.—Messrs Burnham, Blakesley, and Hely d'Oissel.

REPORTS.

The German steamer *Altona* reports: having experienced very heavy weather on the voyage in Formosa Channel. On the 29th, 30th and 31st December, blew a tremendous gale from N.E., during which the ship had to lie to for two days making no headway; from Formosa Channel have had strong N.E. winds with heavy sea up to port.

SUMMARISED OBSERVATIONS FOR NOVEMBER.

From observations at 9 A.M. daily, on the Bluff (100 feet above sea level), the mean reading of the barometer last month was 29.92 inches; the highest reading was 30.34 inches on the 23rd; and the lowest 29.34 inches on the 3rd instant.

The mean temperature of the air was 37.9 degrees.

The highest day temperature in the shade was 54.5 degrees on the 11th, and the lowest night temperature was 24.0 degrees on the 9th instant. The extreme range, therefore, was 30.5 deg.

The difference between the mean dew point, and the air temperature was 2.0 degrees.

The mean degree of humidity of the air was .685; complete saturation being represented by 1.

The general direction of the wind was Northerly.

Rain fell during the month to the amount of 6.16 inches.

There were 21 days on which no rain fell; the maximum fall in one day was .144 inches registered on the morning of the 4th inst.

Earthquakes.—One at 1.40 P.M. 19th instant.

Three Shocks occurred during night of 28th instant.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JANUARY 9TH, 1875.

IMPORTS.

Cotton Fabrics.—The market for Cotton goods generally is languid, holders evincing an inclination to sell from stock and "to arrive." Dealers on their side abstain from operating on an extensive scale, and the tendency of rates is apparently lower. There is no enquiry for *Grey Shirtings*. In *Black Velvets* some small transactions may be noted on a weaker basis, the slender demand in this case being attributable to the fact that dealers have provided themselves to some extent by contracts which will be current for some time to come.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce. ...$1.90 to $2.12½	56 to 60 reed	40 yds.	35 in. nom. per pce.	2.50 to 2.60
8 lbs.	38½ yds.	44 in.	„ nom	64 to 72 „	„	„	2.70 to 2.80
8 lbs. 4 to 8 lbs.	6 „	39 in.	„ ... 2.25 to 2.55	Turkey Reds	25 yds.	30 in. 2¼—3 lb. per lb.	0.90 to 1.00
9 lbs.	„	44 in.	„ ... 2.70 to 2.95	Black Velvets			8.75 to 9.75
Taffachelass Single			... 2.60 to 2.75	English Drills			3.20 to 3.40
				Canvas, Navy, Red Stripe			7.00 to 8.00

Yarns.—Low and medium 16-24 are in good enquiry at somewhat easier rates, but higher class spinnings are less wanted. 28-32 are readily saleable from stock at quotations, stocks being small. Best spinnings of 38-42 are in fair demand but transactions are of very moderate extent.

No. 16 to 24	per picul...34.00 to 37.00	No. 28 to 32	per picul...39.00 to 42.00
Reverse	nom.	„ 38 to 42 ...small stock nom....	„ ...42.00 to 48.00

Woollens.—During the closing week business has continued restricted though a small demand has existed for *Medium Orleans*, plain *Mousselines de laine* (at low rates), and the better quality of *Italian Cloth*. For *broad cloth* there has been no enquiry whatever, and *blankets* and figured *mousselines* are neglected and lower in price.

Plain Orleans	40—42 yds.	32 in....	6.25 to 7.75	Figured Mousseline de Laine...	30 yds.	30 in...	0.28 to 0.32

„ sheet...	„	... 5.00 to 7.00	Tin Plates ... ... „ 8.50

EXPORTS.

Silk.—During the past fortnight the continuance of depressing advices from the home market and the New Year's holidays have checked business. Settlements since the 22nd ultimo barely amount to 300 bales, and prices have further receded $10 to $20 according to quality. The stock is reckoned at 1,600 bales.

A few parcels of very superior silk, the produce of native filature, are now on offer, and bear witness to a slow but real improvement in reeling; they are held at about $625.

The total export since the beginning of the season is 7,109 bales against 9,388 last year at the same date.

	Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.34.		*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.34.*
Hanks—

Common No. 3	430 to 460	16s. 8d. to 17s. 8d.	frs. 46 to 49

Tea.—Since our last Overland issue telegraphic despatches implying almost a re-imposition of tea duty in the United States having been received by several firms here a considerable excitement has been created, and native merchants being made acquainted with this "possibility" have, as is usual with Asiatics, increased their demands for stocks on hand to such a figure as nearly to suspend business for the last few days.

Before the advance a considerable amount was settled, making a total, since last mail on the 23rd ultimo, of nearly 6000 piculs. Stocks remain much as last reported, about 8000 piculs in Yokohama.

It is believed on very good grounds that there are still some 18,000 to 20,000 piculs of this season's tea yet to come forward, and if the native holders hope to hold this amount either for the present scale of prices or carry out their usual threat of mixing it off with low-price parcels of "New Crop" next season they will commit a grievous mistake. Japan teas have maintained their price on the New York market hitherto in virtue of their good quality; let that once be lowered, and China teas will regain their former popularity and the produce of Japan will only prove saleable at a reduction of 20 to 30 per cent on present ruling rates.

Our export to date from Yokohama, including the cargo of the *Vancouver*, is about 14,200,000 lbs.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 3.] YOKOHAMA, SATURDAY, JANUARY 16, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At Yokohama, on the 11th January, 1875, the wife of C. V. MARTINHO MARQUES, of a daughter.

DEATH.

In Tokio, January 13th, 1875, suddenly, ALBERT G. BATES, aged 21 years, of Washington, D.C.

Notes of the Week.

THE appointment of Mr. Von Brandt as Envoy Extraordinary and Minister Plenipotentiary of the German Empire at Pekin, of which we gave some intimation a few months ago, has been gazetted, and Mr. Von Brandt will proceed to the Chinese capital as soon as circumstances permit. Until the arrival of his successor, Baron Von Holleben, at present Chargé d'Affaires in Peking, Mr. E. Zappe, German Consul at Yokohama, will act as Chargé d'Affaires *ad interim*, a post which his experience in Japan well qualifies him to fill, and his appointment to which has given sincere pleasure to all who have the advantage of his acquaintance.

THE sudden death of Mr. Albert G. Bates from suffocation while in a bath heated by a charcoal stove, has caused much sensation and grief among his friends in Yedo. Mr. Bates was attached to the foreign educational staff of the Government, and was esteemed as a promising and industrious member of it. This is by no means the first case in which a foreigner has lost his life by the use of this seductive, but unquestionably dangerous kind of bath, against the use of which any warning at this moment would be supererogatory.

COUNT DE LITTA, lately Italian Chargé d'Affaires during the absence of Count Fé D'Ostiani, leaves Japan for Italy by the next outgoing French Mail.

THE finding of the Court of Enquiry which was called at Hongkong to investigate the causes of, and the circumstances attending, the destruction of the P. M. S. S. *Japan* on the night of the 17th December last, is sensible and straight-forward. It indicates the causes of the fire, and makes a recommendation calculated to prevent future disasters arising from the same cause. It also points out the necessity for a "boat station bill," in the absence of which much confusion and disorder and an unauthorized lowering of boats are sure to occur.

There can be no doubt that the fire arose from the spontaneous combustion of coal in the bunkers, owing to its having been shipped in very wet condition. But as it may be questioned whether this is always avoidable, the greater care should be taken to keep the strictest watch upon the temperature of the bunkers, in order to detect in its very incipiency any overheating or spontaneous combustion of the coal.

It is not the disappointment of an idle curiosity which makes us regret that the examination by the Court of Mr. R. M. Tyndal, U.S. Consul at Canton, was attended with so very poor a result. Colonel Loring said to him "Give us your account of the whole matter," and his reply was "I saw nothing of the fire till the flames got to the deck." His only additional testimony was as to the conduct of Captain Warsaw, which all the evidence proves to have been cool and collected. Surely Mr. Tyndal could have given some description of the actual circumstances of the case, in which the public has the greatest possible interest. It must be remembered that when the *America* was destroyed by fire in this harbour, it was confidently said that, had the disaster arisen at sea, the fire could have been got under, and the ship saved. The power of the engine, it was urged, would have been used to bring an immemse mass of water the bear on the burning material, and this would have extinguished it. We now see that though this plea is not without some force, and even supposing that, under favourable circumstances, a fire breaking out in mid-ocean might be got under, it is still quite clear that if, as in the case of the *Japan*, it originates near the engine, paralysis overtakes the very means relied on to extinguish it. Only an hour and twenty minutes elapsed between the first alarm of fire and the abandonment of the vessel, although twenty-one out of twenty-four possible jets of water were brought into use.

Again, admitting, as must be done, that the great loss of life among the Chinese passengers arose from the communication between the fore and aft parts of the vessel being cut off by the flames which burst through the midships of the vessel; by their paralysation by fear; and by the roughness of the sea and darkness of the night; we are still of opinion that a more perfect discipline in regard to the manning and lowering of the boats, enforced according to the rules of a "boat station bill," would have greatly mitigated this loss of life. But the main conclusion to which this disaster forces us is, that in view of the immense distance the Pacific Mail steamers have to traverse between San Francisco and Yokohama—and the fire might just as easily have broken out on this passage—nothing but iron vessels, built in compartments, will ensure to the public such security as is demanded by the great passenger freights taken by the Company.

As the plain suit known as evening dress has been constituted the full dress of the civil officials of this country, some pains should be taken to preserve from ridicule those who wear it, and who, not having lived in foreign countries, are unacquainted with its proprieties. That the officials have lost immeasureably in dignity and grace of appearance by the change from their own very becoming dress to our very prosaic costume, need hardly be said. But as this has been brought about by a rooted determination to change the whole ideal of life, manner and thought, from an Oriental to an European one, we cannot greatly blame it. In adopting our dress, however, attention should really be given to securing an ob-

Digitized by Google
UNIVERSITY OF CALIFORNIA

servance of its rules—rules to infringe which in Europe is to court social death. In one of Thackeray's delightful "Snob Papers" he shows the inevitable fate which overtakes the man who eats peas with his knife. Let him be statesman, poet, painter, writer, musician or genius of the first rank, all this will not avail him if he flies in the face of society's rules. Similarly, it is a dreadful thing to see a Japanese official cut in halves with a white equator of shirt formed by a total refusal of his waistcoat to meet the top of his unmentionables. It is equally unbearable that a large handkerchief of the very sturdiest material should be thrust into the front pockets of the latter garment, thus producing an appalling diversion from the line of male beauty, unredeemed even by the occasional flutter of the handkerchief in the wind. Such signals are alike unusual and unbecoming. Then, the hats! Merciful Powers! Was there ever seen such a collection of head-dresses as that which made Yedo hideous on the lovely morning of this new year? The hat is, at best, a frightful thing. But Europeans are so accustomed to it, so fond of it, and look upon the use of it as so intimately bound up with their religion, that they introduce it the moment they have the slightest excuse for doing so. Their first prayer in Church is invariably murmured into it—at least in England—and in some inscrutable manner it lends itself to feelings of respectability, *poses* a man in society, and is almost a guarantee for his good behaviour. But all this imparted advantage can be secured only by wearing a good hat: a bad one does exactly the reverse. Put a bad hat on the best dressed man in Bond Street, and he is lost. The most finished work of the tailor, the noblest presence, the most graceful carriage, all avail nothing if so crowned. What, then, is to be said for the hats we see in this country? That they are often worn over the ears, (sometimes over only one ear), that they are rarely put on the right part of the head, that they are always of a bad, and generally, of an execrable, shape, that they are such hats as Monmouth Street would scorn, and are fit only for the dust-cart, is to give no idea of the great disfigurement they produce to those who have been deluded enough to purclase them.

The boots are but little better. A well-fitting boot grasps, without pinching, every part of the foot, and every man who bestows a moderate and proper amount of care upon his dress is particular that while his boots are not too small, they also do not err in the other direction. But a Japanese who has not been abroad seems to buy his boots on the principle that the more leather he gets for his money the better. They are like canoes. You might played at hide-and-seek in them. A "hue and cry" is necessary to find the man who is lost in them. They must have unexplored regions demanding Livingstons and Stanleys to traverse them. They are very Zaharas of waste leather.

Cannot something be done to put these things to-rights? It really is too hard that a people whose own dress is very picturesque and admirably suited to them, should change it for one which certainly does not suit them, speaking generally, and which, worn, as it now is, with an entire disregard of its own rules and congruities, is not only distressing but very ludicrous. The intellectual movement which is taking place in this Empire ought not to be associated with anything provocative of ridicule, and it is with a view of preventing this that we have addressed ourselves to the question. Dress is, more or less, in nations as well as individuals, an index of the mind, and we can assure the Japanese that foreigners casually visiting this country will make some very curious, not to say unfavourable, inferences regarding the national mind, if they see the bodies in which it is encased themselves encased with such an entire disregard of propriety.

Some months since the *Nation* drew attention to the metamorphosis which Messrs. Chambers' "Edinburgh Cyclopædia" had undergone at the hands of its American republishers, and we observe that it has returned to the charge with the view of embodying the representations which the proprietors of the work have communicated in an "editorial statement" on the subject. As this work in its American travestie may find its way to Japan, it is [illegible] that Messrs. Chambers' disclaimer should obtain publicity here, since the arguments which the transatlantic Editor has interpolated in the text of the original—and "which are repudiated by, and "hateful to, the original proprietors"—may impose upon unwary readers who fail to detect the patchwork they form. The following extracts will exhibit the process.

Free Trade (Original Edition.—"This term, when used so late as twenty years ago, expressed a disputed proposition, and was the badge of a political party; it now expresses the most important and fundamental truth in political economy. From its simplicity it affords, to those who expect to make political economy an exact science, the hope that they have obtained an axiom. But it has in reality been established as the result of a double experience—the one being the failure of all deviations from it, the other the practical success of the principle during the short period in which it has been permitted to regulate the commerce of the country."

Free Trade (American Edition.)—"A dogma of modern growth, industriously taught by British manufacturers and their commercial agents. The doctrine had no foothold in the policy of any civilised nation, and had no legislative birth until put forth by Sir R. Peel in 1846. . . . Even the most strenuous advocates of the theory dare not put it to the test of experience in its fullness. The teachers, therefore, remain self-deceived. The cloistered sophists of the schools, and the propagandists of free trade, are doubtless as learned as the sophists of any age, and practically as useless. 'Free-trade expressions need Americanising, as they are utterly hostile to our prosperity, and subversive of scientific truth. Whenever an advocate of this dogma, schooled in their errors, has found devolving upon himself the responsibility of dealing with practical questions, he finds their supposed cardinal truths as groundless as the mythical Arcadias and Utopias of romance. The sophistries of free trade are put forth to lull the suspicions of the deluded purveyors to the wealth of England," etc.

Again—

Protection — Protection Duty (Original Edition), "in Political Economy, terms applied to a practice, now in disuse in Britain, of discouraging, by heavy duties and otherwise, the importation of foreign goods under the notion that such a practice increased the prosperity of the country at large."

Protection — Protection Duty (American Edition), "in Political Economy, terms applied to a practice, found necessary in the United States, of discouraging, by heavy duties and otherwise, the importation of foreign goods, it having been proved that such a practice increases the prosperity of the country at large."

And here is another in the article relating to Queen Victoria:—

Original Edition.—"The progress made by the nation in the various elements of civilisation, especially in that of material prosperity, has been unparalleled (see 'Great Britain'); and perhaps during no reign has so great a measure of political contentment been enjoyed."

American Edition.—"The progress made by the nation in the various elements of civilisation, especially in that of material prosperity, has been unparalleled (see 'Great Britain'); but a growing discontent under her unequal institutions and a progress towards Republicanism, are plainly apparent."

(Here follows a slanderous imputation concerning His Royal Highness the Prince of Wales.)

This is sailing under false colours with a vengeance. The *Pall Mall* happily styles it "Naturalising Literature."

No intimation has up to the hour of our going to press reached Yokohama in reference to the destination of the *Adventure*, troop-ship, and it is thus uncertain whether she will return to England with the relief crews of the gunboats *Elk* and *Hornet*, or be despatched to this port for the purpose of embarking the Battalion of the Royal Marines now serving in Japan. The removal of the French detachment will, it is understood, be made simultaneously with that of the English troops.

(From the Japan Mail Daily Advertiser.)

It is rumoured that there has been an engagement between the Chinese troops and the aborigines of Formosa in which fifty of the latter were killed. We have no news of the loss on the Chinese side, nor of the result of the engagement.

An accident occurred by the bursting of the boiler of a small Japanese steamer on its way to Yedo yesterday morning, by which the two stokers have lost their lives. This accident, due to the carelessness of the engineer, swells a list already formidable enough.

A Meeting of the seat-holders of Christ Church was held, pursuant to notice, at the British Consulate yesterday afternoon. The attendance was small.

Mr. Russell Robertson, H. B. M. Consul having been called to take the chair and the thanks of the seat-holders having been given to the late Trustees,

UNIVERSITY OF CALIFORNIA

Mr. Howell moved a Resolution to the effect that Messrs. Cargill, Wilkin, Ness and James be elected the Committee for the present year, Mr. James acting as Treasurer and Secretary; and that Mr. Russell Robertson be appointed Chairman of the Committee. He remarked that the gentlemen nominated were all conversant with the business which would devolve on them, and, in regard to the appointment of H. B. M's. Consul as chairman of the committee, it was well, in view of the organic change which our Church affairs were now undergoing, to work, as far as it was possible, with the machinery by means of which these affairs had hitherto been conducted.

The Resolution was seconded by Mr. W. H. Smith and carried unanimously.

Mr. Cargill then read the following report from the Special Committee:

REPORT OF THE UNITED GENERAL COMMITTEE APPOINTED TO TAKE THE SENSE OF THE CHURCH MEMBERS ON THE QUESOF THE TEMPORARY OR PERMANENT APPOINTMENT OF A CHAPLAIN.

The United Committee have not been able to proceed as they could have wished in the important duty entrusted to them. The first difficulty they met with was in reference to the amount of funds likely to be available for the expenses of the Church. It was clearly impossible to enter upon any discussion on this vital question until the success of the new money scheme could be ascertained, or until the views of the Secretary of State were ascertained respecting the proposed new constitution.

The Church members would evidently have been only too glad to see an end put to the temporary arrangements existing, but so long as the above-named causes of delay were in operation, the Committee feel that to moot such a question would have been altogether premature. As the Church subscribers are aware, we are still in a state of transition, and the Committee therefore recommend to this meeting that the matter should be referred to the new Committee of Trustees who ought soon to be in a position to give it a practical consideration, and to place it before the members in a shape for satisfactory solution.

F. S. JAMES.
E. D. MURRAY
W. H. SMITH,
HENRY ALLEN, JR.
W. W. CARGILL,
G. P. NESS,
RUSSELL ROBERTSON.

Yokohama, January, 1875.

The meeting subsequently discussed certain private business connected with the affairs of the Church.

Mr. Montague Kirkwood has been admitted to practise in the German Consular Court at Yokohama, as one of the four attornies, or authorised legal advisers, for the year 1875. Mr. Kirkwood is, we believe, the first English barrister admitted to practise in this Court in the above capacity.

WE are informed that His Excellency Sir Harry Parkes is expected to pay his long promised visit to Kobe by the next steamer; perhaps then the Recreation Ground question (Vexation Ground it should be)—may get settled.—*Hiogo News.*

THE entertainment given on Saturday evening at the Gaiety Theatre by Mr. Pauncefort did not draw as large a house as might have been hoped, nor, to tell the truth, was it quite as successful as we should like to have seen it. "Delicate Ground," with which the evening opened, is a piece which presents formidable difficulties to amateurs on account of the great art required to reconcile the capricious alternations of feeling in Madame Sangfroid and the unfortunate gentleman who has *not* married her, with the probabitities of the case. Mr. Pauncefort, as Citizen Sangfroid, played his part well—with ease and excellent effect, though we are not quite clear that he dressed it in accordance with historical requirements. The part of Madame Sangfroid was taken by a gentleman new, as we think, to our local stage, and if he was not everywhere quite successful in a part which can only be properly filled by a woman, he still showed considerable talent and must be complimented on a handsome person and a very good make-up. His entrance was really so excellent that we hoped for an extraordinary performance. But it is no blame to any man that he could not pourtray such a character as that attempted on this occasion.

Less must be said for the young royalist who did not marry her, and whom she may certainly be congratulated in not having married. The gentleman who took the part sympathised so entirely with the audience in their view of it that we are sure he will not now be offended when we say that he afforded unbounded amusement to the house. We must not venture to say more than this. Were the house to live a thousand years, we doubt if it could forget the words "It must be her uncle!"

On the conclusion of the play a body of amateurs sang *Mynheer van Dunck*, which is an amazingly good piece of music, though, it must be confessed, a little out of date. It did not go very well, and there can be no real necessity for the mispronunciation of the word "Zuyder" which almost invariably attends the performance of this glee. The "Zuy" has nearly the value of our "oo" as in the word 'shoot,' and not "ei" as in the word 'eider,' and as almost invariably sung by us—doubtless one of the results of our free institutions.

A concertante duet for piano and flute followed, both parts extremely well played. We must specially compliment the gentleman who took the piano-forte part which required a great deal of execution. The orchestra followed with the overture to the *Barber of Seville* which went better that the *Zauberflöte* with which they opened the evening. The entertainment closed with a little afterpiece, and a glee, for four voices, very nicely sung, filled up an odd five minutes.

THE petition sent to Japan by the Coreans, says a native journal, was to the effect that if the Government would overlook their past misconduct they would receive the next Ambassador from Japan with greater deference. Arrangements were accordingly made to despatched Moriyama to the Corea, but the execution of the contemplated mission has been postponed for the present.

A native paper says that it is rumoured that the *shizoku* of the Shirakawa and Kagoshima *kens* are apparently much disturbed, and that they are engaged in secret consultations. It would seem that a dissatisfied feeling exists which affords much occasion for apprehension.

A meeting of the Asiatic Society of Japan was held at the Grand Hotel on the 13th instant, when papers were read on an "Itinerary of two routes from Yedo to Niigata" by Captain Descharmes, Chasseurs d'Afrique, and on "Constructive Art in Japan" by Mr. R. H. Brunton.

THE Hongkong newspapers publish copies of letters which have passed between the chief manager of the Hongkong and Shanghai Banking Corporation and Mr. Kingsmill of Hongkong. It will be observed that Mr. Jackson, formerly manager of the Yokohama Branch of the Corporation, has been appointed manager *ad interim* of its London office:—

Hong Kong, 31st December, 1874.

James Greig, Esq., Manager,
Hong Kong and Shanghai Banking Corporation.

Dear Sir,—Yesterday, in more than one or two quarters, I heard a rumour with reference to the future management of the Hong Kong and Shanghai Banking Corporation, the truth or the contrary of which is a matter affecting the body of Shareholders in general.

The rumour is thus—"That Mr David Maclean (now our manager in London) is to leave his post temporarily on a tour of Inspection through and over the several branch establishments of the Bank. That during his absence from London Mr. Jackson (now our sub-manager there) is to take the place of local manager, and that Mr. Rowett (at present one of our directors) is to take the post of submanager until the return of Mr. Maclean from his inspection tour, and that then Mr. Rowett is to be appointed travelling inspector.

As a shareholder, I beg to put the following queries, and I will feel obliged by your answering them

Is the rumour true as I have set it out above, or is it wholly untrue?

If the rumour be not true in the terms I have put, then is it true in part?

If true in part, in what part and to what extent is it true?

What are the real facts as to this rumoured arrangement in the management of the Bank affairs?

You will observe that I write as a shareholder, and doing so, I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

serve to myself liberty to make such use of this letter and of your reply, as I may think advisable.

I am, Dear Sir,
Yours faithfully,
HENRY KINGSMILL.

Hongkong and Shanghai Banking Corporation.
Hongkong, 4th January, 1875.

Henry Kingsmill, Esq.,
Hongkong.

Dear Sir.—I have received your letter of 31st ultimo, and, in reply, am instructed by my Directors to inform you that Mr. David McLean, who has recently acted as manager in London has, by order of the Directors, started from London on a tour of inspection of the Banks, Eastern Branches, and Agencies. Mr. Thomas Jackson, lately manager of the Yokohama Branch, has been appointed to act as manager in London during his absence, and Mr. Rowett has been appointed to act as sub-manager at the latter Branch, for the same period.

Beyond these appointments, no others have been made as regards the London office, or the inspectorship of the Bank.

I am dear Sir,
Yours faithfully,
JAMES GRIEG.
(Chief-Manager).

It was commonly stated in Peking on the 18th inst., that the Emperor had been reported out of danger by his medical attendants. His Majesty will, however, in accordance with the invariable Chinese usage, remain secluded in his apartments for three months from the day of outbreak of the attack of small-pox. A decree appeared on the 14th, appointing the Imperial Princes to discharge the various functions of religious ceremonial at the Winter Solstice and New Year period, and this has been followed by a second edict, dated the 18th, in which it is announced that the two Dowager Empresses have, at his Majesty's request, consented to assume the direction of public business on his Majesty's behalf. *Daily News.*

CHURCH AFFAIRS.

THE successive disestablishment—for so it must be called—of the churches in the distant settlements of the East which have hitherto enjoyed the support of the British Government, is a measure to which we are not wholly reconciled by being told that it was inevitable, or by the feeling, to which we must frankly confess, that, in the present advanced condition of this settlement, we ought to be prepared to face it. Yokohama has become a large and thriving place, numbering among its residents not only a large proportion of English men and women attached to the English Church, but a considerable number of American Episcopalians who might gladly work with us on a constitution which permitted them to have a proportionate share in the government of Church affairs. It is quite true that, from a commercial point of view, our estate is not very thriving at this moment, and it is certain that, with the advent of the telegraph and the abundant steam communication we now enjoy with the base of our trade, the days of large profits and of rapidly made fortunes have vanished, and business must not be expected to yield more than a moderate commission after all the expenses of conducting it have been paid. But one fact still constantly faces those who urge that we cannot, unassisted, support our Church establishment. This fact is, that we maintain, without the smallest difficulty, all our old amusements, our races, our many various kinds of clubs, and that we stint ourselves but litttle in our pleasures and sports; and there is only one fair inference from it, viz.: that we *ought* to support our Church. It must be confessed that the English Government has been easy and generous with us all in the East on this point—not more so that becomes its spirit, yet, undoubtedly, and, as we venture to think, wisely, easy and generous. It has not said "You gentlemen out in the East pay us no taxes; you certainly derive larger incomes from your work than you could obtain at home; you live well and seem not greatly distressed by self-denial; you keep racers and build racket courts, find money for balls, concerts, and an endless variety of amusements; it surely is for you, under these circumstances, to support your own Church establishment." It has rather taken this view: "It is in human nature to be careless about interests, however great, which are very distant, and such are the ultimate interests of religion. England has no wish, and dislikes the prospect, that her distant children should lose their affection for the institutions under which they have been nurtured. She will make a liberal grant to maintain these institutions, until such time as the population of these distant settlements is numerous and rich enough to maintain them themselves. It is well that, as Christians, they should enjoy the privileges of Christian public worship, and we will enable them to do so until they can do it for themselves."

In the opinion of the Government that time has now arrived, and it has given us notice that we are to expect no more of its support towards our Church establishment, but must rely entirely upon ourselves.

We should not have a word to say against this were affairs more prosperous here. But we are like the Athenians during the plague, as described by THUCYDIDES. Our mirth is only another form of despair. Human emotions are correlated and convertible, and our revelry—such as it is—is the hollow mockery of men who feel that prudence brings no reward, and excess no punishment. "There is nothing new, and nothing true, and it does not matter." We are in face of an

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enemy. Be it plague, war or famine, it is no matter. We have not yet begun to cast lots for each other ; yet another six months of this raft-life might deepen the hollowness of our cheeks, and throw into our eyes a new expression indicative of horrible possibilities in human nature. We can fight, but the virtues of peace and calm prosperity must not be expected of us. Let those who are inclined to blame us first show that they would behave better under similar circumstances.

Yet—to be serious—the blow has really come upon us too suddenly. It is very well to say that we ought to have been prepared for it. But who is always wise for the future? Who could have foreseen such stagnation and distress as characterize our trade? The Russian says "Heaven is far off; the Emperor is near:" and similarly we say, "The heavens are as brass and the earth is as iron under us, but the British Government may bow down and hear us."

The withdrawal of the grant has been too abrupt. Had it come gradually, and with due and tender notice—first one hundred pounds cut off, then another, and so on until we could go alone—we could not have complained. But we are brought up "all standing," as sailors say. We are asked to supply air to a new reservoir from what is little better than a vacuum. We are gasping in an exhausted receiver, and are told that we must make provision for the capacious air-cells of an ecclesiastical pair of lungs. It is impossible.

Again. We have not been fairly discarded and launched by the State. If LAPLACE was right, our Earth and the planets were thrown off from the sun ; and their motions, orbital and proper, are evidences of their origin and relationship. But we do not know where we are. The Act under which we exist, and in virtue of which provision for our maintenance has been made, remains unrepealed. The Church property still stands in the name of the Consul, or, in other words, is still retained by the Government. The first offices have not been performed for us. We are, like Mahomet's coffin, suspended between heaven and earth. And what is the consequence? We are all in confusion. We meet and pass resolutions and read reports which are, more than anything else, like the convulsive struggles of the aspiring boy in the water whose corks have suddenly been taken from him. We cannot tell how far the Act is still in force. Is it fair to leave us to ourselves, and allow us only two alternatives, to sink or to swim? Should not something first be said of what we may, and what we may not, do ; and some motion be imparted to us as evidence of where we have come from, if not—grim thought—of where we are going to?

In view of our antecedents and our disposition in this matter, the Government will hardly leave us yet entirely without aid. We do not plead *ad misericordiam*, for that would not become us. But we plead as children of a generous parent who can at once appreciate and relieve our distresses. We have not been ungrateful in the past, nor are we rebellious now. But, to speak frankly, we are not in a position to stand this additional burden. Human nature must not be strained too far. Our acknowledged frivolities must not be visited too harshly on us. We are no worse than our brothers and sisters elsewhere, while we have exceptionally adverse circumstances to deal with. Only let us have a little more time, and—the English Government is not without æsthetical sensibilities—let not the termination of our relations be an abrupt solution of continuity! Rather let it taper—by retreating hundreds, if it may be so—to an artistic vanishing point. Our confessions and repentances should not be mingled with any regrets at the extreme costliness

SPIRIT OF THE JAPANESE PRESS.

THE BANKING SYSTEM.

The opinion of the *Japan Weekly Mail* on this subject is represented by the article we translated and published last week. A Spanish proverb says "Don't sign the letter you have not read, and don't drink the water you have not examined." The Editor of the *Japan Weekly Mail*, who must be well acquainted with this proverb, has signed something concerning our National Banks which he has not read, and drunk without examination the water of our Political Economy. We must therefare discuss this point with him, expressing at the same time our regret at his ignorance. The *Mail* says that we have imitated the Americans in the principles on which we established our banks. Are the circumstances of the Japanese, it asks, so analogous to those of the Americans that we make our institutions conform to theirs with any advantage to ourselves? After asking these questions he proceeds to say that our Government has imitated, and is imitating, the American system of banking without being acquainted with the principles on which it rests, and that our Government has unjustly united Ono and Mitzui to form a National Bank, and that this union has been productive of no good. We, being Japanese, know where our boots pinch better than the Editor of the *Mail* does, and therefore I will explain this matter specially for his benefit.

Ten years ago there were many establishments in America called State Banks ; they were subject to the laws of the State to which they belonged, and the paper money they issued only circulated in that state, being in fact, somewhat analogous to that formerly issued by our own *daimiôs*, which was current in one province only, and lost heavily in exchange when negotiated in another province. Some time ago I went to Salt Lake City and received some paper money there. On the morrow, when I arrived in Michigan, it was hardly negotiable, and I had to change it into National Bank notes at a loss of twenty per cent. To put an end to such troubles the Government established the National Banks, a measure similar to that of our Government, which converted the old *daimiôs'* notes into the notes of the Okurasho. The issue of our paper money during the war was exactly the same as the issue of greenbacks during the American war, therefore when the *Mail* says that we have acted on different principles to those on which the Americans acted, the Editor may be accused of drinking water which he has not examined.

But I will enter into further particulars.

When our Government first began its issue of paper money, it apprehended much difficulty in getting it into circulation, as there was no actual security for it. The Government accordingly agreed that it would issue bonds bearing six per cent interest, and that this interest, if not drawn, should carry compound interest.

It also made every effort to carry out this agreement. Finding this impossible, it made a proposition to redeem outstanding notes in hard cash. But this seemed as difficult as the other plan, and the Government, much perplexed at the difficulty, sought to find some country embarrassed by the same circumstances. It recognized them in America, and, still desirous of holding to its agreement, it adhered to the system of public debt bonds bearing 6 per cent interest, adding to them the condition that the principal should be redeemed in fifteen years. Whoever brought paper money to the Government received bonds in exchange, and in this way one hundred thousand *yen* were exchanged. But, as it was thought that the people would not be satisfied with 6 per cent interest, and that the bonds would not be bought, it was resolved to adopt the expedient of the Americans, and allow the National Banks to issue paper money on the security of these bonds deposited with the Government, and still bearing this 6 per cent interest payable to the banks. The foundations of these Banks are very solid, and the Government agreed to give hard cash to everyone who brought National Bank paper money for this purpose, and this is done at the present time. In short, the Government has taken charge of the public debt bonds, and pays the public 6 per cent. on them. This put an end to the Okurasho paper money, as the National Banks receive the 6 per cent on all the bonds deposited by them

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the banks making it their busines to issue the paper money. Tho Okurasho paper money may therefore be changed into Public Debt bonds, the Public Debt bonds into National Bank Notes, and these again into hard cash. This is the plan, and these are the steps, taken by the Government to make the paper currency convertible, and we believe this will be accomplished. As *The Mail* is not aware of this principle the whole of its reasoning is based on a misconception. It says that we have constituted our National Banks upon American principles, and speaks against us, saying that the Government unjustly united Mitsui and Ono. It is true that the Government did induce them to unite, but as others came in afterwards and subscribed to form the National Banks, receiving the same interest as Ono and Mitsui, there is no difference between them.

The *Mail* also says that the National Banks will not enrich our country. But five of them have been established during the past year. It is possible indeed that their regulations may not at first be all that is demanded, but, after all, they are very different from what *The Mail* alleges. The Editor, as I have stated, does not know the principles on which these Banks have been established, and, on the failure of Ono, he thought it a good opportunity for discussing the question. Mitsui and Ono would be called private bankers in Europe and America, because they employ their own capital, and are different to the banks which work under special laws. If a private bank failed in England, and the discredit of it were thrown upon the Bank of England, this would be precisely like blaming the National Bank system for Ono's failure.—*Nichi Nichi Shimbun.*)

(The article concludes with some compliments to ourselves, for which we make our acknowledgements to the writer of it, but which it is not necessary to insert.)

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

SUPERSTITIONS.

(Continued)

Sakura mura no Sogo (Sogo of the village of Sakura (cherries) in the province of Shimosa) is a tale well told elsewhere, of a farmer devoting himself for the good of his neighbours, and, by presenting a petition to the highest authorities asking protection against the injustice of his lord, incurring the death of himself and his family. His ghost haunted the *daimio* until he died a maniac.

Stories are told of women returning to this vale of woe to nurse the little ones they have unwillingly left behind.

If lovers are parted, and, while apart, are faithful, the one who dies first visits the remaining faithful one.

If a man passes at night the grave of some girl he has loved, and thinks of her, even though she had not reciprocated his affection, he is followed out of the grave-yard by a beautiful woman carrying a lantern. He recognizes her as his lost love, and she visits him every night afterwards in secret, until discovered by any third person. Any other living being than her lover can only see in her a ghastly skeleton, and the gifts or ornaments presented by her lover are afterwards found upon her tomb.

There is a story of a ghost appearing to an officer who lived near the present Engineering College. One of his favourite female attendants fell ill and was sent to her family to be nursed and cured. Subsequently she was reported to be hopelessly ill, and, on the very next day, to the surprise of her master's family, she made her appearance in the house, and reported herself as fit for duty, to commence which she said she would return on the morrow. On that evening the family heard of her having died at the hour when she was seen in her master's house. The master, a noted scoffer at ghost-stories and superstitions, became a firm believer in all at which he had previously mocked—so, at least, the story goes, as told us by our informer, a hearty believer in all such stories, though once a man in a very influential position.

A story is told of a *hatamoto* who used to exhibit his skill as an archer before the Shogun [illegible], being poor, borrowed from a neighb[illegible] of arrows handsomer than his own. Just before the great day of the trial he sickened unto death, and, as his friend was deploring this misfortune, the supposed sick man called and borrowed the arrows, explaining away his unnaturally rapid recovery. A few days afterwards the lender heard that the borrower had died on the very day of the trial, and, upon visiting the grave, he found his beautiful and valuable arrows laid unharmed upon it.

Haunted spots are known and avoided. There is a tree on the moat opposite the Confucian College, there was one where the School of Languages now stands, and one near the spot where Iwakura was attacked about a year ago, all bearing a bad name, and on which the natives are said to have often found some of their countrymen hanging dead. In the last gasp before death, a green ball of fire is said to leave the body and take a wavy path, leaving a track behind it like a comet. If this is met with it may at times, be caught by taking off the over-coat and throwing it over the ball of flame. The article of dress thus used for ever retains a strong and unpleasant odour. The act does not stay death, but only stays the passage of the soul.

When people die, the fluttering of birds, heard but unseen, in impossible places, and other peculiar sounds, are spoken of.

There is a way of raising a ghost, by putting into the lamp a hundred rush-lights, and, while reciting an incantation of a hundred lines, taking out one of the rush-lights as each line is finished; then go in the dark to a distant spot where a light is left burning and puff it out, when the ghost will appear.

Bake mono are ghosts of another kind, and not human, restless spirits. A girl named Okiku, the servant of a *hatamoto* living in the official quarter, about two centuries ago, accidentally broke a saucer, one of a valuable set of ten, made of some rare material and pattern, and said to have come from China in former times. Her master's anger, and his demand that she should replace the broken saucer, which she knew to be impossible, so frightened her, that she threw herself into a deep well in the garden. Ever afterwards her ghost came to count the saucers.

A ghost that appears to seamen always comes to borrow a dipper. If one with a bottom, is given, the ghost bails water into the boat or junk and swamps it. One with the bottom knocked out is thrown overboard to prevent this catastrophe, and to be rid of the ghostly importunate. Gnomes, ghouls and goblins are as numerous in Japan as in all other countries where there are children to be frightened into quietness and obedience; and lazy, ignorant and worse than incapable and superstitious nurses or mothers to frighten their little charges, when they have lost control over their own patience and temper.

Mikoshi niudo is an immense bald-headed monster that lolls out his tongue, looking dowu over the tall folding screens. *Kakure zatô* is a blind man with a staff who comes to carry bad people off to Hades. *Shitotsume kozo* is a one-eyed ghoul wearing a large hat, carrying in the hand a small sieve containing a ball of fire, the sight of which strikes terror into the beholder.

Rokuro-kubi. Some women are liable, while sound asleep and dreaming, to have their heads leave their body, still slumbering, and roam about, the head only attached to the body by an almost imperceptible film. It is dangerous to arouse them till the head returns to its original position.

Gambari niudo is a ghoul that only appears on the new year's eve. When called thus *Gambari nindo hoto to gisu*, a hairy hand is thrust forward, and if this can be seized and cut off it will bring wealth to the possessor.

Bake-mono tofu-uri (ghostly bean-cake seller) who goes about between midnight and morning. If met with, to speak to him brings evil consequences.

Ouhume, is a female spectre met with on river and canal banks and roads through marches, carrying a child. If met, she asks the traveller to favour her by holding the child for a few moments while she is absent. But after long and patient waiting the child becomes heavier and heavier, until it can be carried no longer, and then drops from the arms, a ponderous boulder which no man could lift.

Toori akuma. A story is told of this demon, that when a certain man was drinking *saké* on his verandah and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enjoying the prospect before him, this hideous object appeared with a naked sword beyond the garden fence, and gradually seemed to float over it and towards the the bibulous lord of his own house stretched at his ease. He hid himself under some carpeting, and from a sly corner spied the baffled demon making for his neighbour's house. The confusion next door soon attracted attention, and he discovered that his neighbour had 'gone for' the demon with a naked sword, but had made the trifling mistake of chopping up his own wife, family and servants.

Hi no kuruma. This is a flaming wheel propelled by three demons, one green, one red and one black, all enveloped in flames, who come from Pandemonium for the bad people. These are seized when the measure of their iniquity is full, to ride on this fearful vehicle with its terrible charioteers, back to their home of raging fire.

Tengu is a demon who does not molest good people or his worshippers; but scoffers and scoundrels, beware! He is said to guard certain sacred places from sacrilege, especially some mountains and shrines consecrated to Kompira. He is invisible, but is represented in offerings to temples by a ruddy countenance and an enormous nose, and is generally accompanied by another mask, black, with an enormous beak; this latter is called *karasu tengu.* These two are called, first, the great nose is the *Dai Tengu* representative of the male principle; the second, *Sho Tengu*, or beak, the female principle.

A celebrated writing-master of the early days of the century, went on a holiday trip to Nikko. Here he remained overnight at a place called Kobuga Hara—the house being the only one within some distance, occupied by Zenki Hayato. Now this Zenki was, as were his ancestors before him, the custodians of the Nikko *Tengu.* Our caligraphist saw with surprise an immense boiler of rice being emptied hot into an enormous tub, and taken to a room separate from the other apartments of the house, and, of course, his curiosity being excited, he asked why this was done. A little exercise of patience was recommended by his host, and, before long, loud and strange noises rather perturbed him, it being a lonely spot. A peculiar munching, crunching, smacking-of-lips kind of noise was next heard for some time, and then the scratching and scurrying he had first heard; then, dead silence. The host then took him to the room where the tub was, and not a single grain remained. The tub was scraped clean, and, with a solemn face and a warning sign, in a tone of awe, the host whispered "*Temmangu* has been to eat." The pedagogue durst not ask or say more.

The Fox and his pranks form the common and every-day burden to the tales of the marvellous, some of them no older than to-day or yesterday. Master *Kitsune* (fox) takes upon himself all shapes and forms, generally that of beautiful women, arrayed as occasion may require. In whatever shape, however, it always follows its victim, who consequently often falls into danger, such as over precipices, into rivers, wells, &c. Firm belief in the vagaries of this animal is not confined to any class, and no doubt he is painted blacker than he deserves, for he rarely troubles the fair sex.

A fox's wedding is a sight seen once in a life-time. It is conducted with all the pomp of the highest nobles of the land, and generally by torch-light and when there is no moon.

Foxes are supposed to steal away the senses of people, and to play practical jokes on them by no means amusing to their victims. For instance; to make them believe that a field of buck-wheat in flower is a river, and get them to strip and wade through it under that impression.—A young gentleman on a dreary wet day met a beautiful lady without an umbrella. Struck with her charms, he offered his own, and plied her ear with compliments. But he observed that her elegant robes were not in the slightest degree either damp or soiled, and were more suited to a fashionably assembly than to a walk on such a day. With a sudden effort he gathered himself together, and, with a prayer, drew his sword and made a fierce cut at the beauty. He then ran home and brought some followers to the spot, only to find a fine female fox badly wounded. While relating his story, he was asked how he knew that it was a fox, and he then told how he remarked the unsoiled robes, and became certain that the fox was trying to tempt him, when he saved himself by a huge effort. He subsequently made a pilgrimage and many votive offerings to protect him from further attempts of the family of the deceased.

The *Tanuki* (badger), unlike the fox, goes before his victims and these are generally women. He has the power not only of taking the shape of handsome loveable young men, but also of inanimate objects. A family formerly living near the Imperial College of Yedo was tormented by badgers who frequently played jokes on the females of the household, sometimes appearing to the new serving-maids as an enormous tea-kettle.

A badger was once for a long time priest of the temple of Morinjie.

A waste-paper dealer once bought an iron pot for boiling water for tea, which he again sold, and on the purchaser, placing it on the fire, a long tail and four legs appeared and away scampered the pot.

Referring to the fox, we have overlooked some curious instances of this superstition. A story is told of a man who had trapped a fox being met by a poor man, who ransomed the beast and set it free. In the course of time, a beautiful girl appeared to the ransomer, and told him she was the fox whose life he had saved. Wishing to make him some return, the only way to do so would be by some pecuniary reward, which, for a fox, was an impossibility, but if the kind-hearted man would take her to one of the houses of public women and sell her there, he would be rewarded by the price without sin to himself. The poor man acted on this advice, and receiving a handsome sum in cash, returned joyfully to his home in the mountains. The fox after playing many tricks on the people of the house and practical jokes on her admirers, disappeared in the garden as a fox. Of course the people of the house never recovered the money. Thus the good were rewarded and the wicked got their deserts.

About fifty years ago, a fox, notorious for its mischievous propensities, lived in one of the suburbs of Yedo called Honjo, and an officer of the Tokugawa household boasted that he was smart enough to fool the fox. Seeing a large fox, as he thought, asleep one day in the locality reputed to be frequented by our sly renard, the officer cried out "Oh, sister, don't sleep there, you will catch cold; come along." The fox awoke, and following the officer, took the shape of his sister. He then invited the former to a restaurant where they had the best of everything spread before them. On some trivial pretext the officer left the room and sent the attendants thither, when they were horrified to see an enormous old fox greedily attacking all the edibles. A general assault was made on him, but he escaped. The officer returned and told the joke he had played on the fox, hoping that it had been killed, or at least caught. But the fox had the best of it, for the officer had to pay the reckoning!

Many stories are told about cats. The following is a fair specimen.

In a certain high officer's residence in Yedo some thirty years ago, a female attendant named Osode (sleeve) was sewing one evening and heard her name called two or three times. Looking round she only saw a cat well known in the house. Again and again she was called, and at last concluded that the voice must come from the cat. Pussy then asked for the loan of a kerchief, a request with which Osode complied, out of curiosity to see the result. In thanking her, the cat told her that if she would look out of one of the closet windows into the garden where the moon threw its brightest rays, after the rest of the household had gone to rest, she would see an amusing sight. Osode, as well as the other members of the household, having retired, she cautiously stole out to the spot named, and, to her astonishment, saw the cats of the neighbourhood collected together, holding what is called in Australia a "Corroboree," each cat dressed in a kerchief and dancing away at a fine rate. Next morning she privately informed the master of this, and was ordered to let him know the next time Puss asked for anything. In a few days the cat wished again to borrow a kerchief, when Osode, by a preconcerted signal, called her master, who rushed into the room with a lance. But too late; Puss had vanished! In spite of all search along the road of escape she could not be found. The only peculiarity observed was a patch of plaster on one of the roads as if lately repaired. The master struck at this with his lance, and behold Puss impaled! A horn

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was found on the cat's forehead and was cut off and preserved.

Another story is told of a *hatamoto* family during the early part of the present century.

While the master was away on official business, his wife was taken ill. He had some time previously adopted a young man as his son, and in honour of this son's approaching marriage a feast was arranged. On the day of the feast the sick woman recovered. Just before the fish and other good things were spread before the assembled guests, certain fish were missed under such suspicious circumstances as to draw attention to the till now sick woman. The result of strict search was to find the body of the sick woman under the verandah partly devoured, and the apparently recovered patient was dispatched with a rapid sweep of the young man's sword, leaving only the carcase of a cat.

Kappa is a monster inhabiting certain rivers, and takes upon itself either the form of a child or some article likely to drop into a river. In trying to recover this object the *kappa* steals the victim's soul.

Otters take on themselves the forms of hobbledehoys and appear to women and play pranks.

USEFUL MINERALS AND METALLURGY OF THE JAPANESE.

LEAD AND SILVER.

C.

By Geerts, Esq.

Read before the Asiatic Society of Japan on the 23rd December, 1874.

(Continued.)

LITERATURE: Kaempfer's History of Japan, I Book, Chap. VIII. Stan. Julien et Champion.—Industries, &c., page 40. Geerts.—Japan in 1871. "Gids," No. 8 and 9, 1872. Japanese Technology.—*San-kaï mei-butsu Dzu-ku-wai*, 1st Vol. Japanese Mineralogy.—*Seki-kin-san-sho-ko. Ko-san-sic-ran-sen*, or short indication of the chief *Ore* bearing mountains.

Japanese history does not mention the year when lead (*yen namari*, Syn. Koku yen, u-jaku) was obtained for the first time in Japan. Silver-ore was discovered accidentally in the year 667, A.D., at Tsu-shima, during the digging of the foundations of a new castle, named Kanedono-shizo;* this ore produced the first Japanese silver metal in the year 674.†

Lead is a metal not much used by the Japanese. The reason for this cannot be the want of ore, as has wrongly been stated by many authors; for we have the best proofs that *galena* (the chief lead ore) and even an excellent kind of this mineral, is far from being rare in Japan.

Silver was in former times, especially from A.D. 1,400 to 1,600 found and melted in Japan in much larger quantities than at the present time. There has been a time when there was an abundance of silver in this country, but after the old trade of the Portuguese and Dutch‡ and particularly after the opening of Japan in 1859, silver became scarce, because of the former large export of this metal to foreign countries. We cannot agree with some authors who say that at the present time, the Japanese soil should be very rich in silver-ore, because we have not found many samples of *rich* ores, but chiefly a relatively small quantity of silver as an admixture in several copper and lead minerals.

The Ores in which lead occurs in Japan are:

1.—Galena or Lead glance (sulphide of lead). We have seen several varieties; the finest kind consists of crystalline aggregates of large cubes which readily cleave in directions parellel to their faces. It is found frequently in the same veins with copper pyrites and contains often a small quantity of sulphide of silver. The extraction of lead out of this mineral is effected by a roasting process, nearly similar to our western method. In many samples we found a small quantity of silver. The largest amount of silver we found in lead glance is about 1 per cent. according to the Japanese works on this subject. Galena is found in many places in Japan, but still the quantity of lead produced by the Japanese has been small up to the present time. It is not easy to understand why lead metal has been and is still a regular article of import from Europe.

It is true, bar-iron is also an article of import although good iron ore is abundant in Japan; but this anomaly is caused by the difficulty of smelting good bar-iron out of the ores, which is not so with the extraction of lead out of galena. The latter process is much easier than the extracting copper out of copper pyrites or iron out of iron-minerals.

Lead glance occurs in the following Provinces of Japan:—

Remarks.	*Provinces.*	*Places or Districts.*
Good ore with 1 q. per mille silver	Higo	South-east part at Oshobata.
Contains silver	Hiuga	Go-gun, Sugiki.
	Satsuma	Jiu-ni gun.
	Bungo	Hachi-gun, Uwaga-yama.
Together with copper-pyrites	Bichiue	Jiu ichi gun.
	Bingo	Jiu-shi-gun.
Contains silver	Suwo	Roku-gun.
	Kii	Shichi-gun.
	Rikuzen	Jiu-shi-gun.
	Cho-shu	Hagi.
Contains silver	Rikuchu	Jiu-gun.
	Sendai	?
Contains silver	Yechizen	Hachi-gun.
do.	Iwami	Gin-san.
do.	Yechiyo	Shichi gun.
	Yezo	Near Hakodate §
	Dewa	Akita, Kuwachi-daué.
	Mino	Ni-jiu-ichi-gun.
	Musashi	Ni-jiu-ni-gun.
Contains much silver (1°/₀)	Hida	San-gun.
	Iwashiro	Ku-gun.

Although *galena* is the only lead mineral used in Japan for smelting lead, there are still some other compound ores to be found, of which the following occur in the largest quantity.

2.—Lead Antimony Ores, several varieties.

Jamessonit in long radiated, fibrous crystalline masses of a leaden-grey colour.

B.—*Plagionit* or *Rosenit* in granular aggregates or amorphous masses of a dark black grey colour.

J.—*Heteromorphit* or *Antimony feather-ore* in fibrous aggregates of a dark grey colour.

All these minerals contain lead, antimony and sulphur as chief elements; often some iron and other impurities. They seem to be found at very many places in Japan. We received samples from Higo: Ohobata; Higo: Hitoyashi; the island of Amakusa; Hiüga and Satsuma. These ores have no practical value, because it is too difficult to separate the lead from the antimony by melting, and also because lead and antimony are found in better minerals, as galena and antimony glance.

Metallurgy of Lead.

The galena is first separated by mechanical treatment from the foreign stones, afterwards coarsely powdered and heated in a globular loamy furnace, the interior sides of which are covered with a layer of fine proof clay. The bottom of this furnace inclines conically, so that the smelted metal runs to the point in the midst and can be received there. The tubes of two bellows reach through opposite openings in the side of the furnace. Wood is used as fuel. When the galena is fused, it is converted by the air of the bellows, partly into sulphate of lead and partly into lead metal, whilst a portion of the sulphur escapes together with the products of combustion, as sulphurous acid. Immediately afterwards this portion of metallic lead acquires oxygen and is thus converted into oxide of lead. Another portion of the galena remains unaltered. After this roasting process the second operation commences. A fresh supply of fuel is thrown into the furnace causing a greater heat in order to convert

both the sulphate of lead and the sulphide of lead into metallic lead and sulphurous acid. The fluid metal is then collected into the receiver and cooled. The lead thus obtained is very impure and contains still a large amount of oxide of lead and some sulphide of lead. It is smelted therefore again in a smaller furnace with some charcoal, in order to reduce the oxide of lead. The sulphide of lead still ingredient rises with other impuritles to the surface of the melted lead and is scooped away carefully. The pure metal is then finally cast into small iron cans, or into sheaves and cakes. Lead is also obtained from litharge, produced by the cupellation process of silver, by smelting the litharge with charcoal, to reduce the oxide of lead.

The silver ores met with in Japan, are :—

1.—DENTRICAL NATIVE SILVER (silver moss). The ore seems to occur but seldom in Japan. We saw it only once in a small quantity. It does not serve for the extraction of silver.

2.—SILVER GLANCE (JAKU-KO-SHI or GIN-KO ; Syn. *Sudzuno-yani, Mategara*). This valuable silver-ore is found, though only in small quantities, in the mountain *Beai*, in the province Jö in *Ginsan of Iwami*, in Tadayama in the province of Setsu. It produces some silver but much less than the following ore, which is the chief silver-mineral of Japan.

3.—GREY COPPER-ORE (or FAHLERTZ) a very compound mineral, mentioned already (Metallurgy of Copper). This ore is worked both with copper and silver. It occurs in several places in Japan.

4.—LEAD GLANCE with a variable but small amount of *silver sulphire*. This ore is also used in silver-metallurgy. The last mentioned silver-ores are found and worked at the following places in Japan. At most of these places the production of silver is, however, exceedingly small.

METALLURGY OF SILVER.

Liquation and Cupellation Process.

The amount of silver smelted in Japan between the 15th and 17th century was by no means small ; the Portuguese and the Dutch in the first years only of their trade with Japan, exported large quantities of this precious metal. In the year 1671, the export of silver was prohibited by the Japanese Government. It is a well known fact that in later times very little silver has been found and smelted in Japan. Lead, which contains a small quantity of silver and blister copper *(ara-do)* or metal mixtures, obtained from grey copper-ore, from the mine material for the metallurgy of silver. Formerly the separation of silver from lead or copper was effected chiefly in the Government refinery at Osaka, but in latter times it has also been carried on in other places. The process used by the Japanese does not differ much in principle from our Western method. The whole working is divided into four stages :

1st.—Smelting of the metal containing silver with a certain quantity of lead, in order to dissolve the silver by means of the melted lead and to obtain a compound metal, called AWASI-BUKI-DO, copper smelted together [with lead] ;

2nd.—Heating of this alloy in a kind of liquation furnace with an inclined bottom, to carry off the lead and silver in a liquid state as DE NAMARI (lead which has run out [of the alloy]. The copper and other less fusible metals remain in an unmelted condition, as porous masses, at the bottom of the furnace. This porous metal is called NAN-BAN-BUKI-DO (copper smelted after the manner of the southern barbarians.)

3rd.—Cupellation in a low furnace with a bottom of buck-ashes, in order to obtain raw silver, called HAI-BUKI-GIN (silver smelted upon ashes).

4th.—Refining or second cupellation in a small furnace. The old Portugese had very probably made known this operation to the Japanese. Bürger (l.c.) states that the Japanese used in olden times another (Chinese) desilvering process, but this method was not very profitable and could only be used with rich ores. This old process is described in an ancient Chinese Leehrols gy, called *Ten-ko-kei-butsu*. About the year 1590 a foreigner (Portuguese ?) named *Haku-Sin* shewed a Japanese called Sumitomo the manner of separating silver from lead or copper, even when it occurs in a small quantity only. Sumitomo introduced the new process into his metallurgical works, rose in wealth and power, and got an Imperial patent for the purification of copper and separation of silver from lead and copper. He lived with his family in Osaka and took the family name of *Haku-sui*, in addition to his own, in honour of and out of gratitude to the foreigner.* Bürgar believes, and we think rightly, that the foreigner *Haku-sui* must have been a Portuguese, because the name *namban-bukido* (copper smelted after the manner of the southern barbarians) for the porous metal mass, left after the extraction of the lead, and the year 1590 gives some reasonable ground for this belief.

We will now proceed to the description of the desilvering process.

1st.—The silver containing raw metal (blister-copper, etc.) is mixed with variable quantities of lead (according to the amount of silver) and the whole smelted with a charcoal-fire in a small furnace of fire-proof clay. The fluid metal is then cast in round or square plates, and leaves the name of *awase-leuki-do*.

2nd.—This alloy *(awasi-linki-do)* is now placed on the inclined bottom of a small liquation furnace and the whole heated gradually. The bad metal with the dissolved silver flows off from the bottom in a liquid state, *de namari*, whilst the copper and other less fusible metals remain in a solid condition on the hearth. Thus the lead and silver are separated from the copper and other metals. The porous masses which remain on the bottom, are afterwards smelted and purified, to obtain dry copper from them.

3rd.—The cupellation or separation of lead and silver is effected in a low furnace, with a loose covering : on account of its form, this furnace is called a " toad furnace." The bottom of this furnace consists of a fire-proof plane, covered with a high layer of sifted wood-ashes.

The family *Sumotomo* exists still in Osaka. At the house of the present head of the family, in Osaka, Nagahori ichome, may be seen several old documents in relation to this fact, and also a collection of old presents, given by the former Dutch embasies to Sumitono when they paid the customary visit to his copperworks.

Previously washed with water to extract the soluble matter, this ash floor is stamped and levelled with great care. In the middle a small reund cavity is made, to receive the smelted metal. This ash floor is carefully dried and heated in order that there may be no chinks by which the silver might be lost. The alloy of lead and silver is then placed on the bottom, the furnace is closed with a low covering of fine clay and the whole strongly heated, till the metal flows. At this high temperature the lead is oxidized and gradually absorbed as oxide by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the porous material of the ash floor. The red oxide of lead or litharge forms at the end one solid mass with the bottom and is called then *Mitsuda-do* or *Gin-rokasu*, *Syn. Shiro-kané-uo-nerisoko.* This mixture of ash and litharge is afterwards worked for lead, for which purpose it only wants to be smelted with some charcoal, to reduce the oxide of lead. During this operation the silver is not oxidized and is therefore not absorbed by the porous ash-bottom. At last the silver, mixed with a little oxide of lead and lead metal, remains in the cavity of the cupel bottom. The furnace is then allowed to cool. The remaining metal is finally cooled with water and taken away. It bears the name of *hai-buki-gin* (silver smelted upon ash).

4th.—Refining the silver.

The cake of impure silver is placed in another small cupellation furnace with a fresh ash-bottom. The heat must be regulated carefully, otherwise the silver would be partly thrown away by the sudden discharge of absorbed oxygen. When nearly the whole of the lead and other impurities have been absorbed by the porous cupel, the surface of the silver becomes iridescent, a phenomenon which is caused by very thin films of oxide of lead. Immediately afterwards the silver obtains a splendid, bright surface which serves as a sign of its purity. The metal is then cooled with water and taken away.

The process here described resembles closely, as already has been said, our cupellation method, the construction of the furnaces and especially its bottom being the only differences.

The ameliorated cupellation, known as Pattinton's desilvering process, by which even minim quantities of silver can be extracted with advantage, is still yet unknown in Japan.

The amalgamation process, which is used on a large scale in Freiburg and in America, has found no practical application in Japan.

GEERTS.

THE PREPARATION OF VEGETABLE WAX.

By Henry Gribble, Esq., of Nagasaki.

Read before the Asiatic Society of Japan on the 23rd December, 1874.

The production of vegetable wax has always formed one of the principal industries of the province of Kinshiu, and the trees bearing the wax berries (called by the Japanese Haji-mo-ki), grow profusely on the hill slopes and round the edges of most of the cultivated fields (excepting rice ground) of Higo, Hizen, Sinabara, Chikugo and Chikuzen, whereas in Satzuma they appear to be less prevalent.

The process of producing wax suitable for export to Europe is a tedious one, requiring the outlay of some capital on the part of the manufacturer, who has to keep the berries on hand for at least one year, and, in order to obtain a very superior product, does so frequently for six or seven years from the time of their being picked and sold by the farmers.

The berries ripen in October and November, and are picked by hand in the state shown by the sample marked No. 1 in the accompanying box. After exposure to the sun in that state for about five days they are packed in common straw bags and stored by the manufacturer in his godown for periods varying from one to seven years. The average value of 10 piculs of the berries in this, their first stage, is ten *yen*, the farmer's selling price.

The manufacturer of wax can carry on his business all the year round, being interrupted only by excessive heat or excessive cold. His establishment consists of godowns for storing the berries, a large shed containing the pans for heating, the presses for extracting the liquid wax, and as large a piece of levelled ground as possible for laying out the wax during its bleaching process. He establishes himself as near as possible to a supply of good clear water.

When sufficiently ripe, the berries are thrashed with bamboo flails and thus separated from their stalks. They are then crushed, as shown in the diagram, and reduced to the stage of sample No. 2. This crushing process, which can readily be done between thumb and finger, discloses a small hard red kernel surrounded by an apparently dry husk or fibre. The wax is contained in this fibre and only to a very small extent in the kernel, but it is not necessary to separate the two. They are then well *steamed* over an open kettle, the water in which is kept boiling by a wood fire underneath.

From the steaming sieve the mixture is placed "all hot" into the press bags, surrounded by bamboo rings to fit the aperture in the press, and as quickly as possible placed in the press, as shown in the diagram. Wedges are driven home by repeated blows of a mallet, and the liquid runs off into its receptacle at the bottom. Primitive as this style of pressing is, the result has not yet been improved upon by the trial of several hydraulic presses which have at various times been tried by the Japanese for expressing both oil and wax. Their own presses cost little, never get out of order, last long, require nothing but cheap coolie hire, and, in actual percentage of liquid extracted, do very nearly as much work as an expensive "Langue's" hydraulic press, requiring steam or other pewer to drive pumps which frequently require overhauling and repairing. After being fully pressed, the 'cake' or residue of the wax fibre is broken up, again steamed and once more put through the press, thus yielding all its available wax.

Meantime the liquid quickly solidifies into a large block of a dark green, coarse and tallowy substance, which is at once boiled down and run off into small earthenware saucers, then assuming the appearance of sample No. 3.

The loss in weight of the manufacturer's original purchase of 10 peculs of berries has by this time amounted to 8.50 peculs. His first quantity was reduced to 8.80 peculs by the thrashing process, and of the liquid now-produced from the press he has only one pecul and a-half in the form of sample No. 3.

In order to purify and bleach the wax for export, it now becomes necessary to re-boil it in its present stage, mixed with water and ashes (either shell or charcoal ashes) and again run it off into large blocks. These blocks are then cut up into thin strips or stored, placed on mats and exposed to the air, during fine clear weather only, for a period of fifteen days and occasionally sprinkled with water. The material is then again boiled down, mixed with water only this time, and run into large blocks. Once more are these blocks cut up into thin strips and again exposed to the air; this time for a period of about five days.

Again boiled down, with no water, the impurities rise to the surface and are skimmed off, leaving the residue to be run into saucers, assuming the shape and colour of sample No. 4 which is the vegetable wax as known the European consumer.

The various stages from sample No. 3 to the final one No. 4 have further reduced the weight of wax from 1.50 piculs to 1.44 piculs, and the cost of this production now stands at about the following figures, viz :—

Original cost of 10 piculs berries.....	*yen*	10.00
Coolie hire thrashing and crushing	„	1.28
Steaming and pressing	„	1.44
Waste of press bags and bamboos in pressing	„	0.32
Coolie hire during the bleaching process...	„	1.20
Say *yen*		14.24

for the final production of 1.44 piculs, being the equivalent of about 10 *yen* per picul for the finished wax, without any allowance for interest on the capital used in the first purchase of the berries or in the plant and property of the manufacturer.

It only remains to be mentioned that the present market value of the finished wax is from 10.50 to 11 *yen* per picul when packed in boxes ready for export, and even this price, which shows only a loss to the Japanese manufacturer, is higher than the corresponding value of the same article in Europe, so that for the present, at least, this industry is not a profitable one either to the manufacturer or the shipper. The value of wax, however, varies considerably, and about three years ago it was worth for the London market about 20 *yen* per picul!

Its use at home appears to be confined to the "facing" of candles and the manufacture of "vestas," and the frequent discoveries of cheaper substitutes for these manufactur s materially affect the value of vegetable wax from Japan. For local consumption in the manufacture of Japanese candles there is always a considerable

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

demand for vegetable wax in its unbleached state; but with the prevailing and increasing consumption of Kerosine oil even this outlet for the native industry is getting much restricted.

A reference to the four samples accompanying this paper, showing the various stages of vegetable wax from the berry to the finished saucer, and to the native diagrams (which, Japanese-like, are rather in caricature) showing some of the processes in its manufacture, will, I trust, clearly explain what may well be regarded as one of the chief industries of Japan.

LAMENT OF THE PRINCESS OF MIKAWA, ON THE DEATH OF HER HUSBAND.

Wanes the white moon, but not the bursting heart
That brighter grows, and fuller of its woe:
Time cannot lessen sorrow such as mine.
The spring flowers blossom, and the evening air
Is warm and fragrant, while with houied throats
The orioles, from a maze of cherry boughs,
Sing all the sweet love-secrets of their nests.
But oh! for autumn with her withering woods,
And skies that shed a thousand streaming tears!

The world's best jewel sank in death's dark stream,
And I, an empty bubble on the wave,
Live in the sunshine, while its light is gone.
They laid his body in the gloomy grave;
He went before me down the dreadful way
That all men travel shuddering and alone.
Soon I shall follow, for the days fly fast:
Then, oh! my darling! through the mists of time,
I see our souls together, soaring high,
Like eagles breasting the blue waves of heaven,
Rejoicing in the sunshine, far beyond
The whirring arrows of the hunter, Death,
And all the many miseries of the world.

Now comes the quiet majesty of night,
With sleep's fair frost to hush life's babbling streams.
Husbands and wives lie down in blissful rest:
Like golden lilies dreaming in the sun,
Fond women slumber in the arms of those
Whose love lies round them, as the sapphire sea
Circles the fragrance of an isle of flowers.
Dust is your bed, beloved, mine is pain;
White are these cheeks where once the roses blew,
Cold is this breast that once was filled with fire,
For, till death comes, my own sweet love is dead.

KAJIN.

Correspondence.

THE PROPOSED HARBOUR SCHEME.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 15th January, 1875.

SIR,—Just a few lines to prevent X. Y. Z.'s last letter from misleading, and I have done with this discussion. I believe I might take each paragraph in that letter and offer to it a flat contradiction, but to do that would be supererogatory.

I have already explained that, however good an anchorage Yokohama may possess, it is still an open roadstead, and therefore that that does not militate against the necessity for a wharf.

It is extremely generous in your correspondent to hold out prospects for any revenue, and it argues well in favour of the scheme that he has succeeded in doing so. He has assessed the dues at 10 cents per ton, ingenuously "believing that this is the charge at the river ports in China." Might I be allowed to ask whether no distinction is to be made between a wooden wharf on a river bank, and a concrete pier in an open roadstead which is exposed to waves having a fetch of from twelve to twenty-five miles, and which are at times sufficiently violent to wash the boats from the davits of vessels at anchor? Are the dues to bear no relation to dues charged in other parts of the world where similar facilities are offered, where from one dollar to one shilling per ton is the usual rate?

To follow up the simile made in my former letter, and to look upon the wharf as the platform in a railway station, I presume that these are always constructed to suit the traffic of the station; and railway officials would not erect a platform 500 feet long, if no train likely to use it would ever exceed 250 feet. If X. Y. Z. is determined to exclude all probability of the trade of Yokohama increasing; all chance of the Japanese trade using the wharf; the traffic carried in sailing ships; and the likelihood of the Pacific Mail Trade being carried over the wharf; it might be expected from a sound economist that he would suit the length of the pier to the trade which is to use it. But he has not done so. He calculates the returns from the present foreign trade only carried over a pier twice as long as is necessary for that trade, and still gives a probable revenue. If the promoters of the scheme, in carrying out the complete design, decide to differ with your correspondent in their ideas of the requirements or the prospects of the port, I feel convinced that they, at all events, will not grumble at his prospects of revenue.

In regard to the great question as to the most suitable channel into which the present progressive Government might most profitably divert their energies and their finances, this scheme may be safely put forward as a work which can be accomplished at a comparatively small expenditure; that it will at once become of public benefit and utility; that it will satisfy a long demanded want completely and fully; that it will increase the importance of the port, which will always be the point of departure for America, and will tend to invite shipping to it, and that it will further, even by X. Y. Z.'s showing, afford a handsome return on the expenditure.

In conclusion, I might venture to suggest that those energetic well-wishers and lovers of the Japanese, whose means of displaying their plausible philanthropy is by writing anonymous letters to the newspapers, if they wish to appear sincere in these efforts, should attack some other movements than honest and well-intentioned works of improvement. I need not say they have a variety of opportunities.

I am, Sir,
Your obedient Servant,
A.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 16th January, 1875.

SIR.—*À propos* of my letter of 27th December, I would ask you to note that already we have two steam cargo boats in the harbour competing for the landing and shipping of goods.

Also that the English papers inform us that the Shareholders of the harbour works at Southampton are already alarmed at the prospect of losing their dividends. Further, that I need not have travelled as far as Marseilles to illustrate unprofitable Harbor Works, when an example of overestimating traffic can be found nearer home in the unproductive harbor works and canal into Missisippi Bay and the reclaimed land of Yoshida Shinden. Doubtless the promoters of this scheme thought they were facilitating the trade of the Port, and it requires no difficult calculation to prove that the proposed harbor works will be in a degree as unremunerative.

Your obedient servant,
X. Y. Z.

CHINA TRANS-PACIFIC STEAMSHIP COMPANY, LIMITED.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

London, 27th November, 1874

SIR,—I have this day laid before my Directors your impression of 28th September last, containing a very ably written article, on the powerful position occupied by the Pacific Mail Steamship Company. My Directors very much estimate the favorable tone in which you allude to the services which their vessels have rendered to the community in China and Japan. In reference to this, I may take the opportunity of stating that every passage made by the *Vasco de Gama* and *Vancouver*, has been performed with undeviating punctuality, and that not-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

withstanding that each vessel has already passed through different typhoons which have respectively proved disastrous to a great amount of shipping, they have scarcely been delayed, and have sustained no material injury, and the average of all their passages between Yokohama and San Francisco has proved to be only seventeen days and twenty-three hours.

As regards the arrangements which the Pacific Mail Steamship Company have entered into for the temporary employment of our vessels, I am instructed to state that it was after very much consideration confirmed, as pecuniarily more advantageous, than, with only two vessels, to continue an independent service; and because there has never been any desire here to engage in an adverse rivalry with the great Company already established. But no proposition has been submitted for the ultimate purchase of this Company's vessels, nor has it been in the contemplation of the Directors ultimately to abandon a service which they have commenced under many promising auspices.

I am, Sir,
Your obedient servant,
JOHN W. LEONARD,
Secretary.

INQUIRY INTO THE LOSS OF THE *JAPAN*.

"China Mail" 29th December.

The Court was composed of H. S. Loring Esq., Vice-Consul, President; Commander Lewis, U. S. N. *Yantic*; Lieut. Gillpatrick, U. S. N. *Yantic*; and Captain Clough, mercantile marine, American ship *Malay*; Mr. J. W. Torrey, acted as clerk of the Court.

The inquiry was resumed this morning, when:

John Rooney, the purser, was called, and sworn. His statement is as follows:—My duty during a fire is to assist the surgeon in allaying excitement among the passengers. In the case of abandoning the ship my first duty is to save the mails. On the occasion of the loss of the *Japan*, I attempted to save the mails. I was not successful on account of the smoke. I endeavored to get to the mail room by taking off the hatch. I could not get there on account of the smoke. I came on deck and saw that the fire had not yet broken out. I went with the painter and some Chinese through the hatch to the mail room. The painter and I entered, each of us bringing out 2 bags of mails. I went back a second time and brought out 2 more. My light then was extinguished by the smoke. In trying to find my way on deck I was knocked down by something and dropped all the mails I had got out. When I got on deck I met Captain Warsaw by the engine room. He ordered me to go on deck and see that the boats were swung. I came back and reported to him that they were already swung, and then told him where I had to leave the mails, and asked him for some men to get them out. He told me to try to save what I could of them. I found the steward on the freight deck, and some others whom I cannot name going to the mail room. The captain met us and told us to save ourselves. I left the ship in the 2nd starboard boat. I was in charge of the boat. The vessel was then all on fire amidships' and all communication was cut off between the fore and after part of the ship. When I got in the boat I saw the captain on the hurricane deck. He was last man I saw on board.

Captain Warsaw was recalled and questioned by Captain Lewis.

Q.—What was the complement of the crew or deck hands allowed to the *Japan* by the P. M. S. S. Company?

A.—The sailors were 24 including the boatswain and messboy.

Q.—Had you a full complement on board at the time of the destruction of the vessel?

A.—Yes.

Q.—State their nationalities and the number of each.

A.—All Chinese.

Q.—How many seamen, including officers, had you on board the *Japan*, at that time, whom you considered competent to take charge of and manage a boat properly in a sea way?

A.—26 Europeans and 22 Chinese—in all 48.

Colonel Loring.—In what part of the ship, did you meet the man Drennan, when he was crying out "every man for himself?"

A.—On the port side of the main deck, abreast the ash-shoot.

Q.—When you saw him, did you ask him, "who gave you that order?"

A.—Yes, and he replied, "the chief engineer." I did not repeat the order.

Lieut, Gillpatrick.—Who has charge of the freight deck, and who inspects it, at sea?

A.—The chief officer.

James Drennan:—I was employed as oiler on board the *Japan*. On the night of the fire I received the order "every man for himself," from the chief engineer. I was on the hurricane deck when he gave me the order. He said, "Jemmy, go and see Bennett, and tell him it will be every body for himself." I went below to the main deck, where I met the skipper, a quarter master, and two or three other men. Supposing Bennett to be amongst them, I said, "Boss, it will be every one for himself." The skipper then struck me, and said, he would blow my brains out, unless I went to my duty. He asked me who gave me the order, and I told him the chief engineer.

Lieut. Gillpatrick:—Did you leave the ship in the same boat as the chief engineer?

A.—No.

The chief officer, Mr Hart, was re-examined by Lieut. Gillpatrick,

Q.—Mr Hart, were there any standing lights on the freight deck?

A.—None.

Q.—What kind of lights were used in case you or others went at any time to inspect the freight deck?

A.—Globe lanterns.

Q.—How long before the fire occurred were you or any one else on the freight deck?

A.—About 13 hours. I was there. I had a globe lantern.

Q.—Were the hatches so secured that no one could get out without your knowledge?

A.—The fore hatches and all accessible places were locked, with the exception of two pocket doors leading from the engine room to the side bunker. Through this bunker, which is a continuation of the freight deck, no one could have access from the engine room to the rest of the freight deck without my knowledge.

Q.—During any of your inspections of the freight deck did you ever see any thing to lead you to believe that any one had been on to the freight deck from the engine room.

A.—No, I never saw any indication of such having been the case.

Wong Aloi, late a fireman on board the *Japan*, having been cautioned to speak the truth, was examined through an interpreter, and stated that he first saw fire on board during his watch in the fire room. The flames came from an empty coal room near the freight deck, which was above where he stood. He ascribed the fact of so many Chinese passengers being lost to the roughness of the sea. Many of the passengers availed themselves of the life preservers which were accessible to them all. They did not try to get into the boats. Witness jumped into the sea and swam to the third mate's boat. When the boats were lowered, some of them pulled off at once to sea, and some stayed a long time by the vessel. He only saw the third mate's boat remain.

Leong Asing, another fireman, said he first saw the flames near the freight deck. The smell of the smoke was as that of burning wood.

Robert Morris Tyndal, U. S. Consul at Canton, sworn, stated:—I was a passenger by the *Japan* on her last passage.

Examined by Captain Lewis:—

Q.—What was your general idea of the conduct and self-possession of the Captain and officers during the destruction and abandonment of the vessel during the night of the 17th instant?

A.—My idea is that they, especially Capt. Warsaw, were perfectly cool and collected.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Q.—As far as you could judge was everything directed in as quiet manner as possible, and with that firmness which should characterise a Captain and his officers on such an occasion.

A.—Yes.

Colonel Loring.—Give us your account of the whole matter.

A.—I saw nothing of the fire till the flames got to the deck.

Q.—Why do you particularise Captain Warsaw's conduct?

A.—Captain Warsaw came to me in a very cool manner after the fire had been raging about an hour, and told me that we should all have to abandon the ship. I think he was the only officer who had spoken to me. We left the ship in the first after-boat on the starboard side.

Q.—Do you think as far as you, a passenger, could judge, that every exertion was made to save the vessel?

A.—I do.

Joseph Kennedy, carpenter, late of the *Japan*, was next sworn, and deposed that on the night of the fire he was under the orders of the chief officer. Nothing new as to the origin of the fire, or its first declaring itself, was elicited from this witness. He corroborated the testimony of preceding witnesses as to the rapidity with which measures were taken to quell the fire, and the thoroughness of the resistance offered to it. He thought that the smoke he smelt was coal-smoke. He left the ship in the Captain's boat.

Vanderwoort Bruce Gates, a surgeon in the employ of the the Pacific Mail Steam Ship Company, sworn, deposed as follows:—My place during fire on board is on the after quarter-deck, and my duty is to prevent passengers from jumping overboard, or over crowding the boats. I know of no orders as to what my duty towards the sick or wounded would be in case of fire. I left the ship in the third port after boat. We were told by the captain to take to the boats before I lowered this boat. I took charge of it. I ordered this boat to be lowered, I consider that every effort was made to save the ship. We only remained by the wreck a short time. My reason for this was that the boat was as full as it could possibly hold, with safety.

Captain Lowis.—What was the capacity of your boat?

A.—I am not a seafaring man and cannot say.

Q.—How many persons were in the boat?

A.—12.

Captain Clough.—Do you consider that the boat was properly equipped?

A.—I do.

Captain Lewis.—At the time of the destruction of the *Japan*, were there any sick or helpless men on board?

A.—None,

Ng Asing, having been cautioned to speak the truth, stated that he was a steerage cook on board. He left in the same boat as the chief engineer and six sailors. He denied taking charge of the boat. Charge was taken by a sailor named Chaw Asing. The engineer assisted to lower the boat, but witness did not hear him give any orders. Witness took charge the next morning, relieving the other man who was tired. The ship was all on fire when this boat left. The chief engineer gave no orders at all. He was very sick, cold and vomiting. The boat remained in the neighborhood of the wreck for about 20 minutes.

The case was then closed, the unanimous opinion of the court being that enough evidence had been adduced.

The finding of the Court in this case was as follows:—

DECISION.

We the undersigned composing the Court of Enquiry assembled at the U. S. Consulate, on the 24th day of December, 1874, to enquire into the cause of, and circumstances attending, the loss of the P. M. S. S. *Japan*, Captain E. R. Warsaw. Commander, after hearing and carefully considering all of the testimony adduced in the case, do find as follows:—

That the P. M. S. S. *Japan*, of 4,351 1.2/100 tons register registered at the port of New York, sailed from the port of Yokohama on the 11th day of December, 1874, at 4 o'clock p.m., fully manned and equipped in every particular, bound for the port of Hongkong.

That on the night of the 17th of Dec., when off Breaker Point, at the hour of 11.25, or thereabouts, an alarm of fire was sounded, the approximate position of the ship being Lat. 22.45 N., Long. 116.36 E.

That the fire in our opinion originated in the forward bunker immediately under the freight deck.

That the fire was caused by the spontaneous combustion of the coal placed there when coaling in the harbour of Yokohama, the coal having been taken on board during a violent rain storm and consequently stowed in a wet and damp condition.

That at the last inspection previous to the fire, the engineer on duty failed to inspect this bunker, although he did inspect all others containing coal, the reason assigned being that no coal had been used from this bunker since 5 p.m. that day.

That at the last inspection of the vessel at 8 p.m. the inspecting officers failed to detect any evidence of the presence of fire.

That such was the condition of affairs at 11.25 p.m., when the first alarm was given and smoke seen to issue from the vicinity of the coal bunker referred to.

That at this moment no flames were seen, only a dense volume of smoke.

That immediately the engine was stopped, a general alarm sounded, ventilators turned from the wind, and in fact, the rules and regulations of the Company, made and provided for such an emergency, strictly complied with, and that the officers and crew at once put forward every effort in their power to subdue the flames.

That under the direction of Captain Warsaw, all available streams, some seven or eight in number, were brought to bear in the immediate vicinity of the fire, located in the engine and fireroom at that time.

That all the available fire apparatus was brought to bear on the fire within about 10 minutes, some 21 streams in number.

That the fire apparatus was in excellent condition and was used to its utmost capacity, until the increasing heat prevented the pumps from working.

That every thing was done on the part of Captain Warsaw and the officers and crew generally under his command, to save the vessel.

That after all human efforts had proved futile, as shown by the evidence, to subdue the fire and save the ship, she was abandoned by all on board at 12.45 on the morning of the 18th, the commander being the last man to leave the ship, but we find that in abandoning the vessel there was an evident lack of organisation in lowering the boats properly, although they were properly equipped and provisioned.

That we are of opinion that there should have been established a "boat station bill" upon this steamer, providing for the emergency of abandoning the ship, with a view to the greater security of the lives of the passengers as well as the ship's company, and to prevent confusion and disorder, as well as the lowering of the boats unauthorised by the commanding officer.

That a more rigid inspection of coal bunkers, a greater care in regard to burning surplus coal first, and a more careful supervision of the condition of the coal when coaling should be exercised, and that the temperature of the coal bunkers should be taken at least once every four hours for the purpose of preventing and detecting any incipient signs of combustion going on in them.

That, from all the evidence, we gather the captain was cool, calm and collected, that he did his duty nobly and well, and exerted himself to the fullest extent to save the vessel under his command, and after her abandonment, in remaining by the wreck until all hope of saving further life was gone.

That we consider the conduct of the chief engineer reprehensible, both in passing an unauthorised order calculated to dispirit the persons engaged in subduing the flames, and in allowing the largest boat, in which he was the only male European, to leave the ship only partly filled, without endeavouring to save the lives of those remaining on board and in the water, although, from the evidence, he appears after reaching the boat to have been suffering from inhalation of smoke, and not to have been actually in command of the boat.

Original from UNIVERSITY OF CALIFORNIA

That we consider the great loss of life among the Chinese passengers arose from the communication between the fore and aft ends of the ship (at which latter end most of the boats were placed) being cut off, their paralysation by fear preventing any efforts to save their lives, the roughness of the sea and darkness of the night, and the weight of the money in many cases slung upon their persons, although life preservers were abundant, and were extensively made use of.

H. S. LORING,
Vice-Consul in charge and President of the Court.

BENJ. P. CLOUGH,
Master American Ship "Malay."

Law Report.

H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.
January 11th, 1875.

Antonio Garcia, a Manila seaman of the British S. S. *Estepona*, was charged with desertion from that vessel, and stealing ship's stores.

The accused pleaded "not guilty."

From the evidence it appeared that prisoner, with another man, deserted at Nagasaki, and the ship was detained there some hours till the police brought them on board. It was discovered soon after leaving Nagasaki that a padlock belonging to the ship was fastened on to a chest common to prisoner and the other man. The chief mate then opened the chest, and in it was found canvas and a number of articles belonging to the ship. The ship then arrived at Kobe, where the other thief again deserted by jumping overboard in the harbour, and swimming on shore. The prisoner also attempted to escape, but the mate prevented him.

Prisoner had no defence to make; he denied stealing the articles.

His Honour said he should sentence him to six weeks' imprisonment, with hard labour.

John Condon, seaman of the British barque *Tokatea*, was fined a dollar and costs for being drunk and creating a disturbance on board.—*Herald.*

H. B. M.'s CONSULAR COURT.

Before R. ROBERTSON, Esq., Consul.
January 15th, 1875.

F. DOUGLASS v. H. MILLS.

This was a claim for $36.95, value of a boat and some salt which plaintiff stated he had sold to defendant's so-called partner, Mr. T. Delcor.

Defendant stated that T. Delcor was not a partner of his, and plaintiff failing to prove it, his Honour gave a verdict for defendant, at the same time informing plaintiff that he could obtain redress through the French Consul, as the real defendant, Delcor, was a Frenchman.

GUILHERME DA SILVERIA v. PROPRIETOR *Japan Herald.*

This was an action for $77.25, being balance of wages and commission on advertisements collected for the Hong List.

Defendant pleaded non-indebtedness.

It appeared from the evidence that the plaintiff had been employed to collect information for the Hong List, and that he had been paid all that was due to him for so doing, with the exception of commission on advertisements and the sale of copies of the work, the liability to pay which, when due, had never been disputed by the defendant.

Verdict for defendant, with costs.—*Herald.*

IT is reported that Li Tsung-shi, Viceroy of the Liang Kiang, has applied for leave to retire, owing to bad health. In the event of his request being granted, it is thought not improbable that he will be succeeded by Tseng Kin-tsuen a younger brother of the late Tseng Kuo-fan. There seems to be a fatality connected with the post of Viceroy at Nanking; no one appears able to hold it long without being either murdered, dying, or falling sick.—*N.-C. D. News.*

CLEARING IT UP.

N.B.—It is hoped that the following valuable information, just received with the compliments of an American editor, and obtained, as will be seen, from head-quarters, by a very experienced "interviewer," will clear up entirely the mystery that somehow has hitherto shrouded the Arnim scandal.

After a little delay, consequent on the extraordinary precautions taken at Varzin to prevent any sudden and unforeseen attempt at assassination, I found myself in the presence of the Prince. And I may as well throw out a hint to anyone who means interviewing Bismarck to empty both his shooting pockets first. I was much inconvenienced myself by the preliminaries, having to leave two six-tubers, and a nice blade, and a travelling torpedo in the possession of a gentleman with a white stick, who appears to see to this sort of business and to be tolerably expert. However, I found the Prince cheerful, and I kept my views "on looking inside international waistcoats" to myself. As I entered he was draining a large Bavarian glass goblet, holding, so he said, three pints German. It had been full of champagne, and I noticed that a dozen-and-a-half of a very excellent brand of this wine stood uncorked on a small occasional table at his elbow. Bismarck is a massive man, and equal, I should calculate, to a considerable amount of drink. He now filled his goblet with beer, a polished mahogany cask of which, holding, so he informed me, about nine gallons German, was arranged in the centre of the extensive bureau of the same wood, opposite which he was seated. "Well, sir," I said, "I reckon that you are drinking English beer over there."—"N," replied the Prince, with a malicious twinkle in his eye; "this beer, sir, is from Strasbourg." And saying this, he gulped down the three pints German as easily as if it had been so much deodorised train-oil. This done, he offered me a very fine flavoured cigar, about nine inches by one-and-a-half, and lighting one for himself, and carelessly throwing his legs on the mantel-piece, told me in a very gentlemanly tone to "squat down somewhere." It was his way of putting me at my ease; and so, to reciprocate his friendly fact, I took a swing on to his sideboard, and lighting my nine picked, asked what they cost him the hundred. "Those?" he asked, looking back at me over the top of his chair. "Not a sou. Carlos sent me a thousand of them the other day, and asked me just to write him *one* line in acknowledgment. I smoke his '*explosidos*,' but I can't acknowledge them. No paper in *that* direction," laughed the Chancellor, "beyond that they can pick out of burst cartridges."

"Well, sir," I observed, wishing to come to the point, for the weed was powerful; "well, sir, that may be, but there are a few bits of paper in somebody's keeping, you would, I guess, be glad to strike even at an outlay of one thousand of these remarkable cigars?" and to give emphasis to my insinuation, I quietly drew up both my knees to the level of my chin, and nursed my legs fashionably, as if indifferent to any information my pointed question might elicit. I was not, however, left long in any doubt as to whether or no I had correctly estimated the weakness of my distinguished host. Uttering an involved German oath, and springing from his recumbent position with a force that, while it broke the back of his chair to atoms, and upset the dozen-and-a-half of champagne into the polished steel fireplace, fairly amazed me, the Chancellor of the German Empire turned on me with a glare that was almost disagreeable. I have seen a good deal of random shooting in good society down West, but I cannot recall ever having noticed a gentleman so put out without a previous recourse to something over thirteen cocktails. I felt, by instinct, in both my pockets for my triggers, but he noticed the movement, and roared at me to stay upon the sideboard where I was and listen. I saw he was a distinguished man, and getting out my note-book I said—"Fire away, colonel; only, if you swear, let's have the leading points in English." He paid no immediate attention to this reasonable request, but from the various blanks I found among my notes when I came later to decipher them, I think he must have kept it in his eye. His statement was rather strong in "leading points," which I, however, to save the postage, have thought it better to suppress. Ringing for a fresh dozen of champagne, of which he drank two bottles off, and topped that with six pints of beer, he raved somewhat as follows:—"Look here, sir, you want to know why I want this follow Arnim's papers!" I nodded a respectful but careless assent. "Well," proceeded the Chancellor, taking up a handsomely and heavily chased poker and sweeping a valuable Chinese clock that struck the half quarters off the mantelpiece; "Well, I'll tell you why. What do you say, sir, to there being in the pages of that correspondence my submission, in four languages, to Rome, coupled with a request for a cardinal's hat and gloves, and my size for both marked off on a piece of official red tape? What do you say," continued he, taking the scuttle in

Original from UNIVERSITY OF CALIFORNIA

his lap and pelting the length picture of the Emperor William that hung at the end of the chamber with goodsized pieces of coal, what do you say to a feeler in *my* handwritting to Chambord (addressed 'Henry V.' in sympathetic ink) offering to give back the provinces, half the indemnity, and a bit of Luxembourg, if he would send 500,000 Frenchmen with us to St. Petersburg to give that ruffian the Czar a lesson in writing Spanish letters? What do you say, sir, to a map of Europe, with a German Ireland and a sea-board definitely marked, to reach from Dunkirk to Cronstadt? What, to a project, with all the chief posts filled in (and priced) for a Teutonic republic, under a dictator whom modesty forbids that I should more precisely designate? What of admissions, in black and white, that I, the autocrat of Europe, owe my first lessons in theology to a state underling and a Bavarian professor? What, of proof clear beyond all cavil, that Kullmann received five hundred thalers down to fire at me, and was for six weeks a visitor within these very walls, practising with his pistol upon my stalwart form, cut out in cardboard, and counting nothing for the head, three for the arm, and six for the wrist? What, that on the 14th of February last, I sent and had posted in Paris, that I might escape detection, a vulgar valentine to her Imperial Highness at Berlin? What of a weak lampoon against my so-called master, in which William was twice made, by a forced euphony, to rhyme with "silly 'un?" What of a despatch from a British Minister that did not express 'regret' six times in twice as many lines, and hinted, under certain possible conditions, a threat of independent actien? What, lastly, of a protest that I had five times, by telegram, to bid Arnim publicly pull MacMahon's nose, in order to complicate matters upon the Spanish frontier? Are these, sir," raved the Prince, "matters to leave in the strong box of another man? I tell you no, sir, they are materials which a discreet and powerful statesman" (and here he flung the richly-ornamented fender through the window into the court yard below) "does well to secure at all and any cost!" Delivering himself of this interrogatory protest in a fury which at times made me think regretfully of my twelve tubes and nine blades outside, he suddenly halted and flung himself on the rug in a fit of roaring hysterics. I was about to investigate the contents of his pockets and rifle his private drawers, as a preliminary to summoning some assistance, when the gentleman with the white stick entered. "You had better to be off now," he whispered, returning me my pistols and knife, from which the charges and blades had been respectively dexterously withdrawn. "He is always like this after an interview; and it is wiser to be out of the way *when he comes to!*" He said this with a significance that I was not slow to appreciate; so picking up, as his back was turned, a despatch marked "St. Petersburg," and thrusting it into my coat-pocket, I hurried downstairs. "*Mum* is the word, Governor!" he cried after me, looking over the baluster. "All square, Colonel!" I shouted, as I slid out of the front door. That was half-an-hour ago—and here you are!—*Vanity Fair.*

Shipping Intelligence.

ARRIVALS.

Jan. 9. *Estepona*, British steamer, Hubback, 676, from Shanghai, General, to Hudson, Malcolm & Co.

Jan. 12, *Volga*, French steamer, Nondedeu, 960, from Hongkong, January 4th, Mails and General, to Mess Maritimes.

Jan. 12, *Rachel*, British barque, Firth, 283, from Sydney, N.S.W. November 12th, Coal, to Wilkiu and Robison.

Jan. 14, *Laurel*, British barque, Davies, 638, from Hiogo, 10th, January, Tea, to Smith, Baker & Co.

Jan. 14, *Penrith*, British barque, Moinnard, 521, from London, Aiunst 14th, Generul. to E. C. Kirly & Co.

Jan. 15. *Costa Rica*, American steamer, Conner, 1,917, from shanghai and Ports, January 7th, Mails and General to P. M. S. S. Co.

DEPARTURES.

Jan. 12, *Orissa*, British steamer, Edmonds, 1,089, for Hongkong, Mails and General, despatched by P. & O Co.

Jan. 12, *St. Thomas*, Swedish barque, Hjorne, 289, for Nagasaki, Ballast, despatched by P. Von Heinert.

Jan. 13, *Bombay*, British steamer, Davies, 1,325, from Hongkong, January 6th. Mails and General, to P. & O. Co.

Jan. 13, *Estepona*, British steamer, Hulback, 676, for Shanghai and ports, General, despatched by Hudson, Malcolm & Co.

Jan. 14, American steamer, *Oregonian*, Harris, 1,914, for Shanghai, General, despatched by P. M. S. S. Co.

Jan. 16, *J. B. Ford*, American schooner, Weeks, 198, for San. Francisco, Tea, despatched by Walsh Hall & Co.

Jan. 16, *Caspar*, British barque, Davies, 836, for Rangoon, Ballast, despatched by Captain.

Jan. 16, *Hokaido*, British schooner, Schultz, 104, for Shanghai,

PASSENGERS.

Per British steamer *Orissa*, for Hongkong.—Mr and Mrs Finch, children and servant, Lieut. Moysey, R N., Lieut. M. Grant, Messrs E. Whitall, Goto, Yoshida, J. Skipworth, Pouys, Groover, W. Mitchell, and R. Welch.

Per French steamer *Volga*, from Marseilles.—Messrs Yamasaki, Cancet, Havard, Sharples, Sakiyama, M. Castelle, wife and child. From Naples.—Mr Edward Chioggone. From Port Said.—Vella and friend. From Hongkong.—Mdme Petrowski, and Mr J. M. Dermer.

Per British steamer *Bombay*, from Hongkong.—Dr. Schendell, Rev. J. Wilkinson, and 7 Chinese.

Per American steamer *Oregonian* for Shanghai.—Messrs. A. S. Aldrich, W. Rogers, J. Tayler, Escher. R. W. Irwin, L. K. Lothrop, T. Masuda, C. N. Shaw. Stanhope. W. H. Can, Coln. Brown, Mrr. de Piotrouski Dr. Geerts and one Japanese lady.

Per American steamer *Co ta Rica* from Shanghai and Ports. For Yokohama—Mr C. F. Braga, wife, two children and servant, Mr A. B. O'Malley, Messrs E. D. Fraser, L. T. Farr, Miss Croom, and 7 Japanese, 7 European, 6 Chinese and 55 Japanese in the steerage. For America.—Mrs J. J. Henderson and infant, Mrs T. N. Hardy, and Mr Jno. Lawson.

CARGOES.

Per British steamer *Orissa*, for Hongkong.—
Silk... ... ... 186 bales.
Per American steamer *Costa Rica* from Shanghai and Ports.
Treasure ... ... $121,600.

REPORTS.

The S. S. *Estepona* reports: towed up from Kobe, a small screw steamer measuring about 65 feet in length, well adapted for inland navigation or harbour work, but owing to her draught of water about six feet she will not be available for river work. She is now in the hands of Messrs. Hudson, Malcolm & Co.

The steamship *Washi* has had all her metal sheathing stripped off in dock at Yokoska, and after a thorough overhaul, and new metal put on, may be expected here in a day or two.

The French steamer *Volga* reports having experienced strong N.E. winds with heavy sea from leaving Hongkong to arrival.

The British barque *Rachel* reports: experienced fine weather with variable winds up to the Equator; thence had strong N.E. monsoons, and on the coast of Japan some heavy weather.

The British barque *Penrith* reports: leaving the Downs on Aug. 18th, experienced light N.E. winds, and crossed the Equator on Sept. 21st; passed Meridian of the Cape on Oct. 16th, had strong westerly winds running the easting down; sighted Sandalwood Island on Nov. 23rd, had light winds through the Eastern passage; touched at Gaby Island for water in the Gillolo passage on Dec. 23rd, and met with light and variable winds in the Pacific.

The S. S. *Volga* has gone to Yokoska for the purpose of being docked.

NOTES ON THE WEATHER: HALF YEAR ENDING 31ST DECEMBER, 1874.

From observations at 9 A.M. daily, on the Bluff (100 feet above sea level), the mean reading of the barometer for the past half year was 29.91 in.; the highest reading was 30.38 in. on the 23rd of October; and the lowes 29.34 in. on the 3rd December.

The mean temperature of the air was 60.2 deg.

The highest day temperature in the shade was 95.0 deg. on the 26th and 28th of July; and the lowest night temperature 24.0 deg. on the 9th December. The extreme range in the half year was therefore 71.0 deg.

The difference between the mean dew point and the air temperature was 2.1 deg.

The mean degree of humidity of the air was .819, complete saturation being represented by 1.

The general direction of the Wind during the half year was Northerly.

Rain fell during the half year to the amount of 37.92 in. The maximum fall in one day was 4.63 in. registered on the morning of the 11th July.

There were in all 121 days on which no rain fell. The mean fall therefore on rainy days was .60 in.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JANUARY 16TH, 1875.

IMPORTS.

Cotton Fabrics.—The market for cottons has slightly improved during the past week, but transactions have been of limited importance owing to the fact that dealers are under engagement for considerable shipments now due, and abstain from present or prospective operations. In *Shirtings*, 7 lb. weights are dull of sale, but 8¼ lb. have been disposed of in small quantities at quotations, 9 lb. weights, 44 inches, being in fair demand. *Velvets* continue depressed.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in.	per pce.	$1.90 to $2.12½	56 to 60 reed 40 yds. 35 in. nom.	per pce.	2.50 to	2.60
8 lbs.	38½ yds. 44 in.	„ nom		64 to 72 „ „	„	2.70 to	2.80
8 lbs. 4 to 8 lbs. 6	„ 39 in.	„	2.22½ to 2.55	Turkey Reds 25 yds. 30 in. 2¼—3 lb.	per lb.	0.90 to	1.00
9 lbs.	„ 44 in.	„	2.75 to 2.95	Black Velvets		8.75 to	9.50
Taffachelass Single			2.60 to 2.75	English Drills		3.20 to	3.45
				Canvas, Navy, Red Stripe		7.00 to	8.00

Yarns of 16/24 spinning are in fair demand, and are readily saleable from stock at quotations. The demand for 28/32 is well maintained, and having regard to the small stock now held in this market, an advance may fairly be looked for. There is a fair enquiry for 38/42 spinning.

No. 16 to 24	per picul	34.00 to	37.00
Reverse	nom.		
No. 28 to 32	per picul	39.00 to	42.50
„ 38 to 42	small stock nom.	„	42.00 to 48.00

Woollens.—The market for woollen fabrics presents but little matter for comment. A fair demand may be reported for *plain black lustres* at low rates, and, notwithstanding the comparatively high prices which rule in the home markets, holders appear for the most part anxious to realise stocks. The same may be said of *mousselines* which are in better demand, though at a figure which shows a bare loss to the importer. *Black Italians* are fairly saleable, but there is no demand for either *broad cloths* or *blankets*.

Plain Orleans	40—42 yds. 32 in.	6.25 to	7.75	Figured Mousseline de Laine	30 yds. 30 in.	0.28 to	0.32
Figured Orleans	29—30 yds. 31 in.	4.50 to	5.25	Multicolored „	30 yds. 30 in.	0.30 to	0.40
Italian Cloth	30 yds. 32 in.	0.25 to	0.37	Cloth, all wool plain or fancy	48 in. to 52 in.	1.00 to	1.30
Camlet Cords	29—30 yds. 32 in.	6.25 to	7.25	Presidents	54 in. to 56 in.	0.75 to	0.85
Camlets Asstd.	56—58 yds. 31 in.	18.50 to	19.00	Pilots	54 in. to 56 in.	0.45 to	0.55
Lastings Japan	22—30 yds. 32 in.	13.00 to	14.50	Union	54 in. to 56 in.	0.70 to	0.85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to	0.19	Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.45 to	0.48

Iron and Metals.—Business in iron continues on an extremely slender scale and the tone of the market may be reported as weaker. We make no change in quotations.

Iron flat and round	per picul	$4.00 to	$4.75	Iron wire	per picul	$8.00 to	$9.00
„ nail rod	„	4.20 to	4.80	„ pig	„	2.00 to	2.25
„ hoop	„	4.80 to	5.00	Lead	„	7.00 to	7.50
„ sheet	„	5.00 to	7.00	Tin Plates	„	8.50	

EXPORTS.

Silk.—Concessions to the extent of $10 to $15 on our last quotations, which we repeat below, have occasionally been obtained for small parcels; but most dealers seem bent upon holding for improved rates. Transactions have, therefore, been on a very limited scale, amounting in fact to about 250 piculs since the 4th instant. Arrivals are 300 bales.

	Laid down and sold in London Ex. 6mos. at 4s. 2¾d. ₰ Lyons, 5.34.			*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. ₰ Lyons, 5.34.*			
Hanks—

Good (No. 2)	500 to 520	19s. 1d. to 19s. 10d.	frs. 53 to 55	Common No. 3	430 to 460	16s. 8d. to 17s. 8d.	frs. 46 to 49

Tea.—The excitement on the American tea duty question, commented on in our last issue, seems to have communicated itself to native merchants, who have become most exorbitant in their ideas of price.

Standard "Good Medium" cannot be bought to-day under $41 to $42 per picul, most parcels shewing little attraction. Fine grades are either scarce or are being at present withheld from offer and range from abont $44 to $45 for only fair quality. Common grades continue relatively much the dearest in the market.

Arrivals come in steadily but in only small lots, the supply being apparently regulated by some guild under Government support, which appears to have the privilege of advancing to the country merchants, and thus obtains a certain control over the goods which enables it to feed the market as circumstances require. By a mere chance the arrangement so far has, this season, been entirely in their favour; but had not the "duty question" come to their aid their present policy would have left the native merchants with a heavy stock of "old crop" teas on hand at the opening next season, and had they endeavoured to work them off by mixing them with new leaf the deception would have been easily detected, and in that case would probably have resulted in a reaction in the New York market against the extreme popularity of Japan teas.

Settlements for the week amount to 2,300 piculs. Stocks are much as before.

Common			$25.00 to 30.00	Fine			$44.00 to $47.00
Good Common			32.00 to 35.00	Finest	*nominal*		48.00 to 50.00
Medium			36.00 to 39.00	Choice	„		53.00 upwards
Good Medium			40.00 to 43.00	Choicest			None.

Yokohama, November 28th, 1874. tf.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

FIRST PRIZE MEDAL—Dublin Exhibition, 1872.

Official Report, London International Exhibition, 1871.

"Mr. Bailey exhibits samples of well-made chemical ware, highly vitreous and durable, consisting of acid tanks, retorts, receivers, condensing worms, and other vessels. His contribution comprises among many other things, an ingenious ascension Filter, in which, by a certain arrangement of stoneware discs in the interior, the water is more exposed to the filtering material than in ordinary filters.

N.B.—No Prizes were offered at this Exhibition.

Yokohama, November 22, 1873. S. 26ins.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to those great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts unanimously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

CAUTION.—Mercandize Marks Act.—The celbrated YORKSHIRE RELISH. — Messrs. GOODALL, BACKHOUSE & Co., of Leeds, England, the proprietors of the above-named sauce, having successfully prosecuted certain persons before Alderman Sir R. Carden, at the Mansion-house, London, on the 6th June, 1874, for having fraudulently counterfeited their trade mark and label, hereby give notice that they will prosecute all persons pirating their said label and trade mark or infringing their rights in respect to the same.—J. SEYMOUR SALAMAN, Solicitor to the Trade Mark Protection Society, 12, King-street, Cheapside.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 4.] YOKOHAMA, SATURDAY, JANUARY 23, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATH.

At his residence No 85. Yokohama, on the 20th January, JAMES JOSEPH ROBERT DALLISTON, Surgeon, aged 54 years.

Notes of the Week.

THE *Hochi Shimbun* announces the birth of an Imperial Princess on Friday the 22nd instant. All officials of and above a certain rank are commanded to present themselves at the palace to make their congratulations.

THE Memorial of the President of the Formosan Commission to H. M. The Tenno, which will be found elsewhere, sums up, in terms of congratulation not unbecoming in the face of a confessed success, the labours of the Board, and begs that its members may be permitted to return to their ordinary duties.

It will be observed that mention is made of the clearing up of "the position of a subject *han*," which can only refer to Loochoo, and a curious commentary on this reference will be found in another translation from a late Peking Gazette. The Japanese will now have to take care that no Loochooans appear in future at Foochow as tribute-bearers. There might be more difficulty in returning to China the Tls 283. 1m. 9c. 8c. remitted to the party of Loochooans as tribute-bearers, though she is so sleepily mechanical that the tender of it might be accepted before the meaning of the act became apparent.

A representation to the Government has also been made deprecating the freedom with which the native newspapers canvass its acts. The Government in reply states that the laws regulating the Press are quite sufficient to prevent any abuse of it and that men must learn to decide for themselves whether comments are good or bad. There is an evident desire on the part of the Government to encourage the growth of political thought and discussion among the people, and to permit free expression of them through the Press. It is also a fact well worthy of notice that among the most prominent representatives of the native Press are men who have held high office under the late Government, but who, instead of showing factious opposition to the present administration, discuss public affairs in a just and moderate manner, indicative of the belief that they are animated by the sole motive of advancing the progress and ministering to the welfare of the Empire. There can be little doubt that the Press is becoming a remarkable power in the country, that the Government is disposed to grant it every possible freedom, and that it is, for the most part, in the hands of a superior class of men.

WE trust that the friends of Japan in America will protest and, if necessary, agitate vigorously against the disposal of the American share of the Shimonoseki Indemnity suggested by General Grant. If we have written about it with some warmth, it is because we feel strongly that the suggested disposal violates the first principles of equity, and would be a grievous slur upon the character of the American people. There is in America a deep and rich stratum of reason and conscience which can be got at, and touched, and made effective to secure a *just* appropriation of this money, which the present scheme of appropriation is not. It ought to constitute a splendid endowment either for the education of young Japanese in America under regulations embodying some such principles as those which we have constantly contended for when writing or this subject, or for the furtherance of educational purposes in this country. The people of the United States may be assured that they cannot keep this money for themselves without defilement, and they will readily acknowledge this if they will be at the pains to investigate the circumstances under which it came into their hands. Our own voice can reach but a short distance, but there are many warm friends of this country in America to whom we would address our appeal, and we trust to them to echo it. This money has become a trust of which the American people are the trustees, and their character and reputation alike must be affected according to the manner in which the responsibilities attached to it are discharged.

Apart from the clever manner in which the exhibition itself is got up—the plaster figures of fishermen in various attitudes, and the less appropriate figures facing them—the cephalopod now on show at Benten is a natural curiosity well worth a visit, but becomes daily less visitable on account of its advanced state of putrefaction. It seems to tally with descriptions of this order which may be found in many works on Natural History. Its power must have been immense, and it is easy to conceive the terror and danger of which such a creature must be the source to any animate being within its reach. The following extract from a work entitled "Sport in North America" may not be without interest to our readers, while it will tend to enhance the interest with which they cannot but view this remarkable object.

The *Cephalopods* are mollusks of the highest order. The nervous ganglions which are grouped around the œsophagus give them a kind of resemblance to the vertebrated animals. They have a lower order of brain, which is protected by a cartilage, which is a rudimentary skeleton, and communicates with the principal muscles. The circulation of the blood is like that of fishes. The eyes of some are quite like those of vertebrated animals, and in all species the sexes are distinct. These characteristics raise them to the foremost rank among the mollusks; nor are they without the dignity of an ancient origin, seeing that their creation dates back to very remote periods of the world's history.

All the known kinds of them are marine, and are carnivorous. Some frequent the open sea, and others hover about the coasts. The shores of the Mediterranean and, above all, those of Greece are infested by them. They cause very great destruction among the crustacea and other fish, and their hiding-places may be discovered by the proofs of their voracity lying about. They injure the fishermen, both by destroying the fish and frightening them from the neighbourhood, and the fishermen take their revenge by killing them whenever they get a chance.

When the Cephalopod attacks its prey, it turns, as it were, on its back; the sack is held up vertically; the arms are stretched out, the calamaries are held horizontally, and then they seize their prey. With the larger kinds, their grasp is irresistible, and the victim soon feels the the bite of the terrible parrot's beak, of which the extending arms are

Digitized by Google

the purveyors. Men have been killed in this way, and the abundance of these huge jelly fish on the coasts of Greece renders bathing there extremely dangerous, whilst in the Polynesian Islands they are the terror of the divers. The common Cuttle-fish of the Mediterranean is about two feet long, but there is a species more than three times as large found in the Pacific Ocean.

It is pretty certain, however that Cephalopods are in existence which far exceed in bulk the largest proportions which zoological treatises assign to them. Thus Peron found on the shores of Tasmania a Cuttle-fish, the arms of which were from seven to eight inches in diameter, and six to seven feet long. Messrs. Quoy and Gaymard found in the Atlantic Ocean, near the equator, the remains of a monster belonging to this family, the weight of which they estimated at nearly three hundred pounds; and in the same waters Rang saw one of a red colour, which was of the bigness of a large cask. M. Streenstrup, of Copenhagen, has published some interesting observations upon a Cephalopod to which he gave the name of *Artchiteuthis Dux*, which was thrown, in the year 1853, upon the coast of Jutland. The body, which was cut up and divided among the fishermen for bait, filled several barrows. The pharynx was preserved, and was as large as a child's head. A section of an arm, which was shown to M. Duméril, was as large as an average thigh. Finally, in 1860, M. Harting figured and described several parts of a gigantic creature of this kind which is preserved in the Utrecht Museum; but all these accounts yield in interest to that which was communicated a winter ago to the Académie des Sciences.

THE Report of the Committee of the Yokohama Fire Brigade shows, as usual, the record of good work done, hard, voluntary service willingly performed, and success attending its performance. There is a debit balance against the Brigade of $471.33, attributable in a great measure to the cost of constructing a tank between lots 75 and 76, which will certainly prove a great safe guard against fires, or, at all events, tend to prevent their spread. We trust that this debit balance will be corrected by the liberal subscriptions of the community to a fund which is as important as it is apparently well administered.

SMALL-POX is still prevalent at Yedo and in this place One man in the camp has been attacked and sent to the General Hospital, and the marines are confirmed to barracks as a precautionary measure.

BEYOND the few words which appeared in our daily issue of Wednesday last on the subject of the case heard on the previous day in H. B. M. Provincial Court, we shall say nothing until it has passed its final stage.

A testimonial, very numerously and influentially signed by representatives of all nationalities in Hongkong, has been presented to Captain Warsaw, of the P. M. S. S. *Japan*, expressive of approval and admiration of his conduct on the occasion of the fire which destroyed the vessel under his command.

(From the Japan Mail Daily Advertiser.)

WE are much concerned to learn, on good native authority that small-pox in its most virulent form has for some short time past been raging at a large village on the road to Odawara. So numerous have been its victims that it has been difficult to find among the healthy inhabitants a sufficient number able and willing to minister to the sick. A great many have already succumbed to the disease, while others, panic-stricken, have made haste to escape to the hills. We cannot learn that the Government has adopted any remedial measures

COUNT LITTA, lately *Chargé d'Affaires* of Italy in Japan, and Baron de Schäffer, the representative of Austria, proceed westward in the *Tanais* which sailed this morning. Baron de Schäffer is accredited to China and Siam and proceeds, we believe, to Saigon.

THE Public will learn with pleasure that the Dramatic Amateurs purpose giving the Falstaff scenes from Henry the Fourth on Friday week the 29th instant. An amusing farce will follow.

IT would appear that Captain Woolcombe, commanding H. M. S. *Thalia*, has not received instructions from Hongkong in respect of the removal of the Marines. All that is actually known is that the *Adventure* will take them from Hongkong, and that, being in readiness, she will not be long detained there.

WE have to notice with regret the decease yesterday morning of Dr. J. R. Dalliston, Surgeon in charge of Yokohama General Hospital, after some days illness. The deceased was a gentleman of large and varied experience, having practised for fourteen years in New Zealand (a portion of this time as Chief Medical Officer to the Militia Contingent), and subsequently, during the last nine years, in Hongkong and in this settlement. His loss will be keenly felt by many among the less wealthy class of this community, to whom his professional assistance was at all times, in case of need, generously extended.

THE Annual General Meeting of the local Fire Brigade was, as usual, very thinly attended yesterday. The Chair was taken by Mr. A. J. Wilkin. The Report for the past year was read and confirmed, and some formal business brought the meeting to a close.

THE occurrence of a case of small-pox in the British Camp has necessitated the confinement of the men of the Royal Marine Battalion to barracks for the present.

ARE newspapers justified in reproducing in their columns the private market-reports issued by houses of business, brokers, &c.? Mr. P. Maclean, piece-goods broker of Shanghai, has, it seems, decided views on the subject and terminates a correspondence between the Editor of the *Celestial Empire* and himself on this subject by characterising the publication of his reports by the former "as at variance with all his preconceived notions of honesty."

A tiger-royal has just been shot at Ningpo, within five miles from the West gate. He is thus described by a correspondent of the Shanghai papers.

"The beast, a male, was shot by a body of soldiers sent by the magistrate for his destruction. He managed, however, to kill two of his assailants, and tear the side of the neck from another, before he fell pierced by some forty bullets of all sorts and sizes.

I measured the tiger, and found him to be 8 feet 2 inches in length from nose to end of tail; 4 feet 4 inches in girth, just below the shoulders; and 2 feet 2 inches from the eye-brows round the throat. The teeth were magnificently white and the canines fully 3 inches long. He was in such splendid condition that neither vertebra nor ribs could easily be felt. I tried in vain to obtain the animal for the Shanghai Museum; the skin had been already promised to the Taotai."

THE HARBOUR SCHEME.

A DISCUSSION has now been going on for some weeks in the columns of this journal, conducted in a very fair spirit on both sides, in regard to a scheme for the construction of a harbour or pier, with the object of affording greater facilities to the shipping and landing of goods in this port. The discussion is not yet at an end, and a good contribution towards it appears in our issue of to-day. But it may be well to say a few words upon the arguments which have so far been adduced on both sides, as they are liable to be lost sight of amid so much correspondence.

X. Y. Z. begins by saying that, in view of the excellence of the harbour and anchorage of Yokohama, such a work is unnecessary, provided there exist the ordinary facilities, such as lighters &c., for the landing and shipping of goods. He does not dispute the conveniences which such a pier would afford to shipping, but cannot see why the Japanese Government should be called upon to spend a sum variously estimated at from one to two millions of dollars on a scheme the direct return for which is doubtful, and which, as general experience proves, is undertaken by private enterprise as soon as trade really experiences the necessity for it. No provision having been made for the levying of pier-dues by any convention with the Treaty Powers, it is clear that the payment of them would be optional, and if they were found heavier than the ordinary charges which they displaced, the facilities afforded by the pier would not be availed of by the shipping in harbour.

In answer to this, A. argues that the additional facilities which such a pier would afford to shipping could not fail to increase the trade of the port, and thinks that native-owned steamers which now make Yedo their terminus will load and unload at Yokohama, their cargoes being conveyed to or brought from Yedo as the case may be. But as the rates of freight from the coast-ports to Yedo and Yokohama are apparently the same, it can hardly be expected that goods will be landed here and incur the expense of carriage by railway to Yedo and cartage to their final destination, when they can be carried by water direct to Yedo, and distributed almost entirely by water carriage to the warehouses of the consignees. In the same letter A. urges "that with the exception of some of the China ports, there is hardly an instance in the world where so large a tonnage is landed and shipped as at Yokohama that some kind of wharfage accommodation is not provided."

In answer to this it may surely be pleaded that we are not so wholly destitute of wharfage accommodation as this sentence would seem to imply. There is the English *katoba* and the Custom House wharf, and though of course these do not permit of vessels coming alongside, they must not be excluded from the question, as they offer fair facilities for the landing and shipping of cargo. These are, we think, equal to the facilities afforded generally in places of equal trade.

X. Y. Z. then proceeds to show the excellent nature of the anchorage, the extent of the shipping and the value of the trade of the port, and argues that this trade cannot afford to pay such dues as would yield a renumerative rate of interest on the money expended on the pier. He adduces the present lighter tariff in proof of this, and shows that it is improbable that the Pacific Mail steamers, which represent half the tonnage of the port and possess the most ample facilities for meeting the requirements of their traffic, would make use of the Pier. He also shows that sailing vessels are under no necessity to avail themselves of these facilities, as urgent expedition in the discharge and loading of their cargoes is not demanded of or advantageous to them. He adduces many cases in which a trade and shipping many times greater than those of this port, enjoy no such special conveniences as those claimed by this scheme for Yokohama, and, especially the case of India, where the Government has firmly adhered to the principle that in matters of this kind private enterprize must be relied on to provide facilities for the requirements of trade. We agree with X. Y. Z. in his view of the reasons why HOLT's and other similar lines of steamers have not extended their operations as far as this country. They have not been deterred by the absence, and will not be attracted by the presence, of wharfage facilities. The absence of a great export trade is the true reason for their steamers not visiting Japan. For reasons, too, above given, he shows that the Japanese-owned steamers have not used and will not use the pier. Admitting that Yedo is not a convenient harbour, a moderate extension of its present facilities, in the shape of more efficient lighters, will meet even the increasing requirements of the trade.

A., in reply, again urges that Yokohama is practically an open roadstead, and that the contrary cannot be pleaded as an argument against the necessity for a pier. He says that landing charges should be proportioned to the cost of the accommodation afforded, and should bear a relation to dues charged in other parts of the world for landing facilities, where from one shilling to one dollar per ton is the rate. He further and again urges that the conveniences afforded by the pier would facilitate and develope trade, and will even show a handsome return on the expenditure such a work involves.

X. Y. Z.'s reply to this letter will be found in our columns to-day, and speaks for itself. Its main drift is to show that the work can hardly be justified, although its convenience is admitted, and, indeed, was never denied.

The great question therefore seems to be, Will the trade of the port be increased by this work? Could not the money which it will cost be far better expended?

In answer to the first question, we must frankly say we cannot think it will produce this result, at least to such an extent as to warrant the construction of the work. We do not for a moment dispute the increased convenience which the pier would afford to shipping. But it should be fairly proved before undertaking such works that they will pay for themselves; and harbour works are among the most costly that engineers can undertake. Not only this. They are proverbial for the manner in which the estimates for them are exceeded, and therefore should only be undertaken after the most careful calculations have been made of their probable cost and probable revenue. Are there any such complaints from the agents of shipping in the port as demonstrate a great crying want? Is there sufficient evidence that the work is demanded by the trade? Will the Pier pay an interest on its cost of construction and maintenance? Until these questions have been answered to the entire satisfaction of the Government, it may be doubted whether money should be spent on what would undoubtedly be a convenience, but has not yet been proved to be a necessity.

THE U.S.S. *Monocacy*, Commander Albert Kouts, arrived here yesterday morning, at 8 o'clock. She is on her way from Nagasaki to Yokohama, having put in here in order to repair a slight mishap which has occurred to her machinery. The Transit of Venus party of American astronomers from Peking is on board.—*Hiogo News.*

OUR SEASON'S TEA BUSINESS.

WE find a subject here which may not be entirely devoid of interest to some of our readers, and we purpose briefly to touch on some of the principal features to be noted in this trade during the past year.

The season 1874-75 opened unprecedentedly early, the P.M.S.S. *Japan*, which left on 25th April last, taking some 200 to 300 pounds "new leaf." This, of course, was only a curiosity like "strawberries in February" at home, but still it gave promise of full arrivals early in the coming season, and these expectations were amply fulfilled. Early in May, parcels of New Crop began to arrive in sizeable parcels, and though the prices demanded were extreme yet they readily found buyers, and by the end of May our tea market was in full swing. The steamers *Vancouver* and *Great Republic* took between them nearly one million of pounds principally "New Crop," and costing as a rule exorbitant prices; both had despatch prior to the 31st May. The immediate effect of this was to hurry forward to this market from the tea districts teas very hastily prepared, and the bulk of early arrivals compared rather unfavorably with the preceding season's parcels to hand at a corresponding period. With increasing supplies the excitement toned down, but still prices ruled high enough to make the bulk of the first steamer shipments anything but satisfactory to shippers, the American consumers having apparently arrived at a maximum figure of 62 to 65 cents for "finest" and "choice" parcels, but paying much more remunerative rates for "low fine" to "full fine" teas; a feature not to be lost sight of for future seasons. Japan teas may be considered as very popular in the States at present, but whether they will continue so at their relatively much greater expense in comparison with China teas, remains yet to be proved, especially if the China growers, taught by recent experience, turn their attention to producing a really good eligible article, and thus regain the ground they lost by their careless preparation of the leaf, and the fraudulent practices indulged in.

The general feeling in the United States seems that Japan Teas should never rule higher than 60 cents gold for full "finest" to "choice" parcels, although in certain towns a few chops of extra quality may even bring 70 cents, but these cost so high here that the margin of profit is very small. The bulk of our shipments consists of from "good medium" to "fines." Our customers in the States expect to buy these at 41 to 43 cents, gold, for the former, and 45 to 48 for the better grade, which no doubt would have been the full average quotations there for the season, had not the unforeseen "Tea duty agitation" stopped in and thus saved some of our "plungers" from otherwise inevitable and disastrous losses.

The sudden or rather precipitate removal of the Tea duty in America has caused an advance averaging nearly $8 per picul in comparison with prices paid while the duty of 15 cents gold was collected. This, however, will soon correct itself. The re-imposition of this duty will cause great difficulty here. The American consumer must of course to contribute a portion of it. But on this side we must recover the advance we permitted to be established on the removal of the duty. This will lead to a sharp contest between buyer and seller and a probable stagnation in the Tea market for the first few months after the alteration has become a *fait accompli.*

Another feature which has more or less effect on the New York market is the heavy and regular shipments fortnightly per steamer, the [illegible] the succeeding steamer generally reaching before [illegible] the first steamer viâ Panama comes to hand. Thus, nearly 1,000,000 lbs. of Teas to arrive are kept floating about on offer during the brisk part of the season. This places a strong card in the hands of the buyers, who are often able to dictate nearly their own terms to eager sellers.

There is another evil which calls for some comment arising from the present state of the Tea Trade in the United States. Induced by the facilities offered by the ample railroad accommodation afforded, many grocers and dry-goods storekeepers come as purchasers, though in a small degree, on this market. Experience alone will teach this class that their legitimate source of supply should be either in the great distributing centres in the Eastern States or in San Francisco. Small credits of £1,000 to £2,000 issued for shipments to Milwaukie, Portland or even St. Louis or Cincinnati are at a manifest disadvantage in comparison with larger and more comprehensive ones issued either for New York or other Eastern cities and San Francisco or Canada. Invoices for their small orders are often required to be composed of four or five grades, irrespective of that period of season when these can be obtained at fair market prices: thus, early in the season, good common "and medium" are relatively much dearer than after the commencement of September. The effect of this is to enhance the cost of all, as a sale made of "medium" in July at $36 will raise the price of "good medium" to $38 and other grades proportionately: the size of the parcel settled is of little importance, and this has become more strikingly evident since the "Guild restrictions" are gaining greater strength. The small buyer, therefore, gets his invoice executed at a much greater average cost than if he had sought the distributing centres at home; and having also started a price for a grade more or less out of season, our market opens high for these when they arrive in bulk.

To return to the present season's business: this country has evidently shewn her capabilities for increasing her tea crop, and it now only remains with the Government to secure "free trade" to both buyer and seller and to abolish the pernicious system of "Guild regulations" which now in a great measure exists. The tea trade of Japan has wonderfully developed within the last four years, and we may look for a steady increase in the country's annual production; but the Japanese Government should remember that they have an active opponent in China, who has already shewn this season in the improvement in the crop of Oolongs that it does not intend to permit one of her staples to be elbowed out of a leading market without a fair struggle, destined to come off this season between its teas and the lower classes of Japans in America, the Oolongs having the decided advantage of price.

The China greens shew to a much greater disadvantage, but here the evil will probably produce its own cure: the general poor out-turn of even the fine classes, and the losses consequent on this, as well as the disfavor with which these teas meet on all markets, will make buyers refuse ill-made undesirable chops, and the producer will have to bestow the same care which used to be given in former years to curing the leaf instead of hurrying it in an immature state to the nearest market for disposal. Thus we may expect to see a decided improvement in China Green Teas.

The result generally will be that the American market will receive a full supply from all quarters, and Japans will have to hold their own against all comers. The cry from America is for "cheap tea," and if she cannot get cheap Japans the tide of popular favour will probably revert to its old channels.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A brief notice of our export to date may be interesting. Our shipments from Yokohama now amount to some 14,200,000 lbs. in round figures. We have, besides, the cargoes of two sailing craft, viz., the *J. B. Ford* for San Francisco, about 200,000 lbs; the *Laurel* for New York with, from here, about 350,000 lbs. which raises our total to 14¾ millions pounds; the steamers *Alaska* and *Vancouver* leaving during the current month will probably take between them 750,000 lbs. and thus our export, by the close of January, will equal if not exceed 15½ million pounds.

Under these circumstances the great questions for solution are, whether the American market can receive favourably so great a threatened excess in export? and, should the duty question entirely fall through, as was the case last year, in what state will the American tea market be at the opening of next season? These are the questions that most deeply concern us on this side, and to the solution of them we look forward, we confess, with no inconsiderable anxiety.

ADDRESS OF ÔKUMA SHIGENOBU AS PRESIDENT OF THE FORMOSAN COMMISSION TO HIS MAJESTY.

[TRANSLATION.]

Nisshin Shinjisshi, No. 10, *January* 15*th*, 1875.

In the month of January Shigenobu and others, in accordance with the confidential instructions they had received, laid before Your Majesty a project for the chastisement of the savages. In April the Formosan Commission (lit.; board of affairs of the savage land of Formosa) was instituted, and Shigenobu was appointed its Chief to superintend all business belonging to it. In May the Commander-in-Chief Saigo Yorimichi departed to the land of the savages at the head of a force, exterminated the wicked, pardoned the submissive, and remained there a long time encamped. During the same month the Minister Plenipotentiary Yanagiwara Sakimitsu was despatched to China, and in August the High Commissioner Plenipotentiary Ôkubô Toshimichi also was sent to the said country. Toshimichi and the others worked diligently and devotedly in the discharge of the important trust committed to them. In October a convention was exchanged with the said country, and in November Toshimichi and the rest reported the fulfilment of their mission. In December Yorimichi returned in triumph. From the institution of the Commission up to this date a period of eight months had elapsed. Hereupon the wrongs of the sufferers were for the first time redressed, the position of a subject *han* for the first time cleared up, security restored to the mariners of all countries for the first time, and the dignity and influence of the State consequently vindicated.

After our troops had started and were on their way, foreign public servants remonstrated. The Chinese Government hastily despatched an envoy, sent letters and manifested a wide difference of opinion. Some persons not comprehending the views of the Government, began to doubt whether it was justified in the course which it was taking. Others discussed the want of funds, and rumour became so noisy that the State was again imperilled.

Shigénobu and the others nevertheless accepted the responsibility, but day and night they were so busily employed that they feared lest their strength might be unequal to the task. Fortunately, the wise resolution of His Majesty the Tennô never wavered, and the councils of the Government became still more resolute. Great military preparations were made, and the mind of the people, both in the towns and in the country, learnt to recognize the purpose of His Majesty. Some desired to cast away their lives and to die for the national cause, others offered to contribute towards the army expenditure. The civil and military officers united all their efforts, and the great work of chastising the savages became an accomplished fact. We have nothing to be ashamed of before foreign nations concerning this measure, and its glory will not pale before the deeds done in ancient times.

If, while public rumour was clamorous, we had hesitated or drawn back, the injuries done to the sufferers would not have been redressed, the position of a dependent *han* would not have been cleared up, the mariners of the world would never have known security, and a land of cannibals would have been established for ever. Had such been the result, we should not only have been disgraced in the eyes of the world, but it would have been a sign that the dignity and influence of the State were about to fall prostrate. Consequently important interests were involved in the chastisement of the savages.

I humbly pray that His Majesty the Tennô will eagerly carry on the work and carefully ponder; that by reflecting on the past he may be enabled to think out the policy of the future so as to exalt his wise work to the highest pinnacle and glory, and that he will not stop with the chastisement of the savages.

Shigenobu reverently begs that the name of Formosan Commission be now abolished, and himself relieved of the title of President, so that he may attend to the duties of his proper office. As for the collection of the documents of the Commission and the audit of the accounts, this he hopes may be completed by the officials of the regular service in about a month, and a report can then be made, together with a detailed account of all that has been done since the institution of the Commission.

RECORDS OF THE *SA-IN*.

PETITION.

[TRANSLATION.]

(PRESENTED BY) FUJITA KENTARÔ, A FARMER IN THE JURISDICTION OF THE YEHIME KEN, ON THE SUBJECT OF NEWSPAPERS.

Since the new régime "newspapers" of various designations and the "Nisshin Shinjisshi" &c. have been permitted to be established, which print matters of all kinds, from the records of the Sa-in downwards, and publish these throughout the country, so that even in the most remote parts of the realm the actions of the Government, the many discussions of the day and the condition and circumstances of every place are known. This certainly tends in no small degree to the development of civilization.

But there are in these newspapers what are known as anonymous communications, the authors of which either do not publish their names or write under a *nom de plume* such as* "the proprietor of such and such a grass-hut," and the drift of which is to find fault with and cavil at the course pursued by the Government and to rail at the proceedings of the Government Departments, the object (of the writers) being to make the Government authority null and void.

With regard to the nature and intent of *petitions*† (presented to Government) on various subjects, there is of course a difference amongst petitioners, inasmuch as some are learned and others ignorant, some wise and others foolish, but as each has a right to reflect and argue on his own honest convictions, he is perfectly justified in criticizing the policy of the Government, or in pointing out what (he thinks) right or wrong in the action of public departments or prefectures. If the writers (of these anonymous communications) published their names, in the case of one (of these writers) failing to apprehend the true bearings of a question, he would be enlightened (by the Government) on the point as to which he was ignorant and in error, and even if only one individual was thus converted to the right view—this might serve as an example to others and so be the first step to the advancement of civilization.

To say evil things whilst concealing one's name is in short, if we reflect, the language of temporising fellows. Why is it that these persons who have (thanks to the

* It is common in Japan in the case of anonymous writings for the authors to sign himself "The proprietor of the grass-hut near the river Sumidagawa" or "near Asakusa" &c., &c.

† "*Petitions*" here used in contradiction to the "*communications* complained of.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Government) lived in security hitherto in their country, do not acquiesce in the (recent) change of administration, a change wholly unprecedented in its magnitude? Why is it that they seek neither to learn from experienced men nor to enlighten those who are ignorant, nor desire to recompense the government for the benefits they have received, but with mis-directed energy give vent to obstinate and selfish ideas?

It would be well, I think, if this class of people were warned, and if the Government in accordance with the newspaper Regulations made known by Notification No. 352 of the 9th day of the 10th month of last year the 6th year of Meiji, (Oct., 9th 1873) were to prohibit the printing at the *Nisshindo*,‡ of (communications) having reference either to the Government or laws of the country emanating from persons other than those authorized (to publish such).

The effect of these statements is§ that the country people living in the most remote places and distant corners of the country not only disregard the motive cause and object in view (of these communications,) but even accept these perverted statements for the truth, and thus the (good) intentions of the Government are thwarted and frustrated, and people are led astray into false beliefs.

The opinions I have stated are narrow and the arguments I have brought forward trivial, but in saying what I have I have been actuated solely by a desire to make widely known the benevolent intentions of the Government.

The Opinion of the Department.

With regard to the subject of the petition, there are already laws enacted bearing on the conduct of newspapers, and discusssion is not needed on this point.

As for "people living in the distant corners of the "country believing in perverted statements &c., &c.," as regards all arguments and views (put forward in anonymous communications) the deeming of them good or bad, correct in their reasoning or mistaken, their adoption or rejection, these are matters which newspaper readers can decide for themselves.

The original document has been returned with this expression.

TRIBUTE-BEARERS FROM LOOCHOO.

Memorial from Fuh Kien.

(Peking Gazette, December 15th, 1874.)

Wên-yih, Manchu General-in-Chief and Superintendent of Customs in the province of Fuhkien, memorialises reporting that the junk from Loochoo has returned to that country and that duties have been remitted as the law provides.

It has already heretofore been reported that the junk conveying bearers of tribute from Loochoo arrived at Foochow on the 10th moon of the 12th year (Nov.-Dec. 1873), when exemption was granted according to law from payment of duty on the merchandize imported. The business upon which this vessel came being now concluded, she has returned to her own country, and a report has been received from the office stationed at Nant'ai (the Foochow junk anchorage), to the effect that the envoy on board the junk, Tung-she-hien by name, has handed in a manifest of the Chinese merchandize purchased and placed on board according to which it is found that the amount of duty for which exemption is to be granted is Taels 283.1.9 8. Upon this your slave has given orders, in conformity with the rules in existence, to grant remission of this payment in furtherance of the profound benevolence with which our Sacred Ruler cherishes tenderly those from afar, and has likewise issued a mandate informing the foreign‖ envoy to this effect. It has subsequently been reported by the officer above named that the envoy in question, Tung-she-hien, has proceeded at the head of his official associates, and the ship's company, overflowing with joy and gratitude, to the custom house, where, with faces turned toward the Imperial abode, they kotowed in thankfulness for the celestial grace, and thereupon set sail from the port. It is my duty to lay a report of these particulars before your Majesty.

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Children's Schools.

Children are rarely sent to school before their seventh year—according to the Japanese mode of reckoning age—(between the fifth and sixth year according to ours) and boys and girls in the infant-schools receive their instruction together.

A lucky day is chosen—the usual time is the beginning of the second month,—the scholar takes a present to the teacher, and also cakes for his school-fellows, his parents or relatives providing the usual pencils, paper, desk, inkstone &c. The first lesson is the *I, Ro, Ha*, in the vulgar shirakana, the numerals, the names of persons, countries, cities &c of Japan, in the order imparted. This is the introductory *Tei narai* (hand learning) or writing-school course. To this succeeds the study of the *Shio-soku-órai*. The studies of girls generally conclude with the *Onna-Ima-Gawa*, the *Hiaku-Nin-I-Shiu*—a verse from each one of a hundred poets.

The *Onna Dai Gaku* (Female Great Learning) a work of greater pretension prepared for young ladies of more advanced powers and greater capacity, follows this, and a few kindred works which can hardly be called school-books. Boys are taught to write the Chinese characters from the *San-ji*, and combinations of these characters; then the *Dó-ji-kio*, a child's book; next, the *Dai Gaku* (Great Learning) of Confucius. The Chinese classics follow and the boys' memory of the eye for Chinese characters is fully exercised, but no more.*

School holidays in the olden time, and before the introduction of foreign professors *ad libitum*, were on the 1st, 15th and 25th of each month. Before the latter day, called *Ten jin ko*, the pupil brought the monthly contribution to the teacher, and a copy, to show by comparison with the last, the progress made. Then there is the quarterly copy written without the *Te hon* (original hand-guide) or copy.

The half-yearly exhibition is a great event, a day for the display of best clothes, and the enjoyment of good things in the form of cakes, fruit &c, paid for of course by the friends of the pupils, who have also to make donations to the teacher in winter for providing charcoal to warm the school-room.

The boys and girls are separated, the girls remaining near the teacher, while the boys are placed nearer the door. Or, if there is an up-stairs room, the bigger boys are sent there in charge of the assistant teacher or pupil-teacher.

School parties and picnics generally demand that the pupils be dressed alike, especially the girls, who, in addition to the writing-school attend singing, dancing and music teachers. The wealthy alone can afford to have their daughters taught at home.

Childrens' Sports.

Girls in Japan have their dolls, doll-houses, and toys, and toy kitchen utensils, from the simplest and cheapest to the most expensive and elaborate according to the extent of their pocket-money. Little ladies are to be seen, as in other countries, mimicking their elders. Toy theatres, usually painted on paper, cut out, and glued into the proper shape, with gandily dressed actors representing favourite scenes from popular plays, are universal.

Soft balls made of rush pith, wound round with coarse cotton thread, are made to bound from the ground to the palm of the hand and rebound to keep time to strings of verses, which, however, are little more than repetitions of words. The new year is the time when ball-play is most common.

* One of the results of this application of the powers of memory is a curious aptitude for remembering anatomical demonstration, and therefore a certainty in operating which is of the highest value in surgery.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Battledore and shuttlecock also comes in on the new year. A crowd of boys and girls in a ring, each with a battledore, drive the shuttlecock from one to the other and a forfeit is paid by whoever misses it—sometimes by a blotch of ink on the face—which does not stain as with us, it should be remembered, though it smears very readily—or a smart slap with the battledore from the other players on the lower part of the back.

Kishago is a game of filliping shells with the thumb or fore-finger nail and making cannons. Other games with small shells, beans or pebbles are numerous, and little bags of small beans are thrown into the air from the back of the hand, others are swept up and the descending ones are caught—our game of kunckle-bones, in fact.

Games common to boys and girls are so numerous that a mere enumeration of them would occupy no small space.

Toys of pith, coloured and dried, when put into hot water, tea or *saké*, expand into flowers, groups of flowers or figures. Fans are thrown at targets. There is wrestling with feet, fingers and hands, from the head, ears, teeth and so on;—games of what we call "French and English" &c.

Kite-flying is exclusively a boy's game, though men amuse themselves by helping boys at it. The kites are of various shapes and vary from six inches to as many feet across. The common shape is square, and it usually bears some painting on it, mostly a face like an American Indian brave, hideous in war-paint. Some of the smaller kites are like shields, fans, butterflies or figures of men with large sleeves, the larger ones rising to a great height and having 'messengers' or 'travellers' sent up the string. Parachutes are not uncommon.

Folding paper into various curious shapes is mostly a girls' amusement, as is cutting out figures which are painted in colours on sheets.

'Cat's cradle,' puzzles, writing or paper with *saké* and burning it, leaving the design drawn unhurt, or writing with the preparation used for blackening the teeth which when dry is invisible: when the paper is moistened the writing becomes visible again.

Shadows on screens on paper-slides, either with cut figures or made with the hands, are common and amusing.

The game known in Europe as *moro*, where one player calls a number, showing at the same time certain fingers, the other player making up the balance, and variations of the game, are common, and is called *Honken*.

Kitsune ken is played by two or three, and then certain portions of the hands represent three things—the two hands held to the ears for the *Kitsune*, or held as if presenting a gun, as the *Teppo* (gun,) and held on the hips as the *Danna* (master.) The forfeit is to drink a cup of *saké*. When ready at the call, one, two, three, he who presents the gun at the fox wins; the fox is shot and loses. If the gun is presented at the master the gun loses; gun to gun, fox to fox, master to fox or *vice versâ*. Master to master does not count, and so round goes the game and the *saké* cup, often to the tune of *geyshas'* songs, almost always in their hired companionship.

A similar game is where papers representing the sun and seasons are substituted for the foregoing, as is also that there the snake, toad and hog are substituted.

Fireworks are of many kinds rocket, wheels, squibs, crackers and so on, and every autumn sees some new kind produced for the amusement of the boys and the conversion of their pocket money.

'*Solitaire*,' and a similar game called *Jiu-roku-musashi*, are common.

Drawing lots, writing names on paper and drawing them blindfold, also writing the names of the young girls and young men present and folding them as we do paper-lights, then throwing the bundle down, those falling together being singled out into pairs and the names afterwards read, are common enough. These and such like games afford much amusement to the young folk.

Infants are amused or quieted in many ways by their nurses and frightened into being good by threats of *Onie* (ghosts.)

Hide-and-seek, Blind-man's-buff &c are well known.

A blind boy, with a kerchief over his eyes and his companions round him, throws a tea cup at one whom he calls by name. Should he hit the one he calls, they change places.

Who stares longest without winking is a boy's game, and girls surreptitiously try to brazen each other out in the same way. But woe betide them if mamma or nurse catch them and tell papa!

Bamboo stilts are very common among boys in Japan.

Birdlime is much used to catch sparrows, bats, dragon-flies and locusts.

Dragon-flies are caught by tying a female to a switch with fine thread. The male comes and is easily caught.

Mantis-fights are got up by putting two of these insects under a glass.

Pitch-penny; Tops, humming, peg and whip, are frequently made of shells.

Boys may be seen blowing bubbles through reeds, the water consisting of an infusion of the tobacco stem with alum in it.

Pop-guns, spring-guns, squirts, cross-bows, traps of many kinds, slings, games of racing and jumping, games similar to draught and chess of many varieties, are universal.

Toys are very numerous from cup-and-ball to hobby-horses. Pumpkins are scooped out and a candle is put inside.

Puzzles are very numerous and ingenious; sticks with rings to be taken off, or of thin wood to be put together in some design.

Chains of flowers, shells, or pressed flowers, the leaves being pressed between folds of soft paper leaving their form and colour on the paper, are common.

The list is far from exhausted, but the foregoing is enough to give a fair idea of the amusements and pastimes of the native children.

CONSTRUCTIVE ART IN JAPAN.

By R. H. Brunton, Esq.

Read before the Asiatic Society of Japan on the 13th January, 1875.

In the paper which I read before the Society on this subject last year I said, that if agreeable to the Society I would continue the subject on another occasion.

I, in that paper, gave a description of the evidences of constructive ability displayed by the Japanese before they had availed themselves of the assistance of Foreign experts. The continuation of the subject I then thought might suitably consist of a description of the improvements which these have succeeded in effecting. In setting myself to this task, however, I find it is one which is involved in considerable difficulty. In the first place the results which have been attained are so few and of so limited a nature that there is but little to be said concerning them, and in the second place the efficiency or practical advantages of such results are subjects of so debateable a character that, to treat of them from that point of view would form a paper hardly suited to a society of this kind. If therefore, in attempting to fulfil a promise which I formerly made, I have not succeeded in forming a very valuable contribution to the proceedings of the Society the difficulties surrounding the subject which I have alluded to above are my only excuse.

In the minds of the modern Japanese there seems to be the same desire for the adoption of a dwelling constructed after a European mode, as for the adoption of European clothes. They argue, with a shew of reason, that the one is necessary to the other. Thus when sandals or clogs gave way to boots, and the loose flowing robes to the tightly fitting European dress, it became necessary to discard the old system of squatting on mats and to adopt wooden floors with carpets, and to sit on chairs and at tables. Europeanized dwellings are therefore now common. The style of building most generally adopted throughout the country in these new houses is a bad copy of the houses to be found in the European settlements. It is almost unnecessary to describe these. They, however, display novel points in the practice of house building which are worth mentioning on that account only. The foundations consist of a stone wall generally about 8 inches thick and 2 feet high. On this wall is laid a wooden sole plate which is about 6 inches square, and into which the wooden uprights forming the walls of the house are morticed. The uprights are also about 6 inches square are placed from 2 to 3 feet apart so that when they are still uncovered they

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

appear like a forest of posts. There are very thin laths placed longitudinally along the uprights at distances of 6 feet or so apart which are secured to them by wooden pins Diagonal struts or ties are very seldom used and the stability of the building is therefore dependent on the stiffness of the different joints in the framework, assisted by the nails used in the different parts of the erection. The roof is formed of timbers very much larger than is required for strength, and is laid with mud and tiles much in the same way as I have described in my former paper as is adopted in Japanese temples. Inside, the houses are generally lined with planks about $\frac{3}{8}$ in. thick on which wall paper is placed, the ceilings of the rooms being executed in the same way. In some of the better class of houses, however, the walls and ceilings are lathed and plastered but this is by no means general. Outside the walls there are sometimes fixed laths to which square tiles are nailed—the joints of the tiles being pointed with plaster—sometimes the walls are plastered without any tiles and in those houses which are intended to be of the best description thin stone flags, of a thickness of about four to eight inches, are built on one another and kept in their places by small iron dogs attached to the woodwork. In some of the houses iron stove pipes are let through the walls surrounded by a stone, but the more pretentious have fireplaces and chimnies erected with stone in their interiors. These are generally about five or six feet square at the base, are generally badly built, and as they project through the roofs they must be in some cases thirty or forty feet high. They can only be kept upright by the floor or roof beams which project against them, and are a constant source of dread and danger.

This is the new species of building common in Japan and foreigners are doubtlessly responsible for it: even at the present day very few houses in the foreign settlements are built after a more secure or substantial style, and in Japanese hands it has, if anything, become worse. When foreigners first arrived in this country they may have had reasons for adopting this method of construction. 1st.—It is, somewhat similar to the Japanese method and those who commenced building might have been glad to adopt it on that account as the work would there be more or less familiar to the only workmen who were available at the time. 2nd.—It has the advantage of only requiring the very cheapest and most easily procured materials, and so is well suited for temporary purposes or for hasty erection. 3rd.—It is supposed by some persons to be the best construction to resist earthquakes on account of its elasticity and on account of the wooden frame work preventing the outside lining of stones or other covering from being precipitated inwards on the occasion of a shock. The first reason in its favour does not now exist in such strength as formerly, because, although really efficient workmen are still very difficult to procure, there are now in this country many Europeans of experience who, by their superintendence and direction can efficiently cause to be executed almost any species of building. For merely temporary buildings it may still be, on account of its cheapness, the best, but if the construction is to have any pretensions to be a lasting erection, or one which has to afford effectual protection from outside disturbances, I have no hesitation in saying that the system is the most uneconomical. From the fragile nature of the materials which compose the outside casing, whether these are stone flags, tiles or merely plaster, the walls are in want of constant repair, and are never water or air tight. The wooden framework from its insufficient covering decays with great rapidity and it is in all points excessively and dangerously weak. The third reason in its favour, viz, its efficacy to resist earthquakes, is one which opens out a large field for discussion on which I may have something to say further on.

In copying this system of construction therefore I need not say that, in my opinion, the Japanese have been led into an egregious terror. And it is really a pity to see such buildings as the new Custom House and the New Town Hall in Yokohama, the new Government offices in Yedo, all of which should be buildings of real stability and durability, built on this principle. These erections have all somep retensions to architecture, they have each cost very large sums of money, and being efforts at improvement in the way ofc onstruction, it is most unfortunate that the system adopted was not one formed on a more sound and substantial basis.

Since the great fire which happened in Yedo in 1872, the minds of the local authorities there have been greatly exercised in reference to the construction of buildings which will afford greater resistance to the spread of fire. A very creditable effort has been made in the new Boulevard at Yedo—where small brick houses have taken the place of the slight wooden erections which are general in all Japanese towns. These new buildings are built with brick which has been coated with Portland cement plaster. The walls of the houses are of course perfectly uninflammable, and fireplaces with properly constructed chimneys are placed in each wall. These houses present no perfect immunity from fire, but there can be no doubt that from the use of uninflammable material in the walls, and by a well-devised system of construction they offer great checks to the spread of fire, and the danger of taking fire is immensely lessened. The buildings have evidently been designed so as to retain as for as possible the Japanese system of house with open fronts and moveable partitions; they are two storied and contain four small rooms, and have a small verandah in front supported on brick columns. They seem to be a very suitable species of building for the class of Japanese occupying them and they most certainly present an infinitely better exampere of building to the people than the European houses which I have just described.

The principal and most important move made by the Japanese Government towards introducing into this country a better appreciation of the art of building and, at the same time, furnishing the country with those results of the ingenuity and labours of our great engineers which have revolutionized the civilized world, is the establishment of the department of public works and the prosecution of the undertakings under its care. The construction of two lines of railway after the English model cannot fail to to instil into the minds of the many Japanese employed in connection with them, the advantages of the principles of building adopted in Europe. Although one of these lines does not unfortunately present many features worthy of imitation, the other one in the excellence of the details of the workmanship upon it, whether in brick, stone, or iron, supplies a model of the greatest value. The lesson that these works afford the Japanese should be of the greatest use to them. The various natural products of their country have in them been moulded formed and brought into combination with each other so as to form structures of precisely the necessary strength, and of the most certain durability.

The graving docks and various other works at Yokoska also present to the Japanese another phase of constructive art from which they may learn the properties and use of another species of material. While the Lighthouses, though humble specimens of construction, and labouring under the disadvantage of being placed in such situations that few people see them, afford, I hope, their quota of information.

That the Japanese have not benefited so fully as they might by the lessons given them in the carrying out of such works, I think, can be safely affirmed. This has been occasioned more by a restlessness of mind and want of application than by want of ability. Their natural presumption of knowledge is proverbial, but in addition to this there has not been established to my knowledge any definite system of education among workmen. The methods of manufacture in all countries by means of which the cheapest, the best finished and only reliable articles are produced are well known to consist of keeping each workman confined to one very narrow branch of labour. In this way he becomes expert in that particular line and is able to produce work with a rapidity and of an excellence otherwise unattainable. In building, a stone mason, a bricklayer or a carpenter is obliged to serve a weary apprenticeship of 5 or 6 years, and after that has been completed a long probation of many years on a merely nominal pay before being considered or trusted as an efficient workman. In Japan, on the contrary, bricklayers or masons are procured ready made; a Japanese carpenter is a mason one day and a bricklayer the next. And the introduction of the system of apprenticeship—by which the intelligence and energy of youths are brought

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to bear on one particular branch of labour—has not, so far as I am aware, been thought of. This defect may be due in a great measure, to the exigencies of the country which has only lately commenced to adopt these improvements, but I fear it is also occasioned by the restlessness of disposition which is a well known feature in the Japanese character.

The materials used for building have been but slightly developed within late years. Wood, which still maintains its supremacy as the principal and the most commonly-used building material has not improved in quality. It is of a most treacherous character as at present to be purchased in the market, this being due to a want of care in felling the timber, in seasoning it and in drying it. No trials have yet been made so far as I am aware of the strength, durability or weights of Japanese wood, so very little can be added to the information I gave in my former paper concerning it. There can be little doubt, however, that the extra demand for timber caused by the commencement of public works of magnitude, and by a desire for larger and more extensive edifices is causing a denudation of the forests of the country. The rapidity of decay in the material itself and, the wholesale destruction to which it is exposed by conflagrations keep up a steady demand for this the stock building material of the country, but if, to this is added the demand caused by the various improvements which have been instituted, the supply is unable to keep pace with it. With a recklessness which I fear is a characteristic of the people the forests are being taxed beyond their powers—timber itself has increased in cost within the last five years to twice or thrice its former price—and fears not unnaturally arise of certain climatic changes springing from the clearing of large of tracts of country of their former forests.

Bricks were introduced by foreigners some years ago and are rapidly getting into extensive use. They do not, however, as yet attain to that excellence of manufacture which make them at all a desirable building material. The process of brick-making, like all other work requiring skill, can only be carried out to perfection by experts. While the Japanese are well acquainted with the manufacture of various porcelain and terra-cotta articles for use or ornament, and succeed in this most admirably, the making of bricks, so as to turn out both a cheap and reliable article, is a process requiring so entirely different methods of work that their knowledge in the former is not of much avail to them. The selection of the clay, its puddling and the shaping of the bricks are at present all done more or less carelessly and without method, but it is in the burning of the bricks that their principal defect lies. Their kilns are formed in the shape of a cone and are when charged generally filled to the top with bricks. A wooden fire is inserted at the bottom and the heated air is allowed to find its way through the large mass of bricks to the top of the kiln.—Those bricks at the bottom, we naturally find, are overburnt and cracked while those on top are quite insufficiently burned. A very small proportion only of really reliable bricks is therefore got from each kiln. I am informed that very excellent bricks are procured in Kobe and Osaka, which are made at Sakai, but I have not had an opportunity of testing these. I have, however, put bricks from various other parts of the country to the ordinary tests and the results are anything but satisfactory.

The ordinary bricks in use in London absorb after immersion in water not more than 1/15th of their own weight and they withstand a pressure of 800 lbs. on the square inch. The ordinary bricks made in Yedo absorb 1/5 of their own weight of water, and will not stand more than 300 lbs. per square inch; that is to say, they are three times as porous as they ought to be and less than half of the strength they should be. Bricks made in various other parts of the country shew almost the same results. The best which I have had opportunity of trying were those made at Hakodate; they stood fully the standard crushing strain but absorbed far too much water. Such bricks are in my opinion quite unfit for building purposes. Their actual strength, when new, may be sufficient for the small erections built in Yokohama, but their porosity renders them liable to rapid disintegration, and to actual rapid destruction from severe frost, while houses built of them must, under any circumstances, suffer from continually damp walls. A very excellent instance of the character of the Japanese bricks may be seen at Hakodate, where a series of large godowns recently erected by the Kaitakushi are in ruins, owing to the splintering and reduction to powder of the brickwork in their walls, caused by one winter's frost. A partial remedy for the badness of the bricks may be to coat the walls with lime or cement plaster, but even with this I fear that sufficient moisture will find its way to them as to have a very deteriorating effect upon them. Another and a very grave reason against the ordinary use of brickwork as at present carried out in this part of Japan is the almost useless character of the lime mortar. Bricks in a building are held together by the lime mortar between them and if this mortar does not possess the necessary connecting qualities each brick is dependent on itself and the edifice which is constructed of them is deprived of almost its entire stability. Good mortar requires clean sharp sand and newly burned lime. Such sand in the neighbourhood of Yokohama is difficult to procure and is almost never used and the Japanese seem to have a pride in using only the oldest lime which from long keeping has entirely lost its virtues.

The system of construction best suited to withstand earthquakes is a consideration which should always hold a prominent place in the design of any erection in Japan. I have not been able, though I have made considerable efforts to do so, to procure any information either to verify the particulars I gave in my former paper regarding earthquakes or to make additions to that. While we are perfectly aware, therefore, of the liability of the country to shocks of destructive violence we are not aware of the nature of the shocks or the localities in which they may be expected to be most severe. It is to be hoped, however, that with the assistance which the Japanese Government now possesses both as regards instruments and professional men, that before long we may have a regular system of observations affording us this information. I have formed the opinion that the heavy roof and the light framework in Japanese erections are ill-suited to withstand these shocks, and I believe my opinion to be sustained by the truest principles of mechanics. This, however, is hardly the place to enter into a disquisition upon that subject. I am also of opinion that a solid erection, properly constructed, will afford the greatest safety during an earthquake and at the same time is the only one which will give reasonable security against fire, wind or the other natural disturbances. An appliance has been devised by a well known English engineer for the purpose of counteracting the disturbing force of an earthquake, the principle of which is very simple. It was said by him that the movement given to the foundations of a building is transmitted with accelerating force to its summit, and that to destroy this the simplest method was to make a break in the continuity of the structure. The designer, therefore, proposed that buildings should be made in two parts, the lower part to be firmly embedded in the earth, the upper to rest on balls which are made to roll in inverted cups. A sudden movement in the lower part would not then, be transmitted to the upper on account of this break or joint in the structure, and the experiments made shew that in point of fact this theory was perfectly correct. He procured this idea from seeing in Japanese drawings the uprights of their houses resting on round stones, imagining this to be done in order to give them as slight a hold of the earth as possible. But from enquiries I have made this does not seem to have entered the minds of the Japanese, and the only way they can account for the uprights being placed on round stones is to keep the wood away from the moisture of the ground and because round boulders are more easily and cheaply procured than square stones. The impracticability of this scheme, which, however, deserves a fuller trial than it has yet had, arises, in my mind, from the fact that a house resting on balls is liable to be swung and rocked about in gales of wind to such an extent as to render it unfit to live in. I may mention that the tables on which the apparatus of some of the Japanese lighthouses rest are constructed with this joint, but they have been found to be unsuitable for the reason I have just stated, viz. that when touched or trod

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

upon they shake and roll too much. It is quite possible, however, that some alterations might be effected on the design to obviate this difficulty, and if this were accomplished there can be no doubt that it would afford great immunity from earthquakes shocks. Any scheme which will afford this should be welcomed in Japan, but at the same time it is in my opinion a great mistake to sacrifice the whole comfort and the safety of dwellings from their dread enemies fire and wind to a supposed protection from so remote a contingency as a severe earthquake is in Japan. The building most truly suitable is one which to the fullest extent provides a protection from both these disturbances.

Wooden houses, on the supposition that they are best during earthquakes, are not well fitted to withstand the other disturbances to which they are much more frequently exposed—and solidly constructed houses, while they are less inflammable, and less liable to damage from bad weather, whether they are well calculated to resist an earthquake shock or not, at all events have this advantage that they will always afford their inmates time to escape. The more solidly constructed a building is the longer it will remain standing, even though solidity is no perfect protection against the rage of an earthquake.

The matter of cost is an important one in regard to works of this kind, and there is not an unreasonable fear that to erect a solid building means a large expenditure. This, under present circumstances in Japan, is probably the case, though not to that extent which might be imagined. The present want of good material and the dearth of efficient workmen enhance the cost of good work, but we must hope that these hindrances will soon be removed, and that in a short space the towns of Japan will consist of something better than rows of tinder-boxes.

NUIHAKUYA.

Nuihakuya! What can it mean? What can such an ugly ill-conditioned looking word denote or signify? Something to eat? No, no, my friend, you must try again. Mayhap an ancient custom, a rusted suit of armour, or a quaint and curious piece of laquer-ware? A goodly margin, truly, for conjecture sir! but yet, not wide enough. As likely might it be a sandalled pilgrim, beads and bell complete, an Eta's daughter, cotton-clad, with rosy features hid beneath a huge reed hat, and playing plaintive melodies on *samisen* from door to door, or else a hollow-chested man with shoulders rounded from much stooping, an anxious face, and yet a not unhappy looking one, a pleasing physiognomy overlaid by a cloud and pinched here and there—perhaps by want—who knows?—into wrinkles and crows' feet, and a pair of owls eyes which blink in the sunlight and require to be rubbed with the back of his hand before he can fetch a focus to regard your face. How he shades his forehead as you draw aside the paper window, and covers up his dilated pupil with a red-edged eyelid, and regards you curiously from between a scanty growth of lashes—more likely *he's* Nuihakuya: and, in good sooth, so he is. And a Nuihakuya is an embroiderer, a worker in needlework devices, a stabber of silken clouts. You'd like your crest upon your best silk jacket, would you? Or perchance you want a gold embroidered present cloth? Present him with a sketch or leave it to his fancy and—my word on it—you must be hard to satisfy indeed, or else he'll please you. Poor fellow! Whose life is harder than is his? Grey dawn sees him at work and "candle time" will find him covering up his frame with tissue paper, and sighing that the days are still too short. A squalid home is his, and difficult to approach by reason of the rotten boards which roof the drain before his house. Does he often take a holiday? you ask him. No! no! he's bad at walking, he will tell you, his legs get cramped with constant kneeling at his work, besides the times are harder than they used to be, and—with a toss of his head towards where his wife is nursing something which looks like a bundle of clothes, and a semi-circular sweep of his chin in the direction of some half dozen other olive branches—he has many mouths to feed. He used to like an outing well enough, but now he's shy and the sunlight hurts his eyes. And yet for all his hermit life he has a strange acquaintance with outside objects. Are such things told to us in sleep? Or is the human brain [illegible] with knowledge? For how else explain the fact that this poor drudge can limn with colored threads his fields of purple iris, his many-feathered flocks of birds, a bamboo grove, a fleet of ships at sea, a fluttering falcon, and who can tell how many other pleasing figments, and never leave his village home to see and study subjects such as these and those? How many curious looking frames he has: embroidery easels; drums with glowing satin stretched instead of sounding parchment; hollow squares, with here and there a half formed picture shewing through the paper cover! Long trestle-shaped arrangements muffled up and dismal looking, and yet supporting naught more terrible than a gold emblazoned banner or an ornamented *Obi*. He'll show you with becoming modesty his handiwork, and preface every object with a "this is but a poor affair" or "that's a paltry business," and should you praise his skill, he'll gravely bow and thank you while he gently deprecates your praise. But for all his quiet manner and humility, he cannot hide the blush of pleasure which mounts into his pallid face. A poor faded ghost of a blush to be sure it is, but nevertheless the best he can afford, the very best his watery, ill-fed blood can muster up in honor of your kindly interest. His fare is very simple, mainly rice and and pickled cabbage, with now and then a thought of fish perhaps, and once a year a little *sakê*. If such thin grewsome stuff as this can feed and nourish up ideas so artistic as are seen upon his web, what possibilities are there not in Beef and Burgundy? How delicate a tracery should woodcock's thigh and sparkling hock produce! Beef and Burgundy! Woodcock's thigh and Sparkling hock! forsooth, to him of "many mouths to feed," and but a *bu* or so a day to do it with! Not but he has sometimes doubled that amount, he'll tell you, and once or twice when trade was brisk, has hired a helper too. But that is only seldom, and it is a rare good day which brings him in a *bu* and a half. Why not change his occupation, then? Nay! he's over old for that, besides was not his father's father Niuhakuya before him. Nay, more he likes the work; Lord love the gentleman, his heart quite expands as he sees his work progress. He can wander amongst the flowers without so much as stirring from his seat, his sun grows warm and warmer as he lays on golden threads, and he's pensive with his silver moon ere yet her crescent is complete.

YOKOHAMA FIRE BRIGADE.

Report of the Committee.

The following report was read at the Annual Meeting of the Association on the 20th instant.

The Committee of the Yokohama Fire Brigade have much pleasure in presenting their Annual Report to the residents and the Agents of the Fire Insurance Offices, and in submitting the accounts of the Hon. Sec. and Treasurer for the past year.

They are glad to able to state that the subscriptions collected during the year shew bnt a small decrease on those of 1873.

Accounts of Receipts and Expenditure are attached to this report, and shew a small balance in favour of $471-33,100.

The expenses for the year much exceed the amount subscribed, owing to the heavy cost of sinking a Fire-well, building an Engine House, and other improvements the Committee deemed neccessary, and it may not be out of place to urge that it is in the interest of all concerned, insured, and insurers to support the Brigade by liberal contributions, and thus reduce the chance of loss by fire as much as possible.

The Steam Engine involves a monthly expenditure of about $80 viz., $60 salary to the Foreign Engineer attached to it, and remainder for sundries, as coal, two Assistants, etc.

A House has been erected for the Engine, with noccessary accommodation for a Foreign Engineer, at a cost of $359 79cents.

Another heavy item is the sinking of the Fire-well, between Lots 75 and 76. This well contains upwards of 16,000 gallons of water, sufficient to keep the "Relief" (belonging to the Brigade) and the "Victoria" Steam Engines at work for upwards of 3 hours and then the inflow is enough to keep one Engine working.

Since the last General Meeting, which was held on the 20th Jaunary, 1874, the Steam Engine ordered from Messrs. Shand, Mason & Co has arrived, and some dozen gentlemen have come forward and volunteered their services to work it at any time it may have to turn out. At Drills and Fires these gentlemen have shown great activity in getting to work, and work steadily.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The following is the list of fires that have occurred during the year:

THE FOLLOWING FIRES HAVE OCCURRED DURING 1874.

January 31, at No. 36, Foreign Concession, cook-house.
February 8. at No. 9, Foyeing Concession, French Naval Hospital.
March 12, at No. 60 and 61, Foreign Concession, destroying the entire block.
March 12, at No. 81, Foreign Concession, godown.
March 13, at Nos. 128 and 129. Foreign Concession, destroying the German Hotel, bakery, and two dwelling houses.
March 25, at Semiyosh'cho, Native Town, Japanese houses.
April 21, at No. 145, Foreign Concession, out-houses.
April 21, at No. 102, Foreign Concession, cook-house.
October 8, at the back of the Custom house, cook-house.
December 2, at No. 116, Foreign Concession, dwelling-house.
December 5, at No. 183, Foreign Concession, godown.
December 16, at No. 159, Bluff, dwelling house.
December 21, at No. 28, Foreign Concession, fire confined to one room.
December 30, at No. 80, Foreign Concession, destroying the entire block.

The Brigade now possesses one steam engine and 800 feet of leather hose; two hand engines and 1,900 feet of canvas hose; buckets, ladders, etc, etc.

Although the hand engines are still in good order, the Cemmittee would recommend that they should be replaced by one or more new ones, as the funds at the disposal of the incoming Committee may warrant.

The Committee have much pleasure in testifying to the satisfactory manner in which the Superintendent, Mr. Davis, has discharged the duties of his post.

The Committee cannot close their report without thanking those gentlemen who have so kindly volunteered to work the Brigade Engine.

The Committee, consisting of Messrs. Benson, Fraser, Dodds, and Leckie (Mr. Hurlbut having temporarily left the settlement), now beg to tender their resignation, and trust that the community will be satisfied with the result of their labours.

For the Committee,
JOHN LECKIE,
Hon, Sec. and Treasurer.

THE YOKOHAMA FIRE BRIGADE, IN ACCOUNT WITH JOHN LECKIE, HON. SECRETARY AND TREASURER.

JOHN LECKIE,
Hon. Sec. and Treasurer.

Yokohama, December 31, 1874.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Society was held on Wednesday evening, 13rd instant, at the Grand Hotel, C. W. Goodwin Esq., V. P. in the chair.

The minutes of the last meeting were approved, and it was announced that the following gentlemen had been elected ordinary members of the Society since the last general meeting: Dr. Elmore, Chargé d'Affaires for Peru, Messrs. J. C. Hayllar, Q.C., Hongkong, J. Smedley, E. S. Benson, and S. Cocking,

The Rev. E. W. Syle then read the "Itinerary of two routes between Yedo and Niigata" by Captain Descharmes.

Sir Harry Parkes observed that Captain Descharmes had described a very interesting, and a very extensive tour through the Northern, Western, and central Provinces of Japan. He regretted that, owing to the want of a good map, those who had heard the paper read would not fully profit by the information it contained until it appeared in print. The same want had been felt on previous occasions, and would continue to be felt when papers of travel were read before the society. He would therefore suggest the preparation of a map of Japan on a large scale, to be exhibited at the meetings of the society, which should show in a manner that would at once catch the eye, the Provinces and Kens, principal towns, mountain ranges, rivers, roads, and other important geographical features of the country, as far as these were at present known or might become known. The routes described in the papers read before the Society might also in some instances be marked upon it. Its use would then be felt, not only when papers were being read, but also by travellers planning a tour or an excursion, and wishing to profit by the experience of those who had preceded them. He believed such a map could be constructed at small expense, and he was satisfied that it would prove of great utility to the society.

Mr. Cargill, in seconding the suggestion, remarked that any Foreign maps of Japan he had seen were very incomplete, while the Japanese maps, some of which were very excellent, had for those who could not read Japanese, all the characteristics of the old maps of Africa—a mere coast outline on a sheet of blank paper. Mr. Cargill also enquired what the expense of preparing a map would be, and whether the funds of the Society could afford the outlay, or whether a special subscription would be necessary.

Mr. Syle said that the matter had been under consideration. He thought that if the Society determined on constructing such a map as that referred to, Mr. Brunton should be requested to superintend the execution of it. He was afraid, however, that the funds of the Society would not admit of the undertaking at present.

In reference to what had fallen from Mr. Syle, Mr. Brunton said that he would be glad to superintend the execution of large maps for the use of the Society. He would propose that they should be made to a scale of 2¾ miles to an inch and should be in six sheets viz: one sheet for the island of Yezo,—one sheet for the Main Island, to extend as far as Lake Inabashiro—second sheet for Main Island to extend as far as Lake Biwa. Third sheet for the remainder of the Main Island. One sheet for the island of Sikok, and adjoining coast. One sheet for the island of Kiusiu, and adjoining coast. The probable cost of executing these completely and in a finished manner would be about $400, the principal items in which sum consist of the Chinese, or Japanese, draughtsmen. Then maps might be enlarged from Japanese maps, many of which are of very considerable accuracy. In fact so accurate are they that some of the present charts used by navigators are compiled from them.

The maps so made would be useful only for hanging on walls, and tracing journeys on with a pointer. They would not be suitable for measuring from, or for photographing or otherwise copying.

Mr. Brunton then read his paper on "Constructive Art in Japan."

Mr. Cargill acquiesced in the observations made by Mr Brunton on the indifferent material used in building, such as spongy bricks, lime that had lost its essential quality, and indifferent timber which began to rot as soon as it was put to use, and that as for the grotesque but pretentious specimens of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the foreign style of architecture in Yokohama, to which he had drawn attention in the New Town Hall and Custom House, he might have added the new Post office, and the British Consulate, the latter being especially hideous. As for the adaptation of buildings to resist earthquakes, and the general use of timber in Japan for the temples and other costly structures which, from their antiquity, seem to have resisted shocks that had proved so disastrous to many towns, he presumed that timber was deemed well suited for resisting those terrible visitations. In other countries the same idea prevailed. He had heard people in San Francisco taking comfort from having so many of their houses built of timber, and being on that account more safe. The town of Wellington in New Zealand is wholly built of wood, private dwellings, public buildings, and churches, including even lofty steeples, that neighbourhood being subject to constant severe vibrations of the earth, and no other building material being deemed safe.

Sir Harry Parkes was of opinion that the light and elastic style of Japanese architecture had no reference to the necessities, or apprehensions occasioned by earthquakes. It is a primitive style of building taken chiefly from the Chinese, who are said to have followed the tent as their model in the long sweeping roof, supported, not on walls but on timber uprights. The Japanese have no experience of solid structures. To them in building timber is a material of first necessity, and scarcity of supply would be very seriously felt. It is probable that although the country within districts easy of access has been denuded of its timber belts of forest still remain which cannot at present be made available for want of means of transport. Forestry laws and the construction of roads evidently demand the serious attention of the Government.

In answer to the Chairman, Mr. Brunton said that from the various authorities which he had consulted he could not discover that the system of lightness and pliability in the construction of houses had been adopted in any country subject to earthquakes—except Japan. Certainly in South America and South Italy the buildings which were now erected were of a most solid description—and those men who were authorities on the subject had, so far as his investigations had carried him, unanimously given a preference to strength as distinct from lightness or elasticity. In a building wanting in strength, its overthrow becomes certain when the velocity of the earthquake wave is such as to produce oscillation sufficient to destroy the equlibrium of its upright parts. But in buildings where the mass or inertia is great, and the connection of the different parts of the walls is proportionately good oscillation is checked, and it may be said that overthrow is impossible—except of course in cases of irregular upheaval or cracking of the earth's surface, or when the foundations of a building are destroyed. In such buildings fractures may certainly be caused at weak places in the walls, but their great advantage is, that on account of their immunity from overthrow, they give their inmates time to escape. The great destruction of buildings in Lisbon Naples and elsewhere by earthquakes has been shewn to be entirely owing to the faulty character of the masonry—there having been instances in the vicinity of the latter place where the front half of a wall has come down leaving the back half standing, shewing that there was no band or connection whatever between the two.

In regard to concrete he believed that no substance could be found more suitable for building in earthquake countries, and he founded this belief on the grounds that there was no joint whatever in a concrete wall, that the whole building was as one stone, and that the connection between its parts was equable and thorough throughout. He could not conceive that a well-built concrete house could possibly be overthrown so long as its foundations were left intact.

Mr. Syle observed concerning the supposed absence of any system of apprenticeship among Japanese workmen, that in China there was no such deficiency; but on the contrary, that every workman—especially every bricklayer—seemed to be provided with two apprentices.

As to the supply of timber in China; it had become the custom in some districts, to cultivate hill-sides, and crop them annually strip after strip, for thirty successive years; at the end of which time, the first portion will have grown up again. For building purposes, large quantities of fine lumber, brought across the Pacific from Oregon, were disposed of at Shanghai. Also a good deal of magnificent hard wood brought up from the Straits, in the Singapore junks.

Prof: W. E. Ayrton remarked that he was not sure whether it had yet dawned on the Japanese that porosity was an objectionable character in bricks, since he remembered when, some months back, he visited Tskudashima where bricks were manufactured in considerable quantities by the convicts there, the Governor of the prison pointed out with great glee how a stack of black bricks absorbed pailful after pailful of water as it was thrown over them. He thought all must agree that Mr. Brunton's severe criticisms of the new buildings in Tokio and Yokohama were most just, especially as regards the pastrycook style of architecture, the one most in vogue, which produced residences like sugared cakes, of layers of white plaster hiding a framework of unseasoned and ill-jointed wood. The builders of these houses appeared to have exercised the greatest ingenuity in combining the flaws of Japanese dwellings with the vices of second-rate European suburban villas; for where, in the modern Japanese house was the graceful roof-curves, the quaintly-moulded corner tiles, the grand entry with its curved scrolls, the picturesque eaves, the ingenious arrangement of rafter, and decorated panels of the Daimio's home? Whilst warmth and solidity, so rightly esteemed as most important characteristics of European buildings, were conspicuous by their absence.

He could scarcely agree with Mr. Brunton that the new brick houses in the Odori of Tokio, the main street of the metropolis of Japan, were satisfactory; since he considered the pretensions to the classic style displayed in the architecture had produced a result not more happy than the absence of all architecture in the more flimsy structures previously referred to.

He doubted whether Europe's ancient Gothic architects would approve of the new mongrel red-brick buildings of Tokio, that bear so strong a resemblance to national school-houses. In addition, to a race like the Japanese who loved brightness and sunshine, who passed the greater portion of their lives in the open air he could imagine nothing more distasteful than the small windows, absence of verandahs, and general gloom of a medieval building.

What was really wanted in this country at the present moment was an architect who had thoroughly mastered the varieties and styles of the European schools of architecture, and who, in addition, had also studied the ingenious development of wooden structures in the United States. Such a man after arriving here would with similar industry study Japanese buildings and their extreme siutability, in many respects, to the climate of the country and the tastes of the people. He would then be in a position to evolve buildings that did not as now combine the evils of all styles, but which, instead, bore evidence that the best points of native and imported art had been judiciously selected. We might then have buildings possessing the beauties of the yashiki and the conveniences and comforts of a first-rate English building.

The Meeting then terminated.

Correspondence.

THE HARBOUR SCHEME.

To the Editor of the *Japan Weekly Mail*.

20th January, 1875.

Sir,—Your correspondent A. is becoming warm in his advocacy of the Harbor works. Surely if according to A. the scheme "is such a complete and perfect one," it will stand discussion. The facts I have adduced speak for themselves, and considering the earnest advocacy of A. it was evidently worth while disproving these facts if possible rather than concluding that it *would be* supererogatory to offer a flat contradiction to them. If this is a specimen of the hasty and injudicious manner in which this scheme is being pushed forward before the Japanese Government, it is to be regretted. It is also worthy of note on this point that Mr. Brunton, who is supposed to be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the promoter of this scheme, is now addressing the principal shipping firms here asking for information regarding detention of goods, charges for landing, shipping, &c. It would have been thought that the engineer of such a work would have acquired this information before maturing his plans.

A. again falls into error by calling the Yokohama anchorage "an open roadstead," and remarks "that that does not militate against the necessity for a wharf." If it were an open roadstead it would militate very considerably against a wharf; but A. is not quite clear here as to the difference between a wharf and a pier. The work proposed is a concrete pier, and in an open roadstead even this would prove of very doubtfut utility. The calculation at 10 cents per ton on shipping was not based, as A. infers, merely on what vessels paid in the river ports in China, but was the extreme rate in my opinion which vessels visiting this port could afford to pay. In reply to A.'s query I would inform him that certainly there is a distinction between a wooden wharf on a river bank and a concrete pier in an open roadstead, &c., &c., and that this distinction was apparent to me when I made the incidental reference to the 10 cents charge per ton. It was also apparento me that some of the wharves in China have cost probably as much per foot as the proposed pier is estimated to cost, taking into consideration the price of land, material, and the treacherous peculiarities of the river. It is impossible to frame the Pier dues on what the work costs. The wharves in Shanghai for instance must have cost vast sums of money, but many of them are entirely useless through the silting up of the river. "The coat must be cut according to the cloth." In these case. you cannot draw the comparison between "other parts of the world where similar facilities are offered at rates of from one shilling to one dollar per ton." Where such rates are charged there are certain advantages which makes it worth the while of vessels to pay such charges, and it is ridiculous to suppose that the trade of Japan for many years to come would admit of such an extra impost upon it. Why, in the Suez Canal (the most costly work of the kind of modern times) the rate is only 8/6 per ton.

I confess I do not understand the drift of your correspondent's remark regarding the simile of the pier (not wharf) acting as a platform to a Railway station &c. My view was that such a work at all is unnecessary, and this, without paying any attention to the length of the Pier. I showed that at a cost of $1,000,000 with the entire Foreign shipping using the Pier at a rate of 10 cents per ton it would not pay 3½ per cent on the expenditure. The $1,000,000 I conclude will only carry the Pier about half the estimated length, which would be into a depth of water too shallow for the majority of the shipping to use it, therefore it would necessarily show a more disastrous result. If the Pier costs $2,000,000 according to my showing it will not pay any interest at all on outlay, although taking the money at 7 per cent., which is really about 1½ per cent. less than the Government borrows its money in Europe.

If the Japanese Government have been dazzled with the idea that this pier is to act as a feeder to the short section of railway between Yokohama and Yedo, they will certainly find themselves disappointed in the result. Yedo, as I before remarked, and not Yokohama, is the terminus, and situated as it is on the shores of a magnificent bay, goods coming by sea, until a trunk line of railway is in existence, will be unable to stand the transport by railway for the few miles before they reach their destination when the goods can be carried to their destination by water without any palpable additional cost. Water carriage in all countries is invariably cheaper than land carriage until railways have been developed. When the coasting trade of this empire has to compete with the railway through to the producing districts, then the question of competition will become more equal between railway and water carriage. But of what avail will that be to the proposed pier? The steamers will then, even less than now, be able to use the pier or railway between here and Yedo, and the pier has every chance of becoming a white elephant to Japan, as useless from a renumerative point of view as the Pyramids of Egypt, without being nearly so interesting as a specimen of constructive art.

The most that can be said in favour of the scheme is that it will be a great convenience to the foreign trade of Yokohama. But that it will increase this trade is more than doubtful. A similar plea might be urged for covered ways in the principal thoroughfares between Yokohama and the Japanese town; business on rainy days is almost at a standstill on account of the objection the Japanese have to leave their dwellings with the chance of getting wet. No doubt this measure would be a great convenience to the people and would facilitate the business of the port, but who will argue that such an expenditure is necessary or would prove remunerative?

Another point which apparently has been lost sight of is the fact that the population of Yokohama and suburbs is steadily decreasing, and the people are gradually returning to Yedo, where the cost of living is so much cheaper. A walk through the reclaimed districts to the westward of Yokohoma will at once convince an observer of this fact. Two years ago it was difficult to find an empty house in this quarter and now a very different state of affairs exists.

A. professes to find satisfaction in my estimate of a return of 3½ per cent interest, on the supposition that money could be got at 7 per cent interest for constructing the Pier, that the entire foreign shipping visiting Yokohama would make use of it at 10 cents per ton, and that the extreme cost of the Pier would be $1,000,000. But it is evident that the Pier will cost nearer $2,000,000, and that the money cannot be obtained under 8 or 8½ per cent, so that it would return no interest whatever on outlay.

This evident deduction A. is pleased to term "a handsome return on the expenditure," but it is to be observed that he is only giving his opinion (not upon an investment of his own) but upon what he considers is "a handsome return" to the Japanese Government upon their investment. It is therefore fortunate for the Japanese Gouernment they have not to rely upon the estimates of your correspondent in this matter.

It is to be regretted that A. should allow himself to be disturbed by the manner in which this discussion has been conducted. The subject was one of great general interest, and the best mode was adopted which offered to secure the most complete ventilation of it. This apparently had its recommendations for your correspondent, and if instead of finding fault on such immaterial points, he had confined himself to disproving the facts and figures brought against him, he would certainly have assisted towards a more satisfactory consideration of the subject.

It is no possible concern of mine how the Japanese Government expend their money, or if they choose to pitch $2,000,000 into the Yokohama bay. I shall probably benefit by the convenience of the pier as much as any of my fellow residents, but at the same time it is perfectly evident to me that such a project, if adopted, will be the means of preventing the carrying out of works of equal public convenience but more general benefit.

Your obedient servant,

X. Y. Z.

DAVISON V. ORIENTAL BANK CORPORATION.

The following is a copy of the report of the referees in the case of J. Davison *v.* Oriental Bank Corporation:—

TO C. W. GOODWIN, ESQ., ASSISTANT JUDGE, H. B. M. COURT, KANAGAWA.

SIR,—We have the honour to report that in accordance with the instructions contained in your order dated 30th October last, we have now taken the accounts in this case, and we certify that at the date of the verdict, say 17th October, there was due by defendants to plaintiff the sum of Mexican dollars five thousand two hundred and eighteen, and nine cents (say $5,218.9), as per enclosed statement of general account.

We further enclose statement of cash account, and schedules A, B. C. D. E. and F, and have the following remaks to offer thereupon:—

STATEMENT OF CASH ACCOUNT.

In the accounts handed in to us by plaintiff, the amount that had been received by him on account of sales of goods was stated at $26,272.58

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Defendants claimed that plaintiff had received 27,167.32
Fortunately both parties agreed that the amount paid out of the receipts by plaintiff into defendants' bank was 18,584 39

After a careful and laborious comparison of the items of cash received in plaintiff's cash-book, with the items of sales made in the memorandum salesbook we fix the amount of receipts by plaintiff at $26,335.58; thus plaintiff has retained on account of total charges the sum of $7,751.19.

All outstanding accounts for sales made to be collected by defendants.

SCHEDULE C.—DUTY.

Claimed by plaintiff	$4,317.68
Statement by defendants	961.68
We find the amount should be	943 20

The greater part of the goods, duties upon which plaintiff claims, were not hypothecated to defendants *until after* they were landed, consequently do not come within the scope of the verdict. The above sum of $943.20 is the whole amount we find to have been disbursed by plaintiff on goods, the documents of which at the time of landing were held by defendants.

Interest on duty we have disallowed, as we find that plaintiff's receipts covered him for this outlay.

SCHEDULE D.—LANDING CHARGES.

Claimed by plaintiff, $430.50, being at the rate of 30 cents per package.

We certify to this rate as being reasonable; but for the reason given above in regard to duty, we have disallowed the charge on the greater portion of the goods, and certify to a sum of only $78.52.

STORAGE.—SCHEDULE E.

Plaintiff claims an average rate of 35 cents per package per month. We consider that this rate is by no means unreasonable, and accordingly confirm it. As regards dates from which storage has to be reckoned: we have taken it, on those goods landed for account of defendants, from date of landing, and on those transferred to defendants subsequently to the landing, from date of transfer. The rate of 35 cents per package, in our opinion, is rather below than above the usual tariff in Yokohama; and, moreover, the storage of the goods in question must have been unusually troublesome. Many of the packages, from their shape and character, must have been of bad stowage. Nor was it a case of out-and-out warehousing, in which the goods were taken delivery of in quantities; for we find that very often only one or two packages, and sometimes even part of a package, were delivered at a time.

It has been urged upon us that the goods were of small value, and could not stand such a rate of storage. This plea, however, seems to be without foundation, for we find that the average value was at least $110 to $120 per package, or quite equal to that of a bale of shirtings or yarn.

It has also been urged upon us that many of the packages were small. We have given due attention to this statement, but—and especially as there evidently was a good proportion of bulky, some very bulky, packages—this fact does not appear to us to weigh down the considerations on the opposite side of the question.

We may state, moreover, that defendants brought witnesses from French and German houses, who, it was understood, had a special acquaintance with miscellaneous goods of this character, and their evidence was to the effect that they would be ready, under agreement, to store similar goods at a fixed charge of 10 cents per package, plus an *ad valorem* bonus of 2½ to 5 per cent. Now, such a method of computation, taking the lowest figure of 2½ per cent., would make the storage account up to $6,600, or more.

The storage extends over a period commencing May, 1873, and ending at the date of the verdict; the total gives an average of 9½ months for 1,702 packages. The amount of this account is $5,659.15.

FIRE INSURANCE.—SCHEDULE F.

Plaintiff claims ¼ per cent per month. This is in accordance with the usual tariff in Yokohama, and we consider it to be fair in the present instance. Insurances can be effected more cheaply when goods are covered a lengthened and definite period; but as regards the goods in question, there was no definite agreement as to the period during which they would be deposited, and the quantity was liable to fluctuation day by day.

An agent who covers goods under such circumstances, has to risk an outlay which he may never get back, and, consequently, must charge in proportion.

Fire insurance companies charge ½ cts. per cent. for a month's policy.

As with storage charges, we have disallowed fire insurance on goods not actually landed for account of defendants, until from after the date of their transfer to defendants.

The *period* over which the fire insurance account extends, is the same as that of the storage account.

The *values* for the insurance are taken for the most part from the amounts marked upon the delivery orders which plaintiff gave to defendants. This information is wanting in the delivery order of 20th August, 1873, and plaintiff claims that he entered this batch of goods on his insurance list at $60,000. There is, however, no definite record to prove this, and as the letter of hypothecation for said goods given by F. Beato to defendant mentions insurance for $54,000, we have allowed only this lesser amount.

Total of fire insurance account, $6,288.41.

In conclusion, we would only remark that owing to the long period over which the transactions to which these accounts refer have extended—to the want of any definite arrangements between the parties—to the absence of periodically closed accounts and the great difficulty in following dates or particulars which have slipped past without record,—it has been a matter of much difficulty to satisfactorily determine many items. We believe, however, that in all but a few minor cases, when we have had to decide according to the balance of such evidence as there was, we have been able to arrive at a well-grounded settlement.

We have the honour to be, Sir,
Your most obedient servants,
A. J. WILKIN,
H. J. HOOPER, } *Referees.*

Yokohama, 13th January, 1875.

IN THE BANKRUPTCY COURT.

Before RUSSELL ROBERTSON, ESQ.

January 18, 1875.

HONGKONG & SHANGHAI BANKING CORPORATION *vs.* E. WALLACE.

This was a claim for $8,700, balance of account.

Mr. F. V. Dickins appeared as counsel for plaintiff; defendant appeared in person.

Mr. Dickins, before commencing, wished to make a slight amendment in the petition plaintiffs had filed. He stated that the debtor summons had been served in the usual way on defendant, and no definite answer had been filed to it. He therefore thought defendant would not contradict that he had committed an act of bunkruptcy. He should like to hear what items, if any, the defendant disputed. He understood that defendant asserted that he was not indebted at all.

Defendant said he was acting without legal advice, and hoped the Court would make every allowance for any legal errors he might commit. He disputed the claim altogether. The fact of the matter was this: In 1868 and 1869 he sold two bills to the Hongkong and Shanghai Bank. They were drawn on Mr Rivington, of Hongkong, who accepted them, but never met them, and the Bank, instead of protesting them in the usual way, returned them, but to Yokohama, and this branch of the Bank debited them to his account. Another bill of his on Mr. Sands, of Hongkong, was treated in the same way. The Bank by doing this, he said, deprived him of all legal remedy he had against Rivington and Sand, and, therefore, he coutd not see why he ought to pay. Part of the total sum claimed was for interest,

Mr. H. Cope, acting manager at Yokohama of the Hongkong and Shanghai Bank, testified that the Bank purchased the bills in question, and that on their not being met in Hongkong they were returned, and placed to defendant's debit. He believed it was the custom for a bank to protest dishonoured bills, unless there was some reason for not doing so. He could not remember what the cost of protesting a bill in Hongkong was, but it might be from $5 to $10.

After some discussion,

Mr. Dickins prayed that the Court order defendant to amend his answer, and to state distinctly and definitely in it his objections to pay the various items mentioned in the petition.

His Honour granted the motion, and the next hearing will take place on February 2nd.—*Herald.*

H. B. M. PROVINCIAL COURT.

Tuesday, January 19th, 1875.

W. G. HOWELL *versus* C. D. MOSS and J. R. ANGLIN,
PROPRIETORS OF THE *Japan Gazette.*

This was an action for libel for the publication of a letter offensive to the character of the plaintiff. The damages were laid at $1,000.

The following gentlemen were empanelled as a jury:—Messrs Plummer, Palmer, Blakeway, H. Moss and Noble.

Digitized by Google
UNIVERSITY OF CALIFORNIA

Mr Dickins appeared for the prosecution. The defendants were represented by Mr G. P. Ness.

Mr Dickins proceeded to open the case on behalf of the plaintiff. The action, he stated, was brought against the proprietors of the *Japan Gazette*, a newspaper published in Yokohama. It was not necessary to comment upon the enormity of the offence for which the plaintiff sought satisfaction at the hands of a jury; it was sufficient to ask their earnest consideration of the charge and the letter which formed the ground of the action. Of this letter he proposed to submit a printed copy.

Mr Ness objected to the Jury being supplied with the letter in question, in which the pleadings of the other side were interpolated.

His Honour thought there could be no objection to the Jury being permitted to have the printed copy of the letter. He should warn them, however, that the portion embraced in brackets should not receive their attention.

Mr Dickins resumed—It was not alone in that Court that the defendant was put on his defence as to his character, a character built up during his whole residence of twenty years in the East; he was also on his trial before the Public. This larger Court comprised the gentlemen of the East,—the jury a committee of that Court. His client had two modes open to him of seeking redress for the injury his reputation had sustained—either by criminal or civil action for damages. He had chosen the latter, as he courted the fullest investigation into his conduct and motives which had been so cruelly assailed by the writer of the letter published by the defendants. It was open to them to plead justification in extenuation of its libellous statements This the defendants had not dared to do, knowing that the facts were of a defamatory nature and were false. Without going at length into the subject of the nature of a libel I may inform you, briefly, that any publication which tends to bring any person into contempt or ridicule, or can be construed as reflecting upon the moral character of a person following any particular profession or a trade, if printed, is a libel. As an extreme case which shows the tenderness of the English law of libel I will refer to the case of "Fray vs. Fray" (34 Law Journal: Common Pleas 45). The plaintiff and defendant in this case were brother and sister and the libel consisted in a letter written by the defendant, alleging that the plaintiff and her mother felt a pleasure in putting him to the utmost possible expense by proceedings in Chancery. This was held not to constitute a libel and was overruled.

The Counsel then proceeded to call witnesses.

Mr John R. Black, sworn.—I am a newspaper proprietor and printer in Yedo. I was formerly proprietor of the *Japan Gazette*.

(The Counsel for the defence here admitted that the defendants were the proprietors of the journal in question.)

Mr Ness proceeded to cross-question Mr Black.

To this Mr Dickins objected, but subsequently withdrew his objection.

To Mr Ness.—I am a newspaper editor.

(Mr Ness was about to ask the witness certain questions as to his opinion of portions of the letter, but His Honour decided that he could not permit them) continued: I only know from information I have received that an agreement exists between the plaintiff and the Japanese Government. (The Counsel was proceeding to cross-examine the witness, but Mr. Dickins objected for two reasons. First, that the witness's evidence was "hearsay" and could not be received and secondly that it tended to show justification which had not been pleaded.)

Cross-examination resumed.—Had I been writing on the Formosa question I should have referred to several authorities: to the public papers of Yokohama; to the Official departments of the State; the American Legation and to my own experience. I have repeatedly referred to authorities with reference to the Formosa troubles. The diplomatic correspondence of Mr Low, American Ambassador at Peking, on the subject was among these.

His Honour thought these replies did not bear upon the subject and recommended their abandonment. Further, that as the plea of justification had not been put in the Counsel was barred from asking questions tending to show that the comments of the defendants were in any sense justified.

Mr Dickins.—Besides, the evidence given by the witness is, I submit, utterly irrelevant.

His Honour.—Certainly.

Mr Ness.—With the permission of the Court I propose to amend my plea to that of justification.

His Honour.—That I certainly cannot permit.

Mr Ness.—I propose to address your Honour upon the admissibility of evidence after the adjournment.

[*The Court here adjourned until 2 o'clock.*]

On resuming, Mr Ness proceeded to address the Court with the view of showing that the plea "not guilty" allowed of his proving by evidence that a reasonable exercise of the liberty of fair comment might be urged in justification.

His Honour, however, decided to reject such evidence as being excluded by the plea of "not guilty," and as tending to justification, which justification has not been pleaded.

Mr Ness requested that note might be taken of his objection.

Mr Griffith Howell, sworn: I am on the staff of the *Japan Mail*. I recognise the numbers submitted to me as published at the office of that journal.

To Mr Ness: I recognise the numbers you produce, dated during the years 1870, 1871, 1872, 1873, 1874 and 1875, as having been published at the *Japan Mail* office. I know nothing of an article headed "Probity of the Press" which appeared in the *Japan Herald* in the month of March, 1874.

This closed the evidence for the prosecution.

Mr Ness stated that he did not intend to call any witnesses. He, proposed, however, to read certain letters from the *Japan Mail* from 1870 to the present date, showing that the line of conduct of that journal afforded fair ground for the comments of the letter written by "Fair Play.'

His Honour, however, objected to receive them as evidence on the grounds already alleged and as not being shown to be provocative of the letter in question.

Mr Dickin's said: There is no more cowardly mode of attack than a libel. As poison works secretly and insidiously upon a man's constitution, so libel operates upon the moral character, which it gradually undermines unless its destructive ravages be counteracted. By old Greek and Roman laws it was severely punished by heavy fine, and in some cases even by death, while the common law of England awarded heavy penalties to this offence from the earliest times. No mode of attack can be meaner than that by a newspaper libel, and it is difficult to understand how the proprietor of a journal can have been induced, as in this case, to lend himself to the degradation of spreading defamatory matter. However contemptible the letter in question may be in its literary aspect, its effects are nevertheless indestructible. The defendants are worse even than the writer. He, possibly, might be able to plead his wounded feelings, or might be goaded to attack his adversary by the recollection of past offences, while the publishers of the letter have not only endorsed his enmity but have in cold blood, as it were, afforded him the utmost publicity within their power to disseminate his calumnies. The letter, I have said, is a libel, and by libel I mean that which disparages the general character of another person, or of an individual following any profession or business—the proprietor of a newspaper for instance. The libel is contained in the letter which follows.

Mr Dickins here proceeded to read the letter signed "Fair Play" commenting at length on those passages which are more particularly referred to in the observations embraced within brackets.

TO THE EDITOR OF THE "JAPAN GAZETTE."

SIR,—A letter to the London *Times* signed W. G. H. dated Yokohama June 19th, is naturally attributed to the genius of the *Japan Mail* (*the plaintiff being meant thereby*); and we shall be assured that it was written, in order to put the Formosan embroglio truly, fairly, calmly, and dispassionately before the English public (*it being thereby insinuated that the plaintiff's said letter of the 19th June, was written for the purpose of falsely, unfairly and improperly putting the conduct of the Japanese Government with respect to the pending Formosan affair in a wrong light before the English public, while the plaintiff was receiving money or subscriptions from the said Government under an engagement to afford support to the policy of the same*). At the time the letter was written, there was some sort of agreement between the Japanese government and *Japan Mail*, which, if the latter had any object in originally seeking and the government had any object in assenting to, meant this, and nothing else:—That the *Japan Mail* was content to sell some kind of benefit to the government, which it was supposed to be worth the government's while to purchase, by subscribing for one hundred and fifty copies of the paper. W. G. H. may write what he pleases, either in the *Mail* or to the *Times*, but nothing that he can say can give any other complexion to the contract, in the eyes of common-sense people, than that the government, or some prominent member or members of it, was or were led to believe that the *Japan Mail* would so trim its sails as to make all circumstances fair winds for Japan (*it being thereby insinuated that the "Japan Mail" had sold its support to the Japan Government*); and that the government would find a fair and generous support from the proprietor of the *Mail*. It was an unfortunate moment for the government and for the *Mail*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

when the rival editors of the *Herald* and *Mail* came together, and that explanation was given which enabled the former to apply the prod to the latter on the subject of the subsidy. Thenceforth, wriggling like a spiked eel, the *Mail* tried to serve two masters. The small sense of justice it still retained felt that it must not altogether lose sight of the compact; whilst its pride did not like the admission that it was a hireling. The inevitable consequence was that it blew hot and cold; and its sickly attempts to appear independent and at the same time fair towards the government has been too much for the risibility of its readers for many a day. That must be bad enough for such a tender skin; but alas! the circulation of the paper for the ensuing twelve months has been jeopardised to the extent of one hundred and fifty copies; and that's enough to make any free and independent editor wince, if not weep.

The letter of W. G. H. to the *Times* was sent when its writer was virtually under engagement to the government. Its canting, candid style but renders its singularly uncandid statements the more glaring and reprehensible. The story of the origin of the Formosa trouble; the chicanery attributed to Soyejima; the colouring given to Mr Le Gendre's connection with the Government, with the embassy of Soyejima, and with this Expedition; the glance at the Saga insurrection and its effects; the picture of the divided Japanese cabinet; and the declaration of the illegality of the course taken by Japan; all shew a bias—a strong personal bias; a bias totally antagonistic to the country, and to the action of the man who gave the *mot d'ordre* to accept the proposals of the *Japan Mail* and to make it the foreign mouthpiece of the government.

The letter is a tissue of erroneous statements from begining to end. It has just enough of truth to give a peg to hang the distortions on. What says Tennyson?

> "And the parson made it his text that week, and he said likewise,
> That a lie which is half a truth is ever the blackest of lies;
> That a lie which is all a lie may be met and fought with outright,
> But a lie which is part a truth is a harder matter to fight."

(it being insinuated by the quotation and the paragraphs immediately preceding it that the plaintiff in his said letter to the London "Times" of the 15th of June last was guilty not only of lying, but of that worst species of lying in which the lie is cloaked by a modicum of truth).

The letter may safely be left to the numerous readers in this country who, having larger knowledge of the facts than home readers have, are able to estimate its truthfulness, and to award to the writer the condemnation he merits (*it being thereby again insinuated that the plaintiff in writing his said latter of the 19th June was guilty of deliberate falsehood*). Well may it be asked what object the writer could have, in so discrediting the Japanese government, from whose exchequer he so largely benefited? (*it being thereby insinuated that the plaintiff was unfaithful and ungrateful to his employers the Japanese Government*) Imputing motives to any man is to be reprehended; but remembering the acrimony with which the *Mail* has always dealt with those government matters, on which it has always been proved to be so singularly ill-informed, it can only be surmised that W. G. H. was anxious to ensure the failure of the Japanese government, in case it should require a fresh loan, by representing it as unworthy, and as the victim of a set of official rogues.

It is well that W. G. H. is neither the only, nor the earliest, writer who has addressed himself to the *Times*. It is to be wished that it could be said he was not the most uncandid and double-faced. With those who objected to his arrangement with the Japanese Government no sympathy need be wasted. Some, at least, of those who cavilled at it would have been glad had the contract gone their way. But a writer is most heartily to be condemned, who, while accepting value for services rendered, with his left hand, permits his right to indite most injurious statements, if true, to such a widely circulated and powerful paper as the *Times (it being thereby insinuated that the plaintiff while employed by and receiving money from the Japanese Government maliciously and dishonourably gave the utmost weight and publicity possible to statements injurious to the said Government and false in fact and known to be so false in fact and injurious in nature to the plaintiff at the time he made them public.)* The injury done to Japan may have been irretrievable

The importance of the subject must be my apology for so great a trespass on your columns.

I am, Sir,

FAIR PLAY.

In concluding, Mr Dickins characterised this letter as a mere explosion of abuse and virulence, utterly without argumentative sequence, indicative of strong personal hostility and, worse than all, not an honest criticism. The agreement with the Government gave, he alleged, no colour to the charges with which the letter teemed. He would read the preamble which indicated the object with which this agreement was entered upon which was as follows:—

"In view of the importance of diffusing information regarding "the state of affairs in the Empire of Japan and arousing attention "to it in the principal cities in Europe and America the following "agreement has been entered upon between the Government of "Japan on the one side and W. G. Howell, Proprietor of the "*Japan Mail* on the other side."

Thus the object of the Government was to diffuse information upon the condition of the country, nor need this be wondered at considering their newly awakened relations with foreign countries. It might perhaps be inferred that this involved some *quid pro quo*, and that the plaintiff was expected to advocate the views of the Japanese Government when such a course became desirable. But this was never sought by them, and by a subsequent clause of the agreement my client effectually excludes any such demand being made upon him and excuses himself from any services which he cannot conscientiously extend. The clause is as follows:—

"The said W. G. Howell in view of the unwritten, but "universally recognised laws and traditions which guide al "honourable journalism shall be at full liberty to express and "publish his own opinions in a true and impartial manner "upon any matter communicated to him by the Japanese Govern"ment, or any matter soever upon which he may see fit to com"ment, and shall be as free in this respect as if he had no connection "with the Japanese Government."

My client naturally as an honest man reserved this right to criticise, but it was to criticise "measures not men"; and while his natural tendency has been to judge the people of this country with an appreciation of their aspirations towards a higher civilisation, he has unsparingly criticised those errors which seemed likely to betray the country into disappointment and to sow the seed of future troubles. Counsel here cited the case of Campbell *v.* Spottiswoode, in which the printers of the *Saturday Review* were cast in damages on the ground that a newspaper article cannot be justified by privilege. He closed his address by reminding the jury of the importance of protecting the individual against the license of the press, which had too frequently been pushed to outrageous extremes in this community

Mr Ness proceeded to address the Jury on behalf of the defendants. The letter, he contended, was not libellous. It was a fair comment upon the understanding which was supposed to exist between the plaintiff and the Japanese Government, and had His Honour not refused to admit as evidence the extracts from articles which he had proposed to adduce from preceding issues of the *Japan Mail*, he could have shown this. He commented upon the nature of the agreement, and contended that it might have been inferred from it that some support was promised to the Japanese Government as the plaintiff had within his own discretion the power of dispensing the copies subscribed for in such manner as he pleased. (Mr Dickins denied this, and showed that it was otherwise provided for in the agreement.) With reference to the poetical quotation he failed to see that it possessed the importance with which it was sought to invest it. He concluded by urging the Jury to mark by their verdict their appreciation of a fair freedom of comment to which, he thought, the letter confined itself.

His Honour then proceeded to charge the Jury. He pointed out that the defendants had possessed the power of justifying the libel if true, but that they had wisely taken another course. He briefly indicated the conditions of a libel, and directed them to consider carefully the letter of "Fair Play" with the view of understanding how far its insinuations brought it within these conditions. The imputations, he said, were of a grave and offensive character, and as justification was not pleaded it was for the Jury to exercise their judgment in determining the wrong inflicted, and, if a wrong had been inflicted, to find damages accordingly.

After some few minutes consultation the Jury returned a verdict of "Nominal Damages—One Dollar."

The consideration of the question of the costs was deferred.

H. B. M. PROVINCIAL COURT.

Before C. W. GOODWIN, Esq.—Assistant-Judge.

January 22nd, 1875.

MURATA YAICHI *v.* W. RANGAN.

Plaintiff claimed in this case 100 *yen* the value of a pack-horse which defendant had taken from him in August; 25 *yen* the value of harness and 40 *yen* as the loss he had sustained by the withdrawal of the pack-horse which was his means of support.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Plaintiff deposed that on the 26th August, as he was leading his horse on the Bluff road it had, in passing a narrow part of the road, in some way injured a vehicle which was standing on it. The horse in the vehicle ran away and he assisted in stopping it. On his return he found that the defendant, to whom the vehicle belonged, had seized his horse. He had since endeavoured to get it back from him, but was told that it would not be given unless he paid for the damage to the carriage and $4.50 the cost of the horse's keep.

Mr Rangan, testified that the vehicle referred to was his. He removed the pack-horse which he found kicking his carriage, and put it at livery. He had endeavoured to find the owner with the view of having it removed, but the plaintiff had never applied to him. The horse meanwhile had died.

The foregoing evidence was corroborated by the defendant's *betto*.

A Japanese inspector of police said the man was too poor to pay damages.

His Honour said that the defendant was not justified in seizing the plaintiff's horse, and that he should award him $150. If he had any claim against the plaintiff for damage to his carriage he must bring it in the Japanese Courts.

THE CULTIVATION OF USEFUL PLANTS.

[The following abstract from Dr. Hooker's Report on Kew Gardens has been communicated to the *Straits Times* by Mr. James Collins, Economic Botanist at Singapore.]

Under the head of "Interchange of Plants and Seeds" Dr. Hooker reports that large quantities of Mahogany seed have been procured, and sent to the East Indies and Mauritius, and of Teak Seed to the West Indies. Some interesting remarks are given on the subject of Coffee and Eucalyptus, which I quote in full:—

"The Liberian Coffee, stated to be a most prolific variety, has been raised in quantity from seed sent by T. B. Freeman, Esq, from Cape Coast. A Ward's case of this variety has arrived in good order at Ceylon, and other plants of it have been sent to the East and West Indies. As the Coffee disease (a fungus, *Hemileia vastatrix)* and the Borer (a beetle) continue their ravages in the Coffee plantations of Madras and Ceylon, it is much hoped, though scarcely to be expected, that the Liberian variety may prove less liable to the attack of the insect and fungus, or either of them.

Seeds of *Eucalyptus globulus* have been distributed, on demand, to all parts of the world, and especially West Africa, under the prevalent belief that plantations of this tree will dry the soil of swampy districts and suppress malaria: it is also a widely-spread idea that its foliage is a powerful febrifuge. But I have failed to discover that these reputed virtues have any certain foundation. This *Eucalyptus* is a native of a dry and cool climate (Tasmania and Victoria), and all attempts to cultivate it in the various damp tropical regions to which it has been sent from Kew have proved failures. In temperate and various sub-tropical climates it is admirably adapted to clothe unforested ground."

Dr. Comrie, the Surgeon of H. M. S. *Basilisk*, however informed me that he had tried the Eucalyptus oil with marked effect in lowering the temperature in fevers. Dr. Schomburgk, the Director of the Botanic Gardens, Adelaide, gives also a good account of the "Sheep bush" of the Cape of Good Hope *(Pentzia Virgata)* which has been successfully introduced into South Australia from seeds received from Kew in 1869. The leaves and branches of this plant have an aromatic bitter taste, which is said to be much liked by sheep, and imparts a fine peculiar flavour to the mutton.

The Cinchona plants (from which quinine is prepared) sent to Jamaica from Kew, are doing well, and the late Governor Sir John P. Grant, K. C. B., reports that there are 200 acres planted with these trees. Bark from 3-year-old plants has been examined and the results reported "as highly satisfactory as regards the prospect of Cinchona Cultivation in Jamaica."

Pineapples, Oranges, and Bombay Mangoes are doing well in Jamaica, and it is believed that the fruit of the latter will form an important article of Export to New York. The Vanilla, Pepper and Mangosteen plants are doing well: the Mangosteen has not, however, fruited yet. The culture of tobacco is becoming important and is well spoken of.

From Trinidad Dr. Hooker has received specimens of balata gum to be reported on. It is yielded most probably by the *Mimusops globosa*. A part of this specimen was sent to me, but in the hurry of leaving England I had not the opportunity to report on it. It is, however, a very fine specimen, even better than that of British Guiana, and would meet with a ready market in England. Balata gum, I may mention by the way, is somewhat between India-rubber and Gutta Percha, partaking of the characteristics of both.

Dr. Hooker also reports that in Mauritius the Government are taking active steps for the conservation and increase of the forests there.

Dr. Hooker also reports that living plants of the true Para India Rubber tree (*Hevea Braziliensis* or *Siphonia elastica* as it was formerly called by botanists,) have been sent to India under the care of Dr. King. The seeds from which these plants were grown I obtained from Cameta on the Amazon in Brazil from Mr. Farris, and purchased them for the Indian Government. Happily the Indian Government shew every disposition to follow out the suggestion I submitted in my report to them on "Caoutchouc," to cultivate these plants, for the fact must not be lost sight of, that for regular and sufficient supplies of staple vegetable products recourse must be had sooner or later to cultivation, and the sooner the better.

Dr Hooker quotes some interesting remarks on the Cinchona Plantations in India, which I give in full.

"On Nov. 11th, 1873, 25,000 lbs. of bark from the Nilghiri plantations were sold in London, and fetched an average price of 2*s*. 10 *d*. per lb. The total sum realized was 3,490*l*. One parcel of *Cinchona officinalis* sold at the very high price of 5*s*. 9*d*. per lb.

"Of dry bark 33,000 lbs. were used on the Nilghiris by Dr. Broughton, in the manufacture of a cheap febrifuge, the estimated value of which is 3,300*l*. Within the year 50,000 lbs. more of bark are to be harvested, the estimated value of which is 6,700*l*.

"The total income from the Nilghiri plantations alone will thus come to 13,490*l*. in 1873, and will be greater in future years: This is considered to be a very satisfactory interest on the whole outlay since 1860."

Dr. Peccari, in New Guinea, has also found that quinine in large doses is an almost infallible cure in small-pox.

The history of the Cinchona plants and their cultivation is a very interesteng one, and I may at some future period give some account of it.

Chocolate and Ipecacuanha are doing well in India, although with regard to the latter, Dr. Hooker informs us, that it is not yet ascertained whether it will succeed without special culture.

REUTER'S TELEGRAMS.

LONDON, 18th January, 1875.

President Grant has sent a message to Congress in which he vindicates the intervention in Louisiana on the ground of the lawlessness of that State. He asks instructions from Congress.

President Grant recommends the restoration of the Duty on Tea.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Jan. 20. *Washi*, British steamer, Hescroff, 221, for Hakodate, General, despatched by Hudson, Malcolm & Co.

Jan. 21, *Costa Rica*, American steamer, Conner, 1,917, for Shanghai, General, despatched by P. M. S. S. Co.

PASSENGERS.

Per French steamer *Tanais*, for Hongkong.—M. M. Braga, two child, and Chinese, Kanagi, Otori, 2 Jap. officers, and Kuntze. For Saigon.—D. Schaeffer, Austrian Minister. For Marseilles.—Mr S. Beretta, Le Counte Litta, Italian Chargé d'Affaires, Echeman, J. Chapsal, Struve, Hesselberg, Petrowski, Glasenapp, Yamazawn, Madame Croome, Mr. J. de Vrenges.

Per American steamer *Alaska*, from Hongkong.—Mr W. B. Skidmore. For San Francisco.—Mrs Smith, Miss Reed, Capt Nicholas Shoan, Messrs C. Koopmanschap, C. P. Monroe, N. E. Falk, Capt E. R. Warsaw, and officers of the *Japan*.

Per American steamer *Golden Age*, from Shanghai.—Messrs Morris, Van Buren, Capt Salterthwhite, Mrs Craven, Mrs Hausche and child, Messrs E. C. Kirby, J. Lawson, 2 Japanese, and 34 in the steerage. For San Francisco.—Messrs R. J. Blackburn, C. Robertson, R. Henderson, and W. Blethen.

Per American steamer *Costa Rica*, for Shanghai.—Messrs A. Barnard, L. Medarde, M. Beach, and 3 Japanese in the cabin, and 12 others in the steerage.

CARGOES.

Per French steamer *Tanais* for Hongkong:—

Silk—For Marseilles	... ...	60 bales.
,, London	... ...	130 ,,
Waste Silk	... ...	121 ,,
Treasure	$25,600 Hongkong.	
,,	$7,000 Singapore.	

Per American steamer *Golden Age*, from Shanghai—

Treasure ... ... $285,715.

REPORTS.

The British barque *Britains Pride* reports: experienced heavy weather during the last three days of the voyage.

The British ship *St. Kilda* reports: experienced heavy weather for the last three weeks. Has been within 100 to 200 miles to port for the last fourteen days. On the 12th instant in a heavy gale lost the main topgallant mast and split several sails.

The British ship *Black Prince* reports tolerable weather during the voyage.

The British barque *Pride of the Thames* reports: experienced pleasant weather and a good run up to near Rock Island; rough weather afterwards. Has been five days making the distance.

The American steamer *Alaska* reports: experienced head winds and moderate weather during the passage.

The British steamer *Montgomeryshire* reports having experienced heavy weather during the whole of the passage.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JANUARY 23RD, 1875.

Cotton Fabrics.—A more buoyant feeling has been observed in the local market during the course of the closing fortnight, and as dealers have exhibited an inclination to operate in imported goods, fair transactions have taken place. Several steamers bringing goods contracted for to this port are now almost due, and buyers have therefore been satisfied to supply only their more urgent wants. Hence prices have a tendency downwards.

Yarns.—The observations made upon the position of the piece-goods market may be applied to Yarns also. Transactions have been fairly large, but pending the arrival of the steamers now expected business is restricted to the satisfaction of pressing requirements alone.

Woollens.—A fair enquiry has existed for Woollen fabrics during the closing fortnight, but sales have only been possible upon the basis of a somewhat lower range of quotations which holders of stocks appear to have readily acquiesced in. Plain *black lustres* have been disposed of in fair quantities at low rates, and *Mousselines* have been in enquiry. For the latter, however, sellers have been willing to accept irremunerative prices. *Black Italians* have met with a fair demand, while *broad-cloths* and blankets have been comparatively neglected.

Iron and Metals.—The market for bar iron, for which fair prices had been obtainable after the departure of the last mail, closes with a weaker tendency and the trade is without any activity. We quote rates as follow.

Kerosene.—The market is somewhat bare of stocks. There are none held by importers.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—The endeavours made by buyers to bring down prices have hitherto failed to produce any great impression on the market. Concessions to the extent of $10 to $15 on *Hanks* have occasionally been obtained in the course of the past fortnight; but on the whole native dealers seem to be bent upon holding their good parcels for improved rates. *Oshius*, for which there is an active demand, remain as quoted in our last.

Settlements since the 7th instant barely amount to 300 bales, and the stock is computed to be about 1,600 bales.

The export to 31st December last is 6,853 bales and it is not improbable that, if the present low range of prices be maintained, the total export of the season may be short of 14,000 bales.

Tea.—Since our last Overland Issue a steady though not important business has been done although buyers are limited to three or four houses. Prices show a marked advance, "Good Medium" not being obtainable under $42 per picul.

Settlements for the period amount from piculs 3,800 to 4,000. Stocks are rather lighter and supplies have apparently been withheld for the last few days.

There now seems some possibility of the duty question being carried in the United States, a change which will occasion great trouble and dissatisfaction at the opening of next season. The Japanese merchants will fail to see the necessity for the enforcement by buyers on this side of a lower scale of prices than has been ruling during the current season, and we may look forward to a restricted and dragging business at the opening of next.

The *J. B. Ford* has had despatched for San Francisco with about 150,000 lbs. Tea and the *Laurel*, which arrived here from Kobe to fill up, will leave at an early date for New York direct.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 62 ins.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 3rd December, at Boulogne-sur-Mer, Mrs. W. G. HOWELL, of a daughter.

DEATH.

At Shanghai, suddenly, on the 19th instant, Mr. HUGH LANG, Editor and Proprietor of the *Shanghai Evening Courier* and *Shanghai Budget and Weekly News-Letter;* aged 43 years.

Notes of the Week.

THE small-pox epidemic is apparently on the decrease in Yedo, but during the last week it has unfortunately gained in virulence here. At this moment there are twelve cases in the hospital, two only of which, however, present unfavourable aspects.

IN our issue of the 9th instant we took upon ourselves, after due enquiry, to question a statement made by the Chairman of the Hongkong and Shanghai Bank in his speech at the annual meeting of shareholders, to the effect that some of the Yokohama exchange operations of the year 1873 had been frustrated by an unusual and unexpected issue of Japanese paper currency at that time. We stated that "no such issue was traceable, and that until we had sufficient evidence to substantiate the statement, we should continue to regard it as without foundation."

The soundness of our position was immediately afterwards questioned by the *Japan Herald,* which sought to traverse our statement by saying that there was an issue of paper currency to the extent of seven and a-half millions of *riyos,* and that this would account for the fluctuation in exchange alleged by the Chairman of the Bank to have frustrated an otherwise well-based operation.

It is certain, however, that had any such large issue been made, a change in the relative values of paper and gold must have betrayed it, and there is no evidence of any such change having been produced by such means. Admitting, for the sake of argument, that any such issue of paper money had taken place, it would naturally have resulted in an increase of value in the gold coin, nor can it be pleaded that this would have had the effect attributed to it by the Chairman of the Bank. There certainly was, during the latter part of the year 1873, a very large export of gold coin from this country, the object of which, whoever may have been the shippers, perplexed us very much at the time, as neither the state of trade, nor the price of gold, nor the rate of exchange seemed to warrant it. But it is wholly impossible to attribute this export to any unusual or excessive issue of paper, which, as a matter of fact, did not take place and we can only infer that an entirely erroneous view has been taken of the causes of the unprofitable operations, the onus of which it has been sought to place on the shoulders of the Japanese Government.

THE service which may be rendered to knowledge by a few energetic and cultivated men is exemplified in the Journal of the Transactions of the German Asiatic Society issued this week—but too late to enable us to take more than a cursory glance at it. It opens with a paper upon the Japanese orders of nobility by the President and German Minister Resident, Herr von Brandt. Dr. Hoffmann next contributes a paper upon the Manufacture of *Shojio, Sake* and *Myrin.* The typhoon of the 13th September is next brought under consideration in a contribution by the President. Some excellent notes by Dr. Müller on Japanese music, follow, the tunes thrown into our form of musical notation, and the native instruments, with the metheds of playing them, illustrated by some graphic and admirable wood-cuts. The fifth paper is upon the territorial changes which have taken place in this Empire since the time of Jimmu Tenno. The sixth treats of the funeral ceremonies of the Shinto religion. A seventh treats of the Pharmacopœia of Japan, the work of Dr. Geerts, who has rendered such good service to the sister English Society. The tenth paper embraces the records of a journey in the South-western part of Yezo from the pen of the late Dr, Ritter, who recently fell a victim to small-pox. This is followed by a paper on the Ancient Dress of the Japanese, also illustrated. Then comes one on Studies in Natural History in Japan by Dr. Rein; another upon the Ainos by Professor Dönitz—of great research and interest—another upon the freshwater—moss-inhabiting insects; one upon a Japanese butterfly producing sounds; and lastly one on a curious case of malformation in a cat.

IN view of the diverse nationalities represented by the patients at the General Hospital, is it sufficient that the medical man in charge should speak only one language, viz, English? We are strongly inclined to think that if the emoluments were divided between two medical men, combining three languages among them, the usefulness of the Hospital would be increased, and the subscriptions as well. The post is not so much one of profit, as of honour; and the work might be divided between two gentlemen with advantage to the interests of the Hospital and the community.

THE following particulars relating to Ta-tsing "The Sublimely Pure" Dynasty which succeeded the Ming dynasty in 1644 will not be uninteresting at the present moment. The late Emperor Tung-chi was the eighth of his line, and was born on 27th April 1856, being the only son of Hien-fung, the previous Emperor. He succeeded to the throne on the death of his father on the 22nd August 1861. On the 2nd of November 1861 the Regency of eight appointed by Hien-fung to administer the Government during his son's minority, was overthrown by a Palace revolution, and the principal members of the Regency were executed. The reins of government were taken possession of by the Empress Dowager, the Empress-mother and Prince Kung, who in reality governed the Empire until the Emperor by proclamation assumed the government on the 23rd February 1873.

THE effect of the decision of the Assistant Judge in the motion heard by him on Thursday last relative to the costs of the suit in which the proprietor of this Journal was the plaintiff and the owners of the *Japan Gazette* were defendants, is liable to be misunderstood. Although the smallness of the costs awarded us appears, and, indeed, is, absurd, yet, it must be remembered, that had the case been tried in England, we should, under a similar certificate given by the Judge, have been entitled to exactly the same costs as would have been awarded to us had we obtained the whole of the damages claimed.

A translation of an article from the *Nichi-nichi Shimbun* lately appeared in this journal in which the following proverb was quoted as coming from the Spanish; "Do not sign the letter you have not read, and do not drink the water you have not examined." The fact that such a Spanish proverb exists was doubted a few days afterwards in one of the local papers. But the Japanese writer was correct, the proverb in the original running as follows:—*Ni firmes carta que no leas, ni habes agua que no veas.*

IT is also curious to observe that a Japanese writer in the same journal, in commenting lately upon the question of representative institutions and the action of the Sanghi on this question, makes the following quotation from Antony's Speech in "Julius Cæsar:"—

> O masters, if I were disposed to stir
> Your hearts and minds to mutiny and rage,
> I should do Brutus wrong, and Cassius wrong,
> Who, you all know, are honourable men.
> I will not do them wrong. I rather choose
> . . . . . to wrong myself and you,
> Than I will wrong such honourable men.

Another article on the subject of the proposed House of Commons is headed "To be, or not to be, that is the question."

BY an advertisement in our daily columns it will be observed that the Japanese have established a line of steamers between this and Shanghai in opposition to the P. M. S. S. Co. They can only hope to achieve anything approaching success by extremely careful management.

A telegram from China received to-day reports "Succession disputed."

WE shall not hesitate to admit that the announcement made some few weeks since that the Dramatic Amateurs had decided to give some portions of one of Shakespeare's comedies occasioned in our minds some apprehension as to the result. That the effort was laudable and deserving of success, a step in advance and, as we hoped, subversive of the reign of burlesque among us we truly believed; but upon weighing our fears against our hopes we must allow that the former appeared gravely to preponderate. Nor were we alone in our anxieties. For independently of the fear that a Society of performers, kept together by no stronger bond than the ambition to please, or possibly to shine, may at any trying moment exhibit its want of cohesion in some untoward defection, there is the ever-present prejudice with which the mind turns to the performance of amateurs. A Hamlet on the boards of Drury Lane of whose previous life and *entourage* we are absolutely ignorant appeals to us with all the undiminished prestige of the philosophic Prince, while the Hamlet of every day life—Hamlet who appraises the merits of tea, lauds his chop of shirtings or draws bills of costs—comes before us loaded with the undignified associations with which he is inevitably coupled in our imaginations and suffering from the apparent anomaly which the opposition suggests. The performance of last night, however, has fairly dispersed the apprehensions which attach to amateur enterprise when it soars beyond the region of carpet piece or burlesque into the exalted atmosphere of pure comedy. The play itself, an admirable historical commentary on the times, is one of those jumbles with which Voltaire reproaches our stage. But in the whole range of Shakspeare there is no drama in which the action is more unflagging, the characters more varied, or the story more simple and free from intrigue, and whether in the cabinet or on the stage none can be more entertaining. The difficulty of filling the central character, indeed, has rendered it difficult of adequate representation. For what intelligence can search and comprehend all the nooks and corners of this wondrous compendium of wit, gluttony, license and cowardice, the "mad Prince's" favourite? To what one mind are all the traits of the poet's conception revealed? And were even these conditions realized, the physical requirements of the part are so seldom found associated with the intellectual alertness which should give them the briskness that renders the possessor "not only witty in himself, but the cause that wit is in other men" that few, we imagine, have borne away with them from its representation a tithe of all its merits.

There is, we believe, no amateur performer east of Calcutta, or probably of Constantinople, to whom the part of Falstaff could have been committed with greater certainty of an honest rendering than to the amateur who filled it last night. His intelligent appreciation of the poet, an unforced and flowing humour and a keen insight into the opportunities afforded for dramatic effect and situation were displayed with that admirable judgment and sense which to our mind lift this gentleman to a rank rarely attained by the unprofessed performer. Always forcible and earnest, in the later scenes he played with a richness of humour that we should not have been disposed to augur from his previous representations. The humour was, it seemed to us, here and there somewhat too saturnine, and the gradations of temper less finely marked than we should have deemed fitting to the occasion, but on the other hand the delineation was marked with the propriety of a cultivated school of acting, sobriety of gesture, and freedom from the extravagances which some actors are not ashamed to employ. The chief defect we have to notice in Mr. Spurgeon's characterisation is its want of breadth, and as we have stated our impression that no brush can fill so vast a canvas, he may be assured that he errs, in our opinion, in very good company. The defect was not redeemed by any special qualifications of voice or figure, and truly admirable as was his make-up, it was, in itself, inadequate to confer the sense of reality.

The performance, however, was remarkable as exhibiting Mr. Spurgeon's powers in a new direction in which we shall hope to see them yet more largely exercised.

Mr. Newcome's delineation of the "mad Prince," while withal wanting in dignity and nobleness of demeanour in its early scenes, satisfies us that we shall be justified in requiring much better things of him. He visibly amended in the course of the play, and in the last scene evinced a fitting appreciation of his royal birth and its attendant dignity, delivering his share of the dialogue with excellent point and effect. We may however venture to point out that the blank verse at the close of the first scene was spoken without due care and that its meaning suffered in consequence. It is important that this monologue, which furnishes the key to the Prince's disreputable companionship, should be given "with good emphasis and discretion." Of the elegance with which Mr. Newcome dressed the part it is right that we should express our appreciation, though we venture to suggest that even in descending to the habits of his boon companions the Prince should retain the privilege of remaining always covered. We must admit that we cannot remember if stage tradition has it otherwise.

Mr. Fredericks made good use of the rôle of *Poins* which he filled with ease and with excellent tact. The part is, it is true, one of but slender weight. He is employed chiefly as a foil to Falstaff, who would otherwise possess undue prominence: Mr. Fredericks' judicious treatment of the rôle recommended itself by its repose and sobriety. Miss Mathews did something for the trifling part of *Francis*, while *Bardolph* (fitted with that carnavalesque nose which is almost as rich a mine of wit to *Falstaff* as his own fatness is to others), *Peto* and *Gadshill* formed a highly orthodox band of henchmen. Lastly due credit must be given to Miss Herbert's performance of the hostess. That the play had been carefully rehearsed was apparent from the unusual smoothness, and much credit is due to the actors for the assiduity which this bespeaks. The scenery and dresses were highly creditable,

Original from UNIVERSITY OF CALIFORNIA

"Little Toddlekins" is one of those ingenious constructions which English playwrights raise upon French foundations, and bears "Palais Royal" pretty plainly stamped upon it. The absurdities of the situation—a man of thirty years of age, encumbered by a previous marriage with a daughter of forty-eight—are practically endless, and the conception of its difficulties follows upon its statement. Mrs. Spurgeon as *Amanthis* surpassed all her former exploits in the broad drama, and yet so delicately was this effect produced, so tranquil and thoroughly womanly were gesture and action, that the abundant applause which she occasioned was a tribute rather to the anomalous position of the woman than to the skill of the actor who so successfully personated the part. It was an excellent specimen of high-class farce. Mr. Fredericks played the young father with some spirit, but with insufficient variety, and seemed scarcely at ease in his "patter" speeches to the house. But the part taxes the memory heavily and this must plead for any insufficiency. Mr. Vernon found a congenial part in *Mr. Babbicombe*, whose ailments he represented with provoking humour and comicality, while *Capt. Littlepop* was represented with spirit enough by *Mr. Newcome*. The slight female parts, *Annie* and *Susan*, received commendable treatment at the hands of Miss Mathews and Miss Ella Herbert.

A small orchestra formed of amateurs performed some operatic selections in the intervals of the plays.

We observe that the performance will be repeated on Tuesday next, with the view of affording to those who were unable to attend last night another opportunity of witnessing these excellent plays.

(From the Japan Mail Daily Advertiser.)

THE snow-fall which began on the morning of the 24th would seem to have extended over a considerable area of the adjacent country. It appears to have lasted about twelve hours.

SMALL-POX appears on the increase in the settlement, and several fresh cases, including one at the Camp, were reported yesterday. It is presumed that this will delay the departure of the Marines.

IT may interest our readers to learn that no fresh cases of small-pox have occurred in Yedo during the past four or five days among the European community, although the disease is still carrying off numbers of the native infant population. It will be remembered that the duration of the last visitation did not exceed six weeks, and there is fair room to hope that the improved sanitary arrangements in, and the better drainage of the settlement may limit the present epidemic to a like period.

THE Second of the series of Amateur theatrical performances was given last evening, by the Dramatic Union of the German Club. We shall content ourselves with saying that "Der grade Weg der Beste" was given with its full breadth of humourous situation and pleasantry and that the performers (among whom we may be perhaps permitted to specify notably the representatives of the Kandidat *Krumm* and of the *Schulmeister*) succeeded in amusing their audience thoroughly. The story of this little piece is as follows:

Major Von Murten, a veteran officer, finds himself placed in the embarassing position of having to select a clergyman for the parish living which is in his gift, and as a successor to the former incumbent whose young widow enjoys his hospitality and protection. Perplexed by the difficulty of choosing, he resolves that *Amalie* shall select the most suitable of the candidates who may offer himself for the holy office, though coupled with the condition that she must also be prepared to take the object of her choice as husband. She pleads the difficulty of so perplexing a situation, but reconciled to it by the necessity of her lot, consents to further *Von Murten's* intentions, disclosing as she does so that her heart was long since given to a student, who loved her in return. The first of the candidates to arrive is *Krumm*, who has taken unusual precautions to excite popular feeling in his favour with the view of influencing his patron's judgment, and who has also learnt that the successor to the living must first win the graces of the widow. But *Amalie*, distrusting his appearance, (with which she has made herself acquainted by peeping through the keyhole), has resolved to put him to the test, and determines to substitute the Major's house-keeper *Frau Krebs* for herself as the relict of the late incumbent. *Krumm* though at first repelled by the homely features of the house-keeper soon yields to the account she gives of the more solid charms of her presumed property, and hastens away to bring her the betrothal ring. Meanwhile *Wahl*, the second candidate, has arrived. *Von Murten* delighted with his appearance and modesty, and the intimation that the medals he wears were won at Düppel and Königgrätz, apprises him that he has gained his goodwill and adds the condition upon which the living shall be his. To this *Wahl* exhibits strong repugnance, and at length admits that his heart is prepossessed and that he will not marry. He is about to resign his candidature when *Amalie* enters the room, and the lovers, recognising in each other the object of their former devotion, readily embrace the proposals of the veteran that they shall marry. *Krumm*, who returns bearing the ring, learns that the living is not to be his, that his indirect mode of soliciting it has failed and that, after all, THE DIRECT ROAD IS ALWAYS THE BEST.

Of *Bädeker* less must perhaps be said. The subject was ungrateful, and, it must be allowed, somewhat unentertaining. The analysis thus describes it:—

Dreese, a barber of a provincial town, liable to fits of excitement which he has been advised to dispel by gymnastic exercise, and travelling with his daughter, has given himself out as a petty judge in order to secure a certain social standing. *Feodor*, also a barber of the watering place visited by *Dreese*, and desirous of the society of the pseudo-judge and his daughter, pretends to be a young *attaché* to a Legation, and introduces himself by restoring to *Dreese* the "Bædeker" which the latter had lost. *Feodor* and *Laura* mutually fall in love, each one fearing that the position of the other will militate against their union. *Dreese* opposes *Laura's* choice, and makes arrangements to quit the place, prior to which an attorney, *Queke*, comes in to seek *Dreese's* opinion on a knotty point of law. *Dreese*, having forgotten his "Bädeker" (which contains his money), returns to the hotel for it and misses his train. Furiously angry, he sends for a barber on whom he thinks he may vent his anger. *Feodor* appears, each discovers the true position of the other, and all social bars to the union of the lovers are removed.

The two pieces constituted a very pleasant evening's entertainment.

H. M. S. *Adventure* sailed from Hongkong for Yokohama viâ the Coast ports of Japan on the 26th instant, and may, therefore, be expected in the course of the ensuing week. No time has yet been fixed for the departure of the Marine Battalion.

THE Annual Meeting of the Yokohama Race Club was held at the room of the Chamber of Commerce yesterday afternoon under the presidency of Russell Robertson, Esq. The accounts were read and passed, and a Committee elected for the forthcoming year.

THE question of costs in the case of W. G. Howell *versus* the Proprietors of the *Japan Gazette*, was brought up yesterday morning in Chambers. The right of the Judge to certify was admitted, and the only question was whether, under the circumstances, he was justified in certifying. After considerable argument the Judge decided that he was so justified and characterised the libel emphatically as a wilful and malicious one, adding that, to his mind, the inuendoes in the pleadings appeared even less strong than the occasion warranted. The amount of costs was afterwards discussed, and was finally settled at $25, the judge being of opinion that under the tariff, and in view of the damages given, he could not allow more than the taxed costs of a suit under $200 in value, notwithstanding the hardship to the plaintiff. The costs of the motion were then asked for, but finally no order as to these was made, the judge taking the view that strictly the question of costs ought to have been determined at the trial and the adjournment into Chambers was especially for the convenience of both parties.

AN intimation reached Yokohama yesterday that Mr. A. von Knobloch, German Consul at Kobe, had died by his own hand. No reason for the act has been discovered.

A number of men are required to supply the place of the foreign Municipal constables who have hitherto been drawn

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from the military forces quartered here. Application should be made to the Municipal Director.

A fire broke out last night at about a quarter past eight o'clock in the shed recently built to accommodate the goods traffic at the Railway Station, Benten. By the time the engines arrived the fire had obtained a fast hold upon the structure and all efforts to extinguish it proved in vain. The damage done, is, we believe, however, confined to the building.

THE entertainment given last night at the Gaiety Theatre was so good that we can hardly speak of it justly without being accused of exaggeration. The care and study exhibited, the finish of execution, the mastery of detail, the thoroughness and true excellence which characterized every step of the performance, did the gentlemen whom the public has to thank for it, the highest credit.

The scenes from Henry IV. present difficulties wholly unknown to all but those who have attempted to represent them, the chief of which is, of course, the character of Falstaff—one of the greatest creations of the human mind. The difficulty is to play this character at all. It is the despair of professional actors and has slain many a fair reputation. It is so vast, and rich and full, so incomparably greater than any part in the same field of art, that it demands the very highest powers in the professional actor, and, on such occasions as that of yesterday, powers ordinarily quite unknown to the Amateur. Yet Mr. Spurgeon's versatile and—we do not wish to flatter him—wholly exceptional powers were equal to the occasion, and gave us a rendering of the character of really great excellence. We may not dilate here upon the chief points of merit though we may do so elsewhere, and must content ourselves with saying that he was well supported throughout, and that the effect of the whole was excellent in a high degree.

After these scenes Charles Mathews' "Little Toddlekins" was given, Mr. Spurgeon playing the "Infant" with a really rich humour which kept the house heartily amused during the whole performance. Babbicombe was hardly less excellent, and the other characters were generally well sustained. The evening was a great and complete success.

THE departure of the *Adventure* troopship, though fixed for the 15th proximo, will be contingent upon the preparations of the French troops. Should these not be sufficiently advanced to permit of their leaving on that day, the sailing of the *Adventure* will be delayed.

We learn that Captain Roper has assumed temporary charge of the S. S. *Ly-ee-moon*, Captain Stevens having been taken ill and compelled to remain at Nagasaki. The *Ly-ee-moon* reached Amoy on the evening on the 13th.—*China Mail.*

A Fire broke out at Himeji (Banshiu) at 12.40 a.m. on the 19th instant, but was confined to the destruction of about a dozen houses.—*Hiogo News.*

A Telegraph station was opened at Otsu for the public reception of messages for the first time on Wednesday last.—*Hiogo News.*

ABOUT a week ago a raid was made on a Chinese house in Main Street and four men were arrested on the charge of smoking opium. The next day three were released, but one is still kept in custody.—*Hiogo News.*

To show the popularity of the Chinese Imperial Government Loan, we need only state that the number of Bonds to be allotted was 3,000, while the number applied for was 20,171.—*China Mail.*

A Rumour is current that some Russians up country from Hankow overheard Chinamen saying it was a pity the gunboats had come up to the city as it would interfere with the projected general massacre of foreigners which had been arranged for an early date. We give this for what it is worth. —*Celestial Empire.*

We hear that Mr. Russell Sage has been replaced as President of the P. M. S. Co. by Mr. Alexander; and that Mr. W. H. Fogg, formerly of Shinghiai, has become a director of the Company. It is reported that Mr. Fogg takes the managing directorship, which has been held by Mr. Rufus Hatch, but we have been unable as yet to get confirmation of this. The *Great Republic*, with the next mail, left San Francisco on the 2nt inst., and the connecting steamer is due here on 5th February. The next homeward mail from here, following that which closes to-day, will be on the 2nd proximo, to connect at Yokohama with the *China*, leaving Hongkong on the 1st.—*N.-C. Daily News.*

WE hear that the steamer *Min*, which has sailed for China and Japan, has been bought for the Japanese Government by Messrs. Matheson & Co.—*L. & C. Express.*

LIGHTHOUSE FOR JAPAN.—A large number of lighthouses have during the last few years been constucted in Edinburgh for the Japanese Government. They have been ordered through Messrs. Stevenson, the eminent lighthouse engineers, from whose designs the whole of the apparatus has been constructed. One of those lights is at present to be seen in the workshops of Messrs. Dove and Co., engineers, Green-side-lane, who have made the mechanical portion of the apparatus and fitted up the glasswork. This light is one of those known by the name of First Order Dioptric Holyphotal flashing light. The rays are acted upon by name of glass lenses and reflecting prisms, the whole of which are built together and placed on a revolving carriage, which is driven by clock-work. The effect of the revolving motion is to bring the large lenses with their attached cupolas of upper and lower prisms successively in front of the light, thus producing the appearance of a series of flashes. The large lamp placed in the centre of the apparatus is constructed to burn paraffin, and is fitted with Captain Dody's burners, which are at present being introduced into all the Scotch lighihouses. The cost of an apparatus of this description, with the lantern in which it is placed, is about £3,400.—*London and China Express.*

THE FACTS OF THE CASE.

ON Wednesday morning last, the Assistant Judge heard the motion relative to costs in the suit for libel tried by him on the Tuesday week previous, in which the Proprietor of this Journal was the plaintiff, and J. R. ANGLIN and C. D. Moss, Proprietors of the *Japan Gazette*, were the defendants.

The costs, intended to have been given by the Jury, were awarded by the Judge on the only scale on which he could amend the misapprehension of the Jury. The remarks of the Judge on the hearing of the motion are also to be well noted in connection with his decision. He characterized the libel emphatically as a wilful and malicious one, and added that the pleadings on the subject of the inuendoes contained in it were not even as strong as the occasion warranted. It may also be noted that the Jury was in no sense one similar to the special jury before which such a case would be heard in England. The *camaraderie* which exists among men who, with one exception, were of the some class of life as the defendants, is a fact the mention of which imputes no conscious act of unfairness to them. But questions of character affecting men in an altogether different walk in life should be tried by those who have a personal knowledge of what is the bearing, and what the effect, of an imputation on the character of a person so situated. Had the proprietors of the *Gazette* possessed a spark of true courage or manliness they would have apologized for their act, pleading, what may possibly be true, that the letter was inserted by mere inadvertence. It was, of course, sent them by some person animated by a feeling of cowardly vindictiveness against us, and they may have been too stupid to understand the true bearing and enormity of their act until it was too late to repair it, except by a frank confession of their guilt and the offer of a suitable apology. By refusing or neglecting to make this they made themselves accessories after the fact to a shameful act, and though their punishment from a pecuniary point of view has not been serious, they have to bear the far severer penalty of being convicted of an offence of a singularly odious and disgraceful nature.

As regards the remarks which have been made on the case elsewhere, we shall leave them to the judgment of the public, reserving, however, to ourselves one point on which we will, as briefly as possible, say a few words. Our object in doing so is simply this. During the past three years the circulation of this Journal has greatly increased, and a large proportion of its present readers know little or nothing of its history prior to that time. Statements, therefore, prejudicial to its character, publicly made, demand notice.

It has been said that this Journal has been pursued by those it has attacked. It is perfectly true, and we will enumerate the cases.

In 1870 we were told, on what seemed excellent authority, that a local tradesman named BERTRAND, a Frenchman, of whom, of course, we knew nothing, had kicked a Chinese in the stomach and caused his death. We mentioned the alleged fact with a natural indignation, and asked whether BERTRAND was to be tried for manslaughter. He immediately came to us, and with singular good humour said we had been led into a mistake, and that the report was wholly untrue. We instantly contradicted it in our columns, and expressed the regret we most unaffectedly felt at our mistake. Subsequently, and, as we discovered, instigated by other persons, he brought a suit against us, gaining one farthing damages, the costs of his suit of course falling on him.

The second suit was brought against us by a merchant-consul, whose use of his consular seals and consular position in aid of equivocal and notorious transactions with Japanese merchants had not only caused these poor men cruel loss, but were said to have led to the suicide of one of them, who could not return to his province to face those on whom his own credulity or want of judgment had entailed ruin. But though we drove the trader from Japan and stopped these doings, we were somewhat incautious in our attack and the suit went against us. Three leading foreign merchants of the place, however, enclosed to us, in a letter infinitely more valuable than its enclosure, the sum of the judgment, as a tribute to the service we had rendered to honourable trade in this country.

Shortly afterwards the enormous charges then habitually made by certain lawyers in Yokohama were brought to our notice. One victim came to us with a bill for over $900, sent in to him for three days work! He could ill afford the money; he could procure no abatement of the charge; and he dilated on the cruel hardship of it with no unmanly anger, yet with a rankling sense of its gross injustice. We attacked these charges and those who made them, and an attempt was made to repel our attack. One lawyer, of whose extortions at that time we had never so much as heard, brought his action and lost it. Within a few months he left Yokohama. A second came on, and gained a verdict, the amount of which was instantly enclosed to us anonymously by some spirited and generous man, whose name even to this day we are ignorant of. The decision was appealed against, and a new trial was ordered. But it was ultimately agreed to refer the case to the Assistant-Acting-Judge as Arbitrator. He gave his decision in our favour. One of the notable features connected with this case was that we had placed in our hands a letter from one of these lawyers to a mercantile house of first rate standing here, *offering his services to reduce the enormous bill charged by the other.* But our attack immediately threw them into close alliance, though the result was a defeat to both.

These are the suits which have been brought against this Journal, and it is for the public to judge whether or not they are honourable to it. As to suits which it is alleged might have been brought, it may be sufficient to say in the language of the law, *De non apparentibus, et de non existentibus, eadem est ratio.*

It is said that we might have repelled in our own columns the attack which constituted the late libel. We refuse to adopt any such course. We will not bandy words with any paper on the subject of our character. It is enough that when such attacks become libellous we hand them over to the law. The idea of etiquette in such matters implies the idea of some respect, equality or relationship; and we must be excused from entertaining any such ideas in connection with such journals.

We have only to add that the columns of the *Japan Mail* have never contained an anonymous letter reflecting upon any other paper in this country, though they have been sent to us in scores. When we have felt it our duty to remark upon these journals, or upon any individual whose public conduct demanded such reflection, we have done it in our editorial columns.

As regards the question of any undue influence brought to bear on this journal, the charge is refuted by the columns of the paper and the evidence adduced in the case under consideration. Nor should we be doing justice to the Japanese Government were we to omit to mention the fact, that while anxious to turn to national

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

account the large amount of information regarding this country which has been given to the public through the columns of the journal, it has never, by the smallest suggestion, sought to influence our opinion, or made, directly or indirectly, the slightest protest against those opinions, unfavourable to its course of action, which our views, whether sound or unsound, led us to take of the course most calculated to advance the national welfare.

CHINA.

THE death of the EMPEROR OF CHINA, coming, as it does, so suddenly after the humiliation inflicted on the Chinese Government at the hands of this Empire, must in all probability be fraught with important consequences. The means adopted for the settlement of the Formosan quarrel were perhaps the best possible at the moment; but they betray a national condition on the part of China which would be regarded with unmixed contempt were not its probable consequences so full of danger. To say that China is the vastest aggregation of human beings under one government on the face of the earth conveys but a feeble idea of the forces it contains, and of the mischief they would cause were the equilibrium which is now better or worse maintained among them, gravely disturbed. But there are certainly causes at work tending to disturb, if not to destroy, this equilibrium, and we are in no slight apprehension that its present unstable nature may result in consequences, which, should they come about, will not affect the Chinese alone.

In the first place there would seem to have long been a conviction on the party of the Chinese, properly so called, that the rule of the Tartar dynasty has nearly reached its legitimate and even possible term. It is more or less associated with the idea of foreign subjection, and has lately been connected with the grievous humiliation of the Formosan affair. The mind of the considerable numbers of Chinese brought into greater or less contact with Europeans or European modes of thought, has been greatly affected by this contact. They seem restless and uneasy with the prospect of organic change, which, whether it come with more or less travail and agony, cannot now be very long delayed. There are beliefs which, like certain kinds of prophecy, have a tendency to bring about their own fulfilment, and the belief that a dynasty is dying is one of these. The minds of men become detached from that which partly was supported by them, and which partly afforded them support. Sentiments which tend to produce adhesiveness and cohesion lose their strength. The magnet has parted with its power of attracting and retaining, and the particles which once acknowledged and obeyed its supremacy, fall from it and lie ready to obey another form of domination.

It is certain, too, that for some years past, and especially latterly, disaffection has been growing throughout the Empire, and hardly a mail from China arrives without bring the announcement of some disturbance of greater or less severity. Another source of trouble is the manifest weakness of the Chinese finances, a weakness so marked as to have forced the Government into the market as borrowers on the occasion of the late Formosan trouble; and if, as a correspondent suggests, the whole of this affair was concealed from the late EMPEROR, it is clear that a condition of affairs exists little calculated to bear any such strain on the executive as would arise in case of serious rebellion.

The telegram which announced the death of the late EMPEROR reported that all was quiet in Peking,* and in view of the recently announced appointment of the Empress as regent for one hundred days pending the indisposition of the EMPEROR, it is not impossible that the malady with which he was attacked had previously proved fatal, and that this short regency was adopted in order to keep the fact dark. It is said that the PRINCE of TUN will be chosen to fill the vacant throne, the succession clinging apparently to families rather than to individuals in any certain order. All we know of this Prince is that he is an old man, the elder of the late EMPEROR'S uncles. He has taken no important part in the government of the country, but for some time has occupied the position of Commander-in-Chief of the army of Peking. But in view of the condition of affairs to which we have just alluded, is it not probable that the extreme age of the EMPEROR elect will of itself tend to precipitate the trouble and disunion we so much dread? The theory of paternal government does not easily lend itself to a throne filled by a dotard or a protracted regency. Rather, indeed, are these contingencies and expedients serious bars to its effective working, and we shall be surprised if the now pending occupancy of the throne assumes this form. So far as the Chinese themselves or the interests of foreigners, are concerned, a ten years of regency is the equivalent of ten years more of obstruction, blindness and marking time instead of marching forward. Now that TSENG-KWO-FAN is dead, LI-HUNG-CHANG is probably the leading man in the Empire. He is a pure Chinese, and represents such enlightenment as may be found among the higher order of Chinese officials. Whether, or by what means, he may form a party and bring his views into the ascendant, it is impossible to say; and it would, we think, be a mistake to suppose that the great mass of the Chinese people desires organic change. It is one thing for those who have lived under the mild and free rule of England, whether in Hongkong, Singapore, or elsewhere, to feel such a desire. These constitute but a small fraction of the vast mass of their brethren, whose sentiments and views are almost wholly confined to the small questions which make up their routine of daily life. As for political thought, in the sense in which it exists among the European races, or as it is vigorously beginning to exist in this country, it is virtually unknown in China, and its creation would demand the existence of elements now almost wholly absent from the minds of the Chinese people.

So far as the interests of foreigners are concerned, they are, as in this country, identical with the interests of the natives. If it is our interest to construct railways and send them machinery or cheap manufactures, it is equally for their benefit that they should use and enjoy these advantages. So adaptable is the spirit of a free commerce, that even if their vast and still unearthed stores of coal and iron make them our competitors in these trades, we shall be quite ready to place other commodities within their reach which it will pay us equally to exchange with them. The more prosperous and progressive they are, the better we shall be pleased; and any change which takes place at Peking calculated to produce this result will be hailed with satisfaction by Europe.

ITINERARY OF THE COUNTRY TRAVERSED BETWEEN THE 3RD AUGUST AND THE 8TH SEPTEMBER.

By Captain DESCHARMES, Chasseurs d'Afrique.

Read before the Asiatic Society of Japan, on the 13th January, 1875.

My principal objects in this journey were to travel northward in the direction of Lake Inawashiro; thence to pass through the province of Aidzu; to reach Niigata by the course of the river which flows from Lake Inawashiro; and to descend the West coast southwards to a point favourable for reaching Fusiyama through the mountainous province of Shinano to Kofu, and from Fusiyama to reach Tokio by one of the well-known roads.

The 5th, 6th, 7th, 8th and 9th days were dedicated to Nikko, the itinerary and features of which are well known.

From the 10th the itinerary may offer some interest to those who may wish to visit less frequented parts of the country.

10th August.—From Nikko to Imaichi—a well-known road. From Imaichi the path tends northward towards Owatari (2 *ri*) through a picturesque country. The river Daiyagawa (the torrent of Nikko) is passed, afterwards that of Kinagawa, which is much ravined, deep and rapid, and abounds with a fish called *ai*. Packhorses cannot pass this stream, and the next station on the left bank being 30 *chô* from the river a considerable delay in the journey takes place. Halt for the night at Funania, a village of small importance.

11th August.—From Funania to Ishigami.

From Funania to Tamania (1 *ri* 28 *chô*) about 8 *chô* past Tamania is a rapid torrent which can only be passed by fording. It is about 30 metres broad, and is often impassable. It is called by the country people the Arakawa. From this torrent to Takauchi (2 *ri* 10 *chô*) the road is wooded picturesque, and the stream swift; the general direction East.

From Takauchi to Ishigami 3 *ri*. Two unimportant streams may be forded, and just before reaching Ishigami, a considerable stream, often impassable, named Hokigawa, running from N. to S., has to be crossed. The general direction of the road is N.

From Ishigama to Kiwattahada, 5 *ri*. The last three *ri* traverse the great plain of Nasunohara. This plain appears about ten to fifteen *ri* long and from three to five broad, and is covered with grass and fern, like all the *hara* in Japan. There are few or no trees, and little water or trace of cultivation. No house is to be met with until Kiwattahada, a village consisting of a few cottages. One *ri* before arriving there the traveller is still among the mountains. Beautiful streams of fresh water are to be met with, and vast dry beds of torrents, indicative of terrible storms, and bearing enormous blocks of stone and uprooted trees. From the plain of Nasunohara Mount Tsukubsan may be seen towards the S.E., and the vast chain of the Nasusan running from S.W. to N.E.

From Kiwattahada to Muronoi, three *ri*, over a very bad road, and with a second *hara* to traverse. Before reaching the village of Murunoi, a considerable torrent named Nakagawa is reached and must be forded. From Muronoi to Yamoto, 2 *ri*. Leaving Muronoi the gorge of the Nasusan is reached. The road becomes extremely difficult, in some places very muddy, sometimes steep and covered with rocks. The gradients are very sharp. In fine weather the neighbouring summit of the Nasusan may be seen with fine effect, the view embracing a vast expanse towards the S. W. and E. and presenting a magnificent *ensemble*.

13th August.—Halt at Yumoto.

The village of Yumoto consists of some 30 houses built solely to receive the bathers of the summer season. A torrent of mineral water runs through this open gorge from S. to N. at the foot of mount Nasu. The only street of the village is in this gorge and runs parallel with the stream. Wooden pipes convey the water into the middle of the street by two conduits, the one bringing cold, the other, hot, water. Five square tanks of two compartmente occupy about 30 metres of the road between these two streams. The mineral water contains sulphur in small quantities and alum. The temperature is very high (from 60° to 62° C.) but it can be reduced in the tanks in a few minutes to a more moderate level by a simple and ingenious system of cocks, by which the streams of hot and cold water can be regulated at will. These mineral waters are called the Shikano yu (the waters of the stag.) Tradition relates that the first persons who made use of them were led thither by observing a deer which had been wounded by hunters, its instinct leading it to resort to the waters.

The village was formerly much larger than at present. It is overlooked, in front, by several temples sufficiently well preserved, at least externally. It was built at about 800 metres distant from its present site. But a terrible flood in 1857-58 destroyed the whole village, and in order to avoid the repetition of a similar catastrophe, it was rebuilt higher up the valley. It contains only about a hundred inhabitants; its only trade consisting in a little sulphur and some vegetable products used in dyeing. In winter a few deer are killed, and, though rarely, bears of a small species. It is a good game country, and possesses woodcock and pheasants. In the neighbouring stream *ai* and *yamame* (trout) are caught.

To the north of the village, and after an ascent of a few minutes, the tourist is brought face to face with Nasu, a beautiful and imposing mountain. It consists of three principal peaks, one of which, called Chausugatake, is an extiuct volcano. The Nasusan is properly speaking a well-defined volcano. It still emits smoke and subterranean sounds. The crater appears to be about 200 metres in diameter. The sides are arid and bear traces of eruptions of lava. The last eruption is said to have taken place in the year 1730. The ascent to the crater is easy; and that of the neighbouring peak, Bishamon, can also be made. This station would afford an agreeable resort in summer; the air is fresh and the nights are cool; but the bad state of the roads would for a long time render access to it difficult for the majority of travellers, and almost impossible for European ladies.

Another hot spring station is to be found at a place called Shiwobara, towards the West of Nasu, and to the N. E. of the road from Nikko to Aidzu, which passes not far from here. It is possible to go direct from Nasu to Aidzu by the neck of the Santagré, but the roads are very bad, by the confession even of the natives.

14th August.—From Yumoto to Idoyo.

Leaving Yumoto, the left bank of the river is passed, and the traveller descends the slopes E. of the Nasu. For 4 *ri* these slopes are well wooded, bnt the roads are muddy, full of ruts and impracticable after rain. Not a house is to be met with until the miserable hamlet of Tsunago is reached, consisting at most of 70 souls, and absolutely destitute of resources. From this point to Shirakawa, a great uncultivated plain must be passed marked with the peculiar characteristics of the *hara*: the distance is 2 *ri* 15 *chô*.

At Shirakawa the great northern road from Tokio to Sendai in Aidzu is regained. Shirakawa is a large town of about 2 kilometres in circumference, with a large trade in silk. It is the ancient Shiro. At some distance to the West the road branches off to the N.E. towards Sendai, and N.W. towards Aidzu. In this latter direction, and at 2½ *ri* from Shirakawa, is to be found the village of Idoyo —18 to 20 houses.

Leaving Idoyo the road takes a general direction northward. The country is very undulating and well wooded, and the following villages are passed:

Kamigoya.....	..(1 *ri*, 20 *cho*).
Makinouchi	1 „ 15 „
Naganuma	1 „ 2 „

At the latter point you leave the Onkaido (or great road) if it is desired to go direct to the Lake Inawashiro. Formerly a *shira* was standing in this important place which is one of the gates of the province of Aidzu, either by the direct road or by the defile which leads to the Lake Inawashiro. To reach the latter point it is necessary to proceed by way of Takinohara (1 *ri*) with one relay of horses, passing through a pretty valley variously cultivated, bounded on the N.E. by the mountains of Iwaki. On dismounting, the defile or neck of Oyuwake is entered. The road follows, at a rounded angle, a stream which runs from N. to S. Both banks are covered with thick wood rendered useless by want of roads. The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

right bank is formed by a somewhat remarkable mountain Achimangatake, the ascent of which is prolonged for about 2 *ri*. Nearly at the summit a single post-house is to be found, called Oyawake, and at 1,000 m. above this point one of the finest views in Japan may be enjoyed. It extends towards the South and South-east with an immense horizon bounded by the lofty mountains of Sendai and Oshiu.

Still continuing to climb these steep slopes, the traveller leaves, with many regrets, this magnificent country and arrives at the boundary which divides the waters of the Pacific from those of the Sea of Japan, a venerable gate and a feudal barrier informing him of his entrance into the province of Aidzu. This boundary is hardly reached before a rapid descent towards the north is commenced, and a view is gained as superb as that which has just been left behind. A succession of the mountain-chains of Aidzu and Sendai extends to the North. At a turn of one of the angles of the path Lake Inawashiro is seen in a hollow, shining like a mirror in the last rays of the setting sun. But the steepness of the slopes which lead to the foot of the valley soon eclipses this panorama, and after three *ri* of easy walking we arrive at the village of Nakiji, close to Lake Inawashiro.

Nakiji is about three kilometers from the eastern extremity of Lake Inawashiro. Taking boat on the lake it may be traversed towards the N. E. as far as the point where it flows into the basin of Aidzu, from whence Wakamatsu may be reached on foot. But strong westerly winds are frequent on the lake, and at such times the passage is almost impossible in the wretched boats ordinarily employed. Under these circumstances the route to Aidzu must be regained by crossing from Nakiji to Fukura.

Inawashiro is one of the largest and most picturesque lakes in Japan. It is fed by two streams which flow from the East and North-east and measures about 4 *ri* in all directions. It is surrounded by mountains of no great elevation, except that of Bardaisan on the North shore, one of the highest in Aidzu. On the same shore there are a few villages where salmon and *masu* are caught, and a fish, peculiar to certain lakes in Japan, called the *akahara* (red-belly). A small trade is carried on between Wakamatsu and the different points of the lake. But the total absence of roads in the neighbouring regions renders all commercial movement difficult, and it may be said of this place, as of the whole of the interior of Japan, that the growth of public wealth would derive considerable impulse from the opening of good roads. The main roads (called *on'kaido*), like that of Aidzu, are the only ones laid out and these are only intermittently repaired, and even these are detestably bad in respect of the inequality of the surface and the steepness of the slopes. The reform of these is a work of paramount necessity to the Japanese Government and would be productive of the best results.

The shores of Lake Inawashiro may be recommended as an agreeable summer resort, although it should be stated that they are entirely destitute of all resources for European life. The temperature is cool, and in winter the streams are frozen for several weeks.

If desirous to regain the Tokaido, the traveller must take the route from Nakiji to Fukura which is undulating and picturesque. From Nakaji to Harajiku, by Fukura, there are five *ri* to traverse, over a good country. The mountains assume a bolder character as you approach Wakamatsu.

The slopes from mount Kanehori and Takizawa are steep. Towards the North lie the vast plain of Aidzu and its capital Wakamatsu which is reached after a march of 8 or 9 *ri* from Nakiji,—a fatiguing walk on account of the disintegrated filex which forms the soil from Ou[kaido for several kilometers before reaching Wakamatsu.

Wakamatsu is the capital of the ancient province of Aidzu. It is a considerable town, but possessed formerly a far larger population than at present. The Castle of the Princes of Aidzu, situated on a hill at a short distance from the town, has been destroyed and razed to the ground. The town is situated nearly in the centre of a great oval plain, of from 10 to 12 *ri* in its longest diameter, and constituting what is properly called the Aidzu country. This plain is fertile, cultivated with rice, and watered by many rivulets which descend from the surrounding mountains, and which unite in the principal stream which flows out of the Lake Inawashiro.

Besides Lake Inawashiro, there are in the basin of Aidzu, two other lakes or lagoons; the waters of these three lakes uniting to form the river which flows towards Niigata. A fourth lake named Kosemura, which is said to be situated on the N. E. slope of the mountains of Nikko also discharges its waters into the same basin, which also carries a large volume of water in the Japan Sea.

Correspondence.

HARBOUR IMPROREMENT.

To the Editor of the "*Japan Weekly Mail.*"

January 29th, 1875.

Sir,—When, in my last letter to you, I expressed my intention of ending my part in the discussion on the New Harbour Scheme, I did so with confidence in the correct judgment of the majority of your readers, deeming it unnecessary to combat the various arguments brought forward by X. Y. Z. any further than they tended to mislead. I still retain the same confidence, notwithstanding your condemnatory article, but, at the same time, I think it might be well in consequence of that article to make one more contribution, as otherwise my silence might be misconstrued by some.

I should, first of all, desire it to be remembered that my advocacy of the Harbour Scheme in print is not direct. I wrote for the purpose of combating what I considered to be an unmeaning antagonism to it perched upon the pinnacle of philanthropy and public benefit to the country.

Any warmth which I may have displayed is therefore due to the inconsistencies of my opponent, not to my advocacy of the scheme, and, being warm, I venture to submit, is more interesting and useful than being vapid which is a noteable characteristic in your correspondent's effusions.

To talk of anything contained in my letters to you as being "specimens of the hasty and injudicious manner in which this scheme is being pushed before the Japanese Government" seems to me so unfair that you must allow me to express surprise at your having allowed it to appear in columns generally so free from such unfounded aspersions.

To say that Mr. Brunton "is the promoter of the scheme" is to show an entire want of knowledge of the courtesies due to professional men. It is equivalent to accusing a lawyer with *promoting* litigation among his constituents. The duties of an Engineer are to carry out his instructions, and to offer such advice as his position entitles him to give in connection with works placed under his charge. And any Engineer who steps beyond this is always more or less a subject for suspicion.

To put your correspondent right on a small point, I may tell him that the proposed scheme is understood to consist of a *pier* running into the Bay, in such a manner that it can, at all times, be used as a *wharf*. The terms "wharf" and "pier" therefore need cause no confusion in the mind of X. Y. Z.

Again, the Yokohama Anchorage is to all intents an "open roadstead." There is a fetch from N.E. of over twenty miles, and between this and twelve miles for nearly 180 degrees of the compass.

If I may venture the suggestion, I should say that this proposed work, whatever its demerits are, should not be judged of from the narrow standpoint of the foreign trade of this place as at present exists. If its entire use was the accommodation of the foreign owned vessels now visiting Yokohama, there might be some just grounds for doubting its profitableness. But while we have good grounds for hoping that there are prospect of an increased activity in business, the proposed works partake more of the character of a national undertaking. Yedo is the capital of Japan, and there is a growing tendency to centralize in it the various trades and manufactures as they spring up.

On account of the Shinagawa anchorage being unsuitable for the feeblest traffic, and incapable of improvement, except

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

at an enormous cost, Yokohama must be the port for Yedo. And owing to the want of any harbour on the coast between Sumidzu or Simoda on the south and Sendai on the north, Yokohama must be the outport for the produce of a large portion of this island.

Increased harbour facilities at Yokohama therefore constitute a natural, if not an advantageous, method of developing the native trade. You admit the great convenience of such a work, but throw doubts on there being any requirement for it. Allow me to ask where does a great convenience end and a requirement begin? To what public work that was ever thought of would such an objection not apply? If such arguments were used against the Railway before its construction, with how much greater force might they not have applied to that work in something of the following manner? "A Railway between Yokohama and Yedo is, no doubt, a great convenience, but can it be said to be a requirement? The Japanese will not be able to afford to pay railway fares but will continue to use the mode of travel which they have been accustomed to and which suits their habits. The European intercourse between the two places is small and unimportant. On what therefore is the Railway to depend for support?" It was made, however, and, if not remunerative, it supplies, fairly well, a convenience which has been taken full advantage of, and which is the nucleus of a more extended system.

The present goods traffic on the Railway, averaging from 600 to 700 dollars per week, though small, argues well for the extent to which it is capable of development with the necessary extensions of the line both here and in Yedo, and the trade of Japan, whatever its extent, is certainly as capable of paying for such conveniences as that of other countries.

Your admission, judged as I presume it was, from the existing trade of the port, I deem to be a powerful argument in favour of the scheme, and the large and valuable steamers now in Japanese hands or being built, the projects of the Government for opening up mines and developing manufactures, the running of mails by native Steam-ship Companies, afford additional arguments for it.

I might further submit that the construction of a complete and suitable wharf at Yokohama, the only available port for an immense portion of the country, seems to be as reasonable a step towards the development of the resources of the country as could well be made, always remembering that it is not a costly work, that it can be quickly and easily accomplished, and is allowed on all hands to be a "great convenience." It will tend to draw trade to Yokohama, and will form the starting point for the various feeders in the shape of roads or railways which will in all probability hereafter be made.

This, I beg to submit, is the light in which the scheme should be viewed, and, with your leave, I will now proceed to the somewhat thankless taste of answering X. Y. Z.'s objections.

The arguments used by X. Y. Z. against the necessities for the pier, founded on various examples of harbours in other parts of the world, have this great defect, that, just as each range of hills has a different contour, so has each natural harbour its own peculiarities. In judging of the necessity for any artificial improvement to a harbour, therefore, it is most misleading to compare it with other places. There are local circumstauces and considerations which, in every case, render such a comparison fallacious. Thus, the peculiar formation of the harbour at Bombay renders the construction of wharves a work of such expense and difficulty that, notwithstanding the pressure brought to bear on the Government in regard to the state of the harbour, and the immense discontent arising from the present want of accommodation, it has, up to within a recent date, hesitated to give the necessary support to its improvement. This, as well as the want of wharfage accommodation at Calcutta, is a crying evil which finds its vent in almost every Indian paper, and it is childish to argue that the Japanese should emulate such a state of matters. X. Y. Z. has himself given a very suitable instance of the fallacy of making such comparisons. He has compared Yokohama with Shanghai, and states that, because the Chinese have not thought of erecting wharfs at Shanghai, this is a reason for the Japanese not doing so here. Of course it is unnecessary to say that Shanghai is differently situated in every way, and the comparison is therefore not just under any circumstances. But he has informed us that many of the wharves already erected have already silted up so as to become useless. May not this circumstance, due entirely to local causes, be quite sufficient to account for the absence of more wharfage accommodation than at present exists at Shanghai? I do not wish to assert that it actually is the cause, but I merely wish to point out how local circumstances may and do affect such matters. In like manner at Marseilles, to which another comparison is drawn, it was found necessary to build a quay wall in nearly 60 feet depth of water, which was exposed to the whole sweep of the Mediterranean, and the expense of this amounted to about 15 millions dollars, but if this cost exceeded what was originally expected and the works have in consequence not been profitable, can it be fairly argued that similar results are likely to occur at Yokohama when the pier is to be built in a sheltered bay with no more depth of water than is necessary for the vessels using it? At Southampton, in the same way, if the shareholders in the Harbour-trust fear losing their dividends from the abstraction of the traffic carried by the P. & O. vessels, I hardly think there is any cause for a similar fear in reference to Yokohama. There is no London with its great trade and wonderful docks near here, and no place which can be made a port within hundreds of miles. An extraordinary piece of argument crowns this portion of X. Y. Z.'s reasoning. As the Japanese are supposed to have miscalculated the probable returns from the "harbour works and canal into Missisippi Bay," therefore the proposed harbour works at Yokohama will be unprofitable! He draws this deduction with perfect seriousness, and if this is not his meaning I fail to discover it, because he surely does not desire to bring instances to prove that traffic is very often overestimated in all parts of the world. No one will be bold enough to question this.

The assertion of X. Y. Z. that private enterprise has, "in the four quarters of the globe supplied the want of the harbour accommodation when that want was felt," is misleading and incorrect. The actual fact is that of all Public Works. Harbours are the ones which have received most assistance from governments. In England, where Public Works as understood in other countries are unknown, harbours of refuge, trading harbours, docks, river improvements, quays &c. are chiefly carried out by Government funds under the contracts of the loan commissioners. The Governments of France, Germany and Russia invariably supply money for harbour works, while in India the government is now engaged in making the necessary enquiries preparatory to extensive harbour improvements. Harbours are and always will be essentially national undertakings, though they undoubtedly are at times assisted by local enterprise.

The arguments used by X.Y.Z. against the probabilities of the Shinagawa trade using the new pier, are founded on the assumption that to carry goods five miles by water is cheaper than to carry them 20 miles by rail, and that therefore this trade will not be brought to Yokohama. This is plausible enough. But it must be remembered that these five miles of water are at the head of a Bay exposed to seas having a fetch of from 15 to 20 miles, and are open from North east to Southwest; that they extend over a mud flat on which the water is at times not sufficiently deep for either cargo boats or steam lighters; that two or three rivers enter on them causing currents so rapid as sometimes to prevent the passage of boats, except at favorable states of the tide; that in whichever direction the wind blows there difficulty in reaching the ships or in returning from them, and on very many occasions it is utterly impossible to do so at all. No increased appliances will effect any satisfactory improvement at this anchorage, or render it at all fit for any ordinary traffic. And X. Y. Z.'s reasoning regarding the comparative cost of water and land carriage, while outwardly correct, is equally deceptive with his other arguments when closely applied to the case in point.

X. Y. Z. doubts the probability of sailing vessels making use of the proposed wharf. Sailing vessels, on the contrary, are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the class of vessel which are the sufferers by the present state of matters. It is not uncommon for them to take two months to discharge, and so tedious are the delays generally that ship-owners at home have on many occasions refused to allow their vessels to come here on account of these. This fact is well known. At the wharf, and with the assistance of steam cranes, a vessel may be discharged in a few days, and whether a return cargo is expected or not, it is improbable in the extreme that they would refuse to accept the facilities offered them. It may be true that vessels require time "to refit and to recruit their crews after a long voyage," but one or two months' work at discharging cargo is not a very favourable opportunity in which to accomplish this. I should imagine that it would be necessary to get the cargo out first, and refitting can be done afterwards, as found convenient. Compulsory detention for this purpose would at all events probably be found inconvenient. The ingenuity of X. Y. Z.'s argument, therefore, is only equalled by its shallowness.

The Mail Companies, especially the Pacific Mail, will no doubt be disinclined to give up their present appliances for some time, but, eventually, there can be no question that they will use the wharf. The ensured safety to cargo, the certainty as regards time, and the protection afforded by the pier are advantages too important not to be made use of. Their coal hulks will probably be given up, and coal depots moved to positions contiguous to the railway, in which manner the coal—that all essential to the navigation of the present—can be moved about with cheapness and dispatch. This will doubtlessly take time to accomplish, and need not be expected to be done at once.

If by offering increased facilities the proposed work does not improve the trade of the port, it will, at all events, add to the amount of shipping visiting it. What I have already stated as regards sailing-ship owners, is equally true as regards the owners of steamers. They likewise dread Yokohama from the delays which their vessels experience, and the loss to them of a few days unncessary detention of their large and valuable steamers is quite sufficient to deter them from allowing their vessels to come here.

I did not "infer" that X. Y. Z.'s proposed charge of 10 cents per ton for using the wharf was based on what was paid in River Ports in China. I took his own word for it, written in his, former letter with most unquestionable clearness. He now says that "in his opinion it is the extreme rate which vessels visiting this port could afford to pay." He omits to give any grounds for such an opinion, and what the reason in his mind may be for a vessel coming to Yokohama being unable to pay the same amount as is usually charged in any other artificial port, I cannot divine. The freights to Yokohama are not the hindrance, the general value of the cargoes is not the cause, and the class of vessels is one to which, on all accounts, quick despatch is all important. He also says that the rates of one dollar or one shilling per ton are charged at other places for "certain advantages," but, that "the trade of Yokohama could not admit of such an extra impost upon it." There here seems to me to be some confusion in regard to the advantages likely to be derived from the pier, and the amount of trade which will go over it. If one vessel used the pier she would be afforded the same facilities as if fifty used it. The amount of trade therefore or the number of vessels using the pier, has little to do with the most suitable charge to levy on each. These "certain advantages" are just those which this scheme proposes to supply; and in judging of the most suitable rates to charge, the amount of work executed in obtaining these advantages, which are dependent on the situation of the wharf, is certainly one consideration which should not be lost sight of, as also are the immunity from risk and the certainty as regards time which it affords compared with what existed before its erection. Thus in a navigable river no ordinary weather is sufficient to hinder the shipping of cargo with ordinary appliances, and a wooden wharf on its bank, while giving increased facilities, is generally a cheap and simple erection. On the other hand in an open roadstead, subject to frequent and heavy gales of wind, the delays and losses in connection with the shipping of cargo may become most vexatious, and the construction of a wharf to improve this state of matters may be a difficult and costly work. Whatever charges may be decided on for the new pier, therefore, these are, in my opinion, the considerations which should lead to a decision regarding them.

If X. Y. Z. does not understand my simile regarding the platform of a railway station, I will attempt to make it more clear to him. A platform in a railway station is a facility afforded for the purpose of enabling goods or passengers to be transferred to or from the trucks or carriages. These are always made of suitable length to accommodate the traffic likely to use them. From the information upon which X. Y. Z.'s objections to this new pier is based, its length is 5,000 feet and its cost is about $1,000,000. From a very cursory knowledge of the Bay it may be discovered that, at a distance of about six or seven hundred feet from the point of the English Hatoba, there is a depth of water of over three and a-half fathoms, this being sufficient for the majority of vessels.

The scheme therefore affords say 4,300 feet of available quay-wall for $1,000,000, being at the rate of $233 per foot. Estimating seven vessels as the number likely to use the wharf (this we may take as being the probable number of foreign vessels actually working cargo at one time), each of which is 300 feet long, a length of pier of 2,100 feet is sufficient for the present foreign trade. This length at $233 per foot amounts to $489,300, and I have to re-assert that a sound economist would base his prospects of renumeration on this expenditure. Should this estimate of seven vessels be found to be too small, another length of pier to suit the requirements can be added, the cost of which will be rapaid by the traffic using it. The conclusion of X. Y. Z. that $1,000,000 will only carry the pier about half the estimated length, and that there it would be in too shallow water for the majority of shipping to use it—and his assertion that the whole scheme will cost $2,000,000, an assumption for which he has not the smallest grounds, which he is guilty of misrepresentation in making without certain foundation, illustrates forcibly the looseness of his arguments.

The statement that an Engineer's estimate of Harbour Works is always exceeded, may be true as regards works in excessively deep water, or in very exposed situations; but there can be no reason for such a result in a sheltered arm of the sea such as Yokohama Harbour, and where there is no great depth of water.

Just one other specimen of X. Y. Z.'s argumentative powers. He asserts that the population of Yokohama is decreasing. This may be so, though I am inclined to doubt it; but in what way does this affect the harbour scheme? Does he intend it as an argument against the scheme? And if so, does he imagine that the results arising from the execution of the work is to be felt no further than Yokohama and its suburbs?

I am not disturbed so much at the manner in which this discussion has been conducted, as imputed by X. Y. Z., as at the way in which it was commenced. While I am firmly of opinion that perfect ventilation of a subject of this kind can produce no other result than a good one, I certainly think that when a writer to the papers lays claim to highflown and philanthropic motives of saving the Japanese from their own want of understanding or from their incapable adviser, he should be very certain that he has good grounds on which to work.

I have attempted to show the unsoundness of the foundation of X. Y. Z.'s arguments and assertions. If I have not fully succeeded, it is, I can assure you, only because I feel the necessity of sparing my own time and your valuable space.

I am,

Your obedient servant,

A.

DEATH OF THE EMPEROR OF CHINA.

To the Editor of the *Japan Weekly Mail.*

Yokohama, 29th January, 1875.

Sir,—The startling intelligence of the sudden death of the young Emperor of China, fraught as it may possibly be with grave consequences to a third of the population of the world is an event which will command universal attention. Although we have as yet no particulars, it is a fact that up to the end of last month in official circles in Peking the Emperor's

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

recovery was believed in, and the suddenness of the event, and the antecedent circumstances attending it, are ominously, if not suspiciously worthy of note.

It is well known that the late Emperor was a youth of considerable force of character, and fully conscious of the responsibilities attaching to his exalted position. Numerous instances have been recorded showing these traits of character. But from his infancy he has been surrounded by party intrigue, and his endeavours at independent action have invariably been met and defeated by the strong opposition and intrigues of the Court party.

A remarkable instance of his sympathy with the poorer classes was reported last autumn in Peking on the occasion of his return from the military review in the park outside the Tartar city. He was struck by the industry displayed in the garden of a peasant by the way side, commanded that the man should be brought to him, and showed his approbation of the qualities which this neatness and order evinced by bestowing on him a mandarin button, at the same time purchasing the vegetables in the garden for the use of the palace.

The Emperor's treatment of Prince Kung is not generally understood, and has been attributed to mere caprice, but it affords another instance of the consciousness he entertained of the responsibility of his position.

The Formosa question was no doubt the indirect cause of Prince Kung's disgrace. It must be remembered that an Imperial Edict dated 11th May, 1872, had been issued ordering the immediate punishment of the savages in Formosa for their treatment of the shipwrecked Loochooans. This, it is needless to say, had never been carried out, for reasons best known to the parties responsible. On the question being taken up in the practical manner it was by Japan, it was incumbent that this disobedience of the Imperial orders should be kept from the knowledge of the Emperor, and there is every reason to believe that he was in blissful ignorance throughout that any such question was on the *tapis*, much less did he know that it was likely to involve his country in war with Japan; and it is to be observed that all reference to the Formosa trouble has been studiously kept out of the Government Gazette and that the indemnity was paid out of the Foreign Customs. But, unfortunately for Prince Kung, the Formosa trouble occurred at a moment when the Emperor had set his heart on rebuilding Yuen-ming-yuen, and the remittances expected from the provinces were obliged to be applied to meet more vital necessities, and no satisfactory explanation could be given to the Emperor why his instructions regarding Yuen-ming-yuen were disregarded. The consequence was the disgrace of Prince Kung, for general disrespect to his sovereign.

His subsequent reinstatement, in deference to the will of the Court party, was a blow to the authority of the Throne, and clearly showed the Emperor to be virtually powerless and entirely in the hands of that party. Looked at from an Asiatic point of view, it appears to be at least injudicious that a proud Manchu Prince like Kung, smarting under the humiliation of public disgrace, should be reinstated, and that the young Emperor should be left dependent on such an adviser.

From the circumstances antecedent to his reported death, it appears to be not at all unlikely that the Emperor died in the middle of December, as the prescribed ceremonies to be performed by him on the 21st December were deputed to Prince Tun, the elder brother of Prince Kung, now 73 years of age. And on the 23rd December we find the Empress Dowager (not the Emperor's mother) assuming the reins of Government during the period of the Emperor's proposed retirement until the 2nd March.

Another curious fact is that at this moment Prince Kung has had his salary trebled, and Prince Tun doubled, and the Mongolian princes about the Court have received pecuniary awards. The troops likewise are not forgotten, as half a month's pay has been bestowed upon the entire Manchu and Chinese garrison.

It is quite possible that the Danish Envoy, having important business to transact, pressed for a reception which rendered the concealment of the Emperor's death no longer possible.

In conclusion, it will be observed that the event must have taken Li Hung-chang (the guardian of the Throne) by surprise, for on the 23rd December, believing in the Emperor's recovery, we find him leaving Tientsin for the Capital of Chihli. Li's loyalty to the reigning dynasty has never wavered, and if any danger threatened, his place, in virtue of his office, would have been at the side of his Sovereign.

Yours faithfully,

X. Y. Z.

To the Editor of the *Japan Weekly Mail.*

Sir,—Without offering any opinion or wishing to interfere in the discussion now going on between A. and X. Y, Z. on the subject of Harbour Works, it is important that neither of them should injure the credit of the country by conveying to those who may not be otherwise informed, erroneous ideas regarding the country's financial condition.

In your issue of the 20th instant you publish a letter from X. Y. Z. in which the following appears—"If the pier costs "$2,000,000, according to my showing, it will not pay any in- "terest at all on outlay, although taking the money at 7 per "cent which is really about 1½ per cent less than the Govern- "ment borrows its money in Europe."

This seems to be a rough calculation by mixing up the 9 per cent loan with the 7 per cent loan, and assuming an average without knowing how much of the 9 per cent loan has been paid back. Further on, X. Y, Z. says "money can- "not be obtained under 8½ per cent."

When Japan borrowed from the foreign public in London for the first time in the year 1869, she paid 9 per cent. A large amount of this loan has now been paid back and the balance is diminishing yearly. The amount offered in London when this loan was issued, was nearly double the sum asked for. When Japan borrowed again in the same market in the year 1871 she raised £2½ millions at 7 per cent, the amount offered to her being five times the sum asked for.) Instead therefore of having to pay 8 or 8½ per cent for money now, there is every reason to presume that a third attempt in the money market would be an improvement on the second, as the second was on the first.

It is true that China has just borrowed on terms equal to about 8½ per cent, but the transaction is a small one, and has apparently been hastily arranged.

In the face of the premium which the Japan 7 per cent stock now bears, it is manifestly unfair to associate Japan with 8 or 8½ per cent.

I am, Sir,

Your obedient Servant,

OBSERVER.

To the Editor of the "Japan Weekly Mail."

Yokohama, 25th January, 1875.

Dear Sir:—In the "Budget of Japanese Notes" printed in the *Japan Mail* of February 23rd, under the heading of children Schools," the following statement has attracted my attention:

"———especially the girls, who in addition to the writing-school attend singing, dancing and music teachers."

Now either this account of what an average Japanese girl is taught conveys a different impression from what we suppose to be the reality, or else there are branches of instruction which receive attention from the Japanese, concerning which we are in great ignorance.

The latter I suppose to be the case; and the great value and interest of those weekly instalments of information contained in the "Budget" before mentioned is highly appreciated by those who desire to know more about the daily life of the "common people" so-called, as distinguished from the more picturesque performances of Daimios, Samurai and Ronins. If the writer of the *Fu So Mimi Bukuro* would supplement his interesting account of the Japanese Musical Instruments by giving us some information as to the kind of "singing, dancing and music" taught to Japanese children, he would be making a valuable contribution to our knowledge of what intimately concerns the social life of the nation. We cannot forget the profound saying "Let me make the songs

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of a people, and I care not who makes their laws;" neither should we ignore the fact that if the Japanese are to have a happy *home*-life they must have good *home* music. At present so far as we can learn—music is either cherished, somewhat jealously, by the guardians of the sacred rites; or else, flying off to the opposite extreme, it is left in the hands of the *geyshas* and their companions.

Now music,—especially vocal music—is too valuable an element to the work of education, and too precious a part of the wholesome and elevating influence of family and social life, to be consigned to the seclusion of the cloister or abandoned to the entertainment of the dissolute: it must be claimed as part of the school-training and home life of Japan.

Referring to my former letter on this subject in the *Japan Mail* of August 24th.

I remain,

Yours respectfully,

ONGAKU.

Law Report.

H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., *Assistant Judge.*

January 26, 1875.

BATAVUS & Co. *vs.* ADAMSON, BELL & Co., Agents of the S. S. *Braemar Castle.*

This was a claim for $156 for damages sustained owing to the non-delivery here of a case of varnish ex *Braemar Castle.*

E. Batavus sworn: I am a Dutch subject, and keep a store at No. 71. The case not delivered was one containing tins of copal and oak varnish. It was consigned to us. Defendants promised to send us the case up from Kobe, where the *Braemar Castle* had gone to discharge other cargo; several steamers arrived from Kobe, but it it did not come. Defendants then asked us to wait till the vessel had finished discharging the rest of her cargo at Shanghai, when the case no doubt would be found on board. We waited so long that I refused to have anything to do with the varnish when defendants wanted me to take delivery of it. We have lost the sale of the case of varnish, as the man now refuses to take delivery of it owing to the long delay. It arrived here by a P. M. steamer on December 10, 1874, and the *Braemar Castle* was here in the beginning of the month of November, when we ought to have received it. We could only get about $80 for the case of varnish now. There is plenty in the market, and when we contracted to sell to arrive there was very little, and a good price could be got. $80 is about the invoice price of the case. I was willing to keep the case at the invoice price if defendants would have paid me $76—the profit I would have made had I received the case when the *Braemar Castle* was unloading at this port, but they refused to pay this, so I then made a claim at the Consulate for the full amount, $156, and let defendants keep the case.

To defendants (by Mr. D'Iffanger): The case contained tins of copal and oak varnish. The invoice value was about $80. The price I sold it at to arrive was high; there was none in the town then.

Mr. D'Iffanger said he was prepared to contest the claim of the plaintiff on two points. First,—because plaintiff could not, by virtue of a special clause in the bill of lading, abandon the goods because they could not be found when the steamer was here. He then read the clause, which was to the effect that if any goods could not be found when the steamer had arrived at their port of destination, and that if they were afterwards found at another port they could be shipped to their destintion (at the expense of the steamer) by the first steamer going there. Secondly,—he would contest plaintiff's claim in part, that was to say he admitted (and it said so in the bill of lading) that the steamer was liable to make good to plaintiff his loss of market sustained through the delays before he received the case; but at the same time he thought the contract plaintiff had made (to sell to arrive) was an unusual one, and the price higher than the market one, and therefore he thought $75 (the loss plaintiff said he had sustained) to be excessive. He had calculated the profit plaintiff would have made at the market price, and it was $21, which sum he considered due by the ship to plaintiff, and he had paid that amount into Court.

His Honour said that under the bill of lading plaintiff was only entitled to the loss of market. But he would have to take the case of varnish.

Mr D'Iffanger then called Mr E. Townley to prove the market price of varnish. He (Mr Townley) deposed that the price of copal and oak varnish at present was $8 a gallon; that is the retail price. Both kinds in November and December last year were bringing $10 a gallon; it was scarce then.

To plaintiff: He should expect to get $8 a gallon for it. He thought he could sell it at that price now. He could have got as much as $12 when it was scarce.

Plaintiff stated to His Honour that copal and oak varnish could now be got for $6 or $7.

His Honour said he should reserve his decision, as he wished to refer to some authorities as to what rate the compensation to plaintiff ought to be calculated at.—*Herald.*

THE CHINA LOAN.

If getting in debt be a sign of progress, the Chinese Government has made a small step in that direction. The new Chinese loan of two millions and a quarter taels, secured as it is on the Foreign Customs' Revenue, will doubtless meet with ready acceptance at the proposed rate of nearly 8½ per cent. Economically speaking, the proposed loan has much to recommend it; but it is characteristic of the false position which China holds among nations, and the bad name its Government has earned for itself, that it has had to go into the market at a rate so much less favourable than has the Government of Japan. The securities offered are, as we have stated, ample, provided care is taken that the revenues assigned are duly placed aside for the intended purpose. There is no reason to believe that the Chinese Government is other than desirous to do its duty in this respect; in fact, we believe that those who control the executive are quite sensible that in a matter of this sort thorough honesty is their best and only policy; and their good intentions are guaranteed by the statement that a certain portion of the Customs' revenue is assigned to the introducers of the loan, the Hongkong and Shanghai Bank, in trust for the bondholders. So far, we believe the loan to be satisfactory, but there is a question to be asked the reply to which is not of so clear a nature. We are not told the object of the loan, nor what are the circumstances which have impelled China to go into the market, and become a debtor to Europe. Were the money raised to be devoted to some useful project, as in Japan, we have little doubt that China bonds would rapidly become a favourite in the market. It has been our unpleasant duty lately to comment on the extremely unsatisfactory state of Chinese finance, and the issue of this loan lends considerable proof to the arguments that we have advanced, that China in this respect has fallen into a position whence she sees little hope of extricating herself. Yet this condition of affairs has occurred in a time of profound peace, when the empire is settled—so far as China can for years hope to be settled within the eighteen provinces—and when the only external foe to be guarded against is the Ameer of Kashgar. It is true that the threatened rupture with Japan cost a good deal of money; but it augurs ill for the finances of a power like China, that the few weeks of preparation really undertaken should have so utterly exhausted its resources as to need an application to foreigners for capital. Had the finances of China been in a moderately sound condition, they should without difficulty have borne this strain, but so involved had they become, that it rendered necessary the present appeal to right them again. These circumstances are not hopeful for the future of the empire, as the government is at present administered; and now that China is about to take the first leap and become a debtor to the world at large, it will behove her to see that her revenues are administered in a less extravagant manner than at present. That the empire is capable of occupying a high financial position, no one who has studied the economy of the country, its resources, both mineral and agricultural, and the character of the people, can doubt. But all these things are rendered nugatory by a Government feeble and yet grasping, and which by unluckily always adopting the very worst means to an end, has succeeded in involving itself in its present complication, The breakdown of Chinese finance when exposed to the light strain put upon it by the threatened rupture with Japan, cannot, however, but have left its impress on the minds of those who direct the Government. If the mere rumour of a war with a small power like Japan so seriously interfered with the car of State, the consequences of any serious difficulty with one of the Great Powers would be overwhelming. When China was ignorant of the ways of the rest of the world, as at the outbreak of the first war, it seemed but a slight thing to offend a Power like England. Men there were in abundance, and the rude munitions of war within the experience of Chinese mandarins were readily obtainable without any very great expenditure of money or discomfort to the country. Experience has twice shown China that things have changed, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that even such measures as might have been effective in 1840, in 1875 would be of no avail. Even within that brief space the expense of war has probably quadrupled, and what China was unable to do then, with a comparatively uncrippled exchequer, is now altogether beyond her utmost endeavours. As we have pointed out, the very measures recently adopted to increase the revenue of the empire are in reality sapping its existence; but we fear that, although known to many Chinese officials, these unpleasant facts have not yet presented themselves in their nakedness to the *de facto* Government of China. The present loan may afford a breathing space to enable some relief to be introduced, but we fear that this will hardly be its result. To amend its ways, unless under the extremest pressure, would be contrary to all the traditions of China's policy. The slight relief afforded will, we anticipate, not be turned to the most useful, or to any useful, purpose. The terms of the loan are as we have stated fair, but one point attracts comment. Issued at £95 per £100 bond, the repayment of the principal by lot will effectually prevent the scrip ever rising above par. The future quotations of the loan will thus never be a fair criterion as to public opinion with regard to Chinese financial resources. Perhaps, on the whole, this will be an advantage; though it might, on the other hand, be useful if the Chinese Government had some external means of ascertaining the effect on its own credit of amelioration in its exchequer.—*N.-C. Daily News.*

THE ROYAL FAMILY.

The interest which the Royal Family, down always to its newest, smallest baby, has for the general public has long been the chief commonplace of satire. It is pretty well agreed that there is inexplicable exaggeration of feeling in the way in which the subordinate members of this high group are regarded. Not much difference is made between those who have political importance and those who have none. It is not the fault of the personages themselves. Indeed, our Princes and Princesses, if it did not come to them so evidently by nature, might be said to be always taking pains to show themselves under precisely the same aspects as less exalted people. But, do what they will in this way, they cannot quite succeed. There is an enthusiasm in the public which idealizes Royalty in spite of itself.

In all the comments made on the subject a suspicion shows itself that the disproportion of sentiment is traditionary among Englishmen; nevertheles we fancy that within the last generation there has been an enlargement of it. Princes and Princesses, whenever they appear, create more enthusiasm than they used to do. The time of this increase of sympathy agrees with the extraordinary development of our large towns, and it is in the midst of these suddenly multiplied populations that the more conspicuous displays of the loyal emotion take place. Rustics are not nearly so impressionable. Part of the explanation doubtless lies in the increased size of the town crowds. When men come together in a multitude the mass become excited by mere sympathetic contact. But this would only apply to the occasions of Royal appearances. The family is a matter of abiding newspaper interest. It must be borne in mind that it is the only family group of any social exaltation that the town people know anything of. In the country districts there is upon every large estate the noble family in the neighbouring castle or hall to be watched and talked of; there is an ascending scale from the squire to the earl or the duke. In the towns there is but one family whose affairs can be intelligibly talked of by everybody, but of this one everything is known. The curiosity respecting Royalty is, in its lowest aspect, an apotheosis of the common instinct of gossip.

Explained or unexplained, it remains true that the Royal Family is the most general interesting social topic that we have. But this interest, in the nature of things, is not a constant quantity. The sympathetic attractiveness of the Royal circle varies greatly, as the group of which it consists alters in the common vicissitudes of life. And immense change has passed upon this family within the last few years.

During the very early years of her Majesty's reign the interest in Royalty, by a kind of unavoidableness, was extreme. The spectacle of a girl ascending a throne like that of England had in it a kind of picturesqueness, and even of pathos, rare in history. By far the greater number of our monarchs have been elderly at the time of their accession. The Queen's youthfulness was a special enhancing circumstance, the recollection of which now stands about at its lowest degree of effectiveness. Middle-aged men have lost the mere attractiveness of youth, while the fact that they are no longer young touches nobody. By-and-by, when age begins to show in the Queen, the remembrance that she ruled when a girl will revive by force of contrast. The younger people who may wish to know how dramatic it made our public affairs for a time can refer to Mr. Disraeli's political romances, where, like the artist he is, he introduced it effectif vely. And the Queen added interest to interest, for Royalty owed to her marriage a domestic rehabilitation. It had fallen to an exceptionally low point in respect of numbers. There were Royal births - the palaces became busy with family affairs. This means of interest has told largely ever since. A few noisy politicians have tried to turn the facts to bitter account, but the numbers of the Royal Family have given it a bulk and conspicuousness, increasing its powe; of drawing and holding attention, With so many representatives Royalty has been often seen. It has exercised full personal assertion. The train of its domestic events has multiplied. The death of the Prince Consort and the illness of the Prince of Wales must be excepted as very sombre events; but there have been many of the opposite kind: wooings, weddings, christenings, visits—all festivities; all pleasant; all (so far as the world knows) satisfactory. There have been bits of romance, even, in some of the matches. Few families so large have been so free of things unpleasant. And one necessary result of the numbers of the family has been to offer to persons of different tastes a choice of favourites.

It may be worth while to think for just a moment how differently the interest of the family would have distributed itself if the Prince Consort had survived. The unfair use made in some quarters of the Prince's direct foreign extraction had already dwindled; long before this time (supposing that in these later days he had kept clear or certain dangers which need not be mentioned) it would have become antiquated, inappreciable. Apart from his political importance, he would have had a weight of another kind. The date from which our modern commercial prosperity reckons in popular estimation is the year of the Great Exhibition, and from his wise connection with that scheme he would have passed as the originator of all this subsequent success. His real share of help in these matters would have been exaggerated by the unavoidable language of public compliment. To-day probably, with his cold accumulative nature and increased experience, there would have been few personages in Europe of equal importance. Against his will, he must always have been credited with too much of what properly belonged to the Queen. And as result of it all, he could not have avoided obscuring the Queen a little. The position of our Prime Ministers, so far as the apparent grouping of the political personnel goes, is very different from what it would have seemed with the Prince still in front of them. His removal has added decidedly to their apparent importance; but that consideration is outside our subject. The Prince of Wales could not have competed in the public eyes with his father. His public doings would unavoidably have had more of a perfunctory look; his private tastes would have seemed trivial beside the Prince Consort's very grave pursuits, In a word, the public aspect of the family would in scarcely any respect be the same if Prince Albert had lived till now. However, all this is of the past.

The Queen is most interesting to those who are fifty years old, or about that age. She is connected up with all their associations; they have the early dramatic memories of her which we have mentioned. But men and women of fifty are not the majority. Of the merely numerical bulk, young people who stand at various stages below their first quarter of a century from a great part. Taking them into account, it is too obvious that the Queen has waned in interest. With all her increased claims on public respect, they cannot look on her as an older generation do; they could not have done so even if her retirement had not taken her from their eyes. There is no help for it. Youthfulness in Royalty can interest the old; age can and does arouse sympathies in the young. The Queen is neither young nor old. There will be a sudden increase in the popular conception of age in the Queen whenever Mr. Disraeli and Mr. Gladstone cease to be the chief moving figures in our affairs. Earl Granville, on the Liberal side, would affect the position in this way very little; all the other leading Liberals are very new men. On the Conservative side there are none who would stir this feeling largely. Lord Derby's is is not very recent, but the public has not done thinking of his father, and that prolongs an odd juvenility in him. The Marquis of Salisbury will remain young politically for some time to come. On the retirement of the chiefs of the two parties the Queen will be recognized as the most experienced person in the kingdom still acting in affairs. This must increasingly give to her a high political interest; and, as age advances, pathetic feeling will again be stirred on personal grounds also. The Queen obtains great respect now; if she lives to be very old, she will have a reverence such as no English monarch before her has had, or probably has deserved, for many and many a generation.

If we look at the family as a whole, we shall see that, in the natural order of things, it is breaking away. It is no longer a group under

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

one roof. They are separating on hearths of their own. All of them do not stay within our shores, and removal tells on public sentiment. The Princess Royal was a general favourite while she was with us, but she is nearly lost to the younger part of of the commnnity. When she has become the Empress of Germany, the imperial lustre will eclipse what remains of the old homely memory. By-and-by the Duke of Edinburgh must go, taking with him the Imperial Archduchess, whose coming here was a little passage of domestic romance. Another circumstance will shortly change the position of the Princesses and Princes. Hitherto, nearly all the members of Royalty, with the single exception of the Prince of Wales, have stood on the same level, two steps below the throne. As the Prince of Wales's family grows up a diversion of attention towards it is unavoidable. We have now three generations of Royalty in the direct line; and the collateral character of the junior branches of the first descent will soon be forced upon us. It will yet be several years before the Royal boys and girls growing up in Marlborough House furnish stock gossip for the public, but as they do so the Princes and Princesses who have interested us hitherto must suffer eclipse. It would be inexcusable not to say that the entrance of the Princess of Wales into the Royal circle of England has been a clear gain to the interest of the group. The feeling she creates about her is wholly and profoundly pleasant and, if attention does not pursue her, she satisfies it fully whenever she is either seen or thought of.—*Pall Mall Gazette.*

REUTER'S TELEGRAMS.

London, 27th January, 1875.

Mr. John Bright at Manchester urged the disestablishment of the Church.

Herr Eisendeck appointed German Minister to Japan.

Mr. Bristowe submitted estimates to Congress proposing reimposition of the coffee duties.

London, 25th January.

The Great Powers have intervened to avert a Turco-Montenegrin conflict. A collision is nevertheless apprehended. The Porte has consented to a trial of the question by the mixed tribunal sitting at Montenegro.

Prince Leopold better.

Garibaldi has visited Rome and met with an enthusiastic reception.

Obituary.—The Rev. C. Kingsley.

London, 14th January, 1875.

A City of Paris loan for 220,000,000 francs will be issued immediately, in bonds of 500, interest 20 francs each. The issue price is unfixed.

London, 13th January, 1875.

The report that Germany has recognised Alphonso was premature; the recognition is deferred until the decree suspending two Protestant journals, and closing a chapel at Cadiz, is rescinded.

London, January 14th, 1875.—President Grant's policy regarding, Louisina threatens disruption of the cabinet.

The report that Germany has recognized Alphonso is premature. His recognition is deferred until the decree suspending two of the Protestant Journals and closing of the Chapel at Cadiz has been rescinded.

A City Paris loan of 220 millions is to be issued immediately in Bonds of 500 francs bearing interest at 20 francs each; the issue price has not yet been fixed.

The German gunboats have returned from Santander.

ARRIVALS.

Jan. 27, *Menzaleh*, French steamer, Pasqualini, 1,160, from Hongkong, January 19th, Mails and General, to M. M. Co.

Jan. 27, *Malacca*, British steamer, Bernard, 1,016, from Hongkong, Mails and General, to P. & O. Co.

Jan. 27, *Vancouver* British steamer, Shaw, 1,917, from Hongkong, General, to P. M. S. S. Co.

Jan. 28, *Traviata*, German barque, Brechwalde, 271, from Takow, January 11th, Sugar, to Chinese.

Jan 28, *St. Thomas* Swedish barque, Hjorth, 340, from Nagasaki, 23rd January, Coal, to P. Von Hemert.

Jan. 29, *Nevada*, American steamer, Williams, 2,144, from Shanghai and Ports, January 21st, Mails and General, to P. M. S. S Co.

Jan. 29, *Ping on*, British steamer, Boswell, 900, from Formosa, January 22nd, Sugar, to Walsh, Hall & Co.

Jan. 30, *Gustav*, German brig, Johannsen, 237, from Takow, Sugar, to Walsh Hall & Co.

DEPARTURES.

Jan. 23, *Courier*, Russian steamer, Lemascheffsky, 491, for Hakodate, General, despatched by P. M. S. S. Co

Jan. 23, *Laurel*, British barque, Davies, 638, for New York, Tea, despatched by Smith, Baker & Co.

Jan. 24, *Alaska*, American steamer, Van Sice, 4,011, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Jan. 26, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Jan. 26, *Britain's Pride*, British brig, Ratsey, 190, for Nagasaki, Ballast, despatched by P. M. S. S. Co.

Jan. 26, *Rachel*, British barque, Firth, 287, for Nagasaki, Ballast, despatched by Wilkin and Robison.

Jan. 27, *Pride of the Thames*, British barque, Brown, 379, for Nagasaki, Ballast, despatched by E. C. Kirby & Co.

Jan. 28, *Golden Age*, American steamer, Coy, 1,870, for Shanghai, General, despatched by P. M. S. S. Co.

Jan. 28, *Penrith*, British barque, Moignard, 521, for Kobe, General, despatched by E. C. Kirby & Co.

Jan. 30, *Vancouver*, British steamer, Shaw, 2,200, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Jan. 30, *Montgomeryshire*, British steamer, Buttlin, 1,446, for Hiogo, General, despatched by Van Oordt & Co.

PASSENGERS.

Per P. M S. S. *Alaska* for San Francisco.—From Yokohama: Mrs Henderson and child, Mr and Mrs Steele and nurse, Mr and Mrs Ramie, Miss Janie McDonald, Mr and Mrs Geo. D. Rowan, Mr and Mrs Lieberman, Prof. Watson, Prof. Young, Count Batthyany, Messrs Conrad, Woodward, Comstock, Newlin, Sober, Waleryke, Cohen, Meyendorf, Leavitt, Gartner, Tappan, Rangen, Edwards, and Tittman. From Hongkong: Mrs Smith, Miss Reed, Capt Warsaw, Capt Shonu, Messrs Koopmanschoff, E. P. Monroe, H. E. Falk, and H. J. Falk. From Shanghai: Mr Jno. Lanson; Messrs J. T. Doyen, Henry Burrett, John Allen, A. A. Pilkington, John Burnett, and about 800 Chinese in steerage.

Per British steamer *Bombay*, for Hongkong.—Mr and Mrs Cope and family.

Per French steamer *Menzaleh*, from Hongkong.—Messrs Brutti os Valdo, Anmer, Babut de Marez, and Dubref.

Per British steamer *Malacca* from Hongkong.—Mr Fa Reda, J. Newton, M. Ullename and 6 Chinese in the steerage.

Per American steamer *Golden Age*, for Shanghai.—Captain Salterthwaite, Messrs R. S. Corning, H. Sylva, C. Riddle, Derma, Dubref, S imiya, Omura and wife, P. Kemperman, and Von Knobloch.

Per American steamer *Nevada*, from Shanghai.—Mr. Kirby, U.S.N, Dr. Dew, U.S.N., Mr and Mrs. Atkin, infant and 2 servants, Mr. W. Beauchamp, Miss Manani, 7 Japanese and 6 Europeans, in the steerage. For America.—Mr. Marquart, Mr. and Mrs. Wyon, and 2 Europeans, in the steerage.

CARGOES.

Per P. & O. steamer *Bombay*, for Hongkong:

Silk	112 bales.

Per British steamer *Malacca*, from Hongkong.—

Sugar	3,3?0 bags.
Soap	495 boxes.
Iron	594 packages.
Alum	120 bags.
Naval Stores	169 packages.
Merchandise and Sundries	510
Total	5,298

Per American steamer *Nevada*, from Shanghai:

Treasure	$131,218.68

REPORTS.

The British steamer *Malacca* reports heavy weather throughout the passage.

The British steamer *Malacca* reports: left Hongkong on the 20th instant at 6.30 a m, experienced strong monsoon gale with high sea to Tung-ying; thence to Yokohama strong N.W. winds with violent squalls. On the 23rd instant at 8 a m. in Lat 26 deg. 50 N., Long. 122 deg. 16 E., passed a steamer supposed to be the French mail. Arrived at Yokohama on January 27th at 6h 8m.

The Sweden barque *St. Thomas* reports strong northerly and N. W. winds throughout the passage.

The British steamer *Ping on* reports heavy N. E. gale for two days after leaving and afterwards west and N. W. winds to arrival.

The schooner *Tori* arrived from the Bonin island; brings information of the death of the former master, Pease.—It is supposed that he was murdered by the coloured woman he lived with who was assisted by a negro who is living on the islands. Had it not been for this accident the vessel left here with the intention of going to the South Seas after Beche de Mer. She brings up some oil, corn and tortoise shell, and reports a very stormy passage of sixteen days.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, JANUARY 30TH, 1875.

IMPORTS.

Cottons.—The market for imports has not undergone any material change since the issue of our last. 7lb. and 8¼lb. *Shirtings* are dull; low makes especially are difficult of sale; for 9lb. 44 in. fair inquiry. Low and medium *Yarns*, 17/24 stock lots are eagerly bought up, 28/32 continue to be asked for likewise 38/42, but sales to arrive are almost impracticable. Stocks are moderate. *Velvets* are in moderate demand, and prices somewhat firmer. Other goods call for no comment.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce.	$1.90 to $2.12½	
8 lbs.	38½ yds.	44 in.	„	nom	
8 lbs. 4 to 8 lbs.	6 „	39 in.	„	2.20 to 2.55	
9 lbs.	„	44 in.	„	2.75 to 2.95	
Taffachelass Single				2.60 to 2.75	
No. 16 to 24			per picul	34.00 to 37.00	
Reverse			nom.		

White Shirtings:—					
56 to 60 reed	40 yds.	35 in.	nom. per pce.	2.50 to 2.60	
64 to 72 „	„	„	„	2.70 to 2.80	
Turkey Reds	25 yds.	30 in.	2¼—3 lb. per lb.	0.90 to 1.00	
Black Velvets				8.75 to 9.75	
English Drills				3.20 to 3.45	
Canvas, Navy, Red Stripe				7.00 to 8.00	
No. 28 to 32			per picul	39.00 to 42.50	
„ 38 to 42			small stock nom.	42.00 to 49.25	

Woollen Fabrics.—Business in woollens is rather more active. *Black Plain Orleans* is more inquired for and would doubtless be paid for a little higher, but for a want of discretion on the part of importers. *Mousselines* have been dealt in to some extent, but here also there are too many offers. *Blankets* are fairly saleable; *Italian Cloth* is in good demand, while the only transactions in *Cloth* were some sales by public auction, when ridiculously low rates were obtained.

Plain Orleans	40—42 yds.	32 in.		6.25 to 7.75	
Figured Orleans	29—30 yds.	31 in.		4.50 to 5.25	
Italian Cloth	30 yds.	32 in.		0.25 to 0.37	
Camlet Cords	29—30 yds.	32 in.		6.25 to 7.25	
Camlets Asstd.	56—58 yds.	31 in.		18.50 to 19.00	
Lastings Japan	22—30 yds.	32 in.		13.00 to 14.50	
Plain Mousseline de Laine	30 yds.	30 in.		0.18 to 0.19	

Figured Mousseline de Laine	30 yds.	30 in.		0.28 to 0.32	
Multicolored „	30 yds.	30 in.		0.30 to 0.40	
Cloth, all wool plain or fancy	48 in. to 52 in.			1.00 to 1.30	
Presidents	54 in. to 56 in.			0.75 to 0.85	
Pilots	54 in. to 56 in.			0.45 to 0.55	
Union	54 in. to 56 in.			0.70 to 0.85	
Blankets, scarlet & green	7 to 8 lbs.		per lb.	0.45 to 0.48	

Iron and Metals.—No change in the market, but in general a decidedly weaker feeling prevails.

Iron flat and round			per picul	$4.00 to $4.75	
„ nail rod			„	4.20 to 4.80	
„ hoop			„	4.80 to 5.00	
„ sheet			„	5.00 to 7.00	
Iron wire			per picul	$8.00 to $9.00	
„ pig			„	2.00 to 2.25	
Lead			„	7.00 to 7.50	
Tin Plates			„	8.50	

Sugar:—Formosa in bag			per picul	4.70 to 4.80	
in Basket			„	5.20 to 5.30	
China No. 1 Ping fah			„	8.50 to 8.70	
„ No. 2 Ching-pak			„	7.60 to 8.00	
„ No. 3 Ke-pak			„	7.10 to 7.40	
„ No. 4 Kook-fah			„	6.70 to 7.00	
China No. 5 Kong-fun			per picul	6.20 to 6.50	
„ No. 6 E-pak			„	5.20 to 5.70	
Swatow			„	3.70 to 3.90	
Daitong			„	4.30 to 4.50	
Japan Rice			„		
Kerosine Oil			„	3.70 ot 3.90	

EXPORTS.

Silk.—No change to report in the condition of this market. Still clinging to the hope of better rates sellers are generally unwilling to meet the low offers induced by the discouraging advices received from Europe and hold back the better part of their stocks. Deliveries since the 21st instant are 325 piculs, a great portion of which no doubt are deposits against temporary loans. Arrivals are 175 bales.

	Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.			*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.*		
Hanks—

Good (No. 2)	490 to 510	18s. 9d. to 19s. 6d.	frs. 52 to 54	Common No. 3	430 to 450	16s. 8d. to 17s. 4d. frs. 46 to 48

Tea.—Business has been rather modified for the closing week, purchasing still being in the hands of a few firms. Settlements, principally Medium grades, for the period since last weekly issue, amount to 910 piculs, shewing no quotable decline so far in prices, though sellers are rather more anxious to close.

Arrivals for the same period amount to some 540 piculs, so stocks shew but little alteration on last figures and range about 8,000 piculs merchantable Tea.

The steamer *Vancouver* which sailed for San Francisco this morning took a full cargo from this of packages and the schooner *La Plata* is reported loading for San Francisco en charterers account.

Common		$25.00 to 30.00	
Good Common		32.00 to 35.00	
Medium		36.00 to 39.00

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills, I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,

To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

Aug. 1. 26ins.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

JAMES WHITFIELD,

CLARINGTON BROOK FORGE AND IRON FOUNDRY,

WIGAN, LANCASHIRE, ENGLAND,

Maker of the celebrated Spades, Shovels, Forks, Miners' Tools, Cart Arms, Bushes; also Small Engines, Mortar Mills, Iron Castings for Collieries, GAS AND IRON WORKS, &c., &c. Dealer in Files, Saws, Steel, Builders' and Mechanics' Tools, Safety Lamps, Hoisting Blocks, Jacks, Anvils, Vices, Bellows, Screws, Bolts, Washers, Rivets, Nails, Safes, Locks, Hinges, and all Ironmongery Goods of best quality as used for home consumption.

Aug. 29, 4ins.

CAUTION.—Merceandize Marks Act.—The celbrated YORKSHIRE RELISH. — Messrs. GOODALL, BACKHOUSE & Co., of Leeds, England, the proprietors of the above-named sauce, having successfully prosecuted certain persons before Alderman Sir R. Carden, at the Mansion-house, London, on the 6th June, 1874, for having fraudulently counterfeited their trade mark and label, hereby give notice that they will prosecute all persons pirating their said label and trade mak or infringing their rights in respect to the same.—J. SEYMOUR SALAMAN, Solicitor to the Trade Mark Protection Socity, 12, King-street, Cheapside.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 6.] YOKOHAMA, SATURDAY, FEBRUARY 6, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

At Kobe, Japan, on the 27th January, ARVED VON KNOBLOCH, late Acting-Consul for the German Empire,—aged 24 years.

Notes of the Week.

IN our Summary of the events of the year 1874 we referred to the attention which the subject of female education is now receiving in this Empire, and the efforts which are being made to advance it. The *Nichi-nichi Shimbun* states that Her Majesty, the Empress, hearing that a school, called the *Shihangako*, was to be established in Tokio to prepare young women as teachers, expressed her deep sense of the importance of their duties, and the necessity which existed for imparting a higher education to the women of this country. The illustrious lady gave further effect to her words by a munificent donation of five thousand *yen* (dollars) towards the institution, in the success of which every native of this country is interested.

The future historian of the movement which is taking place in this country will record many errors both of omission and commission, many sound steps taken and subsequently abandoned, some unsound ones taken and persevered with in the face of remonstrance and of demonstration, not the less perfect because it was at the time prophetic, of the evil consequences of those steps. But he will be forced to acknowledge that a true spirit of enlightenment actuated the Government of the country on the vital question of the education of the people, who in their turn, responded to this by showing a deep desire for knowledge, and by bestowing the most laudable determination on the acquisition of it. The benefaction of Her Majesty is imperial alike in its origin and its amount, and will not only give an impetus to the excellent cause in which it is bestowed, but will produce in distant countries a profoundly favourable impression in regard to the sense of responsibility entertained by Her Majesty of her exalted position, and of the duties which it entails upon her.

A translation from the *Nichi-Nichi Shimbun* which will be found elsewhere explains an obscure passage in the recently published memorial to the Throne by Okuma Shigenobu, on surrendering into the hands of His Majesty the Mikado his portfolio as President of the Formosa Commission.

Major Murata, well known at our rifle-range as an accomplished native marksman, has been detached on special service to visit France and Prussia in order to make himself familiar with the rifle-drill of those countries.

A fire broke out at 2.30 p.m. on the 4th inst. at a village called Itabashi Mura, near the town of Odawara, and after raging for above two hours, destroyed no less than 148 dwellings.

AMONG the passengers by the last French Mail from Yokohama was Mr. Ernest Satow, Japanese Secretary to H. B. M. Legation, who has gone to England on a year's leave, partly on private affairs, and partly with the view of publishing there a work which promises to be of vast utility to all students of the Japanese language. His friends will reconcile themselves for the loss of his society by the hope that his visit will conduce to his personal interests, and the advancement of that study in which he has so greatly distinguished himself. They will, however, not the less miss the valued intercourse of one whose pursuits embraced a wide range of thought, and in whom the 'philosophic mind' which the poet associates with years has borne fruit in youth, the envied treasure of its possessor, the source of instruction and pleasure to his friends, and of advantage to a circle, external to these, who imbibed knowledge from his papers on Japanese subjects published in these columns and elsewhere, often unconscious who was their instructor, or what further claims he possessed on the esteem and admiration of those with whom he was more intimately acquainted.

As we go to press a large fire has broken out and seized the block of native buildings in Homura between the road leading up to the cemetery and Hegt's road. There is little probability of the fire being extinguished until it has cleared the whole block.

(From the Japan Mail Daily Advertiser.)

IN our Weekly columns of last Saturday we spoke of the Prince of Tun as the successor to the late Emperor of China. It is the grandson of the Prince whom it was proposed to place on the throne.

OWING to the approaching departure of Mr. E. C. Kirby for Kobe, where he proposes to reside permanently, the Yokohama General Hospital Fund is deprived of the valuable services he has gratuitously rendered it for some years past in the capacity of treasurer. Other arrangements will be made as soon as may be possible, but, pending these, we are requested to announce that Mr. Henry Allen will be pleased to receive subscriptions and donations.

THE repetition of the performance at the Gaiety Theatre of last Friday took place last night and showed the improvement which might be expected in a second representation. The part of Falstaff was more filled out, and assumed broader proportions (both mental and physical) than before. The Prince was more at his case, aud if the gentleman who played Poins had not been suffering from a severe cold, there would also have been some added points of merit to note in his very attractive pourtrayal of the character. The attention given by the house to the Shaksperean scenes was quite extraordinary, and showed how easily an audience will yield to the fascination of the poet when once the feeling is surmounted tha

he is unintelligible, unattractive, and of another age—a feeling by no means uncommon among many who constantly hear of him but do not make him a constant companion.

The farce which followed—*Little Toddlekins*—was also played admirably, and kept the house in genuine and hearty laughter during the whole time that it occupied the stage. Mrs. Spurgeon's *Amanthis* is really a wonderfully clever piece of ludicrous nonsense, and there were two or three added finishing touches last night which even made an improvement on the rendering of the previous Friday.

A telegram from London announces the death of Lord St. Leonards.

Some few weeks since we stated that in compliance with a request from the Government of Corea, the Japanese purposed to despatch a political emissary thither, but that his departure had been countermanded. Mr. Moriyama, who has been selected for the mission, will, we understand, leave Yedo in the course of a few days.

We read in the *Nichi Nichi Shimbun*:

The *Kazoku*, (*Daimios* and *Kugés*, in fact the present nobles of Japan), who reside at Tokio have recently established a society among themselves and have made their meeting-house at Nagato cho. They have decided to form and are now preparing a library, which is to contain Japanese, Chinese, European and American books. These books are to be lent to any who may desire to read them. The object of the Society is to diffuse useful knowledge among their countrymen and to aid them in attaining civilization. The late Tycoon has presented to the Society through Katz Awa, the Minister of Marine, many volumes of books and some thousands of *yen*.

At an early hour yesterday morning a fire broke out in Tskidji Yedo and before it could be extinguished a large number of native houses perished.

The P. & O. Steamship *Massilia* with London Mails to the 25th December sailed from Hongkong for this port on the 4th instant at 5 o'clock p.m.

Her Imperial Majesty, the Empress, having been informed that an institution was to be established in Yedo for instructing young women as teachers, expressed her deep sense of the importance of improving the education of the women of this country, and gave further effect to her words by a munificent donation of 5,000 *yen* to the institution.

A gloom was cast over the community yesterday by the death, under painful circumstances, of Mr. A. von Knobloch, Acting Consul of the German Empire at these ports. Shortly after one o'clock, the Clerk of the Court, having occasion to go to the office of the deceased, found him stretched out on a sofa, his head leaning over the side, and a pistol with one barrel discharged lying in a pool of blood by the side of the couch. Dr. Thornicraft was quickly in attendance, but death must have been almost instantaneous, as the bullet passed through the head of the unfortunate gentleman, entering above the right ear.

During his short residence in Kobe deceased had not only earned the respect of his own countrymen, but also of all with whom he was brought in contact, and his untimely end has deprived his country of an energetic and painstaking public servant.—*Hiogo News.*

Since the above appeared in the *Hiogo Shipping List* of Thursday last nothing of importance has come to our knowledge with respect to this melancholy event. An inquest was held at German Consulate, Mr. Voigt, the first assessor of the Court, acting as Coroner, but the particulars of the sitting have not transpired.

The funeral is to take place 4 o'clock this afternoon, the ceremony having been delayed pending the arrival of the brother of the deceased from Yokohama.

Mr. Kemperman of the German Legation has arrived this morning by the *Golden Age*, from Tokio, and has assumed charge of the Consulate. Dr. Focke the Consul is expected to arrive in April next, but it is possible his departure from Europe may be hastened by a telegram.—*Hiogo News.*

The first fall of snow of the season, in quantity worth noticing, took place yesterday afternoon.—*Hiogo News.*

From the Tokio Nichi-Nichi Shimbun, February 3rd.

My address to the Throne of the 4th instant contains the following passage:—

"After our troops had started, and were on their way, foreign public servants * remonstrated."

Your Excellency having asked for an explanation of this passage, on the demand of the Foreign Representatives, it becomes necessary that I should state that the Foreign Representatives did not remonstrate against the despatch of Japanese troops to Formosa, but some of them, stating that their Treaty relations with China obliged them to take this course, protested against the employment, by Japan, in the Formosan Expedition, of their ships and subjects or citizens, until it was known whether such employment would or would not be regarded in a hostile light by China.

I humbly make this representation.

(Signed) OKUMA SHIGENOBU SANGI.

To His Excellency
Sanjo Dajo Daijin.

* The term used may also be translated "Foreign Ministers."

THE RECALL OF THE MARINES.

THE approaching departure of the battalion of Royal Marines which replaced the 10th Regiment of Foot some three years and a-half ago, renders it desirable that we should say a few words upon the circumstances which led to the occupation of this settlement by British troops, and demanded their stay here up to the present moment. It is the more necessary to do this because there is no little misapprehension on the subject even in the minds of men not consciously or willingly unfair in their judgment of England's action in the East, but who do not appear to have given the requisite attention to her course in this matter; while it may also be of some service to reply, once for all, to the unfounded aspersions made upon her motives by those who are never so well pleased as when they can repay the debt under which she has placed the subjects and citizens of all the Western Powers in this country by the abuse and detraction which are the natural weapons of envy and ingratitude. It is curious to observe how much trouble and ingenuity is expended by men travelling in one plane of thought to account for the actions or utterances of others moving in an altogether different plane; and this different sphere of motion is, in fact, often the true key to the divergent judgments formed by men upon questions or actions which are capable of the simplest and readiest explanation to men in possession of it. An untruthful, tortuous, or mean man is actually without the power of understanding the action of one of opposite qualities, his criticisms upon which reflect, not any actual truth, but the qualities of his own mind, often assuming the garb of a virtuous indignation inexpressibly ludicrous when its origin is considered. The actions of nations are liable to be similarly misunderstood, and, in the case under consideration, the policy of England and the action of her Minister here have given rise to remarks which are perhaps rather to be deplored from the common mental condition which they reflect, than from any misapprehension they may have caused in the minds of reasonable people.

Those who are familiar with the history of this country and its foreign relations from the date of the signing of the ELGIN Treaty to the present moment, will be aware that in the year 1863 an order was issued from Kiotô for the expulsion of foreigners from this country, nor does it greatly concern us that the object actually aimed at by the MIKADO's party was the embroilment of the SHOGUNATE with Foreign Powers. The order was actually transmitted to the Foreign Representatives, on whom the decision of the issue was forced whether foreigners should be expelled from the country or remain in it. The communication was as follows. *

I communicate with you by a despatch.
The orders of the Tycoon, received from Kioto, are to the effect that the ports are to be closed and the foreigners driven out, because the people of the country do not desire intercourse with foreign countries. The discussion of this has been entirely entrusted to me by his Majesty. I therefore send you this communication first, before holding a conference respecting the details.
Respectful and humble communication.

OGASAWARA DZUSHO NO KAMI.

24th, June 1863.

The British Chargé d'Affaires, Colonel NEALE, at once replied in the following note to this communication, which was also answered by the French and American Representatives in the same sense:

"*Yokohama, June 24th*, 1863.

"The Undersigned, her Britannic Majesty's Chargé d'affaires, has received, in common with his colleagues, and with extreme amazement, the extraordinary announcement which, under instructions from his Majesty the Tycoon, his Excellency has addressed to him.

"Apart from the audacious nature of this announcement, which is unaccompanied by any explanations whatever, the Undersigned is bound to believe that both the spiritual and temporal sovereigns of this country are totally ignorant of the disastrous consequences which must arise to Japan by their determination thus conveyed through you to close the opened ports, and to remove therefrom the subjects of the Treaty Powers.

"For himself, as Representative of her Britannic Majesty, the Undersigned has to observe, in the first instance, that the rulers of this country may perhaps still have it in their power to modify and soften the severe and irresistible measures which will, without the least doubt, be adopted by Great Britain most effectually to maintain and enforce its treaty obligations with this country and, more than this, to place them on a far more satisfactory and solid footing than heretofore, by speedily making known and developing any rational and acceptable plans directed to this end, which may be at present concealed by his Majesty the Tycoon or by the Mikado, or by both, to the great and imminent peril of Japan.

"It is therefore the duty of the Undersigned solemnly to warn the rulers of this country that when the decision of her Majesty's Government, consequent upon the receipt of your Excellency's announcement, shall have in due course been taken, the development of all ulterior determinations now kept back will be of no avail.

"The Undersigned in the meanwhile has to inform your Excellency, with a view that you may bring the same to the knowledge of his Majesty the Tycoon, who will doubtless make the same known to the Mikado, that the indiscreet communication now made through your Excellency is unparalleled in the history of all nations, civilized or uncivilized; that it is, in fact, a declaration of war by Japan itself against the whole of the Treaty Powers, and the consequences of which, if not at once arrested, it will have speedily to expiate by the severest and most merited chastisement.

"With respect and consideration.

(Signed) "EDWD. ST. JOHN NEALE."

But this policy of the Court at Kiotô soon began to bear fruit. The PRINCE OF CHÔSHIU closed the straits of Shimonoseki to the passage of foreign vessels, numerous assassinations of foreigners took place, and no foreigner's life was secure. Sir RUTHERFORD ALCOCK, the British Minister, then in England, returned with all speed to Japan, and, realizing the serious aspect of affairs, requested that a British regiment might be sent to this country from Calcutta, and a detachment of troops from Shanghai, where a British force was then stationed. The simple fact is that but for the practical manner in which the protests of the Treaty Powers were followed up, foreigners would have been compelled to leave the country, and the condition of affairs was so threatening that nothing less than an imposing alien force in this country could have ensured the safety of the foreigners of all nationalities. It fell mainly on England to provide this force, and at one time there were no less than eighteen ships of war in this harbour, and twenty-five hundred men of all arms encamped ashore. But far from there being any desire on the part of the English Government to keep more men here than appeared absolutely necessary, every effort consistent with the safety of its subjects was made to reduce this force, and in the summer of 1865 the contingent of marines was sent home and several detachments of troops returned to Shanghai. In 1868, agreeably to the provisions of the treaties, Hiogo was to be opened, and every effort was made by the Tycoon's Government to evade this obligation. The feeling against foreigners was still very strong, and it is quite certain that, but for the presence of a British force, not only would the opening of Hiogo have been indefinitely delayed, and a bad precedent set in regard to the binding nature of solemn engagements, but the insecurity to foreign life and property would have driven every foreigner from the country.

Subsequently to the Revolution in which the Shogunate fell, and after the country had somewhat quieted down, the British Government, at the instigation of its Minister in Japan, again considered the propriety of withdrawing its troops from Yokohama, and in order that a force more readily moveable than troops of the line should be employed for the protection of the settlement, it was proposed that a battalion of marines should be substituted for the force hitherto quartered here. In other words, not only was there every disposition shewn to reduce the occupying force to a minimum, but the character of the force itself was changed in order that the susceptibilities of the Japanese, and the objections to military occupation which

* Vide Mr. Adams' History of Japan, Vol. I.

Digitized by Google

fall seriously on those who are forced to maintain it, should be considered and provided for in every possible manner. While this change was being discussed, however,—and it must be remembered that the intercharge of despatches between this and England, with the references required at home, cannot be done in a day—a plot of a very serious nature for the murder of foreigners was discovered. This threatened so much danger that the Japanese Government made a request that the troops should not be removed. In the autumn of 1873 the time seemed again approaching when the desirable object could be effected; but the sky became suddenly overcast, and the dissatisfaction in the provinces issued in the Saga insurrection, the attempted assassination of IWAKURA, and the subsequent, and, we venture to think, consequent, expedition to Formosa. At such a time, and in such conditions, the removal of the force could not have been recommended, though just prior to this sudden change it appeared to ourselves, we must frankly confess, possible and even desirable. The events of the next fortnight proved that our hopes were premature, and at no time during the year just passed was it possible. It must be manifest that no minister entrusted with an ultimate decision upon a question of this nature will run any risks in regard to the real issue it involves, which is nothing less than the safety of those of his countrymen whose lives and properties are committed to his safe keeping. A happy-go-lucky policy upon a question of this nature is not one which comports with the dignity of England or the views of Englishmen.

Without taking what may justly be called a sentimental view of this question, we have not disguised our own desire for the approach of the period when it might be possible to remove all foreign troops from this soil. But looking back calmly upon the circumstances we have shortly narrated, we cannot think that the great responsibility attaching to the step could have been safely undertaken before the present moment. It was well that it should taken as soon as possible; the question is whether it could have been wisely and safely taken sooner. This view and this question have been constantly present in the mind of British Minister, and the charge that the presence of our troops in this country has been used as a menace to extract concessions or to settle questions which would not otherwise have been arranged, is as unworthy as it is untrue, and specially unworthy as coming from Englishmen. The presence of a force such as we have had here to guard our lives and property is in many respects a drawback to a Minister, for it is sure to be used against him by foreign and native opponents, and the handle which has been made of it in the anti-English press elsewhere has been the source of frequent comment.

Nor must we forget all the great advantages which the Japanese have derived from it. It is no light thing that they should have gone though all the travail of the past seven years without adding to their own internal troubles complications which the rash undisciplined acts of the men they have too often shewn themselves unable to control, might easily have produced. But for the presence of this small and well regulated body of men, whose presence has never been unnecessarily obtruded, and whose conduct for the most part has been beyond all praise, outrages upon foreigners might have been committed the punishment of which would have been a source of the gravest perplexity to this Government, though the enforcement of it would have been absolutely necessary at whatever expense. It is easy to cry out against this occupation, which the improved condition of the country now happily renders necessary no longer. But it has been, under all the circumstances of the case, a boon alike to ourselves and the Japanese, and while both may be congratulated that the period of it has drawn to a close, the one may not be reproached with, nor the other be ungrateful for, it,

We would not be understood to set a money value upon feelings and susceptibilities of a nature not to be assessed by money, but it is a curious fact that the sum spent in this country by the troops England alone has been obliged to maintain here, is just about equal to the whole amount paid as the Shimonoseki Indemnity, and we may be sure that the peasantry and small farmers in this neighbourhood will long deplore the departure of a number of men whose sturdy appetites have added to the comfort of every cottage within miles of us.

We must be brief in what more we have to say of the battalion. It has formed for over three years an important integral part of the life of this settlement. Both officers and men have been with us in our sports and our amusements. Our social gatherings have been enlivened by their presence, and hospitalities and courtesies dispensed and accepted on both sides have borne fruit, which, so far at least as we ever heard, no such "little speck" as the poet speaks of, ever threatened with decay. But on both sides we are Englishmen, and this forbids alike much sentiment or many words at parting. The battalion will, we are persuaded, preserve Japan green in its memory; and, on our side, we are as little likely to forget it as it is to forget us.

THE GENERAL HOSPITAL.

THE Meeting of yesterday did the best thing possible in regard to the provision for medical attendance at the Hospital. It stipulated for the appointment of two visiting doctors; it prescribed that one of them at least should possess a knowledge of the French language; and instead of appointing them then and there by a ballot, which would have been as unwise a step as could possibly be taken, it elected a committee to make these appointments, providing specially in the resolution passed for this purpose that the medical men so appointed should hold their power under the general committee which manages the affairs of the institution. It is obvious that a public meeting is not the kind of body which could have addressed itself to the business of these appointments with any sort of satisfactory result. Not five of the subscribers present could have any definite views in regard to the relative merits of the candidates and their suitability for the post, while it was of high importance that these qualifications should be determined with a care which could only be taken by a specially appointed body. Such a body necessarily feels a sense of responsibility which it would be wholly impossible to infuse into the mass of the subscribers at such a meeting as that of yesterday, and the danger of grave possible errors was certainly avoided by the transfer of the power of appointment from the body of the subscribers to a committee representing them. We may also venture to state without incurring the charge of flattery, that the sense of the meeting was fully reflected in the choice of the committee, which represents the various nationalities of the subscribers with considerable accuracy, while it provides the new consultative ingredient shewn by the previous discussion to have been absent from the constitution of the general committee.

But the task of the special committee, besides being weighty in its bearing on the interests of the Hospital, is one which presents some serious difficulties to the members composing it, and it may be well to say a few words upon what appears to us the chief of these.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The new features of the resolution passed yesterday are, that there shall be two visiting medical men instead of only one, as heretofore, and that one of these must possess a knowledge of French. Now, it is obvious that these two gentlemen, unless both are of the English-speaking races, must have a language in common in which to consult upon the management of the hospital and the treatment of their patients. In old days this language might easily have been Latin, which would have formed the basis of the education on both sides, and though MOLIERE long ago, and a good many others since his time, have shewn us that the Latinity of doctors is not very pure, it would at all events have been adequate for the purposes desired. But these days are passed, and it must be confessed that French is no more a necessary part of an English medical student's education than English is part of the average French medical student's *curriculum*. For the obvious reason that French is the most generally understood language of Europe in Europe, the French are but little conversant with other languages than their own, though the English run them pretty hard, and the Americans beat them hollow—for reasons equally obvious and unimpeachable. It ought, of course, not to be hard to find a French-speaking English doctor, and an English-speaking French doctor, if one had a very large choice of candidates. But it strikes us that we may try and yet easily fail to find both these, combined with the other qualifications absolutely necessary for the most efficient discharge of the medical duties of the Hospital. You may find a medical man of either nationality possessing the desired accomplishment; but that proves nothing as regards his efficiency in other respects. The choice is practically narrowed to two men who both possess a knowledge not possessed by one man in five, possibly not by one man in ten, of either nationality, unless, of course, you elect two Englishmen or two Americans, one of either of whom speaks French. In other words, four men out of the five on both sides are excluded from the possibility of holding the appointment, and if the fifth man is elected, it will be rather because he speaks another language besides his own, than because he possesses the highest professional qualifications for the post. For, as we have already said, it is idle to suppose that two men of different nationalities (other than English and American) can be elected who cannot confer in a common language. As each man takes his alternate week of attendance, he must learn the state of each patient and the regimen which is being pursued in regard to him. This demands a fair mastery over the language of conference, and, on our statement of the probabilities of the case, taken at their best, it is four to one that the man possessing the requisite accomplishment is not otherwise the best man for the post. From an *à priori* point of view it might possibly be urged that the very possession of this extra accomplishment is in itself an argument in favour of superior professional efficiency, as it implies either a more liberal education, or that capacity for the acquisition of knowledge which is one of the characteristics of a man more gifted than the average of his fellows. But though we might grant the presumption of more liberal education, we should argue nothing of a man's capacity from the accomplishments in question. They are often the results of opportunities denied to other men, or of circumstances by no means conducive to that accuracy of knowledge, and to that power of seeing things in their real relation to each other, which are the true tests of a well-trained mind.

This, then, appears to us the greatest of the difficulties which the special committee has to face, and we are inclined to think that it will not diminish because it is faced, as it doubtless will be, with intelligence and courage. It must, however, be met and surmounted.

The devotion of these few words to a subject of special moment at this time must not prevent our making what we conceive to be due acknowledgments to the committee of management during the past year; and if we couple these with the name of Mr. HENRY ALLEN, it is not for the purpose of making an invidious distinction, but because the assiduity, sound practical sense and constant vigilance over the affairs of the institution, which extorted from us last year a similar expression of thanks to this gentleman, have been largely the causes which have contributed this year to that sound condition of the Hospital finances of which the Report of yesterday afforded proof. To the efficient discharge of the onerous and self-imposed task of Treasurer undertaken by Mr. KIRBY, whose retirement from it, enforced by his departure from Yokohama, will be a source of loss and regret to the subscribers, the institution also owes a debt of sincere gratitude.

THE SILK TRADE OF JAPAN.

WE deem it not amiss at the present moment to draw the attention of our readers to the position of the most important export staple of this country, viz.: Raw Silk, the quality of which this season is so inferior as to cause great anxiety to shippers.

The decline in the quality of Japan silk is not a new feature, but has been long noticed, and often reported upon. Various causes have been alluded to as likely to have brought on the evil, such as cold or rainy weather during the progress of the crop, want of judgment in the selection or the adaptation of cocoons to the Silk required, carelessness on the part of the women in reeling. But even if we were to admit all these causes united, they would hardly account for the extent of the damage done to Japan Silk within the last six or eight years; and it appears somewhat strange to us how few people have thought of including amongst the determinating causes the consequences that would ensue from the export of the large quantities of Silk-worms' eggs which have been shipped year after year to Europe, to regenerate the diseased breeds of France and Italy.

In the opinion of some men of experience the gradual deterioration of Japan Silk may, nay, must, reasonably be ascribed, in a higher ratio than to anything else, to the export of Silkworms' eggs. A few years back this suggestion was thrown out by some members of the Silk trade of this port; but there were not wanting others who were opposed to their views as too extreme. We may, however, observe that those who never exported Silkworms' eggs had less chance of being biassed in their opinion than their opponents who more or less dealt in that article.

The report of the Committee of the Silk trade which was made in April, 1871, stated boldly that, in their opinion, the shipment of Silk-worms' eggs to Europe was doing a great deal of harm to the quality of the Silk produced in this country. That it was impossible by the terms of the Treaty to interfere with this branch of exports, was readily acknowledged. The French and Italian houses were too strongly interested in procuring sound seed from this side, to admit openly that any great harm did or could accrue therefrom. Moreover, the prices which the exporter of Silk-worms' eggs paid to the native dealers during the course of a few years, made it far more advantageous for the latter to turn their cocoons into seed than into Silk. And, inasmuch as the foreign buyers required the best seed that could be produced, and gave for it prices

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

three or four times higher than the natives, no one need be surprised at the eagerness with which the choicest seed from all parts of the country was brought down to this in preference to the inland markets.

The inevitable consequence was that whilst the greater portion of the best seed left the country, the native growers had to shift with the next best they could get, and at such moderate cost as they could afford. But it must be acknowledged also that the second or inferior qualities of seed could not be expected to yield silk equal to that which was produced in Japan before the export trade in silk-worms' eggs began in 1865.

There is therefore little room for doubt that the bad quality of Japan silk, which is causing so many bitter complaints both here and at home, arises, to a great extent, from the now apparent scarcity of prime seed left in the interior.

As an instance of what we have just mentioned, we may say that the province of Sinchiu, in which a large proportion of the best Silk-worms' eggs was made in former times, ranks now below Yonezawa, or Shimamura in Joshiu, for silk-worms' eggs; whilst the Silk from Sinchiu is about the worst that has been seen this season.

The Silk from Shimonita, which was once reputed almost the best of Japan, began in the season of 1873-1874 to show evident signs of degeneration; in the present season it is showing further marked symptoms of decline. If we bear in mind that the Shimonita growers obtain their seed from the adjoining province of Sinchiu, we may from that fact draw our own conclusions. We might quote many more instances, but we suppose that these two cases now in point will bear us out sufficiently.

Under existing circumstances, what course can possibly be advised or recommended? Far from us the idea of soliciting the interference of the Japanese Government with the producers of, or the dealers in, Silk-worms' eggs in the interior. The native authorities have hitherto always been too prone to meddle, and too ready to regulate the commercial pursuits of their subjects, whereas we are firmly convinced that the latter would be best left alone to take care of their own interests. Besides, prohibitory measures would at present be hardly of any avail. The disease which, for upwards of twenty years, prevailed amongst the silk-worms in Europe, has nearly, if not quite, passed away; seed can now be reproduced in France and Italy from native or mixed breeds with such success as enables one to foresee within a not remote period the cessation of this article of export from Japan.

We hear from various Japanese merchants that their eyes are opened to the evil. Besides, the balance of profits which has accrued to the dealers in silk-worms' eggs of the interior, must have been considerably reduced by the bad results of the two last seasons. There is therefore little encouragement for them to bring more seed to Yokohama for export, and, in consequence, we venture to hope that, after a season or two, the cessation of that branch of trade will be mainly instrumental to the return of a quality of Silk equal to that which existed in the five or six years which followed the opening of Japan to foreign trade.

SPIRIT OF THE JAPANESE PRESS.

[Translation.]

(*From the "Nisshin Shinjishi" of Feb. 2, 1875*)

A few days since I discovered an incredible and lamentable circumstance, which I wish to communicate to your journal and to ask the opinion of enlightened persons upon it. If you will allow me a place in your pages, I shall consider it the greatest possible happiness.

Independence.

Tokiô.

I have seen in No. 316 of the *Choya Shimbun*, under the head of foreign news, the following paragraph. (Here follow some extracts from a paragraph which lately appeared in the *Japan Weekly Mail* about the Loochooan Tribute-bearers to China.)

When I read this, I turned the newspaper away from me with indignation. But after a little I reflected that probably it is after all not true, and at any rate not worth taking any notice of. I have since come to the conclusion that is not so. This circumstance affects us in no small degree. For it is clear from Loochoo having been constituted a *han* that it belongs to Japan, and that it is Japanese territory is placed beyond a doubt even in the eyes of foreigners by the solid proof afforded by the expedition against Formosa. But now we hear of the Loochooans sending tribute-bearers to Fokien. What tribute can they have to take? The Loochooans, it seems, are stupid and inconsistent enough to do so. But if so, what object is there in stationing foreign-office officials at Loochoo?

It seems that this affair took place in December last. If Loochoo is to make it obscure to what country her allegiance belongs by sending tribute to China and doing homage to Japan, the Formosan expedition was the act of madmen. What excuse could we have for complaining of the murder of Loochooans? But the Chinese have already admitted that the Formosan expedition was justifiable, and have paid a large indemnity. From which it appears clearly that they also well know that Loochoo belongs to us. What object can the king 王 of Loochoo have had in sending tribute-bearers? And if the Chinese know well that Loochoo belonged to Japan, what object could they have in receiving tribute-bearers? Nor were they content with simply receiving them. The memorial goes so far as to speak of the Emperor's "cherishing tenderly the men from afar." This is grievously wrong. If the Chinese Emperor received the memorial graciously, he must have been utterly mistaken when he admitted the justice of the Formosan expedition, and paid an indemnity.

Can our government pass over this matter? The stupidity of the Loochoo king and the blundering of China are alike unparalleled. What will foreigners say when they hear of this? The mere sending of Tribute-bearers for once is no great matter in itself, but it has an important bearing on our international rights. If the Chinese were to use this circumstance as a pretext for asserting a false claim to Loochoo, who can tell whether it would be possible to avoid difficulties again arising between China and Japan? I have now explained how it is that I think this an incredible and at the same time a lamentable circumstance. I hope it may be inquired into, and a just and enlightened decision may be found with respect to it. The honour of our government is involved.

ITINERARY OF THE COUNTRY TRAVERSED BETWEEN THE 3rd AUGUST AND THE 8th SEPTEMBER.

By Captain Descharmes, Chasseurs d'Afrique.

Read before the Asiatic Society of Japan, on the 13th January, 1875.

(*Continued from our last.*)

The mountains which surround the plain of Aidzu are majestic, and many are very lofty, among others the Bandaisan to the North-East, the form of which is remarkable; Miyojingatake to the South; and the Itoyosan to the West. This latter mountain, even in summer, is not exempt from snow, and furnishes ice which is cried about the streets of Wakamatsu.

Original from UNIVERSITY OF CALIFORNIA

At a distance of one *ri* from the the town there is a very celebrated place of resort, named Shigashiyama. It is a collection of tea-houses in a deep ravine formed by a stream of considerable volume. From the clefts in the rocks which form the right bank, streams of hot water flow; and many resort to the spot to enjoy the cool air and take the benefit of the warm springs, which are of a temperature of about 50-55° C; but they have neither taste nor smell, and do not appear to contain any salt.

On leaving Wakamatsu for Niigata, the western route must be taken, which is a metalled road running through rice fields, and in as detestable a condition as can be imagined.

From Wakamatsu to Bangé is 3 *ri* 10 *cho*—a considerable commercial town.

From Bangé to Funato, 1 *ri*, 20 *cho*. At the latter place a bridge of boats must be passed, constructed similarly to those used in Europe. The aspect of the river is picturesque. On leaving it the neck of the mountain called Tabanematsutogé has to be attacked by a very steep ascent of from 5 to 7 kilometres. From the summit, on which there are two tea-houses, a fine view may be enjoyed. The descent is by an abrupt and picturesque path towards Nozawa, a large town which must formerly have been much frequented. The road, which preserves a generally western direction, passes over the remarkable shoulder called Kurumatogé.

In all these mountains the lacquer tree *(urushi-no-ki)* is found, which is tapped by horizontal incisions in the trunk. It is almost useless to say that the aspect of the country from Wakametsu is picturesque in proportion to the badness of the roads, and the steepness of the slopes. These conditions are unfortunately universal throughout the whole of the interior, and if the eye is pleased the lower limbs are tortured. The tourist should therefore be well shod, and fortified with a patience which does not belong to all Europeans. From all these points of view the country situated between Nikko, Aidzu and Niigata deserves special mention.

The river becomes navigable at Tsagawa, which, in virtue of this position, has become the important centre of a commerce and carrying trade. From this point Niigata can be reached by water in a day when the stream is strong. The distance by land between the two places being from 18 to 20 *ri*, an estimate may be formed of the rapidity of the stream, here called the Tsagawa. When the water is slack, a halt must be made for the night and Niigata reached the next day, the native boatmen being justly unwilling to descend the river during the dark hours. The rapidity of this form of locomotion is not without some disagreeables. For 4 or 5 *ri* after leaving Tsagawa a number of rapids must be passed, and the river, being hemmed in by steep rocks is much of a torrent, studded with rocks, and all the skill, coolness and constant practice of the boatmen are required to avoid grave and frequent accidents. The boats are long and narrow (7 *ken* by 3 to 4 *shaku* broad,) a kind of canoe in which it is well not to indulge in any unnecessary movements, and two men, standing, one in the stem the other in the stern, direct a course in which the smallest error may cause the wreck of the whole freight upon a rock. After three or four hours of this exercise, the mouth of the defile is reached, the river becoming broader and more calm as its mouth is reached; but the sand-banks and eddies render the navigation dangerous at night.

The overland route from Tsugawa to Niigata at first follows the left bank, crossing the very difficult pass of Iwaya. It crosses the river afterwards at a ford, and winds about in a bend on the right bank. This road is only taken in going from Niigata to Tsugawa; the ascent of the river by water occupies from five to seven days, and it is impossible to pass its rapids without great trouble. This part of the basin of the Niigata river is contiguous to coal and copper mines, rich enough, it is said, but not productive on account of the want of good roads.

The approach to Niigata is dull and desolate, the open plains and environs being sandy and uninteresting. The town is very regularly built, the streets are clean, well-kept and rectilinear, and a number of canals keep the town in communication with the river. The population is estimated at over 50,000, and represents the entire commercial importance of all the West. It is at the same time the centre of pleasure and recreation for the whole of the district. The climate seems to differ sensibly from that of the other side of the Pacific; the heat is very great in summer, and the winter is cold and long. As is usual on this side of the Japan Sea the houses are all fronted with a covered verandah, which allows of exercise when the snow covers the streets. The roofs are built at very open angles and weighted with heavy stones. The typhoon which passed over Nagasaki and the South on the 20th August 1874 ended its course northwards, appearing in Niigata on the 21st from 6 p.m. to 11 p.m. The maximum intensity was during the hour between 8 and 9 p.m. Every house was more or less injured, but the destruction was less severe than at Nagasaki on the night of the 20th. The typhoon swept the whole coast from south to north on the 20th and 21st.

The most serious bar to the ultimate development of Niigata is the existence of a very dangerous sand-bank at the mouth of the river. Besides the waters which come from Aidzu, of which, on account of their volume, bring down vast quantities of sand, the river Shinano, the largest in Japan, flows through Niigata, gathering on its course all the waters of the central chain of the West, which again by their vast volume contribute to the blocking up of the port of Niigata. An attempt has been made to remedy this condition of affairs by the construction of a canal, which, however, has been abandoned or account of its defective plan.

The island of Sado, noted for its gold mines, is about 15 *ri* from the coast. Most of the junks in which the traffic between this island and Niigata is carried on, put into port at Teradomari, south of Niigata, to escape the dangers of the bar.

A detailed description of the island of Sado and of the works there, which are under the direction of Europeans, will shortly be given by recent explorers. Although Niigata is an open port it contains very few European residents (5 or 6 in 1874.) There is no doubt that the making of carriage roads from this point to Aidzu would contribute greatly to the extension of business.

From Niigata to Takeno-machi the road follows the shore, passing sometimes through sand, sometimes through paddy-fields or pine woods, and offering little worthy of note.

From Takeno-machi the road, diverging from the South, runs through rich paddy fields towards the East, skirting a bold ridge which projects into the sea, and the very steep declivity of which does not admit of an easy road by the shore. The sea is again struck to the West and South-west, the road traversing the remarkable pass called Saigatabatoye, from the summit of which a splendid view of the rich plains of Echigo in the back-ground can be enjoyed, while the Sea of Japan and the island of Sadow lie in the foreground. On emerging from this pass the little port of Teradomari may be seen, a fishing village about two kilometres in length and well situated. (It would make an agreeable watering place.) From Takano-machi to Teradomari the distance is 5 *ri*.

Leaving Teradomari there is no other road than the sea-shore, which is of fine sand with a gentle slope more agreeable to the bather than the pedestrian. According to circumstances the tourist can follow the coast on foot, or engage a small vessel to go southwards coasting along with a fair wind. Idzumozaki (4 *ri*) may thus be reached, a very large fishing village, 4 kilometres long, and of considerable commercial activity. There are some pleasant tea-houses near the shore, and the beach is very agreeable.

(To be Continued.)

KAJIYA.

What can it be? It's surely a Batrachian, a monster toad preparing for a spring? It can't be human? And yet on nearer approach a close inspection shews that the object in question *has* some claims to kinship with the human family, for it is after all but a sooty boy engaged in chopping charcoal. A sorry specimen in truth he is. An anthropoid, a mere semblance of a man, whose shrunken body, balanced upon a pair of great splay feet, and sunk between attenuated legs—the coarse square jointed knees of which are seen

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

above his head as he squats at work—seems out of all proportion to his monstrous growth of limb. His face is pinched and weazened-looking naturally, and none the less so for his close-cropped hair, and huge outstanding bat-like ears. A grotesque creature, a goblin youth. A thing to see o'nights in troubled dreams. An object of wonder, but most of all of pity. For, on his poor soot-grimed face, are plainly seen the tracks of tears. A scanty and a bitter washing truly. On that account the more discernible perhaps. Poor half-starved wretched creature, he's so overpowered with his misery that he has not eye or ear for aught around him, and even as he chops his charcoal up he sobs. The pitiless north-east wind blows none the milder because of his scant and tattered clothing, but yet it is surely as pitiful as the hard-featured pock-marked woman who has just now shuffled across the road to bestow a cuff upon his ear and call him *chikusho*. A cruel looking woman, bleared and smudged by disease, and so coarsened by want and hardship, that she has not pity enough left in her to induce her to stay her hand and remit the blow which, to say truth, for all the effect it has, might as well have been withheld. For what to him so miserable is a pain or ache the more or less? It but begets a high-pitched groan and a half-pronounced involuntary "*aita*." He's used to it, it's plain. His life seems but a dreary one, and his occupation hardly worthy of a human being's energies. He powders charcoal for the Blacksmith's fire. A greedy little make-believe of a fire which always wants replenishing, and trimming and blowing up, and yet for all the trouble bestowed upon it but a mean concern after all. But then the Forge itself is but a mean concern too, befitting the village in which it stands, and which is not much better. For it's old and out at elbows. A ramshackle, antiquated village, a drowsy place with thatch roofed houses moss encrusted, and here and there so weak about their lower regions that they must needs be propped and pillared up with poles, and slanting beams, which, stretching far into the roadway, trip up unwary passengers, and endanger carriers' loads, and careless packhorse leaders' legs. Small wonder if such a place has a sorry looking smithy and as sorry looking a smith. For a lean attenuated little pantaloon is he. A bony fellow, so smoke-stained and begrimed that it is hard to tell where his body garment ends and his flesh commences. He's always very busy and may be seen at work any day of the year, seated upon the earthern floor, before the charcoal fire aforesaid, above which niggard heap and suspended in full view, will be observed the family rice pot. Not as a spur to exertion, be it remarked, but designedly and of cunning aforethought to catch such stray rays of caloric as rising above such lowly occupation as the heating of an iron rod, would otherwise be lost. Would that they could reach the shivering child outside! But whilst the fire glows, what is the shivering child to the sturdy smith? Sturdy, forsooth? Save the mark! Well, if so strong and full bodied an adjective, is out of place, there are others well deserved and fit. Feebler designations, finnikin of words, requiring haply less of effort—chest expansion—for their use. Wiry little smith. Hard-working smith. Earnest, Aye, so hard-working and earnest that a helper would not come amiss. But he can't afford a helper, so his foot is pressed into his service, and whilst his hands are busy with the glowing metal he blows the bellows with his toes. Such manifold employment of his limbs produces a weird and puzzling effect upon a bystander. It confuses one to look at him. He's surely half a dozen persons jumbled up together. That leg of his, for instance, as it pulls the bellows piston slowly in and out at funeral time, but ill accords with hands which do their duties at quick step. Such a body, it is conceivable, would with difficulty be appropriately fitted with a head, and so it is in this instance. For a face more out of keeping with the remainder of the body is rarely seen. Broad and flat and expressionless, it seems to take no interest in the complicated operations going on below it, not a glimmer of intelligence seems to find its way through the great round brass-rimmed spectacles which hide a good third of his visage in addition to their special office of improving his eyesight. Yet that he has a modicum of brains is plain enough, for his work, though rough perhaps, is excellent, and the clink clink of his hammer, heard at times far into the night, would seem to shew that he's in request and never lacks employment. But let it not be supposed that his hammer's cheerful note is the only music heard about the ancient smithy. Far from it; for issuing from behind the paper doors which screen off the dwelling from the forge, the *Samisen's* lively twang and the sounds of children's voices, shrill and high pitched, may be daily heard, and when by reason of the summer heat the doors stand open, the arts and graces may be seen to dwell beneath one simple roof. Without, the worker in metal, sweat stained and labouring, whilst, within his wife, arrayed in silk, instructs in dancing and deportment. What quaint little pupils she enlightens. Wonderfully dressed, and perfumed too. Their chubby little faces so bepainted that they look like wooden dolls. Aye, and their heads so shaved and their hair so tied and teazed that nature could hardly recognize her handiwork. Nor are the motions of these puppets less unnatural than their persons. Arms akimbo—heel and toe and round about. Toe and heel and round about again they go, each little dancer raising now and then a wooden arm and laying it on its head, or slowly waving up and down a paper fan and keeping time the while with a piping recitation. A curious country surely where the little ones are made to look like dolls! Elsewhere the dolls are made to look like children. Well will be such saltations never so conventional, for all that the family pot requires filling, and so the dance must be kept up and the clang of the hammer must not intermit or else the wherewithal to boil it may be waiting.

YOKOHAMA GENERAL HOSPITAL.

The Annual General Meeting of the subscribers to the Institution was held yesterday afternoon at 3 o'clock p.m. in the rooms of the Chamber of Commerce. The Chair was taken by Sir Harry S. Parkes K. C. B. The meeting was very numerously attended by subscribers and by others interested in the welfare of the Institution. The minutes of the preceding Meeting having been read

Mr. A. J. Wilkin proceeded to read the following report of the Committee whose term of office had expired:

REPORT OF THE YOKOHAMA GENERAL HOSPITAL FOR THE TWENTY MONTHS ENDING 30TH NOVEMBER, 1874.

The Committee have to report that since the last Public Meeting was held, viz.: in June, 1873, the Hospital has held on its way quietly and steadily.

During the twenty months commencing 1st April, 1873, and ending 30th November, 1874, 204 patients have been treated during a total time of 6 784 days. This total is composed as follows:—

1st-class,	168 days	against for	preceding 15 months	216 days.
2nd „	919 „	„	511	„
3rd „	4,073 „	„	2,479	„
4th „	478 „	„	173	„
Charity,	1,086 „	„	1,592	„
Total	6,784 days.		4,971	days.

Thus while the aggregate varies little from that of the period preceding, the number of 1st-class patients shews a diminution, that of the 2nd and 3rd, a considerable increase: and it is satisfactory to observe, the number of those who have had to seek the assistance of the Hospital as charity patients, has again decreased.

The cash account is attached, and shews a balance in the hands of the Treasurer of $50.53, but with liabilities as shewn in dependencies of $1,548.09.

Remembering what the financial position of the Hospital was at the close of 1871, and also bearing in mind that the subscriptions for 1874 which amount to about $2,500 have yet to be collected, Your Committee think that this must be considered satisfactory. However they trust they may rely upon the friends of the Institution to meet the subscription list with their accustomed liberality.

An analysis of the accounts according to the method adopted by the Commission for 1871 shews that the "Variable Expenses" have been at the rate of 67½ cents per day; "Establishment Expenses" have been at the rate of $1.10 per day, together $1.77½; as against respectively $1.12 and $1.05,—together $2.17 for 1871. when, too, the number of patients was considerably larger than now. The rate for the period immediately preceding the present was $1.91 or 13½ cents in excess of the period under review.

This result has not been attained without a careful supervision of the Expenditure, and the Committee wish to cordially acknowledge that the Steward in charge has heartily seconded their endeavors to make the administration economical.

To Mr. Kirby, who for so long has acted as Honorary Secretary and Treasurer, the friends of the Hospital owe their best thanks, and now that Mr. Kirby's probable absence from Yokohama compels him to give up the post, the Committee trust that some one among them may be disposed to take his place.

Your Committee much regret to have to record the recent decease of Dr. Dalliston, who for more than 4 years filled the post of Surgeon to the Hospital.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

During the illness of the late Surgeon, and since his death, Staff-Surgeon Hilston, R. N. has kindly attended to the duties,—permission to do so being accorded by the Senior Naval officer.

It now devolves upon the General Meeting to elect a permanent successor. A wish has been expressed that the appointment should be divided between two medical men, and it is understood that a proposition to that effect will be brought before the meeting.

Owing to the illness of and death of Dr. Dalliston, the usual Surgeon's Report is wanting on this occasion, but the Statistics of Diagnosis and Nationality are attached hereto.

The Committee owe their acknowledgments to Signor Chiarini, who kindly gave in last October a "Benefit" on behalfof the funds:—the half proceeds of which about $600, formed an acceptable aid to the treasury.

A "Hospital Sunday" has been arranged for the 21st instant when collections will be made in the various places of worship, and Bishop Petitjean has besides, kindly volunteered to have a monthly collection.

It is hoped that by these means, many sums which otherwise from various causes, would not appear on the subscription lists, will thus be secured in aid of this deserving charity.

The epidemic of Small pox lately prevailing has made considerable demands upon the special accomodation which exists for patients attacked by this disease, but these demands have been as satisfactorily met as is possible under the circumstances. To maintain small pox huts, which are wanted only once in a term of years, however difficult-is not less a necessity.

In conclusion, although the health of the Settlement has continued upon a much improved scale-and it is matter of thankfulness that it is so, Your Committee would remind you nevertheless, that the sick and the sick poor will never cease from our midst, and that they claim our kindly consideration and our practical help and care.

Yokohama, February 3, 1875.

per W. COWDEROY,
30th November, 1874.

Mr. Cargill thought that the report they had just heard afforded unquestionable evidence of the prosperous condition of the Institution and the improvement which had been effected in its arrangements. The report referred to the necessity for the election of a new medical officer in the room of the late Dr. Dalliston, and this he presumed would furnish subject for discussion. In the meantime he would propose that the Report be received.

The motion was seconded by Mr. T. Wallace and carried unanimously.

The Chairman said that the next business before the meeting would be the election of a Hospital Surgeon. Opinions had been expressed that it would be desirable to have more than one medical officer and it would be well therefore to obtain the sense of the Meeting upon the subject generally.

Mr. Sichel thought it would be well that the meeting should first decide as to the eligibility of appointing more than one medical officer.

Mr. Piquet acquiesced in Mr. Sichel's proposition, and thought it desirable that the point should first be settled by the Committee.

Mr. Winstanley considered it highly necessary that the Meeting should be made acquainted with the views of the Committee upon this subject.

Mr. Sichel thought that it would be preferable that they should have two medical officers attached to the General Hospital. He would not be disposed to recommend that their appointment should rest with the present Meeting, but would rather propose that a Committee of seven, consisting of various nationalities, should at their leisure enquire into the question and investigate the merits of the several candidates for office. The election, if left to the Meeting, would probably be decided in favour of the most popular candidate, whereas a Committee could decide the election at its leisure. He would propose, therefore, "That two medical officers be appointed to the Hospital, but that the total payment to them be the same as has been hitherto made to one."

Mr. John Walsh seconded the motion.

The Chairman said that the next question before the Meeting was the mode of appointment of the Committee.

Mr. Wiggin thought that the election should rest with a Committee of seven, and that this Committee should be nominated by the Chairman.

Mr. Brower seconded the motion.

Mr. Howell said that so far as he could remember the Committee of 1871 had been appointed at the Public Meeting. The duty, he thought, would be best discharged by the present Meeting, and he would therefore, in this view, move as an amendment "That the present meeting do appoint a Committee, to consist of five members with whom should rest the selection of two medical gentlemen"

Mr. Rickett seconded the amendment.

Mr. Dickins thought that the number proposed by Mr. Howell's motion was practically too low. In order to have a wider representation of the various nationalities here it would be desirable to increase the number of members. He would recommend seven.

Mr. Mitchell seconded this amendment.

Mr. Geisenheimer was of opinion that the medical staff of the Hospital should represent two nationalities, and that one member should speak French as well as English. It must, of course, be understood that the officers so appointed should be under the control and direction of the General Committee and not of the Special Committee to which they would in this case owe their appointments. He would propose the following resolution, which appeared to him to embody those which preceded it, and which he thought fully met the necessities of the position. It was this:—

Be it proposed, that this General Meeting of subscribers appoints a special Committee of seven subscribers whose task it shall be to elect so soon as possible amongst the applicants for the vacant post of Surgeon of the Yokohama General Hospital in the room of late Dr. Dalliston two medical officers of different nationalities, one of whom at least should speak French as well as English and that such officers, when elected by this committee, shall be considered as duly appointed and shall notwithstanding their election by a special committee, be answerable to and under the control of the ordinary Committee of the Yokohama General Hospital.

Mr. Sichel seconded the motion.

Mr. Howell observed that the feeling of the Meeting was obviously in favour of a larger number on the Com-

Digitized by Google
Digitized by UNIVERSITY OF CALIFORNIA

mittee. He would therefore withdraw his amendment in favour of Mr. Geisenheimer's motion.

Mr. Wilkin presumed that it would be understood by the Meeting that two medical officers would not necessarily be simultaneously in attendance. The arrangement would most probably be this: Each attendant would take a period of duty of, say, one month, and would at its expiration continue to attend such cases as had been entered during his turn of duty until discharged as cured.

Mr. John Robertson suggested that if the Meeting were in possession of particulars as to the numbers of patients treated of the various nationalities, and the respective subscriptions received, it would largely assist them in arriving at a conclusion.

The Chairman said that this could not be very accurately determined as he had only the list of subscriptions before him and was unprovided with that of donations. But it would no doubt be found sufficient for the purpose. The subscriptions amounted to $2,400 and comprised $610 English ; $600 American ; $450 French ; $345 Swiss $265 German and $120 Dutch ; while of the cases treated 79 were English ; 25 American : 20 Asiatic ; 22 French ; 16 German aud 35 of other nationalities.

Mr. Vouillemont said that he felt satisfied a large increase in the number of patients might be expected if a French-speaking medical officer was appointed.

Mr. Geisenheimer's resolution was then put to the Meeting and carried unamimously.

A ballot was then taken with a view to the election of a Special Committee and the following gentlemen were found to be nominated:

Messrs. R. Robertson ; A. J. Wilkin ; T. Walsh ; H. Allen ; F. Geisenheimer, Vouillemont, H. Ohl.

The Chairman reminded the Meeting that it had still before it the appointment of a Committee to serve in the room of the Committee whose term of office had expired.

Mr. Cargill thought that the interests of the Hospital had so largely benefitted in the hands of the Committee now about to resign that they should, if possible, endeavour to secure their re-election, always supposing that they would be willing to serve again. It was necessary, however, to supply one vacancy by retirement and, he would propose that Mr. Piquet's name be added to the Committee roll.

Mr. Walsh seconded the motion.

Mr. Wilkin thought that in view of the occasional difficulties in procuring a quorum they would act more judiciously in enlarging the number of their Committee, and he would propose as an amendment that to the names already given those of Mess. Vouillemont, Harris, Ohl and Dickins should be added.

Mr. T. Walsh seconded this amendment which was carried unanimously.

The Chairman remarked that with an enlarged Committee he hoped there would be little difficulty in supplying the vacancy caused by the retirement of their late Honorary Treasurer, Mr. E. C. Kirby, to whose assiduity and excellent services to the Institution he paid a flattering tribute. He thought that the Report which had been laid before them afforded much cause for congratulation. The Institution was evidently in a satisfactory condition, extending and likely to extend its sphere of usefulness, and the numerous attendance that day evidenced the warm interest felt by the community in its welfare.

Mr. Wilkin said that all that remained was to propose a vote of thanks to the Chairman for his countenance on this occasion. He had been one of the earliest and warmest supporters of the institution, and his presence among them on that day evidenced the undiminished interest with which be watched its progress and success.

The Meeting then separated.

Correspondence.

THE HARBOUR SCHEME.

To the Editor of the "Japan Weekly Mail."

Yokohama, 6th February, 1875.

Sir,—It will be remembered that your correspondent A. in his letter of the 15th instant, announcing his intention of ending this discussion, considered "it would be supererogatory to offer a flat contradiction" to the facts I adduced in support of my argument that the proposed pier must prove an unremunerative work. However, he appears to have changed his mind referring to your leading article on the plea "that his silence might be misconstrued by some," he has traversed my arguments in a letter occupying nearly five columns of your last issue, but with what effect the following remarks will show.

In the first place your correspondent wishes it to be understood that his advocacy "of the harbour scheme in print is not direct, but was written for the purpose of combatting unmeanning antagonism, &c."

The unmeanning antagonism consisting in my doubting the necessity for such a work or that, it would prove remunerative and recommending caution before launching into a costly work of this description. But it can easily be imagined that to A. who shows such deep interest in the scheme, and is so intimately acquainted with its details and who has such confidence in it as to characterize it "complete and perfect" should look upon any one holding a less confident view than his as an antagonist.

If my mention of Mr. Brunton as the promoter of the project was calculated to cast any reflection, it would seem that A was hardly the party to resent it. I maintain I am perfectly justified from that has actually appeared in the Foreign and Japanese press, from common report, and from the correspondence I have seen from Mr. Brunton soliciting information on this subject since this discussion has been going on, in characterizing him as the promoter of the measure, and in doing so I have yet to learn that I am stating anything which Mr. Brunton resents. In fact I should think that to be engaged in the construction of Harbor works infinitely preferable to that of Light-houses, and especially must this be the case if he is or the same opinion as A with regard to the beneficial results of such a complete and perfect work and the vast benefit it is to prove to this country. To me it seems that to be associated as the promoter of a work under such circumstances would be worthy the ambition of the most renowned civil engineer.

Having entered into these explanations in reply to A's censures I will proceed to answers seriatim and show the fallacious arguments he uses in reply to my statements.

A. first proceeds he says "to set me right on a small matter" and remarks that the proposed scheme is understood to consist of a "*pier*" running into the Bay in such a manner that it can, at all times, be used as a "*wharf.*" He is again incorrect in this, it will thus form a quay (!) This is no mere quibble, as a wharf is generally understood to be a wooden structure on a river bank or the shore and often affords covered protection against the weather. The present plan is a "pier," as I understannd it, with quayage accommodation, in fact any covered protection under the circumstances would be liable to damage with every gale.

I quote A's second statement in its entirety as I must draw particular attention to the fact that he is precise, and although using compass measurements quotes to degrees not points, he says "Again the Yokohama anchorage is to all intents an open roadstead. There is a fetch from N.E. of over 20 miles and between this and 12 miles for nearly 180 degrees of the compass."

The following contradictions to this statement will be as well to note here. In the paragraph drawing a comparison with regard to the works at Marseilles he says "the pier is to be built in a sheltered Bay with no more depth of water than is necessary for vessels using it." Again, at the end of the last paragraph but two referring to the improbability of the estimate being exceeded "but there can be no reason for such a result in a sheltered arm of the sea such as Yokohama harbour and where there is no great depth of water. In the face of these manifest contradiction I now proceed to examine the facts and measurements A. adduces in proof of the exposed position of the anchorage. So that there should be no mistake I refer to the English Admiralty Chart No. 2687 of the Gulf of Yedo, from the surveys of Lieutenant Maury, U.S.N., Captain Sherard Osborn R.N.C.B., &c., published with corrections to December 1870.

A N. E. bearing from the English Hatoba cuts the Northern shore of the Bay a little to the eastward of Tsrumi-gawa at 3¾ miles from the Hatoba, but off this shore a mud flat partly dry at times extends into 6 feet

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

water for 1½ miles in the direction of the hatoba. So that from the English Hatoba to the shore of the Bay is only 3⅔ miles and to the edge of the mud flat is only a little over 2 miles, this is the N. E. bearing where your correspondent states there is a fetch of 20 miles of sea.

Again on reference to the chart the Northern shore will be found to continue round to a N. E. by E. bearing, off which point runs the Kawasaki spit partly dry at times into one fathom water at an E. N. E. bearing, just inside the Red buoy placed at the extremity of the spit. So that in reality the fetch of the Sea only commences at this point across a bight of a bay in no portion of which is not anchorage ground. Mandarin bluff forms the southern boundary of the Yokohama anchorage and it bear S.E. from the English hatoba, but at this bearing it cuts the French hatoba, therefore, to give A the full benefit, I take the centre of the anchorage where the large P. M. S. Steamers usually lie, from which position Mandarin bluff bears S. by E. ½ E. 1½ miles distant and on this bearing it is in one with Kanon-saki point. Therefore from the land at Mandarin bluff S. by E. ½ E. to the land at Kawasaki point N. E. by E. is 9½ points of the compan instead of 16, and 107 degrees instead of 180 degrees. To any one pretending to a knowledge of this subject an error of this kind must be inconceivable and more especially under the circumstances of this discussion and I leave your correspondent to justify such conduct.

It can hardly be true to talk of the Yedo or Shinagawa anchorage "being unsuitable for the feebleat traffic." The population of Yedo according to the lowest estimates is placed at 600,000 and in past times has been much larger.

It is unnecessary to repeat my opinion that until communications with the interior of the country are far more developed than at present, that Yedo in spite of the Pier will mon opolize the Coust trade. The facilities for landing and shipping cargo at Yedo or Yokohama are capable of improvement, and at a very moderate outlay. It is also unnecessary to repeat my opinions as to why the coast steamers will be unable to make use of the pier nor do A.'s arguments meet the question. He rambles about it acting as a feeder, a feeder to what? To a short section of a line of railway running to a position away from the commercial quarter of the capital when the goods can be carried to their destination by water without paying any extra charge. If the country had canal or road communications into the interior than the pier might possibly be of some use, but merely to act as a feeder to a short section of railway running to the same destination to which the goods are in course of transit by water appears to my mind preposterous. Every traveller in the interior calls attention to the great necessity for roads and Captain Descharmes, in his paper read before the Asiatic Society strongly expresses his opinion of this important necessity, the pier when these communications are carried out has something to feed, in the mean time itself will starve. A. next proceeds to show that harbours have their own natural peculiarities, and then lays down an arbitrary rule that "In judging of the necessity for any artificial improvement to a harbour, therefore, it is most misleading to compare it with other places, &c. He apparently has forgotten that in his previous letters he has himself shown a somewhat remarkable disregard to this incomprehensible axiom, it will be wondered how it is possible to judge of any work unless comparison is made in degree with similar works. It may be worth while to show in A's letter what little attempt he has paid to his own axiom. In his letter of the 22nd December he writes "A harbour such as that of Yokohama is like a Railway line without stations, &c.

In the same letter—"With the exception of some of the China Ports there is hardly an instance in the world where so large a tonnage is landed and shipped as at Yokohama included in A that some kind of wharfage is not provided" It will be remarked that A. offered no proof for this assertion, whereas I specially mentioned many of the principal shipping ports of the East which I challenge A. to disprove!

Again in letter of same date A. remarks—"The annual tonnage visiting Yokohama exceeds that visiting Southampton and the character of the trade at both places is similar."

And lastly in his letter of 15th January. He inquired. "If he may not be allowed to ask whether no distinction is to be made between a wooden wharf on a river bank and a concrete pier in an open roadstead." Are the dues to bear no relation to the dues charged in other parts of the world where similar facilities are offered and where one dollar to one Shilling per ton is the usual rate.

I will ask if these are not comparisons with other places, and if it is not really too absurd for your correspondent after having indulged the length he has in comparisons to have the audacity to turn round and object to my comparing the traffic and works at different places.

With regard to Bombay your correspondent is palpably in the dark. In my previous letter I have shown the period when private enterprise turned its attention towards providing suitable wharves, &c., and the following Companies have been in existence for some years viz: The Colaba Land Company Limited, with a capital of £3,200,000, Frere Land & Pier Company Limited capital £120,000, Mazagong Land Company, capital £150,000. He also has no ground for asserting that "the peculiar formation of the harbour of Bombay renders the construction of wharves of such expense and difficulty, &c.," far from this being the case, by the late Indian papers Captain Bythesea, R.N., V.C., the special agent of the Home Government has expressed himself in favour of the extention of the wharf accommodation instead of docks, &c.

At Calcutta likewise wharfage has been provided to meet the requirements of the port by private enterprise.

Your correspondent states that I draw a comparison between Yokohama and Shanghai to the effect "that because the Chinese have not thought of erecting wharfs at Shanghai this is the reason for the Japanese not doing so here" I am not aware of having drawn such a comparison, and must leave A. to point this out.

With regard to Marseilles the Breakwater forming the sea wall of the Docks "Imperial, Napolean, D'arenc Du Lazaret, De la Joilette is not built in 60 feet but in 5 to 6 fms. water or from 30 to 36 feet. And it was unprofitable as far back as the year 1865 when the tonnage by the port was estimated at three million tons and it was then enjoying all the advantages of the P. & O. Overland traffic.

With regard to Southampton your correspondent himself made the comparison and I showed its fallacy. I maintain my position that Harbour works, &c., as a rule in England except in few instances where by act of Parliament harbours of refuge (which are necessarily national undertakings authorized by the state out of considerations of humanity as well as security against attack) are invariably carried out by private funds under Municipal control. The principal harbours of refuge in England sanctioned by the State are those of Dover, Portland and Holy head and sums for their construction were included in the annual budget of the Chancellor of the Exchequer and subject to a vote of Parliament.

I therefore appeal to your correspondent to substantiate his stutement that "in England trading harborus, docks, river improvements, quays &c., are chiefly carried out by Government funds under the Contracts of the loan commissioners."

Who has ever heart of such a Board, how is it constituted, who compose it, what are their duties and where is its habitat (?) until proof is offered on these points I must ask your readers to receive this statement with caution. I conclude this very responsible Board with their onerous duties must he under somebodys control and must get the money to loan from somewhere, but I have failed to find any sums voted to any such body in the Partiamentary estimates I have been able to refer to.

I have heard of the Thames Conservancy in London, the Liverpool and Birkenhead Dock boards in the Mersey, The Clyde trust, the Dundee harbor trust, the Swansea Dock boards &c., &c., but I have get to learn of any such unique Board being in existence with the responsible powers your Correspondent awards them.

The continental governments doubtless carry out the Harbour works with national funds, these are necessary for the national security and are usually protected by formidable fortifications.

Japan is an insular power and the belt of sea which surrounds her is like England her security against attack.

The assertion of your Correspondent that the Govern-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ment of India is making inquiries preparatory to extensive harbour improvements is not justified by fact.

On the abolition of the Indian navy some ten years since the Indian station was formed by a squadron of Royal Navy vessels under the command of a Commodore, and it was subsequently raised to an Admirals command. Of late the attention of England has been directed to her Asiatic possessions, and especially to what is taking place in Central Asia almost on her Indian frontier.

The question of the reconstruction of a new Indian navy has been raised and the Home Government have deputed Captain Bythesea, R.N., V.C. to report on Marine matters generally, he is now in India engaged on this task and naturally whatever bears strategically on the subject will be included in his report and doubtless the Harbour accommodation of India will be a portion of it, but your Correspondent can hardly be justified himself in assuming and leading your readers to believe that the Government themselves contemplate extensive Harbour works. Your Correspondent is again widely out with regard to the Shinagawa anchorage and states it is open from N.E. to S.W. or 16 points of the compass. Instead of which from the centre of the Yedo anchorage in 4½ fathoms water the *land* of Kawasaki spit bears S. by W. ½ W. 3 miles distant and the spit running off into one fathom which really acts as a breakwater bears South, and the *land* to the Northward of Tonegawa point distant 5 miles bears E. by N. ¾ N. or from land to land the Shinagawa anchorage is only open to 11¼ points of the compass instead of 16, and virtually only open to the fetch of sea for about 8 points of the compass. I have already clearly shown that sailing vessels if they meet with any un-necessary delay in discharging at this Port, is their own fault, as by virtue of the Bills of Lading they hold the power in their own hands, and can compel consignees to take their cargo when they are prepared to deliver it, they also have the power as I have said before to land such cargo as delays them. It is therefore idle for your correspondent to assert that these vessels "are the class of vessel which are the sufferers by the present state of matters" and that shipowners have refused to allow their "large and valuable vessels" to come here in consequence of the delay.

Is Yokohama the only port in the world favored with the "large and valuable vessels" he describes, and does your correspondent really believe with the evidence before him of the captain of vessels holding the remedy in their own hands, that it is for this reason that shipowners have refused to allow their vessels to come to this port, and if such is the case, if the trade of this place has been injured by this action, are the goods still lying in the worehouses of Europe or did the owners of the goods find other shipowners gifted with more common sense and comprehension as to the nature of a Bill of Lading to bring on their goods (?)

A. now comes to the question of the Foreign mail steamer companies and at last has doubts that they will use the Pier. If report is to be believed the P. & O. Company, P. M. S. S. Company and Messageries have all replied unfavorably to Mr. Bruntons letter and the latter company already have a steam lighter coming out to meet the requirements of their traffic.

A. concludes this paragraph of his letter by remarking on the shallowness of my argument, that it was indespensible for sailing vessels after a long voyoge to have time to refit and recruit in harbour, as he states that "he should imagine that it would be necessary to get the cargo out first and refit afterwards." This is entirely in keeping in my idea wite the hasty conclusions Ahas arrived at throughout the discussion of this subject.

In the first place it is quite unnecessary for vessels to take any such time to discharge here if the vessels interests are properly cared for. In the next place the first duty of an officer who knows his work is on arrival in harbor to see his ship secure and straight both below and aloft. According to A., the ship should be allowed to remain at the risk of ship and cargo for a lengthered period while the cargo is being discharged. This is certainly a "fresh water sailors" view of a seamans duty and I must be allowed to express a hope if A. has anything to do with the proposed Harbor works that he possesses a more rudimentary knowledge of Harbor engineering than he has shown himself to possess of either seamanship or simple chart measurements.

A's view of a seaman duty may probably account for the instance he gives of a vessel having her boats washed away from her davits while at anchor in the harbor, the captain was probably carrying out these amateaur nautical ideas of your correspondent and had omitted to see to the proper securing of the boats or the trim of his ship.

But so great is A's infatuation with the scheme that with evidence before him that three fourths of the Foreign tonnage visiting Yokohama will not use the Pier, he consoles himself with the idea that they soon will do so, and proceeds to draw on his imagination and states "eventually there can be no question that they will use the wharf." He draws a pretty picture of coal hulks given up and depots moved to positions contignous to the railway, &c. But I cannot follow A in this "flight of fancy" but will give a few more practical reasons for thinking the contrary. In the first place taking the P. M. S. S. Co. which represents nearly half (and more than half if the coal ships that bring her supplies are calculated) the Foreign shipping entering this port what would this Company gain by using the Pier, increased facilities as A states, no, they already possess ample facilities for their traffic and can turn over at least 4,000 tons of cargo in 3 days.

Their vessels are able to load and discharge at the same time on *both* sides of the vessels at different places, at the Pier they will only be able to do this on one side and I fail to see increased facility given in this. Again the P. M. S. S. are fully alive to the necessity of quick despatch and as they have often to both load and discharge cargo at the same time, they take considerable risk on themselves but to reduce this risk to a minimum they load and discharge from covered lighters in charge of trustworthy persons. How would loading and discharging from an exposed quay facilitate this work and who would be responsible for the safety and protection of the goods? with all the necessary confusion incident on the loading and discharging of one out of many vessels which we are asked to believe would be lying alongside the Pier at the same time.

In addition to this, vessels lying alongside the proposed Pier would be liable to damage and strain with every gale, as they would be secured broadside to quarters from which the most violent winds blow; and in going alongside or in casting off from the proposed pier much time and delay must naturally arise if the vessel is to be properly secured.

But the most convincing proof to my mind of the unremunerative chance the Pier will have is that directly it is built the shipping will naturally all crowd up above it and enjoy all the advantages of lying at anchor in smooth, water without having to pay for them. Is it to be expected that the cargo boat interest will give up all idea of competition. Vessels cannot be forced to use the Pier and if any arbitary measures were adopted by the authorities against the native cargo boat owners, will that prevent foreign private enterprise from competing with the Pier, if there is a fair chance of profit. Therefore the Pier will supply the cargo boat interests with means of competition ruinous to itself.

I cannot see how Foreign vessels can be prevented from using that part of the Bay to the northward of the Pier when constructed. The upper portion of the Bay will become as crowded as was the case with the English hatoba when the steamers were running to Yedo. And those unfortunate vessels who are caught alongside the Pier broadside to a typhoon and who are compelled to haul off will find a difficulty in doing so from the danger of fouling vessels at anchor in the confined space above it.

The Japanese Government may have been led to believe that by carrying out these Harbour works they may be able to get an equitable scale of Harbour dues allowed at the Revision of the Treaties, but they may rest assured that independently of this they are entitled to demand a revision of these dues and place themselves on an equality with other nations.

In giving my estimate of ten cents per ton I certainly gave evidence upon what I based this estimate viz: the *present* cargo boat tariff and I further gave the Hongkong tariff in contradiction to A's assertion that Yokohama was singular in respect to the dificiency of wharfage facili-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ties. The rates of freight ruling must naturally form the basis in a calculation of what special charges a vessel can afford to pay out of her earings, but A is too dense to recognize this fact.

The special advantages referred to in my letter were those which an export trade, or high freights ruling at neighbouring ports would offer to a vessel to use expedition in her discharge; these were the inducements I alluded, to which would make it worth a vessel's, while paying wharfage dues, &c. But without understanding what advantages were referred to. A., at once assumes that his scheme is to be the "panacea for all evils" and states "that these advantages are just what his scheme proposes to supply." The Export and Import trade is $35,000,000 is it possible that A. can believe that his wonderful scheme can increase this trade irrespective of the requirements of the country ?

The opinion I gave to the effect that the proposed Pier would probably cost nearer $2,000,000 than $1,000,000 was based on the following grounds. But first it must be observed that I did not assert it as a fact that the Pier would cost $2,000,000 and therefore the misrepresentation lies with A. in this instance as well as in his first letter where he states I called Yokohama "the best natural harbour in the world, my statement being *one* of the best, a slight difference to one who lays claim to such accuracy of discernment as to be able to distinguish when a thing is not only "complete" but "perfect."

In forming the opinion on the probable cost I was guided by the discussion of the question of Harbour works conducted in the Institute of Civil Engineers of England in which the celebrated Engineer G. P. Bidder, V. President of the Institute calls attention to thefact of the estimates of these works being invariably exceeded, and he refers to Dover the original estimate of which was £2,500,000 now increased to £5,000,000 and which Mr. Bidder states will take a hundred years to complete and will cost England £40,000,000 ; also that the original estimate for Portland was £500,000 and will be £1,500,000, and the original estimate for Holy head was £600,000 and in 1858 £932,000 had already been expended—I also had in mind the remarks of Lord Salisbury (Chief Secretary of State for India) who called attention to this subject a few months since at the examination of the Students of the Engineering College. These are the grounds upon which I founded my opinion and taking these into consideration together with Mr. Brunton's reported elastic estimate of "over" a million or "above" a million and also A.'s proclivities to exaggerate calculations against himself I am yet to be convinced I am far wrong.

One word with reference to to the proposed plan.

It appears very doubtful if the position selected is a good one, as it would seem inevitable that a Pier running nearly across the head of this Bay will soon silt up by the enormous deposits of soil brought down by the streams which drain the extensive valleys running into the head of the Bay. The admirable qualities of the holding ground all over the Bay is due to this cause.

The proposal to build the Pier of Concrete is open to the grave objection that no evidence has been given that the Japan lime possesses the all important and necessary hydraulic properties for a work of this description.

The proceedings of the Institute of Civil Engineers draws attention to the paramount necessity to the most careful investigation of this matter before undertaking works of this kind, and illustrates the example of Algiers, Greenwich pier, Woolwich river wall, St. Leonards sea wall and Walton on the Naze Essex which apparently had secumbed to the attacks of the sea. The following is the result of the investigations extending over several years of Mr. Feburier quoted by the Institute "That only eminently hydraulic limes ought to be employed in the composition of mortars exposed to the action of the sea."

In conclusion A. inquires if I imagine the results arising from the execution of this work "is to be felt no further than Yokohama and its suburbs." Infatuated A! Mecca and Kerbela have their attraction for the followers of Mahomed, and A. apparently expects equal devotion to be exhibited far and wide for his beneficient work.

He possibly pictures Mr. Holt or equally celebrated shipowners flocking here in their "large and valuable" vessels attracted by this "complete and perfect" work which is to prove of such in estimable benefit to Japan. But I cannot follow him in this "flight of fancy" and therefore take leave of him until he is more practical in his views and more accurate in his assertions.

Yours truly,

X. Y. Z.

THE PACIFIC MAIL COMPANY.

To the Editor of the "Japan Weekly Mail."

Sir.—I regret to see that occasion has been taken of the delay in the arrival of the *Great Republic* to indulge in an unworthy jeer at the expense of a Company to whom this community are indebted for an efficient line of well appointed, well managed mail and passenger steamers which has been running for the last nine years.

The steamers composing this Company's fleet were models of comfort and excellence a few years back, and to maintain the efficiency of their service the Company appears to have turned its attention to meet the improvements of the age, directly they were enabled to overcome the obstacles to the construction of iron steamers in America.

In England we have too long continued a bad principle of sacrificing breadth for length as necessary for a high rate of speed, but in America they have succeeded in combining breadth with speed and obtaining naturally a more buoyant and safer description of vessel. This principle is exemplified in the new P. M. S. steamers, and just as England in the past followed American models for her clippers, so sooner or later she will follow America and adopt her principle of marine architecture.

What the Public looks to is safety to life, and if we look fairly to what the P. M. S. Company has done in this respect, and remember the peculiarities of their native passenger trade, they have established a claim to public confidence. The steamers are commanded by popular and efficient officers, and the company has been a liberal one ; and I cannot but feel that we shall have cause for sincere regret should any misfortune overtake it.

I am, Sir,

Your obedient servant,

AN ENGLISHMAN.

"JAPANESE NOTES."

To the Editor of the "Japan Weekly Mail."

Yokohama, 6th February, 1875.

Sir,—"Ongaku" asks for fuller information on certain points.

The Notes now appearing are merely transcripts of Odds and Ends, collected during the last few years, and are given to the public as being more suggestive than exhaustive.

Your correspondent is certainly right in attributing "great ignorance" to the great body of your readers and of other residents, as to the real life of the Japanese common people. Home life, such as we appreciate, is a thing unknown in this land, but the *music* (save the mark!) of the *geysha*, and of the professional music teacher are widely different. Your correspondent's last paragraph is inapplicable to the native of the past and present. Let us hope the future has better things in store for (literally) the "better half" of the natives; ignorant though they be, and low as is their social status, they are still superior to the male native in goodness of heart and all that man should look for in man.

Before our "Budget" is exhausted your readers will have before them more that bears on these subjects.

I am, Sir,

Your obedient Servant,

DZUIE-SHITZU.

THE SWAN.

(From the Japanese.)

All in a soft and silent dream
A bright bird, on a dimpling stream,
  Floated through sheen and shade:
The blue wave from her snowy breast
Fell swiftly, though, with wings at rest,
  She scarce an effort made.

To me she seemed to glide along
As easily as childhood's song
  When summer skies are fair,
For who could see the busy feet
That 'neath the flowing waters beat
  With endless toil and care?

Somehow I mused on lofty life
That showed no trace of storm or strife,
  But swept serenely on,
Harmonious as the laws that guide
The throbbing star, the swelling tide,
  While sunlight round it shone.

But none can tell the anxious thought
By which *that* stately course was wrought
  Between its banks of flowers,
The sleepless watch, the secret pain
That almost left the spirit slain,
  The weary working hours.

KAJIN.

Law Report.

IN H. B. M.'s BANKRUPTCY COURT.

Before RUSSELL ROBERTSON, Esq.

February 2nd, 1875.

HONGKONG AND SHANGHAI BANKING CORPORATION *vs.* E. WALLACE.

The plaintiffs in this case claimed $8,700 a balance of account The case had been heard in January, but the hearing was postponed for the defendant's convenience.

The defendant to the suit admitted the correctness of the major portion of the items constituting the account, taking exception to three of these only, viz.: a draft drawn by him upon Rivington. Hongkong, for $1,980 on the 14th September, 1868; another, for $2,475 on the 30th November, and a draft of $2,856 upon Mr. Sands. He admitted having drawn these bills which were dishonoured on presentation, but claimed exemption from liability for repayment upon the grounds that the Bank had not protested them in the usual manner upon the failure of the drawee to accept them. It would seem that the manager of the Hongkong and Shanghai Bank at Hongkong had taken a legal opinion as to the necessity for protesting the bills, but having in view Rivington's circumstances he was advised that it would not be requisite to incur the expense of doing so. They were, instead, returned to Yokohama and the failure of the drawee to accept was notified to the defendant and the bills placed to his debit. The amounts were posted up in his pass-book and interest charged upon them in the usual manner. On behalf of the Bank Mr J. G. Hodgson, the accountant, stated that a sum of $8,719 was the correct balance standing to the defendants debit. Letters were read bearing upon the subject of the dishonoured bills: one dated 7th October 1869 from the defendant to Mr Jackson, at that time Acting-Manager of the Yokohama Branch of the Bank, apprising him of his intention to sell a parcel of silver *bus* (though at a disadvantage) with the view of reducing his debt, and adding in a postscriptum that Rivington had not paid him anything on account of the dishonoured bills. Another letter from Hongkong dated 9th January 1869 explained the reasons for the non-protestation of the bills. Other letters dated respectively 29th January and March 19th referred to hopes that the defendant was acting in the matter and explained that it would have been useless to prevent Rivington from leaving the colony as he was "cleared out." Other letters, dated June and October, 1869, urged upon defendant the necessity for doing something to diminish his debt, and further correspondence passed having reference to the unpaid draft on Mr. Sands, of Hongkong, amounting to $2,850 which the latter had not honoured, paying the amount to Messrs. Wa Hee, Smith & Co, to whom defendant was indebted. Mr. Grigor, Manager of the Yokohama branch between the years 1867 and 1871 had some recollection of defendant's having objected to the accounts, and from a perusal of the correspondence appeared to think that [illegible] to his liability existed in his mind. Had the claim been indisputable he assuredly would not, be said, have allowed it to rest so long in abeyance but would certainly have been slow to use pressure in a case where the bills had not been protested. Mr. Hodgson on being recalled stated that no account had been rendered to the defendant from the 9th October, 1869 to the 5th December, 1874, but that he could not remember if the amount of Sands' dishonoured bill $2,850 was comprised in it. It was not unusual to leave a dishonorod bill in abeyance for 13months; its being debited would depend on circumstances. The defendant's account with accruing interest had been made up in the Bank's books from year to year and it was with the view of obliging him that 13 months were permitted to elapse before it was debited to it. The witness added that it was not usual to charge interest on bad debts.

Friday, February 5th, 1875.

Mr. J. G. Hodgson, cross-examined by Mr. Ness: I decline to tell you whether I should enter the amount of interest on what are deemed bad and doubtful debts in the half-yearly accounts of the Bank.

Mr. Ness insisted upon a reply.

His Honour thought that an answer should be given.

Mr. Hodgson: We charge interest upon all debts, but when a debt is considered bad or doubtful it is not included in the half-yearly account. A special account is kept for and interest therein charged on bad and doubtful debts. The interest was passed in a lump sum, but not previous to that date. We pressed for payment of the two unpaid bills on the 2nd October, 1869. It was arranged to place certain charges on arms due by the Bank to Mr. Wallace's credit. The balance was $4,317.30 on the 31st December, 1870, including Mr. Sand's draft, but [not including interest: including interest it would be $5,300. We expected the charges referred to would go far to reduce this amount. Mr. Wallace did not refuse to deliver the last parcel of arms until the charges were paid so far as I can remember.

Mr. Wallace proposed that a sum of $2,000 should be handed to him and that the balance only should be required to go to the credit of his account. (A letter, dated 5th December 1874, from Mr. Cope to Mr. Wallace was here read, threatening legal proceedings). These proceedings were instituted subsequently to the refusal to deliver these goods. I cannot say whether it was a few days before or after first hearing that I began to look up correspondence. I cannot trace the correspondence of the 5th and 7th February with Mr. Grigor. I have obtained no trace of these letters whatever. I cannot say if the Bank has received them. I was present at an interview on the 1st January 1871 between Messrs. Jackson and Wallace: I believe it was then understood that certain charges should be placed to his credit. I heard a portion of the conversation which took place in the general office. Mr. Jackson instructed me to debit Mr. Wallace's account with Ma. Sand's bill and to credit him with the charges as per memo., Mr. Wallace said nothing on this occasion. I did not hear what took place in the private office. My impression was that Mr. Wallace acquiesced in the propriety of his being debited with the account of Mr. Sand's draft. Mr. Wallace has not to my knowledge denied his liability on those bills. I don't remember if he objected to his account being debited. I don't know if he objected to the Manager. I do not know if he made any unofficial objections.

To Mr Dickins.—During these four or five years no pressure was put upon Mr Wallace solely with a view to his own convenience. The object was to allow Mr Wallace time to diminish his balance by reason of future profits. In case of non-payment we give notice of dishonour. It is the practice of Banks to pass due bills to a special account in which they are dealt with. We looked upon the debt as valid, though doubtful as to whether we should secure payment of it. Mr Wallace has never given notice to the Bank of its being indebted to him. Exclusive of the two bills of Rivingtons there would have been a debit balance of $63 in October 1869. On the 4th November there would have been $300 to his credit on this supposition. Mr Wallace made no demand for this sum. (Correspondence between Mr Wallace and the Manager of the Bank was here read and a reply to a letter read in witness' cross examination dated December 5th in which he proposed that a sum of $2,000 of the charges upon the needle-guns should be paid to him and the balance placed to his credit.) The total charges from date of storage would be $3,588.98: of this $2,746.32 had been placed to his credit on the 31st December 1870. In addition to this a sum of $271.80 was placed to Mr. Wallace's credit. The entries on either side of a pass book are looked upon as binding. Mr. Wallace has not to my knowledge objected to any of the entries. Any official objection

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

would, in the ordinary course of business have, reached my ears. I have in my official capacity of accountant verbally asked him to send in his book.

Edward Wallace, examined by Mr. Ness:—I am a Commission Agent. I have read the account current of the Bank. It is incorrect. I dispute the items dated 5th April, 1869, $1,980; 24th June, 1869, $2,000; 31st December, 1869, $2,850. I sold a draft on Rivington, Hongkong, to the Hongkong and Shanghai Bank for $2,500. on the 30th November, and on 14th December one for $2,000. Both are entered in my book. I have never seen a protest of them. I have had a notice from the drawee in Hongkong, in reference to them, dated the 17th January, 1869. One of the drafts was presented to me in January, 1869, by Mr. Gibson of the Hongkong Bank. I refused to pay it as it was not protested. I made a memorandum at the time that I refused payment. It corroborates my statement. I can produce it if necessary. Mr. Grigor wrote to me on the 8th February, 1869, asking my reasons for the non-payment of the bill. I had seen him in the interval. I refused payment to him on account of the indulgence allowed to the drawee in the case of Mr. Rivington and also on the ground of non-protest. I sent a reply to Mr. Grigor's letter on the 9th February (Press copy produced). I subsequently, on the 11th February, received another letter from Mr. Grigor informing me that the second draft had not been paid. To this I replied to the same effect as to the other. Both letters were sent by me and received by Mr. Grigor. I produce his signature in the chit-book. I received no reply to my last letter. I cannot remember having heard from Mr. Grigor on the subject of those drafts; I received no subsequent application for payment from him. I cannot remember having received a letter of 25th June 1869 asking for payment on account of my alleged balance of $10,000. I cannot remember having sent any reply. I cannot recollect having received a pass-book. Rivington's two drafts appear here, as a debit against me. I made objections to this at the time. I swear I made marks at the time to indicate my objections. In October 1869 Mr. Jackson wrote to me upon the subject of my balance. In explanation of the letter in which I state that I had not yet received any payment from Mr. Rivington on account of the bills, I wish to say that Mr. Jackson showed me a letter from the Hongkong Manager in which reference was made to the possibility of my obtaining something from Mr Rivington's relations in London. The postscriptum was added in consequence of a remark made to me by Mr Jackson. I proposed in my letter to sell certain *bus*. They were worth from $5,000 to $6,000. My charges on James' arms at the time of my writing the letter were $200 or $300—making in all some $6,200. My pass-book shows $11,100 debit in October 1869. The payment of $6,200 would, I consider, clear off the *correct* balance due by me to the Bank, as I did not acknowledge my liability on account of Rivington's drafts which were included in it. I never made any payment on account of Rivington's bills. I have had no application made to me until December last for the amount of Rivington's unpaid drafts, so far as I can remember. I did not consent to Mr Cresser's giving any indulgence to Mr Rivington.

The Court at this point adjoinned until Wednesday, the 11th inst. at 10 A.M.

H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., *Assistant Judge.*

E. S. BENSON *vs.* A. JAFFRAY.

February 4, 1875.

In this case plaintiff brought an action to obtain an order from the Court that certain Japanese, occupying premises on lot 123 for the purpose of trade, should be ejected.

Plaintiff's petition is as follows:—

1st.—That he is the owner of lot numbered 123, in the foreign settlement of Yokohama.

2nd.—That on the 18th day of May, 1872, he leased the whole of said lot to defendant for the term of five years, and that defendant is now in possession of said lot under said lease.

3rd.—That after the date of said lease, and before the month of May, 1873, certain small tenements were erected on a portion of said lot by defendant, and occupied by Japanese subjects, who were carrying on business and trading.

4th.—That at the present time there are three small tenements on said lot occupied by Japanese, who have in store and offer for sale a variety of European and Japanese goods.

5th.—That by the conditions of the Certificate of Title issued by the Japanese Government for this lot, no Japanese subject can legally enter into possession of any land or tenement in the foreign quarter; and that a violation of this condition renders the Title Deed null and void, and the buildings on the land become the property of the Japanese Government.

6th.—That in the month of May, 1873, the plaintiff addressed three letters to defendant, notifying him that the occupation of a portion of said lot by Japanese was contrary to the rules and regulations under which it was granted, and that a clause in the lease to defendant prohibited him from sub-letting the whole or any portion of the lot without the written consent of the plaintiff, and plaintiff requested defendant to cause the Japanese to vacate the premises.

That subsequently, namely, on the 25th day of November, 1874, the plaintiff again addressed defendant a letter, requesting him to have the Japanese removed.

7th.—That by the terms of the lease the defendant cannot sub-let without the plaintiff's written consent. Plaintiff has never given such consent.

8th.—The plaintiff, therefore, represents that his title to the land is in danger; that one of the clauses in defendant's lease has been violated; and plaintiff, therefore, prays that the defendant may be ordered to remove the Japanese traders from said lot, and prohibited from permitting any similar business being carried on in future on any portion of the property.

Defendant's answer was to the effect that the houses were his, and that the Japanese living in them were paid as employés for selling his goods.

His honour said he could only consider if any damages had been sustained by plaintiff. He claimed none. In this case a piece of land was let by plaintiff to defendant, and defendant was not obliged to know anything about the terms of plaintiff's title deed, nor bother himself about it. Defendant was entitled to use the land as benefitted him most, provided he did so fairly according to the terms of his lease. If plaintiff suffered damage through defendant's proceedings, provided he had failed to keep within the terms of his lease, he could bring an action for damages. But certainly a man had the right to use his property to his best advantage.

Plaintiff said he had brought the case because the Japanese authorities had complained; and the letting of tenements to Japanese subjects in the Foreign Settlement was in direct contravention of his title deed, and might render it null and void, and then the land on the lot, together with the buildings on it, would revert to the Japanese Government. [Paragraph to this effect read.] He therefore prayed that his Honour would grant him relief by ordering defendant to eject the Japanese holding shops for the purpose of trading.

His Honour said he had nothing to do in the present case with regard to what might be the terms of the plaintiff's title deed. He (plaintiff) ought to have inserted a clause in his lease preventing defendant from sub-letting any portion of the land or premises on No. 123.

The lease was produced and handed into Court. It was not disputed by the defendant.

Defendant stated that before he leased the premises a Frenchman had erected a tenement and let it to a jinrikisha man.—*Japan Herald.*

Plaintiff then asked what relief he would be entitled to if defendant's proceedings rendered his title deed null and void?

His Honor said he would he could not see that plaintiff would be entitled to any. He ought to have protected his title in the lease he had made with defendant.

Plaintiff stated he would like to call a police sergeant who was in Court. He said this officer had been instructed towards the end of last year to make inquiries amongst the Japanese who held shops in the Foreign Settlement as to their names, the nature of their business, and to whom they paid their rents. This officer had drawn up a report, and it stated in it that two Japanese who held shops on defendant's premises paid rent to him monthly.

His Honor, as the men who held these shops were in Court, decided to hear their statements direct. He would, however, hear the evidence of the police surgeant.

Sakakibara, cautioned, said in November last year he was directed to make enquiries as to whether Japanese were doing business in the Foreign Settlement. He did so, and found that on lot 123 there were three Japanese shops in which various goods were sold. One shop sold foreign wines and liquors, another Japanese dry goods, and the third second-hand articles of various kinds.

To his Honour: They are Japanese stores.

The three men who held the shops were in Court, and after considerable discussion, his Honour decided that plaintiff had the right to first examine.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

employed as a servant at No. 123, in the Settlement. His duties were connected with a furniture shop at No. 123.

To his Honour: He did not pay any rent. He received wages for his services. He never told any person he paid rent. A man named Peter Claussen paid rent.

Sakakibara, recalled: In reply to His Honour, he said last year he met three Japanese men, one of whom was the present witness, and he spoke to them. He recognised two of the men now in Court—Moske and Genkitchi. Moske told him he paid $5 a month rent.

This answer was interpreted to Moske and he then said that he told Sakakibara (the sergeant) at that time that he (Moske) was employed by a foreigner named Peter Claussen, and that the foreigner paid rent. He was not at that time in defendant's employment.

Sakakibara to His Honour: The first time he went to Moske's he said he was a servant and paid no rent. On hearing this he went and asked the other man, Genkitchi, and he admitted he paid $5 a month. On hearing this he again went to Moske and taxed him with it, and after some pressing Moske replied that he and Genkitchi both paid rent to defendant for the shops. The third man told him he was employed by defendant to sell the goods that were in the third shop, and that he received a salary for so doing, as well as a share in the yearly profits.

Sakakibara was then asked to look at the three men in Court, and he utterly failed to identify the third man.

His Honour asked plaintiff if he desired to call another witness.

Plaintiff said he would call Genkitchi (the 2nd man). He did not wish to recede from the case.

Nakagawa Genkitchi, cautioned: He sold articles de Paris, and confectionery. He carried on that business on lot 123. Defendant at the present time owns the goods. On the 11th month last year a Frenchman owned them.

Defendant to Court: This witness, may it please your Honour, was either a lessee or servant of that Frenchman he speaks of, who occupied that part of lot 123 at that time.

Witness continued: After the 11th month last year the goods became the property of defendant. He paid defendant no rent. He was defendant's servant. He never paid any rent at any time.

To his Honour: He never told Sakakibara (the sergeant) that he paid rent, but he simply told him his master paid it.

His Honour here advised plaintiff to accept a non-suit, which plaintiff was willing to do.

His Honour had a few more questions to put to the last witness: He slept in the native town. He had no family, but he had lodgings with a man who had. He rendered no other services to defendant than those of selling goods for him.

To defendant: He was registered as a foreigner's servant in the Kencho. [Witness produced his registration ticket, on which it said that he was employed by defendant at No. 123. It was dated 28th December, 1874.]

His Honour non-suited plaintiff, remarking that he had failed to prove his case, and that the Japanese were servants of defendant, and as such entitled to do business for their master. However, as plaintiff had accepted a non-suit, that would not prevent him bringing a similar action against defendant when he was in a position to prove his case.—*Herald.*

Shipping Intelligence.

ARRIVALS.

Feb. 2, *Lyee-moon*, British steamer, Roper, 611, from Takow, Sugar, to Hudson, Malcolm & Co.

Feb. 3, *Montego*, British barque, Griffiths, 316, from Liverpool, general, to Simon, Evers & Co.

Feb. 3, *Carl Wilhelm*, German barque, Bertelson, 239, from Taiwanfoo, Sugar, to Nethd. Trading Co.

Feb. 5, *Great Republic*, American steamer, Cobb, 4,200, from San Francisco, Mails and General, to P. M. S. S. Co.

Feb. 6, *Tanais*, French steamer, Reynier, 1,200, from Hongkong, Mails and General, to M. M. Co.

DEPARTURES.

Feb. 2, *Volga*, French steamer, Nondedeu, 960 tons, for Hongkong, Mails and General, despatched by M. M. Co.

Feb. 2, *Ping On*, British steamer, Boswell, 650 tons, for Nagasaki, Ballast, despatched by Smith, Baker & Co.

Feb. 2, *La Plata*, German schooner, Ruber, 164 tons, for San Francisco, Tea, despatched by Walsh, Hall & Co.

Feb. 3, *Nevada*, Am. steamer, Furber, 2,145, for Hiogo, general, despatched by P. M. S. S. Co.

Feb. 3, *Tokei Maru*, Japanese steamer, Dunn, 2,117, for Hiogo, general, despatched by Mitsubishi.

Feb. 5, *Traviata*, German barque, Boldle, 271, for Takow, Ballast, despatched by Captain.

PASSENGERS.

Per P. M. S. S. *Vancouver*, for San Francisco.—Messrs. Robertson, Blackburne, Henderson, Marquart, M. Vall, A. de Aranova, Mrs. and Mrs. Durney and family, and Mr. and Mrs. Wyon.

Per French steamer *Volga*, for Hongkong.—M.M. Ah Tam and Ah Kee. For Marseilles.—Mr. Ernest Satow, Mon. and Madame Schwartz, Mon. and Madame Atkin and child, Messrs. Francisco Diaz and servant, Manuel Fernandez Seal, Augustin Baisozo, Francisco Bulnes, Sadaske, Capt. Denniston, Mon. and Madame Holtz and 2 childrens, Mon. and Madame Orny, Madame Musy.

Per Jap nese steamer *Tokio Maru*:—For Kobe: Mr. P. Petrocochino, Mr. and Mrs. Miyabe Yosekoto and child, Messrs. J. Jelovitz, Yamanaka Jimbei, Ewajio, Nobootaro, Negishi, Orai, Nambu, Isuda, Mori, Okamoto, Nakashima Nobuyuki, Uchida, Sungimuraya Futaro, Sheoya, Takata, Fujisashi, Muraji, Nakaya, Kikuchi, Jiro, Tsurumori, Takino, Koike, Hakira, and Kimbei. For Nagasaki: Messrs. Enrique Dupuy de Lome, S. J. Clark, R. H. Wighton, W. Jamieson, and C. S. Pass. For Shanghai: F. Grimaldi, Iwasaki Yohoske, A. Vivanti, and L. Dupont Syle. 38 in the steerage.

Per American steamer *Nevada*, for Shanghai: Capt. Harris and wife, Mrs. Oshima and child, Miss Lebaron, Dr. G. Hill, Mr. and Mrs. Curney, Miss Domoney, Messrs. H. Reuter, C. Huch, C. H. Jubin, W. T. Buckley, Ichikawa, Yokoba, Kingdon, Omu, 89 in the steerage for Kobe. For Nagasaki: 123 in the steerage.

Per American steamer *Great Republic*, from San Francisco:—For Yokohama. Dr. A. R. Platt and wife. H. Viney, Mr. and Mrs. E. McLease, H. McIntosh, U. S. N., Rev. M. Borchard, and 2 in the steerage. For Shanghai: Miss G. Gaswood, Mrs. Colby, Hon. W. Stuart of Blantyre. Houston Boswell, R. Brenan, F. Hillyer and wife. For Hongkong: L. Van Vleit, Gen. I. Shepard, R. B. Shepard, H. C. Woodhouse, Bing Yow, and 295 in the steerage.

Per French steamer *Tanais*, from Hongkong: Messrs. Van Ordt, D. Jongh, A. Margelidon, La Pere, Lecomte, La Pere, Hayabuse, Okamura, Ono, Saykama, Kayasawa, Ejichi, Pateman, Shimusitami, Madame Letoquer, Mrs. Hill, M. de Kermick, Hawagita, Suoe, J. Milian, and Bonare.

J. H. SANDWITH,—*Lieut.*, R.M.L.I.

CAMP, Yokohama, January 5th, 1875.

SUMMARISED OBSERVATIONS FOR NOVEMBER.

From observations on the Bluff (100 feet above sea level), at 9 A.M. daily, the mean reading of the barometer last month was 30.16 inches on the 2nd; and the lowest 29.55 inches on the 29th, instant.

The mean temperature of the air was 31.5 degrees.

The highest day temperature in the shade was 47.0 degrees on the 19th, and the lowest night temperature was 19.5 degrees on the 30th instant. The extreme range, therefore, was 27.5 deg.

The difference between the mean dew point, and the air temperature was 5.9 degrees.

The mean degree of humidity of the air was .652; complete saturation being represented by 1.

The general direction of the wind was Northerly.

Rain and snow fell during the month to the amount of .87 inches.

There were 26 days on which no rain or snow fell; the maximum fall in one day was .244 inches registered on the morning of the 17th, and 26th, inst.

Earthquakes.—Shocks at 0.28 and 0.35 A.M. 14th instant, the second of about 2 minutes duration.

Slight Shocks occurred on the morning of 31st instant at 0.35 and 0.37 A.M.

Iron and Metals.—The market for iron continues exceptionally dull.

Iron flat and round	per picul	$4.00 to $4.75	Iron wire	per picul	$8.00 to $9.00
„ nail rod	„	4.20 to 4.80	„ pig	„	2.00 to 2.25
„ hoop	„	4.80 to 5.00	Lead	„	7.00 to 7.50
„ sheet	„	5.00 to 7.00	Tin Plates	„	8.50

Sugar.—Large arrivals of new crop Formosa Sugar have taken place in the closing week and sales to the extent of about 9,000 piculs at $4.30 are reported. The condition of the market is decidedly weaker.

Sugar:—Formosa in bag	per picul	4.30	China No. 5 Kong-fun	per picul	6.00 to 6.30
in Basket	„	4.00 to 4.10	„ No. 6 E-pak	„	5.50 to 5.70
China No. 1 Ping-fah	„	8.50 to 8.70	Swatow	„	3.40 to 3.50
„ No. 2 Ching-pak	„	7.60 to 8.00	Daitong	„	4.30 to 4.50
„ No. 3 Ke-pak	„	7.10 to 7.40	Japan Rice	„	
„ No. 4 Kook-fah	„	6.60 to 6.90	Kerosine Oil	„	4.00

EXPORTS.

Silk.—Deliveries for the past week are 250 piculs making a total of 580 piculs since the 24th ultimo. It is difficult, however, to determine the figure of actual settlements, as many parcels are delivered as deposits against advances. Common and Medium Hanks are weak at previous quotations; prices for other sorts remain unchanged. A few bales of native "filatures" have fetched $600 to $630, and we hear that coarse Oshius and Hamatski have been bought for native consumption at the parity of $425.

Arrivals since the 21st ultimo barely amount to 275 bales and the Stock is reduced to 12,000 or 13,000 bales.

	Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.			*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.*	
Hanks—					
Best (No. 1/2)	520 to 540	19s. 10d. to 20s. 6d. frs. 55 to 57	Medium (No. 2½)	465 to 480	17s. 5d. to 18s. 5d. frs. 50 to 52
Good (No. 2)	490 to 510	18s. 9d. to 19s. 6d. frs. 52 to 54	Common No. 3	430 to 450	16s. 8d. to 17s. 4d. frs. 46 to 48

Tea.—Business for the past week is almost nominal and prices are weaker, but in absence of operations no change can be quoted.

Arrivals have been on a limited scale, but stocks here are still considerable for present late period of the season.

Settlements for current season to the end of January are about 128,000 piculs for Yokohama alone.

Common		$25.00 to 30.00	Fine		$44.00 to $47.00

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

AMONG our translations this week under the heading "Spirit of the Native Press" is one of an article on the Island of Saghalin, by the writer who lately treated the subject in a previous essay which we published and shortly discussed. Admitting the able manner in which he has handled his subject, what possible inducement could Saghalin offer to foreign colonists? With Australia, Canada and America open to colonizing enterprise—countries where men can bring up their children in the spirit of the laws under which their fathers have lived; in climates agreeable to their constitution; and with educational and religious provision made for them, without which they will not emigrate; what possible attraction could Saghalin offer to Europeans? What race of any value as a race of colonists would migrate thither? The writer seems to have overlooked this feature of his case, and, to our mind, the fact that he has done so converts his letter into an unpractical essay. The tortoise is excellent, but there is absolutely nothing for it to stand on.

THE question of the colonization of Yezo bears indirectly upon the Saghalin question referred to above. And two translations will be found elsewhere referring to this matter. One is that of a letter addressed by General Capron to Mr. Nishimura Sadaaki (acting for the President of the Kaitakushi Department); the other the reply to it.

We are not inclined to agree with General Capron in his recommendation that young men should be sent to Europe or America in the interests of this Department, for the acquisition of mere theoretical knowledge. It is possible that were they sent to Australia or some of the western parts of America, to see how enterprise, muscle, freedom and capital win, in a few years, whole districts from the domination of nature to that of man, some good might result from the expenditure this course would involve. What these young men should be taken to see is, not old countries, but countries where the European system and genius show their conquering power—a power exhibited not in the war of man against man, but of man against savage nature. This demands blood and muscle, courage, enterprise and *inducement*. It is no use giving patches of ground to the indolent ne'er-do-weels of whom the writer of the article on Saghalin speaks. It is the younger sons of the good blood of England who have made the colony of Victoria what it is; and this means the employment of capital

That so little has actually been effected in Yezo, in spite of the enormous expenditure in the Kaitakushi Department, is not, however, General Capron's fault. His advice has been sound and practical, and his remonstrances against the neglect of it vigorous and unceasing. In season and out of season he has tendered this advice and made these remonstrances, and the reply to his letter acknowledges this in ample terms. It is to the obstructions placed in his way by the machinery of Japanese officialdom, that the lamentable disproportion between the vast sums of money spent by the Department and the results of this expenditure, must be traced. There is no use blinking this fact, that, for all practical purposes, the work done in Yezo during these years amounts to nothing. There are some newly cultivated patches here and there, and some forced settlements elsewhere There have also been some good surveys made, and considerable additions to our knowledge of the geography, geology and mineralogy of the Island. But there is no more root in the thing than in an artificial flower; no more life in it than in a straw man. If anything of permanent use is to be done in this Department, it must be placed under some one who will work day and night at it, and leave a thriving colony behind him as the result of a life's labours. All that has been done up to the present moment is mere play and fiddle-faddle, and it would be as absurd to ignore this as it would be unjust to blame General Capron for it. Let his advice upon the subject of the fisheries alone be taken, and in three years Yezo would exhibit a vast improvement. At present it is little more than a constant drain upon the Imperial Treasury. It should be so governed as to yield a handsome surplus, and this surplus should be applied to its further development.

THE next mail for Europe will carry from this country a gentleman whose services to it have been of no ordinary character. In the Mint at Osaka, and in the coin which has been struck there, Major Kinder has reared the monument and diffused the tokens of an ability, industry and honest tenacity of purpose which few Governments have ever had the good fortune to command at the hands of an alien. Difficulties which would have dismayed and totally baffled ordinary men, have disappeared before his energy, his varied resources and indefatigable spirit; and it is not too much to say that he has laid every foreigner in this country, and specially every Englishman, under personal obligations to him, for the illustration he has afforded to the Japanese of those qualities which are the intellectual and moral prerogatives of our race, and on the possession of which we legitimately pride ourselves. It is gratifying to know that he leaves Japan with the most flattering recognition of the services he has rendered to the Empire, made to him under the hand of the Minister of Finance; and we can but add our own regrets that, at a time when an extended circulation of the Japanese metallic currency seemed opening out—a prospect full of advantage of many kinds to the country—the gifted artificer under whose hands it has attained so high a reputation, should leave it, to a future which the most hopeful must still pronounce to be uncertain.

The natural disinclination to the spirit of compliment which would have deterred us from making these acknowledgments to Major Kinder so long us he remained among us, and while still in the Imperial employment, must disappear before a duty which is forced upon us now that he is leaving this country and the service of which he has been so distinguish-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Major Kinder will be honoured with audience of His Majesty the Mikado prior to his departure.

WITH a spell of usually cold weather, the skaters have had some opportunity of enjoying a pastime which is a specially fascinating one, though the very confined space to which they have been limited has curbed alike their ambitions and exhibitions. Beginners can make but little progress on a sheet of ice which requires them to turn after every ten steps forward, while those who are more advanced have all the vigour and freedom of action which good skating implies entirely taken out of them by so confined a field. It has always seemed to us rather hard that the English, who certainly possess the material out of which the best skaters in the world might be made, so rarely get an opportunity of skating for more than a week or a fortnight that they have no opportunity for that practice which is absolutely necessary to make a good skater, and which the Americans and Canadians so amply enjoy. Send an Englishman who has the right stuff in him, to Canada or America, and our impression is that, with the necessary practice, he will rise to the first rank as a skater. As the case stands at present, the inhabitants of the American continent beat him hollow in variety of evolution, and have caried the art into regions of which he never dreamed. In this respect the English skaters are simply nowhere by the side of their cousins. But in all that concerns the ease, grace and dignity of motion, we venture to think the English school is incomparably above that of America, as any one may see in the London parks during the skating season. The Englishman goes like a planet—*ohne Hast, ohne Rast.* The American goes like a comet. His pace and vigour are wonderful. But he wants the calm and grace and dignity which are the striking characteristics of the English school. It may be doubted whether young nations can attain this. They are too self-conscious and self-assertive. They are thinking of the impression they make, and are demanding an acknowledgment of themselves, their claims and position. They *pose*, but are not *posed*. This is fatal. To make a fine school of skaters you require a history of some centuries behind your scholars, galleries of portraits and aristocratic institutions. There should be at least traces of the stately minuet in it. It will not abide the rankness and vulgarity of the polka school, or any suspicion of the rude bobbing which now goes by the name of dancing, and which, in the case of nine men out of ten, makes a modern ball-room, in the eyes of an older generation, a scene of almost indecorous romp. Our fathers taught that it requires three generations to make a gentleman, and we may have as good illustrations of this truth on the ice as anywhere. But lectures on this subject are useless without illustrations, and as we are ten thousand miles from these, we merely waste our time and that of our readers.

A few weeks ago we called attention to the unsatisfactory results produced by the order which has forced all the Japanese officials to wear European evening dress as their own full dress, and we did so in the hope that these results would be corrected in the future. But the question has been again forced on our notice by seeing a Japanese official in a tail-coat of black lustre, adorned with rows of light brown buttons, the lower part of his pantaloons tucked inside a pair of high-low boots, and a hat pulled over his ears and nearly eclipsing his nose. Really, this is no laughing matter. If the gods themselves were so habited, humanity would roar. Why should there not be a tailoring branch tacked on to one of the supply departments of the army, where any Japanese official could get a suit of clothes made of proper cut and proper material, paying for it the price it costs the department? A good European cutter and one assistant, with a sufficient number of work-people, could easily superintend and manage it, and we should soon see no more of these dreadful apparitions, which, we can frankly assure the Japanese, are sources of abundant ridicule not unmixed with contempt, and from this we would wish to shield their reputation as well as that of individuals. We suggest that in the depart-

Digitized by Google UNIVERSITY OF CALIFORNIA

two lay-figures, respectively labelled "Example" and "Warning." One should exhibit a model Japanese gentleman dressed like an European gentleman. The other should be habited in a swallow-tailed coat reaching down to the heels, the pantaloons tucked inside a pair of roomy boots, the loops of which are characteristically obtrusive, a yard of white shirting in one of the front pockets to represent a pocket-handkerchief and its ordinary place of bestowment, a woollen jersey, a paper collar and made-up white tie, all awry. And, finally, a hat—or rather *the* hat—*that* hat—(the darkness that may be *felt*.) And, as the Japanese are taking to quoting Shakspeare, we will give them a simple motto for these figures.

> Look here upon this picture, and on this.
> .....And what judgment
> Would step from this to this?

WE have republished elsewhere a letter which appeared in our daily columns during the week, on the subject of typhoid fever and its treatment by means of the "wet pack." The subject is one of a technical and scientific character, and we should on this account have considered it somewhat out of place in these columns, but for the fact that an outbreak of typhoid not unfrequently succeeds an outbreak of small-pox. The *rationale* of the "wet pack" system of treatment is that it reduces the amount of chemical action in the body, which is abnormally intense in fever. This action results in a more rapid waste of the tissues by oxidation than nature can repair; the general strength is thus wasted and the patient succumbs. The wet pack prevents this. It is not new as a method of treatment, but is unfashionable, most probably owing to its association with hydropathy as a system of therapeutics.

(From the Japan Mail Daily Advertiser.)

A farewell dinner was given on Saturday evening at Bonnat's Hotel by the German Residents to Mr. Von Brandt, the German Minister Resident, preparatory to his departure from this country for Pekin. Dr. Müller, of the Imperial College of Yedo, occupied the chair. The proceedings, which were characterized by great cordiality towards the retiring Minister, and this, not solely from the members of his own nationality, were continued until a late hour.

THE civil contract of marriage between Mr. Arinori Mori, formerly attaché to the Japanese Legation in the United States, and a Japanese lady, was read at his residence, Yedo, on Saturday, in the presence of a large number of invited guests among whom were many foreigners. The ceremony was limited to the reading of the document to the contracting parties and was very brief.

AT about half past seven o'clock on Saturday night a fire broke out at the North Eastern extremity of the Main Street of Homura in close proximity to the Foreign Cemetery. Aided by the inflammable nature of the buildings and the brisk wind which at the time prevailed, the fire spread with unusual rapidity, and, before any of the engines which had been summoned arrived, had already established its mastery over the block of native huts extending to the foreign tilery at the base of the cemetery. At this point a low brick wall which lined the narrow roadway arrested its progress and the tilery buildings, being roofed with tiles fortunately escaped from ignition. Following the line of the eastern side of the main street, the fire swept all before it as far as the temple steps, and here the combined efforts of the various powerful engines succeeded in putting a term to its ravages at about nine o'clock, by which hour the wind had so much fallen as to remove further apprehension. As is usual in native-built towns, the fire had devoured all before it with the exception of the mud houses, and it is probable that the dwellings covering eight or ten acres of ground, and which we should assume speculatively to have numbered some 250—we have not had time to officially—perished.

At about a quarter past eight o'clock another fire, caused

out in the village of Amanuma, situated in the gully which divides two spurs of the Bluff, burning down some ninety or hundred dwellings before it could be stopped. The inhabitants were chiefly of the poorest class.

By this double catastrophe a very large number of our poorer neighbours have been rendered homeless at a season and under circumstances of peculiar hardship. We understand that the usual doles of food have already been granted and are pleased to learn that on representations being made to the Treasury yesterday, Mr. Okuma at once ordered that a grant in aid of money should immediately be made to the sufferers to assist them in their trying situation.

A fire broke out in Honjo, Yedo, on Saturday night, and was not extinguished until considerable damage had been done.

Colonel Richards and the Officers of the Royal Marines have accepted an invitation from the Chief of the Imperial Japanese Marine Department to be present at a Review which will be held this day on the Marine Parade Ground, near Tskidji, Yedo at half-past-one o'clock.

As an illustration of the unusual severity of the season we may state that the self-registering thermometers marked 14.5 and 14 (or 17½ and 18 degrees below freezing point), on the mornings of the 7th and 8th instant respectively. This we believe to be the lowest temperature experienced by foreigners in this country.

THE Great Northern Telegram Company announces that their cable between Vladiwostock and Nagasaki is again in working order.

TELEGRAMS received yesterday from Ozaka announced that a severe fire was raging there.

On the termination of the Review the foreign officers present were entertained at dinner, during which the band of the Marines performed a selection of music.

WE understand that arrangements have been made for despatching the S.S. *Lyeemoon* to Hongkong with the American Mails on the arrival of the *Vasco de Gama* from San Francisco.

THE Committee appointed to choose two successors to Dr. Dalliston, the late Surgeon to the General Hospital, have elected Dr. Eldridge and Dr. Massais to the office. Dr. Eldridge was formerly Associate Professor of Anatomy in the Medical School at Washington, and subsequently had charge for three years of one of the Government Hospitals at Hakodate. He has also done good service in this country by superintending the publication of a medical serial in the Japanese language for the instruction of native medical men in the later researches of medical science.

Dr. Massais was formerly medical officer to the French Municipal Council in Shanghai, and has since been employed by the Japanese Government in connection with some of the provincial hospitals.

The Committee may be congratulated on having been able to find with so little delay two gentlemen possessing the qualifications rendered necessary by the vote of last week, and otherwise well qualified for the posts to which they have been appointed.

THE native journals appear much perplexed by the presence at this moment in Ôsaka of so many officials and ex-officials. Kido, Ito, Itagaki, Inouyé and others are said to be assembled there, and their meeting has not unnaturally given some colour to the rumour that changes in the Cabinet are impending. The *Nichi Nichi Shimbun* is assured that Inouyé, Furusawa and Komuro are at this moment strennuously endeavouring to procure a meeting of Itagaki with Kido and others, in order that their past differenees may be reconciled and amicable relations once more entered upon. But this result, it adds, is uncertain.

A Meeting was held at the Chamber of Commerce Rooms on Thursday afternoon for the purpose of appointing a Committee to undertake the preliminary arrangements for the Ball to the English and French Marines. Fourteen gentlemen were appointed as a Committee: Mr. Leckie will act as Secretary.

THE telegram which was privately circulated yesterday afternoon, on the subject of the American tea duties has added considerable weight to the rumours which have been gathering shape for some weeks past. It is, apparently, far from certain that the reimposition contemplated will have effect. The project, it is well known, encountered much opposition.

YESTERDAY being the anniversary of the Enthronement of Jinmu Tenno was celebrated in the usual manner in Yokohama and Yedo. The streets were decorated with flags, the ships in harbour were dressed, and a salute was fired from the forts at mid-day.

THE *Nichi Nichi Shimbun* of yesterday states that Yamagata, Minister for War, was about to leave for Ôsaka. and that Okubo's immediate return thence might be expected.

A fire broke out yesterday morning on the premises, lot 136, at present unoccupied and formerly used as a *Café Restaurant*. Assistance was promptly available and the flames were extinguished pending the arrival of the engine. The origin of the fire is unknown.

Mr. Moriyama left yesterday for Corea. He is accompanied on his mission by Hirosawa and Ichibata, two officers belonging to the Ministry of Foreign Affairs.—*Herald* 11th Feb.

MR. Von Brandt was entertained yesterday at a farewell official banquet given at Hamagoten in his honour.

THE hearing of the case of the Hongkong and Shanghai Banking Corporation against E. Wallace was resumed yesterday before H.B.M Consul. His Honour declined to permit the production of further evidence on the plaintiff's side and the case ended with the addresses of the respective Counsel. The decision will be given on a later day.

THE RECALL OF THE MARINES.

WE shall hardly be wrong in regarding the approaching departure of the English and French forces which have been so long stationed here, as marking an epoch in the modern history of this country. It implies the conviction on the part of England and France that the consolidation of THE MIKADO'S government is complete, and that neither from it, nor from any section of the Japanese people, have foreigners to apprehend any form of those dangers against which the troops were stationed here to guard us. Nor can it be otherwise than a source of gratifying reflection that the Japanese have evinced towards the corps a friendly spirit at parting which is the best possible proof of their appreciation of the manner in which its unobtruded occupation of this settlement has been conducted, and of the service to this country, explained in our last issue, which the troops have indirectly rendered.

That we are justified in regarding the event as a well-marked epoch in the national history, appears to us clear from the coincident rise of two convictions, one on the part of the Foreign Powers, and the other in the minds of the Japanese. On our side, there is a conviction of the stability of the Government and of the existense of a friendly spirit towards us in the minds of the people: on their side, a conviction that the fear of foreign conquest is one which has arisen from an entire misapprehension of the fundamental views in regard to this country entertained by all the Treaty Powers, or by any one of them. This fear has been assiduously instilled into their minds; nor was their survey of the actual condition of Asia, made in pardonable ignorance of the mind of Europe, and specially of that of England, such as enabled them to combat the apprehension. But we are strongly persuaded that all such fears have now been banished from their minds, and that they regard us as coadjutors in the task of assisting in the progress of this country, in the development if its resources, and the growth of its power and influence in Asia. They know, of course, that we look for benefit to ourselves from this advance, but they equally know that this benefit can only come to us from their own prosperity and tranquillity, that disunion or anarchy among themselves are our foes, and that our hopes run perfectly parallel with their own. The rise and realization of this conviction surely mark an epoch in the history of the country.

But though this may be interesting and gratifying as a speculative reflection, it suggests duties and responsibilities, the more forcible pressure of which should be seriously felt at such a moment. The mind of this people has travelled fast of late, and will not lose force as it advances. But the material condition of the nation has not kept pace with it. The statesmen of Japan have not yet fully realized the idea that the future power and prosperity, let us say even the enlightenment and civilization, of the country depend upon the development of its resources and the increase of its external trade. This trade is now in a most deplorable condition, and has long been so. There is no vigour, no tone, no health in it. Feeble and emaciated, it drags its torpid existence along, an object of contempt to both native and foreign merchants. Before men will abandon establishments which they have reared in foreign countries, they will go through much. A dozen converging motives induce them to persevere, and as many act in deterring them from making what is virtually the acknowledgment of failure. But it may be doubted whether there are three foreign merchants [illegible] but for these motives, would not [illegible] Japan and seek their side. The native merchants clamour quite as loudly, or grieve as deeply, over the miserable condition of their trade; and the Japanese Government must not imagine that this is a light thing. A thriving commerce is, after all, the true basis of a nation's welfare and civilization. It was trade which reared the palaces of Venice and Genoa, which bordered the canals of Amsterdam with stately mansions, and with gorgeous halls of state, walled, roofed and floored with polished marble; which has founded schools of learning and of art, and has made the great commercial cities of Europe museums of the treasures of all climates and all ages. It is trade which has made London the indescribable and unparalleled city that it is; and to the lines of bristling masts which throng its river, and to its warehouses, full of the products of all regions of the earth, it owes the wonderful opulence, refinement, cultivation and enlightenment that bewilder a thoughtful visitor at the other end of its almost endless streets, and in its practically endless squares. This is a vital question with the Japanese. They are beginning to educate their people, and are teaching scores of thousands of them a language the very class-books of which infuse new ideas into their minds regarding the relations of the governors and the governed. One of these days they will begin to ask themselves and their rulers why they pay such a vast proportion of their incomes to the state They have already a press which has shewn a vigour in its youth of a very remarkable nature, and the Government may rely upon it that, one of these days, the activity which now spends itself largely upon speculative questions—precisely as our own press did in the days of CHARLES II.—will find a material to work upon touching much more nearly the daily concerns of each man's life. In this vigour and activity of the press we rejoice unfeignedly, believing them to be among the very best evidences of the vitality of the movement we are now witnessing. But we all know the story of Frankenstein. The Government must not imagine that a force of this nature once called into existence will be the plaything of a nation. The burning glass, which is a child's toy, becomes, when cast in a larger mould, an instrument in the hands of the philosopher which melts the diamond, and in the heat of which the precious metals run like water.

We hear of schemes which may prove a convenience to trade, and we do not disregard their value or importance, though we dread the expenditure they will entail, and the disappointment they will cause from a financial point of view. We are persuaded that if Japan will undertake the more modest, less showy, but infinitely more important task of constructing roads throughout the Empire, her exchequer will gain in ten years two dollars for every one thus spent. Thoughtful men in this settlement, whose views are not limited to the business of the day, and to whom a mere temporary depression of trade is no source of grave discouragement, look serious when they reflect upon the condition of this country, its small actual resources and its large present expenditure. It is by the surplus of revenue over expenditure that nations, like individuals, grow rich. But the classes which produce the wealth in this country do not accumulate it, and thus there is no increasing fund of capital to put out at compound interest, as there ought to be. The new epoch of which we have spoken demands a fundamental revision of the taxation and expenditure of the Empire; of its commercial system, and the principles on which this is based; of the laws which would permit of the employment of foreign capital and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

works calculated to afford remunerative employment to the capital spent on them. There is no limit to the money which would willingly be lent to Japan for the latter purpose, and at a low rate of interest, would she but consent to give the proper guarantees for its economical expenditure, and were European capitalists persuaded that the above questions would occupy the attention of her rulers.

THE DISPOSAL OF THE AMERICAN SHARE OF THE SHIMONOSEKI INDEMNITY.

WE must be pardoned for our constant reference to the the question involved in the disposal of America's share of the Shimonoseki Indemnity; and we need to urge no other plea to the Americans here or elsewhere than the very good one that the honour and reputation of the United States are largely concerned in this matter. So far as we have had the means judging, the American press has been quite sound in its view of the question. But, unfortunately, the representations of THE PRESIDENT to Congress on the subject have met with no response, and the money is in danger of being disposed of in a manner which would certainly ill accord with the general sense of the American people, were they familiar with the circumstances of the case. We have so often and so recently gone over the facts, that we shall not intrude them again upon our readers. But the following paragraph from the *New York Times* shows the light in which the affair is viewed in the States.

> The New York *Times* says that "the President's allusion to the payment of the Japanese indemnity will attract attention. This indemnity was agreed to be paid by Japan, in consideration of the Simonoseki forts having fired on American war-vessels. The damage done to the vessels was very slight, but Japan agreed to pay nearly three-quarters of a million of dollars, in gold, in satisfaction for that affront. In consideration of the specially friendly relations existing between our country and Japan, the President repeatedly recommended that the unpaid portion of the indemnity be declined. Congress took no action in the matter, and the President now says that in consequence of this failure he was obliged to carry out the provisions of the Treaty of 1864, and receive the cash. It ought to be said that this affair has caused much mortification in Japan, and the President's reference to the matter shows that he does not relish his share in the business. Under the circumstances, the demand of the government was a blunder, and we should be glad if some method which would be honorable alike to the United States and Japan, of refunding this money could be adopted by Congress."

Now, it must be acknowledged that there are certain difficulties attaching to the restoration of this money to Japan. They are not very grave; but they must be faced and surmounted. They are two-fold. In the first place, the share claimed by the United States was adjudged to their Government by a stipulation made between the four Powers who took part in the action, and after the convention on the subject was signed. The claim must have caused some surprise to the other three Powers, because the share in the action taken by America was practically *nil*. Nor is this for a moment made any subject of reproach to the Government of the United States. They simply had no fleet here, and this was the accident of the position. They would have joined the other Powers most cordially in punishing the PRINCE of CHOSHIU for his conduct, had they been in a position to do it. But, as a matter of fact, they were not, and they chartered and manned a steamer at a total expense of $30,000 on which their flag was hoisted, so that they might put in an appearance. It was all that, at the moment, they had the power to do, and this they did. There is not the slightest reflection made on them for this. But, in consideration of the trifling expense to which they were put, we think it would have been more just, certainly more delicate, had they agreed to the method of distribution of the Indemnity proposed by France, viz, in proportion to the expenses incurred. This would have substantiated their claim to cordial cooperation in the action, it would have covered the expenses incurred, and would have obviated all chance of subsequent reproaches for having made money out of a punitive act—a part which we are quite sure the American people had not, and have not, the slightest wish to play.

But here the first mistake was made. The subject was discussed in Paris, and Mr. BIGELOW, the American Minister, rejected the French proposal of a *pro rata* division according to the expenses incurred, and claimed a fourth of the total sum paid by the Japanese. He urged that the success of the operations depended upon the united front shewn by the Treaty Powers, and that this entitled America to share equally with the others. We quite agree with him as regards the importance of this united front. But this was a question touching only the relations of the Treaty Powers among themselves *vis-à-vis* of the Japanese. The distribution of the Indemnity, when once the sum had been agreed upon, was a question with which the Japanese had virtually nothing to do. The cordial cooperation of the Treaty Powers had been reflected in the joint appearance of their flags before Shimonoseki. All that was necessary to be done, *quoad* the Japanese, had been done. With the division of the Indemnity the question practically entered upon another stage in which they had no concern. So that it cannot be doubted that the division of the money would most equitably have been made on the principle laid down by the French Government. But Mr. BIGELOW thought otherwise; and, by what we cannot but regard as an inequitable view of the case, he claimed an equal share with the other three Powers in a sum of money which perhaps represented nothing more than the whole expenses to which they were actually put, but to which the United States had, on these grounds, only a claim to the extent of $30,000; and his action in this matter has placed the United States Government and people in this position, that they hold about $1,200,000 in gold (principal and interest together) to indemnify them for an expense of $30,000. Is this, can this, be just and right? There is only one possible answer to our question, and that the people of America would make this answer, we are as convinced as we are of our own existence. But does the money, under the circumstances which attended its division, regarded as a question between the four Powers, belong in equity to the United States? Yes, certainly; because the American principle of division was accepted and acted upon. The principle was one which, as we have said before, it required some questionable kind of courage to urge; but which men of fastidious feelings would not demur to, not because it was right, but because it would be hopeless to try to convince the man who made it that it was wrong. But, right or wrong as regards the principle of division, the money now belongs to the United States. The questions are, what will they, and what should they, do with it?

We have already discussed THE PRESIDENT'S suggestion, viz, that it should be spent in educating a certain number of young men as interpreters for the Legation and Consulates of the United States in Japan, and in teaching English to a certain number of Japanese in America. The plan is not destitute of humour, and the grave manner in which this is veiled does not detract from the excellence of the joke. The dry fun of THE PRESIDENT has passed into a proverb. But as the proposal of one whose business it is to see that the honour of the United States does not suffer, we must frankly take exception to it. The logic of the whole question lies in a nut-shell. Either the Government of the United States has a moral

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

right to put this money into its treasury, or it has not. If it has, there is no need for any special disposition if it. If it has not, it can have no moral right to defray expenses with it which it is the duty of the state to bear from its own resources. Congress is perhaps more at fault in this matter than THE PRESIDENT. He has once or twice before this brought the question before the Houses, but they have taken no action on it, and he is thus forced to make the necessary suggestion himself. By the very act of doing so he betrays his conviction that this money cannot go into the public treasury. We only wish that his proposal in regard to it had more perfectly satisfied the equity of the case.

But there is one other point worth a moment's consideration. The Japanese have a great deal of pride; nor is this a fault in a nation. Their rigid adherence to a severe code of politeness may guard them from explosions of temper which are not unknown to our freer manners. That they feel strongly on the question at issue is not for a moment to the doubted, and any proposals made in regard to the disposal of the money should be based somewhat upon their view of the equity of the case. Our strong impression is that they would not consent to send any of their youths to be educated under any such scheme as that which THE PRESIDENT sketches out. They would most probably strip the case free from any of those sophisms which so easily grow up round similar cases among ourselves—the offspring of our more subtle minds and hair-splitting logical powers—and say roundly, "This money does not in equity belong to you. It should never have been taken from us. But, under all the circumstances of the case, we have no objection to spend it for educational purposes. We will do more, we will pay the greatest attention to your suggestions on the subject. But more than this you ought not to ask from us."

THE IMPERIAL MARINES.

In acknowledgment of the invariable courtesy with which they have been received on their occasional visits to the Camp of the Royal Marine Battation quartered in Yokohama, and of the valuable instruction which these visits have conveyed to them, the Officers of the Imperial Japanese Marines in Yedo invited Colonel Richards and Officers of the Battalion under his command to an Inspection Parade of their men on the Drill Ground at Tskidji, Yedo, on Tuesday last.

Shortly after half-past-one o'clock Colonel Richards R.M., accompanied by several of the Officers of the Battalion, arrived on the Parade Ground in company with Colonel Ti, Chief of the Department. They were received with a general salute from a Battery of Marine Artillery, consisting of six brass field-pieces, with probably 120 men, which, after marching past, was withdrawn to a distant corner of the drill-ground. The Battalion of infantry than advanced in line, and after a general salute broke into column to the right and took up the usual position for marching past. Having marched past in column, they countermarched, marched in quarter-column and finally in double-time. Line was then re-formed, and the manual, firing and bayonet exercise was performed under the orders of the Majors and Adjutants of the half-battalions. The Battalion was then put through a variety of manœuvres by Colonel Tokeda who was in command, comprising changing front, deployments, advancing and retiring *en échélon* and firing volleys by half-battalions, and after an advance in line in review order and a general salute, the infantry returned to barracks. The ground was then occupied by the Artillery who were exercised in the various details of their drill, firing several rounds. After dismounting and mounting their guns they gave a general salute, and in their turn were marched to their barracks. The number of men under arms on the occasion was six hundred, of whom probably about four hundred were infantry.

The conduct and steadiness of the troops under review on Tuesday last, may fairly be judged from a foreign standpoint of professional criticism, since, for some three years past, they have enjoyed the advantage of discipline and training after the most approved European system, and it is pleasant to be able to report the favourable impression that, judged even by this high standard, their performance of the manœuvres made upon the spectators present. Their excellent drill, steadiness in marching, wheeling in fours or in column and their final advance in line in review order—the latter executed with admirable precision—were highly commendable. The ungainly swing of the arms and shuffling gait so painfully present in raw and imperfectly-trained levies, were here changed to the ease of bearing which the soldier only attains to through the ordeal of a severe and well-applied discipline. Indeed, if we except the fact that the left half-battalion showed too much precipitation in the bayonet exercise in quick time—a fault which drill and practise will alone remove—we have nothing to reprehend in the very meritorious exhibition of progress afforded by the troops under inspection. It is gratifying to be able to add that the condition of the barrack-rooms at Hamagoten in which the men are lodged afforded evidence of scrupulous cleanliness, order and regard to their health and comfort.

The Imperial Marines are equipped after the model of the English forces, being armed with short Snider and Enfield rifles. Their accoutrements are of the, now obsolete, English pattern; their uniform that of our marine artillery; and their drill is that prescribed in the "Red Book," which has been translated literally into Japanese with this intention.

At the close of the review Colonel Richards and Officers of the English Marines were hospitably entertained at dinner by the Chief and Senior Officers of the Department. During the dinner the excellent band of the regiment performed a selection of music very creditably.

We cannot close our brief notice of the corps without adding a few words of well-deserved eulogy to Lieutenant Hawes, Royal Marines, to whose organisation we believe its condition to be exclusively due, and whose indefatigable exertions, professional experience and, we must add, tact and courtesy have smoothed the many difficulties which a foreigner must necessarily have encountered in so arduous an office. Beginning some four years since, he has projected and executed a large and important work unassisted and without the aid of foreign drillmasters, in this short space of time; and in the pronounced success of the test of the Inspection by foreign officers on Tuesday last may best be read the measure and issue of his exertions. So much has already been achieved that we may now fairly look forward to the continuous progress of this arm of the Imperial Service, nor is there room to doubt that, like its counterpart in the British army, it will attain to and preserve the distinguished position of being the pride and flower of the native infantry.

SPIRIT OF THE JAPANESE PRESS.

"THE SAGHALIN QUESTION.*"

[TRANSLATION.]

BY SASANAMI HEIJI, OF THE "NIPPOSHA."

(Tokiô "Nichi Nichi Shimbun" of February 2, 1875.)

The question of selling the whole of the Island of Saghalin to Russia was discussed by me in the Tôkiô *Nichi Nichi Shimbun* of the 28th of last month, but up to the present moment the matter has not been taken up by any writer of the day. How is this? It must be, I think, that my words have failed to move the writers of the age. This I regret exceedingly.

It becomes necessary for me, therefore, once more to set forth my opinions, foolish as they are, on this subject. And it behoves us to reflect through what force of circumstances Saghalin has become reduced to its present embarrassing and inextricable situation.

* Lity. "*Hokumon*" "Northern Gate" the meaning of which would seem to be found in the idea of Saghalin being the northern outpost or Frontier Gate of Japan—to be guarded against foreign invasion.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

With regard to the state which the complications and difficulties concerning Saghalin have reached at the present day (our action) in sending an Envoy to Corea and bringing pressure to bear upon her without (first) ascertaining the true nature of our relations with that country, or pausing to consider under what agreement tribute was paid to us by Corea in the time of the Tokugawa dynasty of Shoguns, (and our action with regard to Saghalin) has been one and the same.

On the institution of the New Regime certain plausible men who had not arrived at a clear understanding as to the policy adopted by us and the course of events regarding that island, but contented themselves with a slight superficial enquiry into the subject, worked on the Government officials by drumming into their ears:—"Saghalin is territory belonging to our country, the "Empire of Japan. We must colonize and civilize it, "and by so doing make the power of our Emperor felt "throughout all countries of the globe." At once, and without an instant's reflection, the Government officials closed with these suggestions, and then for the first time the proposal to colonize Yezo and Saghalin became matter of common talk throughout the country.

In this way the men now at the head of the administration, without considering either the fitness of the moment or the strength of the country, led away the nation, taking them unawares by a sudden cry, and the nation by this means (not only did not call to mind but) actually forgot that in former years a treaty of joint occupation had been concluded with Russia. The end of it is that they (*i.e.* Government) are brought to book by the people and are assailed with the accusation of having disappointed their hopes.

Therefore am I how obliged to find fault with the heedless negligence which characterized the Government counsels during the early part of the new administration, in not looking back to and taking thoroughly into consideration the past course of events (with regard to Saghalin). However, this (mistake on the part of the Government) is a matter the discussion of which concerns this country alone, and therefore in the (hopeless) state to which matters have come at the present day, it is absurd for the Government to persist in their mistaken policy, neither is this the time for the nation to call the Government to task (for it), and in discussing this question with the writers on the staff of this Paper I ventured to grapple with a dangerous subject,—one which Japanese are loath to mention, and following it up pursued it until I had it in a corner, as it were, and was face to face with the question of selling Saghalin even (if necessary).

I consider it of the utmost importance that I should now go over the subject a second time, submitting the question to a careful review.

On looking into Geography we see that Japan proper (i.e. not including Yezo and Saghalin) is situated in the southern portion of the North Temperate zone, and therefore there is in reality no more favoured place in the whole world. Russia on the other hand, including Siberia, extends from the North Frigid zone as far as the upper portion of the North Temperate zone, and consequently its climate is exceedingly cold, while the nature of the country is barren; so that if we compare it with Japan it is impossible to say how very much inferior Russia is. Now Saghalin lies between the two countries, and, therefore, if one crosses over from Japan to Saghalin, a transition is made from a warm climate to a cold one, but coming into Saghalin from Russia one enters a warm climate from a cold climate. There are advantages and disadvantages (which respectively accrue to each nation) from the foregoing situation (i.e. their geographical positions) which are natural and cannot be avoided. And supposing that both countries were equal in point of power, it is still clear that profit (to the one) and loss (to the other) must follow. How much more then must this be the case when the two countries (in question) are not on a par in strength and weakness?

Now-a-days what those Japanese who wish to lull themselves in happy security rely upon is simply the mere fact of the vast extent of Siberia and its distance from the Capital of Russia. On asking a certain individual about this, he told me that on the occasion of his visit to St. Petersburgh, the capital of Russia, in the capacity of consul, he there fell in with a Japanese from the Province of Kaga, and learnt from him that it had taken him, travelling quickly by post-chaise, eight months to reach Moscow, the old capital of Russia, from Siberia. It becomes evident therefore that Russia would not expend the money and resources of the whole country † merely for the sake of possessing a single out-of-the-way island like Saghalin. (There is a talk of the railway being extended to Siberia, but until this becomes an accomplished fact there is no cause for apprehension). However, as this great distance from east to west which separates (us from Russia) will only last (*i. e.* be effectual), until the completion of the railway, to rely altogether and solely upon this is not enough.

Arguing from the natural geographical position (of the two countries) it is seen that Russia has one advantage over Japan. I ask you—let us look at the situation as it really is, at the facts of the case as they really stand. The Russians are advancing daily *foot by foot.* ‡ The Japanese are retiring daily *inch by inch* § Is this not so?

Again, if we argue from the ground of the natural temper and disposition of the people (of the two countries), Fukuzawa Shisays on this subject: "The Japanese "have no energy, no strength; they are like wooden im-"ages with the addition of eyes and noses." However, amongst our population of over thirty millions there are (some who appear to be energetic and strong and wish to colonize Yedo. The energy and strength of these should be proved. Is this energy and strength real, or is it only assumed? In my opinion (the volunteers for the colonization of Yedo) are only ne'er-do-weels, profligates, worthless and feeble fellows, who cannot support themselves by their own labour, and are consequently in danger of falling into distress from hunger and cold, (though I do not say that all without exception are like this) men in fact belonging to the very lowest class of people in Japan. To take men of the lowest class such as these, and with them to undertake a gigantic work (such as the colonization of Yezo is) is truly a hopeless task. It is vain to look amongst Japanese of the present day for that combination of energy and strength, rising superior to a hundred failures, by the aid of which the English Puritans of past ages founded a colony in America! Deeply as I deplore the state of things, I bring Fukuzawa's statement regarding the absence of energy and strength (in Japanese) in support of what I say. To take men without energy and without strength and to entrust them with a task of colonization beset with many difficulties, is like putting keen-edged swords into the hands of men too weak to use them, who in striving to wound others would only succeed in cutting themselves.

Thus if we look at the question from the two standpoints which we have adopted, the colonization of Saghalin by Russia is like taking a sponge in one's fingers and dipping it into water; but for our country to found a colony in that island is like putting the feathers on the shaft of an arrow with spittle.

The difference in the power of the two countries is greater than that which exists between the heaven and the earth! Is this not so?

With regard to this land (i.e. Saghalin), supposing that it were actually territory belonging to Japan, still, arguing from the true aspect of the case at the present time it might be said that the whole island belonged to Russia. With how much more truth can this be said when there is a treaty for the joint occupation of Saghalin?

If we disregard the true state of the case and the condition of the times, and, declaring publicly that the island belongs to us, enter at once into a dispute with the Russian Government, will the Russian Government, following the* precedent established by China, put their seal, in conjunction with our own Ambassador, to a treaty favorable to Japan? (I think not).

If I, Sasanami Heiji, were in the place of Gortschakoff, the Russian Foreign Minister, (and a Japanese envoy

† As she would have to do in order to effect *the conquest of territory at so great a distance from her capital*, is understood.

‡ The writer has made a most happy rendering of this passage and could not have made it more forcibly clear.

§ The combined eagerness and ease with which the Russians gain provinces and the unwillingness and stubbornness with which the Japanese give way before these are happily contrasted.

* The Settlement of the Formosan difficulty.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

came with such a declaration to me) I would most assuredly dismiss the ambassador, and taking this as a pretext, I would annul every thing even down to the treaty of joint occupation. And in such a case my argument on the sale of Saghalin to Russia,—the strong-hold, so to speak, into which I have with infinite labour and pains entrenched myself,—incurring all the time the reproach of being a coward,—there would be nothing left for it but to fall to pieces at one fell swoop like a citadel taken by the enemy.

Supposing that there were ever so clever and able men (in Japan) and that they devised ever so clever and unequalled a policy (with regard to Saghalin), let Russia but once be enabled (through some mistake on our part) † to get hold of a pretext (for seizing Saghalin), and I doubt exceedingly if there would be any chance of our renewing a struggle,‡ in which we have already lost, with any prospect of success. In my opinion there are two courses now open to us.

With regard to the first the present is not the right moment for disclosing this, so I will postpone it for the time being, and proceed to the second of the two courses I have mentioned.

This is, to bring about a joint occupation of Saghalin by the subjects of all foreign countries and the people of Japan.

To the question of how this is to be effected, I reply: "By giving to all foreigners desirous of residing in that "island a special permission from the Government to do "so. By granting them any ground which they may "cultivate and colonize to hold as their own, and con-"sidering them as people living in Japanese territory "(*i. e.* as Japanese subjects)." For although Saghalin is, as far as Japanese are concerned, the most miserable place conceivable, yet cattle and goats can be kept on its plains, and the hills would serve as places from which to obtain timber. Besides, if we compare its latitude with that of Sweden in Europe, we find that it is much farther south than the latter country.

Should there, therefore, be any Foreigners wishing to emigrate (to Saghalin), laws should be drawn up by which they should be enabled to make profits—(it has been urged that Japan should even defray the cost of their passage there, but I do not think it is necessary to go so far as this), and, on the arrival of the colonists in Saghalin, ground should be leased to them at the cheapest possible rate, the title deeds for the same handed over to them, it should be settled in how many years, at how much a year, the price of the land should be paid up, and after the lapse of thirty or forty years certain light taxes might be levied on them. Moreover, power should be given to them to hold and possess this ground (so bought) as personal immoveable property belonging to them, and if for instance the term of 50 years was agreed upon (as the length of time the leases should run), a rule should be laid down for the renewal of the lease at the expiration of every 50 years, and our Colonization Department should all throughout do their utmost to treat these European colonists in every respect (impartially) as Japanese.

Again, as the colonists attained a slightly flourishing condition, different settlements would insensibly be formed, such as the Swedish and Danish Settlements, &c., &c. And then quite a different government to that prevailing in Japan Proper would be established. The Colonization Department would become an Upper House and its officers would become the members composing it, and these would cause representative debaters to come from the various settlements, and would thus form a Lower House. This state of things would resemble the Colonial Government which existed when America was first colonized. Much prosperity would follow the adoption of this course, and a new country would be opened up in Saghalin. And this being the case, the Japanese settlers occupying Saghalin jointly with the European colonists would be stimulated by the example of the others, and not wishing to fall behind would all lend their energy and strength (to the common cause of progress), and even men of recognised ability would emigrate to Saghalin from Japan Proper.

It is advisable for us, therefore, at the present time to fix upon some definite plan of action, and, inviting Europeans to join us, to make an agreement with them by which they should emigrate to that Island. In giving them land a special law should be enacted enabling them to hold and possess real estate, and in our treatment of them if we go by a Treaty for joint occupation, why then men who have come from the different countries will certainly be found to say that Saghalin is a pleasant and agreeable country.

I hear somebody say :—"But supposing action is taken "in accordance with your suggestions, Saghalin will be-"come a country of many nationalities, a republic in fact, "and the Government and laws of Japan will not obtain "there. And in this case what will be the benefit to "Japan ?

To such a person my answer is. "This is just what I want. For if you compare the respective advantages accruing —on the one hand—from there being (on our frontier) a small country, where men's rights are respected and liberty of thought and action strictly guarded and preserved, to serve as a buffer (between ourselves and Russia)—and, on the other hand—from the carrying on of an intercourse with Russia, she being directly on our frontier-line,—on which side does the advantage lie ?"

Think over it quietly, ye writers ! You will be able to find it out for yourselves !

† If we once gave Russia a part of a pretext for carrying out her designs upon Saghalin, the island is lost to us from that moment.

‡ The struggle which is insensibly going on between the Russian and Japanese colonists.

Representative Institutions.

I could not at first understand those who urged "the rights of the people" and the constitution of "a House of Commons." But now I do. They are only haters of the Government, and therefore may be called the anti-government party.

In the winter of 1873 certain ex-Sanghis and other prominent men sent in a memorial to the Government, subscribed with their signatures, stating that a House of Commons should be established, and I thought that these people constituted the "radical party." Some time before this, Gotô, Itagaki and others spoke in favour of sending a hostile expedition to Corea, but, on the return of the Embassy which was despatched to Europe and America, the mind of the Government was suddenly changed, and these become the liberal party. Therefore Gotô, Itagaki and the others were discharged from their offices. But their ambitious feelings did not cease, and even then they desired that this expedition should be made. I think this resembles the conduct of the *samurai* of Choshiu and Satsuma who clamoured for the expulsion of foreigners, while their real object was to ruin the Tokugawa party. Last year many of the learned of the country were constantly urging the establishment of a House of Commons and the concession of certain rights to the people, a despotic system being, they said, a bad one. They did this so vehemently that not a day passed without paragraphs on the subject appearing in the newspapers. Kato, one of the officials of the Imperial Household, spoke out and said that we were not ripe for such changes, and since that time not a day has passed that we have not seen paragraphs in the newspapers urging that any such radical charge was undesirable. But since Gotô, Itagaki and others have become silent on the subject, others have taken up the cry. I do not think that those people who spoke out at first and subsequently become silent were the true well-wishers of Japan. The opinion of the radical party differed from that of the liberals, though both desired that certain rights should be conceded to the people. Our own view has been that we should commence with small changes, and gradually advance to others of greater importance. But no one has coincided with us in this view, so I infer that the debaters care little about the rapidity of these changes and care equally little either for the liberal or the radical party. They are merely cherishing a spirit of hatred in their hearts, and are using their knowledge and their pens to make the cry of a "House of Commons, a stalking-horse for their opposition to the Government. Our idea of a true statesman debating on such a subject as that of the government administration, is that he should first determine the direction of his conclu-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sions, or, in other words, form his opinions definitely, and then adhere to them during the discussion without swerving. Then, even if he should be opposed by all the strength of the Government speaking in an opposite direction, he should maintain his views; while even if his personal antagonists or enemies side with him, he should accept their assistance, undeterred by any private feeling. But the present debaters are animated alone by bitter feelings towards the Government, and revile it even when it leans towards their views; from which it may be inferred that they care little for the principles for which they contend. We are compelled therefore to say that they constitute an anti-government party. But we cannot say that all the debaters in Japan are like these, and as there are many quite able to judge of such matters, I need add nothing further to what I have said.—(*Nichi Nichi Shimbun.*)

Reply.

(*Nishin Shinjishi*).

Since the *Nichi nichi Shimbun* has been appointed the official organ of the Government by order of the Daijokwan, the Editor of that paper has become very proud, and has published many reckless articles which have been again checked by other journals. But what he published on the 6th instant was worse. It was a falsehood and a slander.

I have been informed that the Editor was the dependent of some interpreter at Nagasaki, and is now the jester of some of our Ministers. He is flattering the present officials, and slandering the innocent under the pretence that they are guilty.

The *Nichi-Nichi Shimbun* of the 6th inst., states that the ex-Sanghis sent their memorial to the Government at the close of the year 1873. But this is a mistake; it was on the 18th January 1874. It also states that they transmitted their memorial to the Throne on the subject of a House of Commons after they were discharged from their offices. The Editor had, I think, better make enquiries of the *Sa-in* who it was that discussed the principles of our laws in 1871, and who it was that urged the institution of the *Sa-in*. In the postscript of the memorial put by them before the Government concerning representative institutions, is the following passage:—

"We have often urged this question while in office, but the reply to our views was deferred on account of the absence of the Embassy." This is ample proof that it was not after their discharge from office that they first urged the establishment of representative institutions. So that here we have a second mistake.

The Editor then goes or to say that the ex-Sanghis are the radical party and are trying to destroy the power of those whom he calls the liberal party. But while the Embassy was in America some of them returned in great haste, reporting that they were desirous that foreigners should be permitted to reside among us, that Christianity should be tolerated in the Empire, tribunals of justice established throughout the country, and fresh treaties made with foreign powers. At this time they were half beside themselves. Who are these people? Do they belong to the radical or the liberal party? The Editor says they are the liberal party. Now, if we should compare the people who stayed at home and cried for a House of Commons, to those who came over in this great hurry from Washington and desired so many immediate changes, which should we call the liberal, and which the radical, party. Is not this another mistake?

I think the skilfully composed language of the Editor is used for the purpose of slandering the officials who lost their offices and flattering those now in power, and these are the only opinions he has. He says that the ex-Sanghis are silent and that he does not know what they are about. Is he deaf? Some of them have formed a Society called the *Ruishisha* (rising spirit) in the Kôotchi *ken*, and others have formed the Iijo sha (self-help) in the Miodo *ken*. Both *kens* are very populous, and new members are being rapidly enrolled into these societies. This is the Editor's fourth mistake. Indeed, I could point out to the public many other like mistakes in the article of in the interior might be misled by his erroneous statements, I have made these short explanations.

Counter Reply.

There have been some sharp passages of arms in the newspapers, but nothing has been so graceful as the letter of Mr. Araka published in the *Nishin Shinjishi* of yesterday replying to our statements concerning the ex-Sanghis and the House of Commons. An examination of this letter has convinced us that the writer must be a person of high education and accustomed to mix in the best society. We shall therefore make him another explanation.

In the opening of his letter, he makes a personal attack upon us, but it would not become us, as a newspaper, to make a personal defence.

1st, Mr. Ataka says that we were in error in saying that the ex-Sanghis sent in their memorial to the Government on the subject of the House of Commons in the winter of 1873, and that they actually did so on the 18th, January 1874. Our opinion is, however, that their consultations began in the winter of 1873. We cannot pretend that our newspaper is a perfect diary.

2nd.—Mr. Ataka next says that we were in error in saying that it was after the discharge of the ex-Sanghis from their posts that they commenced writing about a House of Commons.

The men who sent in the memorial about a House of Commons were Goto, Soyeshima and Itagaki. Were they in office at that time? No; they had already been dismissed from their posts, but were ordered to remain in Tokiô, and it was while thus remaining there that they sent in their memorial to the Government. For these reasons we said that they were not in office at that time.

As regards the contention of the ex-Sanghis regarding the manner in which our laws should be made and the establishment of representive institutions, we hold that it was their duty to have urged this while still in office. The presentation of their memorial after their dismissal removes their act from the sphere of official debate and converts it into mere popular discussion.

3rd.—Mr. Ataka says that our statement that the ex-Sanghis are of the radical party, and the present officials constitute a liberal party, and that the ex-Sanghis are making a stalking-horse of the cry of a House of Commons in order to undermine the influence of the liberal party, is another mistake of ours.

If Mr. Ataka will look into this matter again in the light of our explanation, he will see that we made no reference to the travels of the Embassy, nor to anything prior to its departure. It was to the time of the outcry for an Expedition to Corea that we referred, and at that time there were two parties, one radical and the other liberal. The latter of these fell, and simultaneously a memorial was sent in to the Government concerning the establishment of a House of Commons. It is solely to the latter that we referred, nor can we now take notice of any thing else.

4th.—Mr. Ataka again says that we are in error in stating that the ex-Sanghis have lately become silent on the subject of the House of Commons. We had every reason to infer this, for we have only seen one article on the subject in the *Hôchi Shimbun*. We have indeed heard of the societies of which he speaks in the Kôchi and Miodo *kens*; but we have yet received no proofs that they were so popular as Mr. Akata represents them, and, in truth, it was on account of their unpopularity that we said the ex-Sanghis constituted an anti-government party. These are our views; but Mr. Ataka says they are mistakes. Our answer is that if the ex-Sanghis are well-wishers of the people and anxious for popular rights, they will hereafter becomes the leaders of the representatives of the people. Then, indeed, Mr. Ataka will be proved to have been right, and our own views to have been wrong, and we shall be happy indeed if it prove so. Antony says he has no wish "to make Brutus," "Cassius and Casca angry, for they are all honourable" "men; he would rather make himself Cæsar and the"

[TRANSLATION.]

To NISHIMURA SADAAKI, Esq.,
Acting for Kuroda, Chôkŭwan.

SIR,—On the occasion of the very pleasant entertainment at the Tsukiji Hotel, I was given to understand that when the time arrived for my return to America a great number of the officials of this Department would probably accompany me with the intention of personally seeing and investigating the various improvements and advances in civilization which have taken place throughout America. At this I was much pleased, and on subsequent reflection I came to the conclusion that the advantages accruing from this course of action to the Kaitakushi would be very great.

Of the advice given by me during my period of employment by their Department with respect to the improvement and colonization of Yezo, much has been misunderstood, neither have my suggestions been properly followed, and consequently my efforts have often been fruitless and even productive of harm.

Of course there is this to be said, that in a case where traditions and customs have been handed down for hundreds of past years there is a basis of already formed opinion on various matters which is of unconscious growth, and therefore our wishes (in cases like this) cannot be crowned with success through their appearing extraordinary in the face of these bigoted and prejudiced views.

In order to bring this Department into a flourishing condition, waiving personal considerations, I consider that there is nothing better than for you to send enlightened and able men to America and Europe, and cause them to investigate sea transport, manufactories, mines, agriculture, fisheries, and the system on which commerce is conducted, &c., &c. They would see that by means of precedents and examples extending over many hundreds of years, and by long experience in the development of the means of subsistence, that most important object of all to mankind, these industries have there reached a state of perfection, and it is truly essential that similar success should attend the operations of this Department. I therefore greatly desire to see this measure adopted.

(If I went to America accompanied by Kaitakushi Officials) I should of course give the officers of the Department every information about education, and point out to them the educational procedure which has attained the highest perfection such as "*Montensu*" (sic) and "*Oberante*" (sic).

Should this really be done I am ready to accompany the officers of the Department to the different European States.

My especial object in urging you to adopt this course, is that I may enable you to understand the advice which I have throughout laboured with might and main to impress upon you, and that I may cause you to comprehend the many difficulties which I have had to contend against while serving in the capacity of Adviser to the Department. This is the aim which I have in view.

(Signed) HORACE CAPRON.*

RECORDS OF KAITAKUSHI.

"Hochi Shimbun" of February 9th, 1875.

Letter of Nishimura Sada-aki in answer to Mr. Horace Capron, in which he states that he does not recollect having made any positive assertions (to Capron) on the occasion of the dinner in Tsukiji to the effect that on the return of the latter to his country he would send officers of the Department with him to make a personal inspection of the advances and improvements made in highly civilized countries, but that he will confer with the Head of the Department respecting the suggestions contained in Capron's letter and send him an answer on the subject. Acknowledges that Capron has never been backward in offering suggestions and pointing out mistakes which have occurred, and that the Department are grateful to him for his efforts on their behalf. That with regard to the not carrying out of many of his suggestions—it has been impossible to do this, as the interests of the Government had to be consulted, and as moreover care had to be taken not to exceed the fixed estimates (or grant of money for the colonization of Yezo), and that the non-adoption of his proposals was not because the Government clung to old-fashioned ways and customs. That ever since the beginning of last year, owing to the Saga troubles and Formosa question, all new works had to be deferred for the time being and could not be carried out at once. That the documents containing his advice &c. will be all, from the very first downward, carefully preserved in the records of the Kaitakushi, and as the civilization of Yezo progresses they will be taken up and acted upon, and that it is not intended to dismiss them lightly from notice.

扶桑耳袋

FU SO MIMI BUKURO.

A BUDGET OF JAPANESE NOTES.

CHILDREN'S SPORTS.

(Continued.)

The third day of the third month is the great annual festival for all girls, great and small, and of all families in which a girl has been born during the previous twelve months. For days previously white *saké*, cakes, cockle-soup &c, are prepared and new robes and girdles are in request. Cherry, Peach, *Keria Japonica*, and some other flowers are used to decorate the house. Formerly figures were made to be launched and sent adrift on a stream on this day. Now, shelves decked with gay covers are set up, on which are laid out dolls and toy sets of furniture, complete marriage *trousseaux* &c. Cakes, tea and food at meal times, are prepared and laid out on miniature table services. *Goseku*, or the 5th day of the 5th month, is the boys' festival, and those who have had a son added to their family during the yearly term make right merry on this occasion. The common people have a large fish of paper, the mouth distended with a hoop, from which it hangs to a long pole. The wind, blowing into the mouth, distends these fish-shaped balloons, and all over the city, as they flaunt gaily, they present a strange sight.

Officers exhibit in front of their houses a stand holding war-banners, lances, &c, and inside the house a room is decked out with toy armour, dolls in fighting costume, representing the ancient heroes, such as Taikô, Yoshitsune, Benke, Tametomo, Asaina &c. Offerings of food are not made, as on the girls' festivals, but a good feast is set out for the boys, at which good wishes are expressed for their success in life and future bravery. The merchants of late years have adopted many of these and other customs formerly practised alone by the *Buké* or officers. The full-grown children and even old men enjoy much of the pastime of the younger people, and have many ways of amusing themselves not open to their offspring before maturity.

FEMALE ACCOMPLISHMENTS.

We give these in the order of their importance.

Writing. This is done in the female style of running hand, in the *Hiragana*, and embraces a few Chinese characters. It differs from the classical style, and from that generally used by men, and involves a syntax varying from that of the commonly spoken language, besides containing many expressions and abbreviations not used by men. A special size and quality of paper is used, and the characters employed are large, and curved with an especial gracefulness of form.

Reading is restricted only by the fancy, taste, and talents of the individual, but rarely extends beyond the current literature of the circulating libraries or book-lenders, written in the easiest style, the Chinese characters having the *Hiragana* alongside, to assist the reader in deciphering them. These books are generally love-stories, novels, or accounts of ancient heroes and heroines, dressed up to suit the public taste. Needle-work in this country, is unlike that of the fair sex in our own native land, and is little more than what we call tacking, basting, and herring-boning, the cutting out of flounces, skirts, gussets, sleeves, bodies &c. are exceedingly simple, nor do the shapes and fashions change [illegible]

* It must not be forgotten by the European reader that the above

Digitized by Google UNIVERSITY OF CALIFORNIA

Embroidery is the only ornamental needle-work done, and few but tradesmen do much of it. Portions of the underskirts of dresses are frequently embroidered with flowers or simple designs, and the family crest is worked on the upper portion. The elaborately embroidered dresses of the ladies-in-waiting at Court and at the residences of the *daimios* are almost invariably done by tradesmen. Hair-dressing is supposed to be learned, but never acquired to perfection, as it is held to be almost derogatory, and is certainly very difficult.

Cooking is nominally essential to a native lady of accomplishments; indeed, the name of the Shogun's (Tycoon) and great daimios' wives was *Mi-dai-same* (*mi* honourable; *dai*, kitchen; *sama* honourable lady). But few are really expert, and men are usually employed as cooks, by all above the inferior classes, and at hotels and eating-houses.

Fencing with a short sword, or a halbert with a staff of some four feet in length, was sometimes taught to the daughters of officers, also the throwing of a weapon like a reaping-hook.

Music. The *Koto* (harp), the *samisen* (guitar), especially the latter, is taught to all classes who can afford it, and, of course, to those who are to get their living by it, and perhaps support idle relatives, as is alas! far too often the case. The *Kokiu, Fuye, Taiko, Tsuzumi* are extra accomplishments rarely found combined in one individual. The national female musical instrument, the *samisen*, has many styles, one of which only is usually taught.* Last, though not least, is the *Odori*, or posturing, learned from the third or fourth to the fourteenth or fifteenth year.

In the provinces girls learn to spin cotton, rear silk-worms, reel off the silk, and weave the thread. Household work is a matter of course, and sometimes manly amusements are learned, such as arranging flowers, *go* (draughts) *shogie* (chess) folding paper into shapes of birds or other objects &c., &c.

Manly Accomplishments.

Gei Jitzu (Faculty of Accomplishments) may be divided into two great classes.

Bun Gei or Literary; and *Bu Gei* or chivalrous. Eighteen divisions or classes were originally brought over from the Continent (China), but the following is what was taught till the present decade, and is still affected by the conservatives or *Kiu-hei.*

The *Bun Gei* or *Gakumon*, the literature, or rather "Chinese letters" or characters, may be subdivided into *Kan Gaku*, or classics of China; *Wa Gaku*, or native literature.

Kan Gaku, or classics of China, and works written in the same style include *Gun Gaku*, or 'War Teachings,' which had several *Ringie* or styles, the principal being *Yamaga, Takeda, To gun riu, Echigo, Kurama*, and *Naganuma.*

Ba jitsu (horsemanship) is divided into *Otsubo, Ogasawara, Kisha.*

Jiu jitsu (wrestling) is also taught, but not much practised by gentlemen.

The use of the following weapons is taught:—*Yumi* (archery) has also its *Ringie, Ogasawara* and *Hickie* being the best known.

Kamma is a weapon like a bill-hook and is thrown at an enemy. It has its *Ringie*, the *Shosetsu, Shinkage* and *Kusare.*

Bo a staff of hard wood a fathom in length, more used by farmers than by *samurai*. *Naga maki* is a yard long staff to which a sword is tied, as our rioters would a scythe.

Exercises with the *Tsuku bo satsumata*, the *Mojiri*, and other weapons which were to be seen at the guard-houses in older timses, used to lay hold of dangerous characters, and the methods employed to tie up prisoners with the *Tori nawa*, are also practised.

Shiu-ri-ken was a piece of iron about three inches long, thrown from the hand, a dangerous missile when used by the expert marksman.

Yari (lance): there are many forms of this weapon and styles of using it, such as *Yaneda, Hozoin*, &c.

Ken jtisu or Fencing. The principal styles taught are *Shin kage, Shinto, Yagiu, Ono-ha-itto*, and *Ni-to-riu*, or two swords, one for each hand. The *Naginata*, a short lance with a large curved blade, although considered more as a woman's weapon, was taught in the *Shin-kage* and *Shidzuka* systems.

Ho jitsu, or the art of handling fire-arms, has numerous *Ringie* or styles, of which the most common are *Inouye, Tatsuke* and *Ogie.* The latter, introduced with the use of foreign weapons, demands peculiar modes of handling the weapon and is somewhat complicated.

The teachers of fencing and the use of these weapons after the various styles, most jealously conceal the peculiarities of their methods from all but their pupils, who also are discreet, but the secrets are mainly confined to holding and aiming.

Under the heading 'weapons' further notice will be taken of details now omitted.

Bun-gei, Polite letters. We will for convenience divide these into *Wa* (native) and *Kan* (classics of China.)

Shin gaku is divided into the *Yoshida kei, Suiega ha*, and formerly there existed some other sects, worshipping at the same shrines, but with somewhat different ceremonies necessary to be studied by the accomplished man.

Wa gaku. The native literature, history and poetry, and the more admired native authors must be known to the Japanese gentleman.

Kan gaku. (Classics.) The standard works of the Chinese classics must be somewhat familiar to assist in composition.

San jitsu. (Arithmetic), is not generally much studied, and many native gentlemen and officers are unable to use the *soroban* (abacus) with facility.

Rei or *Shitzukegata.* Politeness, good, behaviour, is absolutely essential, and is studied from the earliest age. The Tokugawas followed the *Ogasawara* style of polite observances.

Shi consists in composing verses in Chinese.

Outa or native poetry, *renga haikai*, &c., have their admirees. In reciting these verses the voice rises and falls somewhat after the tones of the Chinese. The scholars in the capital may be heard frequently reciting in this, to us, mournful style.

Taka-Jo, Hawking was anciently an Imperial pastime latterly the Tokugawa family and subsequently the great Daimios practiced it. It is a sport rarely to be met with now.

Shinkiku or *Kemawari* Foot ball *Yokin* (small bows).

Fishing, hunting, shooting, with the cross-bow, fowling-piece or other weapons, boar-spearing, &c., are all more or less affected by the *daimio's* retainers.

The practice of musical instruments also forms part of the accomplishments of a finished gentleman; he understands too the *No* dances, the arranging of flowers, gardening, &c., and unfortunately many less innocent accomplishments are studied by the young *samurai.* Each had his peculiar hobby, many of them coming under the head of 'Pastimes' or of some special avocation. Men reared in the city or in the provinces had their special and peculiar tastes and experiences, and many of the poorer classes of the *samurai* filled up their time and supplemented their scanty incomes by working at some trade, Nai Shoku.

The wholesale reduction of fares and freights between Yokohama, the intermediate ports and China, announced by the Pacific Mail Company, so far from daunting the Mitsu Bishi Company, has impelled them to proclaim even more "alarming sacrifices." The first named Company having lowered its cabin fares to Hiogo to $10, and to other ports in proportion the Mitsu Bishi takes up the challenge with Hiogo $7.50, and Nagasaki and Shanghai in proportion. Freight, too, comes down with equal rapidity; the American Company offering to convey cargo between this and Yokohama for $1.50, and the Native Company for $1.00 per ton. The short-lived nature of this "cut-throat" policy may be safely predicted, but should it last only during the ensuing Spring we may expect to see a large influx of visitors between the ports interested, and especially, it may be assumed, will foreigners from the neighbouring ports avail themselves of the opportunity to visit the Kioto Exhibition.—*Hiogo News.*

* The great difference in the styles renders it difficult for the majority of learners to acquire more than one method.

ITINERARY OF THE COUNTRY TRAVERSED BETWEEN THE 3RD AUGUST AND THE 8TH SEPTEMBER.

By Captain Descharmes, Chasseurs d'Afrique.

Read before the Asiatic Society of Japan, on the 13th January, 1875.

(Continued from our last Number.)

The route continues as before, and the snow-clad summits of Echiungotateyama are to be seen towards the south-east. To Hiza, 3 *ri*, where an important annual horse-fair is held in the fifth month of the year. In 1874 2,000 horses were brought there.

To Arabama *(2 ri)* a considerable fishing village, with a miscellaneous trade. To Kashiwazaki, 2 *ri*, an important commercial town with a populaton of 12,000. There was a sharp skirmish here in 1868, and many houses still bear marks of the strife.

It is better to go by sea from Kuji tanami (the shipping port of Kashiwazaki) to Imamachi, if the weather be favourable.

On arriving at Imamachi, there is a dangerous bar at the mouth of the river, which can only be crossed when the wind in any other direction than northerly. In good weather this voyage is pleasant and rapid, and in the distance may be seen the peaks of Tateyama in the province of Echu. The foot of the Yoneyama is passed a mountain of fair altitude, on the summit of which there is a temple which can be very distinctly seen from the sea. This temple is only frequented or inhabited from the 4th to the 8th month. Near Kujiranami there are some deep caverns in the cliffs, which may be entered by boats. All this coast, from Teradomari to Imamachi, is well populated, commercial, and possesses a good climate. The nights are cool, and the shore well adapted for sea-bathing. The beach is soft and remarkable for the absence of shells. The men are vigorous, tanned by the sun and sea-air, and devoted to fishing. The women are strong and capable of the hardest toil such as is usually undertaken by men. Immamachi is a large town with a population of from 6,000 to 8,000 souls, built on the left bank of a river which conduces to a flourishing trade.

From Imamachi to Tokata 2 *ri*. Leaving the coast, the road opens towards the south, crossing a vast and fertile valley and leaving to the right in a south-easterly direction three peaks rather remarkable for their form and dimensions, and known as Migokosan, Shuchisan and Yake-yama, the ascent of all which appears difficult.

Takata is a town containing from 30 to 40,000 souls, the ancient seat of a *daimio*, and still important from a commercial point of view. It is one of the great centres of production and supply of the west side of the main island, and particularly of the province of Echigo.

From Bakata to Sekigawa.—Route by causeway in the middle of the rice-fields from Bakata to Arai 3 *ri*. Arai is a large village of from 4 to 5,000 souls. From Arai the road rises by gentle but continuous slopes. Passing Mihogi you cross the very picturesque torrent of Sekigawa, of which the two steep banks must be climbed by a zig-zag path which has a pretty effect. Sekigawa is a wretched village, but the *honjin* is good.

Immediately after passing this village you climb a stiffish pass called Kumasakatoge, and on descending from this pass come upon the pretty village of Nojeri, on the border of a little lake of the same name.

The lake of Nojeri is very picturesque and well situated. The form of it is somewhat curved and its length appears to me not to exceed a *ri* and a-half. It is embellished with little well-wooded islands, and has but few fish. On its banks tower the three summits of Kuroshime yama.

From Nojiri to Murei (3 *ri*) the road traverses some pleasant woods, and redescends to Murei with tolerably rapid slopes. You then find yourself by the side of a great torrent which empties itself into the river of Shinano.

Leaving Murei you enter the mountainous part of the pass called Koda mazaka. From the top of this pass you behold the vast panorama of the basin of the Shinano-gawa, peopled with numerous and rich villages, and the view is bounded to the south by the high mountains of the Shinano district. The whole of this region appears rich and cultivated.

As soon as you descend into the valley you meet a long succession of villages, nearly contiguous, which end at the temple of Zenkoji, 4 *ri* 20 *chô* from Murei. This temple, which has no other merit than that of being very large and situated upon a rather towering hill, is one of the most celebrated and most frequented in Japan. The aggregate of the villages of Mina, Naganomura &c., which surround it, may furnish a population of 50—60,000 souls. This agglomeration of people seems to be flourishing and the superstition which attracts devotees to this sanctuary is more earnest than ever.

From Zenkoji to Sakaki.—From Zenkoji to Tanpagima, 1 *ri* 12 *chô*, the road traverses the plain and river Shinano. This river as has already been said, empties at Niigata into the Japan sea. It has its source to the south of lake Suwa, runs there from S. to N., afterwards turning towards the N. W. to Niigata. One may follow the right bank as far as Niigata, but this which is called the Nagasaki route, is very bad, and for this reason it is preferable to proceed down the shore from Niigata to Takata, according to the itinerary here indicated.

From Tanpajima we may shape our course either towards Matsmoto or directly to the east in order to reach lake Suwa. This latter route is preferable because we thus avoid three very difficult passes, which are in the direction of Matsmoto.

We turn consequently to Shinonoi, 2 *ri* 10 *chô*, and, thence, following the valley of the Chikumagawa and affluent of the Shinanogawa, arrive at Sakaki, 4 *ri*, by a picturesque road, traversing fertile and well-peopled districts.

The plain before Shinonoi has been the theatre of battles famous in the history of Japan (about 1520?) between the Princes of Echigono Kenshiu and Takeda Shingiu. Two *ri* further on than Shinonoi and about 1 *ri* from the road and on the right, a series of pretty high mountains called Obasuke-yama may be seen at the foot of which is a remarkable, large stone, about 20 in. high at the side of a little pond, which tradition represents as guarded by a fantastic dragon, and other absurdities which merit no further mention. Before Sakaki the river Chikumagawa makes a way for itself across the mountains, by a vertical fissure very remarkable and having a fine effect.

From Gakaki to Nagakubo.—The road follows the right bank of the Chikumagawa taking a straight direction to the east. After three *ri* we arrive at Weda, a very great centre of the production of silk, and containing from 40,000 to 50,000 souls.

From Weda to Hoya, 2 *ri* 18 *chô*, we follow the last offshoots of the groups of Asamayama. On leaving Hoya the road returns to a southerly direction, following the valley of the torrent called Yodagawa. On this very picturesque road one may in returning enjoy the view of Asamayama, the crater of which emits (and did so notably in 1874) abundant vapours. Finally we rejoin the Kisokaido at Nagakubo, after a march of 4 *ri*, which though interesting, is painful, the soil of all these roads being always denuded (at least in 1874.)

From Nagakubo to Shimonosuwa.—We proceed from Nagakubo to Wadajiku, and thence to Shimonosuwa (total 8 *ri* 18 *chô*) surmounting the passes of Weda and Waga by a picturesque road; but one of the most difficult that one can travel, excepting the last part, which is good for about 1 *ri* before reaching Shimonosuwa. At about this distance, one has a delightful view of the lake.

Stay at Shimonosuwa.—The village of Shimonosuwa is built at a short distance from the lake, which unfortunately is not seen from the larger of the houses. In this village are found hot springs, and three principal sources may be mentioned, which are:

1.—Wata noyu, near the principal post house (Gohungin); the baths are clean, and are even closed to the public, the temperature is 43°. The inhabitants pretend that these waters contain silver, and they call them Ginyu.

2.—Koyu, containing alum. Temperature very high.

3.—Tangayu, temperature very high; there are also the sources of the Kunuwosowa at the other end of the lake. These are also much frequented by the inhabitants. The climate of the borders of the lake is always fresh;

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

on the 27th in the morning the thermometer indicated 12° 5 at 6 o'clock. One might make a summer visit here in circumstances favourable to health. In winter, according to the statements of the inhabitants, the cold is very severe, and one might cross the lake upon thick ice for 30 or 40 days (January and February.) The fishing is excellent and it is said that the country abounds in game. On fine days one may see from the middle of the lake Fujiyama, which appears in all its height through a large opening formed at the S. E. by the mountains which encircle the lake.

The lake is not large, 2 *ri* by 1 *ri*, but it is well situated and surrounded by remarkable mountains; it empties its waters into the Pacific, by the large river Tenriyukawa, which runs towards the S.E. and has its outlet at Hamamatsu (province of Enchin) into the Pacific.

This river is one of the most important in the island of Nippon. It traverses mountainous regions almost impassable; its course is torrent-like, and presents rapids which are descended with some danger. The navigation on it is considerable.

From Shimonosuwa to Kamitsutaki.—From Shimonosuwa to Kaminosuwa 1 *ri* 18 *chô*, we follow the north bank of the lake. The view of the lake and surrounding country is picturesque; to the east the far off summits of Hidanotakayama, which may be seen, preserve the traces of snow in their fissures.

Kaminosuwa is a moderate sized village situated at the end of the lake, where is still to be seen the castle of the Prince who formerly lived in the district. From Kaminosuwa to Kanagawa (3 *ri* 18 *chô*) a pretty route, through a moderately well-cultivated country. From Kanagawa to Kamitsutaki (3 *ri*) a hilly road with fine horizon. Fusiyama, which commands the whole landscape, is nearly always visible.

From Kamitsutaki to Kôfu.—From Kamitsutaki to Tsuburai (5 *ri* 10) the road, which is very hilly, follows almost entirely the course of a torrent (an affluent of the Fujikawa.) The fields are traversed by streams of water, very rapid and beautifully clear.

After leaving Tsuburai near Nizazaki the road goes into the bed of the torrent, itself and becomes very often impassable (2 *ri*, 18 *cho*.)

Nizazaki is a large market town of 10-15,000 souls, situated at the entrance of the rich plain of Kôfu. On leaving this point, you quit the mountainous region properly so called, and survey the vast plain of Kôfu, rich in agricultural products and silks.

The road as far as Kôfu, 3 *ri*, 18 *cho*, is very good, and has been repaired anew in 1874 April. This distance is traversable by jinriksha. Kôfu was in olden times a Tycoonal town; its castle still exists. It is situated in the basin of an affluent of the Fujikawa, at the foot of the huge buttresses of Fuji-yama and of the central mountains of Shinawa, in the midst of a country rich by nature. The population is about 19 or 20,000 souls.

There is a considerable silk-trade, and a silk-manufactory on the European plan has been started by the care of the Government. There is also a small trade in rock-crystals which come from the mountains of Shinawa, and in the autumn a large trade in grapes and fruits; in fact nearly all the grapes eaten in Tokio and Yokohama come from this place.

The wretched state of the roads and the absence of vehicles make themselves greatly felt here. Thus, for instance, a basket of grapes which is sold for 25 sen in Kôfu costs more than a *riyo* delivered in Yedo. There is, however, a direct road from Kôfu to Yedo, called the Kôfukaido, but it is especially bad at the passes (of the mountains.) The Fuji-kawa, on one of whose affluents the town of Kôfu is situated, is a small though rather important stream, whose fertile basin lies to the eastward of Fujiyama. It empties itself into the Pacific, Eastward of * *

The navigation is very dangerous, being in the midst of steep and jagged rocks which form numerous rapids. It is impossible to descend the river except in very narrow canoes, and without great danger of capsizing. On the right band of the river is to be found the celebrated pilgrim-resort of Minobu.

From Kôfu to Kawaguchi.—If however you wish to go straight towards Fusi-Yama, it is necessary to leave the basin of the Fuji-Kawa, and to take the road from Kôfu to Numazu. This latter is a small seaport of the Pacific situated on the bay of Suruga, from which fish is sent to Kôfu and the adjoining country.

The first part of this road is through the plain, from Kôfu to Izawa (1 *ri* 18). From this point it enters the mountains by ascents which are rather easy as far as the pass called "Dyurozaka," which leads to the village of Tonaki (4 *ri*).

On leaving this place you climb very streep ascents wishout interruption, called the pass of Mizakatôge, from the summit of which you enjoy a magnificent view of Fusi-Yama and of the little lake of Kawaguchi at the foot of the pass. You redescend by gradual slopes to the little village of Kawaguchi situated at the border of the lake of the same name.

The pass of Mizaka is one of the most difficult to climb, but one of the most interesting, in the centre of the island of Nippon.

Lake Kawaguchi is about 1 or 2 *ri* (in length), and stellar in form. It is sustained by a torrent coming from the pass of Mizaka; has no visible outlet, and does not seem to discharge its waters anywhere. Here is found however the *masu*, an excellent kind of salmon, which is generally found only in rivers communicating with the sea. There are eight lakes of the same kind around Fuji-Yama, the greater part of which have no visible outlet.

From Kawaguchi to Subashiri.—On leaving Kawaguchi the route follows the bank of the lake; this is also traversable in a boat. All this passage is charming.

Hence to Kamijoshda, a large market town at the foot of Fuji-Yama. Thence to Yamanaka, on the border of a little lake Mikkazuki which latter resembles, in shape, as its Japanese name indicates, a crescent of the moon. At length, one *ri* from Subashiri, one descends a rather steep pass, and finds oneself at the foot of Fuji-Yama and the point.

The huge wastelands which stretch between Kawaguchi and Subashiri are generally rather montonous. One finds a poor vegetation and occasonally volcanic plots of ground.

From Subashiri to Kiga.—The ordinary route from Subashiri to the coast is by Mishima; but you may proceed direct to Kiga (Valley of Miyanoshita) by Gotenba and pass of Senko Kubara which is very high and one of the worst roads possible to be seen.

From Kiga to Tokio.—The rest of the return journey to Yokohama and Tokio is well-known; therefore we limit ourselves to the account given above.

[*For Tables see next Page.*]

THE ROSE AND THE RAIN.

(FROM THE JAPANESE.)

A Rosebud in a garden gay
Hid all its sweetness from the day:
Its crimson leaves were folded fast,
Though sunbeams softly o'er it cast
Their golden glory, and the breeze
Sang of a thousand sights that please.
But rippling rain at length apart
Drew the green vestures from its heart,
And left it smiling in the sun
To life, and love, and beauty won.

Trembled the trees, the wind waxed high,
Swept a fierce storm across the sky,
The lightning like a sword-blade gleamed,
From the black clouds a torrent streamed,
And soon the radiant leaves empearled
Were scattered o'er the weeping world.

True love is like a silver shower
That fills with light the summer hour;
But passion like a tempest sweeps
All loveliness to darksome deeps.
Bright heart of boyhood, ponder long
The meaning of the simple song!

KAJIN.

Correspondence.

THE HARBOUR SCHEME.

To the Editor of the "Japan Weekly Mail."

Yokohama, 13th February, 1875.

Sir,—The two concluding paragraphs of A.'s letter to you of the 22nd December last, appear to me to contain the whole gist of the question of a harbour pier or wharf, such as has been proposed to be made by Government.

There can be no doubt that the construction of such a work would facilitate the operation of the discharge and loading of vessels here, but from what has appeared as the experience derived from other works of a similar character elsewhere, I doubt whether it would prove remunerative to those who carry it out; if constructed by Government (and it may presumed no unaided private enterprise will undertake the matter,) it would be done more with a political view of assisting the commerce of the country in a public way than from a speculative spirit of making it pay.

A work of this kind is in existence at Melbourne, but from the fact of its being part of the whole railway scheme of the colony in the hands of Government, it is impossible to say that the pier by itself recoups them for the expense of its construction.

If the wharfage accommodation of the place is inadequate to the requirements of the port, surely it could be extended and improved without going the expense of constructing a pier in deep water, which from the correspondence which has appeared in your columns, would not only appear to be unremenerative but also almost unnecessary. Should the policy of the Japanese tend to develope further the commerce of the country with foreign nations, some greater conveniences than at present exist in the way of wharves at this port may be necessary, but even such works are not always of a profitable character.

X. Y. Z. in his letter of 6th February, speaking of the harbour of Bombay, refers to some public companies there, but strange to say he omits all mention of one of the most important wharfage properties, the Elphinstone land estate, originally in the hands of a company, but a few years since taken at £2,000,000 and now the property of Government, who pay a guarantee interest of about 4¼ per cent, a third of which has to be obtained from other sources of revenue. The Calaba Company which he mentions has a capital of £1,200,000, not £3,000,000, but even on this lesser sum its dividend to the stockholders has not been more than 2½ per cent for the last 5 years. This Company arose out of copartnerships formed nearly 20 years ago, the business of which consisted in the reclamation of land, construction of wharves, docks, piers, warehouses and presses &c. In the report of this Company dated July 1870, it was said that "various schemes for the construction of a "Deep Water Pier have been proposed, and it is obvious that "such a work is not only absolutely required, but likely to "prove financially successful." Twelve months later it was stated to be the intention of Government to construct such a work, but the project has since been abandoned and a wet dock proposed. At any rate Bombay is yet without such a work as a Deep Water Pier, although the trade of that city is considerably great than that of Yokohama is likely to become for many years.

The whole question of harbour improvement here should be watched with great interest by the foreign community, but by those who have the welfare of the country at heart the views put forward in your impression of 19th December, that money would be far better spent on a good system of macadamised roads throughout the Empire, are most likely to be commended.

I am, Sir,

Your obedient servant,

H.

Law Report.

H. B. M. BANKRUPTCY COURT.

Before Russell Robertson, Esq., *Consul.*

February 10th, 1875.

Hongkong & Shanghai Banking Corporation *vs.* E. Wallace.

The hearing of this case in which plaintiffs claimed $8,700, a balance of account, was resumed to-day.

Mr. E. Wallace stated that the amount of the draft sold by him to the Bank on the 4th November, 1869, on Mr. Sands was $1,850, and as he had not received any intimation of its dishonour and was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

apprised of its having been transferred to Wahee, Smith & Co., he concluded that his liability was at an end, more especially as the Bank had never pressed him for payment and he had told the Manager he declined to pay the dishonoured bills. His pass-book had not been demanded since 1869. In cross-examination, he said, that the Bank had been indebted to him since early in 1870, on his assumption of non-liability for the dishonoured drafts. He had been he admitted, pressed for the payment of rent to Mr. Piquet in 1872, and that in 1873 Mr. Dickins had corresponded with him on behalf of Mr. Blakeway in reference to a debt of $2,000. Other claims were also made upon him and his liabilities might, he thought, be assumed at about $7,000. If the Bank made good its claim he would be unable to satisfy it. In 1871 he had sent $200 by draft to Hong Kong and according to his impression had paid for it in notes or silver. Several of his cheques, drawn in, 1871, had been duly honoured but he had not since then drawn any. In reference to the dishonoured drafts he certainly thought that the Bank should have given notice more promptly, but he knew that an arrangement with regard to them had been made between Kresser and Rivington as the latter had been permitted to leave Hong Kong. His claim on Rivington was for the freight on a cargo of rice which he had paid, but there had also been other transactions between them. He had been refused an overdraft by Mr. Jackson in October 1869 at which time $10,611.54 stood to his debit. In reference to that portion of his evidence in which he stated that he had placed a mark against certain objectionable items on his pass-book he could produce no correspondence. With regard to the bill drawn upon Sams he concluded that its transfer to Wahee, Smith & Co. was equivalent to its payment. Had he been under the impression that he was in debt to the Bank on account of these bills he would not, he said, have demanded $2,000 part payment of charges for storing the rifles.

Mr. Ness said that this was his case.

Mr. Dickins applied for anadjournment to allow of the production of further evidence.

To this Mr. Ness objected.

His Honour said he would consider the matter, the Court adjouring until Friday the 12th instant.

FRIDAY 12TH FEBRUARY.

(Continued.)

Mr. Dickins was proceeding to show reason why he should be permitted an adjournment for the purpose of adducing further material evidence when,

His Honour stated that he had determined to refuse to grant an adjournment. The case must now be brought to a conclusion.

The Counsel on both sides having addressed the Court on behalf of then respection clients,

His Honour intimated that he would reserve his decision.

GERMAN CONSULAR COURT.

Before Ed. ZAPPE, Esq., Consul.

Messrs. GRAUERT and FRANKE, Assessors.

TAKAHATCHI TONNEHITCHI *vs.* ROTHKUGEL.

This was an action brought to recover $100 bargain money.

Mr. Mots, of the Saibansho, appeared for plaintiff.

Plaintiff stated that he made with the defendant, on the 25th February, 1873, a contract for delivery of 500 pieces colored cotton Italian cloth, to arrive and to be delivered according to sample. That he paid for account of the defendant into the Chartered Mercantile Bank $100 bargain money. That the defendant having failed to fulfil the contract, he had brought this action for the recovery of the bargain money.

Defendant: Had made the contract in question with the plaintiff, and had received $100 bargain money. Had been ready to deliver the goods within the contract time, and according to sample, but plaintiff had refused to receive them. Had then written to the plaintiff and informed him that he would sell the goods at his risk and expense. Had sold the goods at current market rates, and sustained a loss of $1,118.72. Detains the bargain money as part payment on this loss. [Correspondence between plaintiff and defendant, also account of sales laid before the Court.] Has filed, through the Consulate in Yedo, in the Yedo Saibansho, a petition to recover from the plaintiff $1,118.72, for the loss sustained. Petition was filed on the 25th of August, 1873; however, no judgment has been delivered as yet. Prayed the Court to postpone the further hearing of the present case, until judgment had been delivered by the Japanese Court. Is of opinion that the judgment of that Court will furnish him with important evidence in the present suit.

Plaintiff argued that the case at present [illegible] Court had nothing to do with the case defendant has pending in Yedo, and prayed the Court not to grant the prayer of the plaintiff, but to continue the hearing of the case before it.

The Court considered that the still pending decision of the Japanese Court would furnish material evidence for defendant's case, and that an immediate decision of the present Court might prejudice the decision of the Japanese tribunal. His Honour then adjourned the further hearing of the case until the final decision of the Japanese Court be rendered. —*Herald.*

THE MINT.

THE following is the last half-yearly Report of the Director of the Japanese Imperial Mint, and derives its chief significance from the closing paragraph which announces the retirement of Major KINDER. In limiting the operation of their coinage to this country, as they have done by their late measures upon the currency question, the Japanese have made an error of the first magnitude, and with the retirement of Major KINDER from the post of Director of the Mint, the last hopes which we have so earnestly cherished that the Japanese *yen* would be the current coin of China and the Eastern European settlements, have vanished. The Japanese have lost this game with the four honours in their hands.

REPORT OF THE DIRECTOR OF THE IMPERIAL MINT, FOR THE HALF-YEAR ENDING 31ST JANUARY 1875.

To HIS EXCELLENCY SANGI OKUMA SHIGENOBU,

Minister of Finance.

YOUR EXCELLENCY,

I have the honour to submit the Fourth Report on the Imperial Mint, for the information of His Imperial Majesty's Government.

AMOUNT OF GOLD OF STANDARD FINENESS IMPORTED INTO THE IMPERIAL MINT DURING THE HALF-YEAR.

Imported by.	Ounces Troy, at 900 Standard.	
Japanese	9,845	59
Chinese	...	...
Other foreigners	...	...
Imperial Government	6,106	99
Total	15,952	58

DESCRIPTION OF GOLD BULLION IMPORTED FROM THE PUBLIC DURING THE HALF-YEAR.

Description.	Ounces Troy.	
Gold Bars of unknown fineness	5,918	81
Refined Gold Bars of unknown fineness	2 989	23
Total	8,908	04

AMOUNT OF SILVER OF STANDARD FINENESS IMPORTED DURING THE HALF-YEAR.

Imported by.	Ounces Troy, at 900 Standard.	
Japanese	174,503	13

Other foreigners	...	...
Imperial Government	291,972	08
Total	465,972	21

DESCRIPTION OF SILVER BULLION IMPORTED FROM THE PUBLIC DURING THE HALF-YEAR.

Description.	Ounces Troy.	
Silver Bars of unknown fineness	169,897	29

I shall be fully prepared at the appointed time, on or about the 31st January, to transfer all matters connected with my office as Director of the Imperial Mint, in accordance with the instructions of the Government conveyed to the Oriental Bank Corporation.

The annual vacation was observed from the 1st of October to the 15th November. During that time, the whole of the machinery, furnaces and working plant was put in thorough repair.

The weighing arrangements referred to in my last Report have been perfected by placing the Automaton balances on a bed of concrete, covered by iron plates, and the vibration from the wooden floor, which was before an obstacle to accurate weighing, has been entirely prevented, resulting in greater regularity in the weight of the coins.

The new barracks for 100 soldiers, which have been erected from my designs and plans, approach completion, and I leave with the officials of the Building Department working drawings for the new entrance and gate house, which will at once be erected.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A larger gas main through the entire length of the premises is now being laid, to meet the increasing demand for gas.

The following coins have been struck and passed for issue by the Coinage-Director, as shewn by the bullion office returns:—

Denomination.	Number.	Value.
Gold 20 Yen	None.	None.
10 Yen	„	„
5 Yen	95,825	479,125
2 Yen	None.	None.
1 Yen	„	„
	95,825	479,125
Silver 1 Yen	243,735	243,735
50 Sen	—	—
20 Sen	1,263,800	252,760
10 Sen	730,769	73,077
5 Sen	2,793,144	139,657
	5,031,448	709,229
Copper 2 Sen	2,154,978	43,099
1 Sen	12,998,038	129,980
½ Sen	7,745,544	38,727
1 Rin	2,719,660	2,719
	25,618,220	214 525
Grand Total	30,745,493	1,402,879

The total number of pieces passed for issue was 30,745,493, and the real or nominal value $1,402,779.

The falling off in the coinage of gold is very decided.

The coinage of silver has been almost entirely confined to the smaller subsidiary pieces, the quantity of silver yen being merely nominal. This latter coin has been declared a legal tender at Singapore, Canton and Foochow, and at these ports it now passes at par with the Mexican dollar.

Copper coins of all denominations have been produced in large quantities, the daily out-turn being now about two tons.

The following is a list of the European officials in the Director's Department whose agreements have terminated:—

Mr. G. W. HUNTER, *Assayer of Premelted Silver, &c.*
Mr. EDWARD ATKIN, *Superintendent of Gold and Silver Melting.*
Mr. HERBERT WHEELER, *Director's Secretary.*
Mr. HENRY SHEARD, *Die Engraver.*
Mr. EDWARD WYON, *Foreman, Coining Department.*
Mr. ROBERT SMITH, *Foreman, Copper Rolling Mill, &c.*
Mr. R. FINCH, *Foreman, Sulphuric Acid Works.*

I embrace this opportunity (the last I shall have) to thank all who have been associated with me in the Mint for their able and valuable assistance. In every detail the Mint is now in the most perfect order, and will be left by me in that state.

I have the honour to be,
Your Excellency's most obedient Servant,

T. W. KINDER,
Director of the Imperial Mint,
Master of Her Majesty's late Mint, Hongkong.

Osaka (Japan), 28th January, 1874.

ASSAY, &c., OF TRIAL PIECES FOR THE COINS STRUCK DURING HALF-YEAR ENDING 31ST JANUARY, 1875.

On the 29th January, 1875, by order of His Excellency Sangi Okuma Shigenobu, Minister of Finance, Mr. Ishimal, the Commissioner, and other officers of the Imperial Service, assembled at the Mint for the purpose of testing the coinage of the past Half-Year.

The Commissioner selected indiscriminately from the pyx pieces collected daily, a certain number of coins, which were then accurately weighed, with the following results:—

Denomination.	Date of Coinage.	Weight in Grains.	Standard Weight.	Deviation Allowed.
5 Yen	No. 1, Aug. 4, 1874	128·7	128·6 grs.	0·5 grs.
5 Yen	No. 2, Sept. 15, 1874	128·7	128·6 grs.	0·5 grs.
5 Yen	No. 3, Jan. 11, 1875	128·4	128·6 grs.	0·5 grs.
1 Silver Yen	No. 4, Aug. 28, 1874	417·2	416·0 grs.	1·5 grs.

Indiscriminate selections of each description of coin from the various packets were then weighed:—

Denomination.	Weight of 1000 Pieces.	Standard Weight of 1000 Pieces.	Deviation Allowed on 1000 Pieces.
5 Yen	267·91 oz.	267·91 oz.	0·015 oz.
1 Silver Yen	867·00 „	866·66 „	3·28 „
50 Sen	None.	None.	...
20 Sen	173·28 „	173·38 „	0·1 „
10 Sen	86·66 „	86·66 „	0·05 „
5 Sen	43·33 „	43·33 „	0·05 „

The copper coins were tested as to weight, with the following results:—

Denomination.	Actual Number of Pieces in the Pound Avoirdupois.	Number of Pieces Allowed by Regulations.
* Two Sen	31½	31½
One Sen	63½	63½
Half Sen	128	127
One Rin	512	500

Assays were made by Mr. Dillon of the following coins:—

No. 1.—5 yen... ... ... 900·3 parts of gold in 1,000
2.—5 yen... ... ... 900·0 „ „ „
3.—5 yen... ... ... 899·8 „ „ „

SILVER

4.—1 yen... ... ... 900·0 parts of silver in 1,000

Standard of the above, 900/1000ths, with a remedy or permitted deviation of 2 parts in each direction.

As on former occasions, the whole of the remaining pyx pieces were melted into ingots; pieces from each ingot have been also assayed by Mr. Dillon, with the following results:—

GOLD.

No. 5.—5 yen... ... ... 900·0 parts of gold in 1,000

SILVER.

No. 6.—1 yen silver ... 900·0 parts of silver in 1,000

SUBSIDIARY SILVER.

No. 7.—Bar cast from 20 sen...799·6 parts silver in 1,000
8.—Bar cast from 10 sen...799·0 „ „
9.—Bar cast from 5 sen...800·5 „ „

Fineness 800/1000ths, with remedy of 2 parts.

(Signed) W. CHANDLER ROBERTS,
Chemist and Assayer of the Mint.

Royal Mint,
1st December 1874.

LETTER FROM THE HONOURABLE CHARLES W. FREMANTLE, MASTER OF THE ROYAL MINT, LONDON, WITH THE REPORTS ON ASSAYS OF COINS, &c., OF 1873-74.

ROYAL MINT, LONDON,
2nd December, 1874.

SIR,

I have the honour to submit to you herewith a statement showing the result of the Assays made in this Department on the gold and silver pyx coins and ingots of the Imperial Japanese Mint for the year ending 31st July, 1874, which have been forwarded to me by direction of the Lords Commissioners of Her Majesty's Treasury.

The result of the examination has again been in every case satisfactory, and I have, in accordance with your request, furnished to the Oriental Bank Corporation a statement of the Mint charge for making these assays, amounting to £2 7s. 6d.

I have the honour to be,
Sir,
Your obedient Servant,

Major KINDER, (Signed) C. W. FREMANTLE.
Osaka.

ASSAY REPORTS ON PORTIONS OF "PYX COINS" AND PIECES FROM "TEST INGOTS" SENT FROM THE IMPERIAL MINT OF JAPAN.

T. W. KINDER,
Director of the Imperial Mint,
Master of Her Majesty's late Mint, Hongkong.

* All subsidiary and copper coins are pounded.

A CURE FOR TYPHOID.

(TO THE EDITOR OF THE TIMES.)

Sir,—In the recent discussion as to the cause of typhoid fever, has not an equally, if not more important question been overlooked—viz., whether the treatment of fever almost universally adopted throughout England is the most efficacious means of arresting, eradicating, and curing the disease? That there is another system worthy of serious consideration at the hands of the medical profession at large the following facts clearly prove:—

On my being taken suddenly ill last year at Lucerne, and acute symptoms of a threatened fever setting in, my friends forthwith called in Dr. Steiger, who enjoys a considerable reputation throughout Switzerland. He ordered me at once to be what is called "packed;" and on my expressing surprise, he said, "I am thankful to tell you that the doctors in Switzerland and Germany have at last learnt the value of simple remedial measures. When Bourbaki's army entered Switzerland, I had charge of the fever hospital for this district, and out of 24 patients suffering from typhoid fever (two were brought in dying), I cured 22 entirely by application of the wet sheet. I used neither medicines nor stimulants, and the soldiers completely recovered their health in a very short time. During the last eight years this system has been carried on in the Paulo Hospital with signal success, reducing in a surprising manner the death-rate in the fever wards. In private practice I invariably adopt this system, and rarely lose a patient whom I have treated from the commencement of the fever. I have been particularly successful in puerperal and scarlet fevers. This system is now almost universally adopted throughout Switzerland and Germany." Through Dr. Steiger's assiduous attention and packing treatment, I was able to resume my journey in two days.

Now, if not trespassing too much on your valuable space may I be allowed to explain the process and the principle?

1. The Process.—A blanket is spread out on the bed, and a sheet, wrung out in cold water, placed on the blanket; the patient is then wrapped up in the sheet, and the blanket packed round the body; other blankets are finally placed over the patient. In lieu of the sheet, a towel or towels may be used, depending entirely on the extent of fever and the probable reactionary powers of the patient. The sheet is renewed every 10 minutes or quarter of an hour, according to the temperature of the body, which is ascertained from time to time by placing a thermometer in the arm pit of the patient. It will be found that each sheet will reduce the fever from three to seven degrees. This process is continued for about an hour, after which the patient is quickly washed over for a couple of minutes, either on the bed or in a tepid bath, and put back into bed. It is renewed at intervals of four or five hours until the fever is entirely subdued, which crisis is usually shown by a spontaneous outbreak of natural perspiration. By means of the thermometer, the fever can be kept in check by repeated sheets as easily as a steam engine can be controlled by the handle of the machine.

2. The Principle.—It is always difficult to explain in simple language a system depending upon and that ought to be studied by the laws of science, but, in plain words, the wet sheet-pack is simply a cooling poultice. As is well-known the rationale of all diseases is the determination of blood in excess to the interior of the body, and the foundation of all curative processes ought to be the withdrawal of such blood for healthy redistribution throughout the body. This is the principle of a poultice, and of the wet sheet-pack. It withdraws the heat of fever as generated by accumulated blood, and it is continuously repeated till the body regains its normal temperature through restored equilibrium of circulation. Furthermore, the poison, which is the base of all specific fevers, is thus made to expend itself harmlessly, without involving the body in destructive consequence of prolonged febrile excitement. It has been proved without doubt, that the disease by this system can be arrested and eradicated in the course of a few days, without running what is considered the usual course of seven, 14, 21, and 42, days. The subsequent period, also, of a long convalescence is entirely avoided.

It is at the urgent request of many friends that I now venture to make public these statements; and I trust the medical profession at large, towards whom we all owe a deep debt of gratitude, will kindly accept these suggestions in the spirit in which they are offered.

As a layman, I am unable to enter into the medical and scientific part of the question; but Dr Steiger, of Lucerne, with whom I have lately been in correspondence, has kindly given me permission to use his name, and any letters addressed to him on this subject will, I am sure, receive his best attention.

The only apology I can now offer for this letter is the deep interest I have long taken in hospital work, and the conviction that a system

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

so simple in its application and so effective in its cure, when adopted in such countries as Germany and Switzerland, is not unworthy the practical consideration of the medical profession in England.

I have the honor to be, Sir, your obedient servant,

JOHN O. STEPHENS,
Vicar of Savernake, and Honorary Secretary to the Savernake Hospital.

November 28.

REUTER'S TELEGRAMS.

LONDON, February, 12th, 1875.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, FEBRUARY 13TH, 1875.

Cotton Fabrics & Yarns.—Our import market during the closing fortnight has been feebler in its tone and devoid of any interest. *Shirtings* of all weights are neglected, and rates again show a tendency downwards. *Velvets* are dull of sale, while other Cotton fabrics call for no special comment at our hands. Yarns 16/24 and all descriptions of 28/32, of which latter counts the market is very bare of stock, have been in excellent demand but transactions in these have been on a comparatively slender scale.

Woollens during the fortnight have been anything but brisk. With the exception, perhaps, of superior qualities of *Black Italian Cloth*, still very scarce and wanted, and a more favourable feeling for medium qualities of *Black Lustres*, all other Woollens seem neglected, and the approaching close of the season appears to tell sooner than usual. Importations having been plentiful in most descriptions during the season stocks in Japanese hands must be of some importance. *Blankets* 7lbs. remain saleable at a reduction in price. In *Cloths*, excepting one or two sales of cheap military cloth, no transactions have been reported so far at least as we can learn, while large quantities of all descriptions are offered at public sales with a very unsatisfactory result. *Mousseline de laines* would be in a sound position were they held in stronger hands than is the case. Large quantities are on offer and eventually find purchasers.

Iron and Metals.—During the fortnight business in metals has continued very quiet, and small parcels only have changed hands to satisfy current demands.

Sugar.—The market continues to droop in presence of the large stocks now on hand and coming forward. There is a general absence of speculation and the trade is without animation.

Kerosene has passed out of first hands and the market is without stock. Sales of 4,000 cases to arrive are reported at $3.47½.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—Since the 23rd ultimo we have very little change to report in prices; they have receded about $10 for Common and Superior *Hanks* and advanced $10 for fine-sized *Oshius*; other sorts remain as quoted in our last.

Although arrivals have not kept pace with settlements the unsold stock is fully 1,200 bales; buyers, however, generally complain of the scarcity of good Silks in all descriptions. Coarse *Oshius* have been bought in this market for native consumption at the parity of $400 to 425.

Settlements are estimated at 600 bales of *Hanks* and 150 of *Oshius* and *Sodai*. Shipments by the last three malls amount to 520 bales, making a total export to date of 7,955 bales against 10,532 last year for the same period.

Tea.—Our last overland issue reported a steady business at full rates, and buyers firm in their demands.

With the commencement of the current month some apparent hesitation on the part of buyers was noticeable, and operations, only amounting within the last fortnight to piculs 300, were suddenly checked making settlements since 23rd ulto. about 1,500 piculs: this reaction evidently arises from the fact that the proposed reimposition of Tea duty in the United States, has been successfully opposed and of this further telegraphic confirmation has been received this day.

In the present state of the market it is useless to furnish quotations, buyers requiring a drop of at least $8 per picul even to induce them to look at samples, and the Japanese holders, who have been greatly misled as to the probable course of the market, are as yet unconvinced of the effect the miscarriage of the speculations based on the reimposition of Tea duty in the United States must have on this market. Business for the present must, therefore, be considered as nearly suspended.

Our total export from Yokohama for the current season to date is 15⅓ millions pounds, with a considerable amount of Tea, fired and packed on hand, only waiting freight room for the United States.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

Aug. 1. 26ins.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

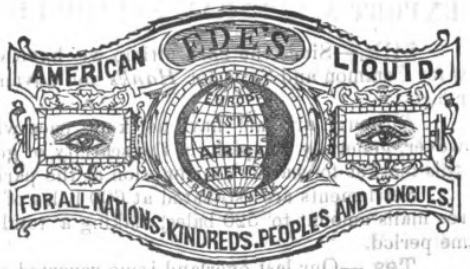
Of Messrs. CROSSE & BLACKWELL,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES



bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S Shaik Bachoo was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

Caution.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from **every respectable dealer** in India.

MISCELLANEOUS.

SIGHT IS THE GREATEST GEM OF NATURE.

Has been proved by thousands to be the best ever offered to the Public.

THE ONLY PREPARATION THAT WILL RESTORE THE ORGANS OF VISION.

Dimness, aged, weak, watery, sore, bloodshot, **kells, cataracts, specks,** colds, inflamed, near sighted, over-worked, and every disease of the eyes, cured in a few dressings. Thousands of Testimonials can be seen. Send a stamped envelope for testimonials, and judge for yourself. Some of the most wonderful cures ever effected in men, women, and children, in the United Kingdom, the majority of whom had been pronounced incurable by the Hospital Surgeons and other eminent Oculists.

☞ **Wanted, Agents at all Foreign ports.**

Sold in bottles at 2s. 9d., 4s. 6d., and 11s. worth twenty guineas a bottle.

N.B.—None are genuine that do not bear the name, John Ede, upon the stamp as well as upon the bottle.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may befound on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles by all Chemists.

CAUTION.—☞ The public are requested to observe that all the above preparation bear the Trade Mark usherein shown. THOMAS KEATING, LONDON, EXPORT CHEMIST AND DRUGGIST. Indents for

VOL. VI.—No. 8.] YOKOHAMA, SATURDAY, FEBRUARY 20, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

IT is rumoured that important changes in the Cabinet may be expected shortly. The aim of these apparently is to embrace a larger field of opinion within the Council of State than is at present represented there.

IN our "Budget of Japanese Notes" of the 16th of last month mention was made of a Japanese bogy called *Mikoshi Miudo*, which is said to be "a bald-headed monster that lolls out his tongue, looking down over the tall folding-screens." The parallel for this among foreigners in Japan is the ghost of the Tycoon, and nothing can be more amusing than the manner in which this bogy constantly looks over the screen, lolls out his tongue, and frightens the believers in this superstition. He put in a bold appearance this week, and scared a dozen or two of persons to such an extent that they momentarily expected to receive telegrams from Yedo announcing an attack on the Castle. They were convinced that the late Shogûn had been proclaimed at Osaka, and that they were sure of a revolution for breakfast on the following morning. Now, although the ex-Shogûn is alive—and, indeed, our readers will find elsewhere in our columns this week some very gratifying traces of his existence—the Shogûnate is as dead as—we will not say a door-nail, (though, by the way, the expression is Shakspearean) because a door-nail never had any life—but as a limb or tumour cut off from the body is dead, and this is as dead a thing as we know of. The Shogûnate was an unconstitutional excrescence, and was regarded as such by the Japanese themselves. It was growing weak when foreigners came to Japan. But it began to crumble into dust when the foreign Powers insisted upon the signature of the Mikado to the treaties; and when it fell, it fell never to rise again. The resurrection of the Shogûnate is about as possible and likely as that of the French Mayors of the Palace.

IT is rumoured that negotiations are pending between the Government and the Pacific Mail Company for the purchase of the vessels which form the coast line between this and China. It has been generally understood that the Government promoted the formation of the Mitsui Bishi Company to utilise the many steamers they found on their hands after the settlement of the Formosa affair, and it must be a very serious question whether it is prudent to extend a risk already very large by the purchase of a number of vessels which are so far obsolete that the work they do can be done by steamers of more economical construction, at far less cost. It is conceivable that the purchase of these vessels by the Government might remove the only existing impediment to a competition of a very formidable nature.

THE successful journey of Mr. Margary of H. B. M. Consular Service from the coast of China to India, is a conquest of no slight merit and importance. The attempt was made in 1861 by Major Sarel, Captain Blakiston and Dr. Barton, but was unsuccessful. Mr. Cooper then tried it in 1868, but was stopped in the province of Yunnan and compelled to return. From the other side, Major Sladen, travelling from Bhamo, in 1868, reached Tang Yueh Chow, a frontier town in Yunnan, but could get no further on account of the Panthay rebellion. The French expedition of 1867-68 under Captain Lagree, who died in Yunnan, entered that province from the South, having started from Saigon.

Mr. Margary appears to have been sent to meet the present expedition from Burmah which is under the command of Colonel Horace Brown, and he seems to have reached Bhamo six days before Colonel Brown quitted it, so that the expedition will have the benefit of Mr. Margary's guidance along the whole route down to Shanghai, which he has just traversed. A fresh laurel has been gained by the Consular Service, and it is believed that one or two others of its members are attached to Colonel Brown and will accompany him from India. Mr. Ney Elias, who made a journey across Mongolia for which he was rewarded with the Geographical Society's gold medal, is also attached to the party.

WE have given elsewhere a translation of a paper which will excite a lively curiosity in a large class of readers on the other side of the world. We refer to "Dr. Müller's Notes upon Japanese Music," published in the last number of the German Asiatic Society's Journal. The readers of our translation will labour under the grave disadvantage of not being able to follow the paper with the assistance of the ample and admirable diagrams which accompany it in the Society's journal. This could not be avoided; but the loss is severe, for Dr. Müller's researches disclose some extremely complex and fanciful ideas relating to music among the Japanese. It was inevitable that the art should be pervaded by the mystical spirit of Chinese speculation: and that the terrible number 5, which has made so much havoc in Chinese physics and metaphysics, plays much the same part in the music of the Japanese, and seems answerable for some at least of those peculiar effects which they love so well and we detest so cordially. That Dr. Müller is correct in saying that the Japanese find our music much more displeasing—he goes so far as to use the word *abscheulich*—than we find theirs, may very possibly be true, because a musical European listener to Japanese music can follow it to a certain extent, though it seems to him devoid of rythm, meaning or beauty. But our music must seem to them a mere confusion of sounds of the most discordant nature, quite as devoid of these characteristics as their's seems to us, and it is within our own experience that their unfailing politeness imperfectly conceals the consequences to their nerves of the performance of European music. We must frankly express our envy of Dr. Müller as being the first in this very interesting field. We had ourselves collected notes upon the subject—the results of the most pro-

Digitized by Google

tracted torture to which we were ever subjected—and hoped to have placed them long ere this at the service of the sister English Society. But they were swept off by fire in 1873, and we have never had the courage again to go through the experiences of which they were the fruits. We should also acknowledge that they were not comparable with those of Dr. Müller for richness and variety of information, and were especially deficient in all that concerns the theory of Japanese music, and its mathematical and astronomical foundations, the greater part of which is as new to us as we imagine it will be to the world.

We have spoken of the torture—it is little less—which investigations of this nature involve; and perhaps we shall be exposing a certain vindictiveness of nature in reflecting with some gratification that our own illustrations of European music must have caused at least as much pain as was inflicted upon us. The sentiment is human. Yet we doubt if any shock to Japanese nerves can equal the agony caused to a European of average musical sensibility by setting a native flute-player at him. Lear speaks of pain which he would not have inflicted upon his "enemy's dog." But the pangs caused by filial ingratitude, the serpent's tooth, and the most complicated machinery of torture, could hardly leave humanity more completely prostrated than half an hour spent with a vigorous and accomplished Japanese flautist. To say nothing of the diabolical self-complacency of the artist under whom it was our own misfortune to writhe during a period which a senseless clock might mismark as a few minutes, but which, measured by nerve pulsations, seemed an eternity, the sounds produced by this genius were of so truly terrible a character that nothing but our conviction that he suffered quite as severely from a return performance on the piano-forte, could obliterate the recollection of that terrible fifteen minutes. We must defer further remarks upon Dr. Müller's paper until after the appearance of the promised second part.

THE following is the correspondence relating to the contribution of books and money lately made by the ex-Shôgun, Keiki, to the nation, in aid of a national library.

I regret to find that the Library proposed last year is not yet made. At first you need not have a large collection of books, but can commence the foundation of the Library with a few, and subsequently increase them. They will ultimately become of vast assistance to our countrymen. If you decide upon the establishment of the Library, I will transmit to you one thousand works* and two thousand *yen*, sent to me for this purpose by my former master, Tokugawa. Favour me with an answer after due consideration.

(Signed) KATZ AWA.

To KAIZOKU KAIKAN.

REPLY.

In answer to your communication I have to inform you that we shall accept the contribution of your former master, Tokugawa, of one thousand works and two thousand yen, with grateful thanks. We have this day resolved on the formation of the Library, and shall bestow one fourth of all contributions in money upon the purchase of books.

DAIJO CHUJIN,
President.

To KATZ AWA.

* Embracing several thousand volumes.

THE ball in honour of the French and English marines is fixed for Friday, the 26th instant. Arrangements have been made by which a special train will leave the Yokohama terminus for Yedo at 2.30 a.m. for the convenience of the residents in the capital. The cosmopolitan nature of the occasion promises to bring representatives of all nationalities together, and it is to be hoped that all who are anxious to recognize the advantages which have accrued from the presence here of the small force now on the point of departure, will take part in the entertainment about to be given in its honour.

AT the annual meeting of the members of the Chamber of Commerce held on Tuesday last, Mr. Wilkin resigned the office of president, and Mr. Arthur Winstanley was elected to the vacated post. In view of Mr. Winstanley's long experience in the business of the port, and the active part he has always taken in public affairs, his election to the president's chair is a deserved tribute to his qualifications for and claims to that position.

THERE is a gambling-house in this settlement, kept by a Chinese, the suppression of which is a matter of importance to all who have Chinese employés. These men are entrusted with money, and the love of play induces them to risk it at these houses. The gambler's inevitable fate overtakes them, and their masters are sufferers as well. We draw attention to this because several hitherto well-to-do Chinese have been ruined at this house, and have been forced to leave this country, their employment, and the prospects of success here. In one case brought to our notice a man of good station in life, and of hitherto irreproachable conduct, decamped with a large sum of his master's money, which he subsequently lost at this very house to which we wish to draw the attention of the Japanese authorities.

SERMONS will be preached tomorrow morning and collections made in aid of the General Hospital; in Christ Church by the Rev. P. Joseph Reed, Chaplain of H. M. S. *Adventure*; and at the Union Church by the Revd. Dr. Maclay.

JUDGMENT was given to-day in the case of The Hong kong and Shanghai Bank *v.* E. Wallace, for the Defendant with costs.

(From the Japan Mail Daily Advertiser.)

DURING the past few days severe fires have raged in various quarters of Yedo. On Friday afternoon a fire broke out in the new "Ecole Militaire," erected in the grounds of the late Owari Yashiki, which was only extinguished after a considerable portion of the buildings had perished. On Saturday, at about 11 o'clock A.M., another fire occurred in the residence of Dr. Anderson, Chief Surgeon attached to the Naval Hospital, at Tokanawa, and within a quarter of an hour the house was completely destroyed, the owner failing to save any of his property. We regret to learn that Dr. Anderson's loss comprises a valuable library of medical and miscellaneous books and works of art and that he was uninsured. The sparks from the burning house carried in the direction of the wind, ignited a block of native buildings in the neighbourhood which were destroyed. At seven o'clock last night a fire was reported in the neighbourhood of the Nihon-Bashi, but appears to have been extinguished before much damage was done.

As we were active in urging upon the Railway Department the publication of the Traffic Return, we have some claim to draw the attention of the Director of Railways to the manner in which those Returns reach us. They are press-copies of a statement, the form and details of which are written out weekly from beginning to end, and as it may be presumed that four press copies of the original are taken, the chances are that at least two of them are illegible. That which reached us today is, for all purposes of accuracy, quite illegible. Surely this is a case for a form. Two hundred of them would last a year and cost a dollar or two. The 'workmanlike' spirit of a Department may be almost unerringly inferred from its forms, and that the document in question is about the worst form possible is quite incontestable.

THE conferences at Osaka of the Sanghis now in office with the ex-Sanghis, have given rise to the wildest and most absurd reports respecting political affairs—reports so absurd that the mere repetition of them involves a certain unsteadiness in first principles. Belief in the Cock Lane ghost was bad enough in Johnson's time: the idea of raising or laying it now is ten times as bad. That these conferences will bring about some important change in the Cabinet cannot be doubted, and we may hear of them very soon, but they will not disturb the shades of the Shoguns.

THE Administration of the "Messageries Maritimes de France" have gracefully recognised the efforts of Maida Koriu, an officer of Ashigara, on the occasion of the catastrophe to the *Nil*, by presenting him through their Agent here with a valuable gold chronometer as evidence of their sense of his distinguished humanity.

SEVERAL of the officers of the Imperial Marines were present yesterday afternoon at an inspection of the Royal Marines, and were subsequently entertained at dinner by the officers of the Battalion.

ARRANGEMENTS have been made for the departure of the Royal Marine Battalion on the 1st March. The French troops will embark on the same day in the contract mail steamer.

A native newspaper draws attention to a violent dust-storm which occurred on the 16th instant, following closely upon a slight shock of earthquake. By a somewhat unexplained process the writer connects the dust-storm with the phenomenon and invites the comments of the philosophers.

THE hearing of the case of the Kaitakushi Department of Yeso against Messrs. Martin, Cohen & Co. for the recovery of $40,000 was commenced yesterday before the U. S. Consul-General and two Assessors. It will be resumed on Monday next.

Mr. Von Brandt, the German Minister, left yesterday for Shanghai by the *Oregonian*. He was accompained on board by his old colleagues and a number of his countrymen, and has left Japan amid many demonstrations of good-will.

General Yamagata, Minister of War, left for Osaka yesterday by the steamer *Oregonian*.

Mr. Okubo is among the passengers from the Southern Ports by the *Golden Age* this morning.

ON Saturday afternoon Yamagata, Minister of War, General Saigo, Colonel Fukuwara and several officers of the Imperial Service were present at an inspection of the Battalion of Royal Marines at the Camp, Bluff. The distinguished visitors were received by a general salute from the troops who afterwards broke into columns, marched past and subsequently went through the bayonet exercise. The huts, hospital, signal lights and field telegraphic apparatus were subsequently examined with much interest and the distinguished visitors left with an expression of the pleasure which their visit had given them. We understand that the Officers of the Battalion will entertain the senior officers of the Imperial Marines to-day.

THE Messageries Maritimes Steam-Ship *Volga* with European mails to the 3rd January, left Hongkong for this port yesterday morning, the 14th instant, at seven o'clock A.M.

THE *City of Peking* for this port sailed from San Francisco on the 14th instant.

THE S. S. *Bombay* with the English Mail of the 11th January left Hongkong at 5. p. m. on Wednesday last.

POPULAR PROGRESS.

IT is obvious that while the organic change which has passed over the face of this country during the past seven years constitutes an advance in its history, the result of that change has not been unmixed good. Rather, indeed, has it brought with it some evils the correction of which would seem to be of vital importance to the future welfare of Japan. The chief of these seems to us to be the danger of loss of that variety and independence of thought and action which was, to some extent, one of the characteristics of the old system. It is true that these forces were often exceedingly ill-directed, and became sources of many forms of trouble. But they were at least forces, and force implies life. They were to be found in operation over the whole face of the country, and the people were sufficiently near to their various centres to have some influence in the direction of them. But now it would almost seem that these forces were concentrated in and limited too exclusively to one spot, and that their more intense action in this sphere tended to destroy that vigour, independence and variety of thought on which Europeans set so much value, and which they justly think has contributed so greatly to their own progress. And we incline to think that the strong cry for representative institutions of which we have heard so much during the past two years, is a form of protest against the extreme spirit of centralization which has been the natural fruit of the Revolution. In conceding to the native press the great freedom which characterises it, the Government has provided an escape for feelings which otherwise might collect in dangerous density and become sources of serious trouble. But it may be doubted whether the freedom enjoyed in the capital, where the eye of the Government is all-seeing and its hand is practically omnipotent, is equally permitted in the provinces; and it is certain that only men who have been brought into contact with, and have largely profited by, forms of European thought, could be persuaded of the wisdom of allowing so free a diffusion of opinion which is often directed not only against the acts of the Government, but against its very constitution. That the Press has hitherto exercised its power with a discretion arising, as it seems to us, quite as much from its general good sense, as from any fear of practical reproof, must be manifest to any one who has been at the pains—our own inclination would rather lead us to say, the pleasure—of watching its progress during the past year or two. But as it is the child, it is also the parent, of freedom of thought; and it is idle to suppose that this can exist without more harmony between the views of the governors and the governed than we have any reason to imagine now exists in this country. That the liberty which has been granted to the Press is one of the best correctives of the evils of which we spoke above, cannot be questioned; but, as we have just observed, it is not easy to believe that it is enjoyed throughout the country to the same extent as at Yedo. In the absence of anything corresponding to representative institutions, it is an excellent safety-valve and means of education. But it will certainly tend to hasten the time when representative institutions will be more loudly demanded, and each will then become auxiliary to the other. It is now apparent that not only the people, but prominent members of the Cabinet, saw plainly enough that the popular demand for something in the shape of representation could not be satisfied with anything so opposed to the idea which lies at the root of representative institutions as the meeting of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Saga insurrection. The Chihanji are, of course, mere nominees of the Government, and the boldest of them could but have taken a view of public affairs more or less in harmony with its own policy. Indeed, it is far more probable that such liberty of thought as men in that position would be permitted to assume, would find vent in their despatches to the Central Government than in a public assembly. Were there men in any such position as that of mayors, elected by the free suffrages of a municipality, the case would have been widely different. In such a case there might have been tangible evidences of some freedom of opinion, and the necessity for the expression of it. Whether more or less wise, it would have been in some sense representative, and therefore of a value, in this respect, altogether beyond that of the opinion of nominees of the Government.

May it not be, then, that the germs of those representative institutions which there appears some probability of our seeing eventually in this country, will spring from the municipalities, rude as may be the form in which these now exist? As we remarked last week, it is impossible to give the rising generation of the upper and middle classes of this country a new instrument of thought like the English language, the most simple works in which carry with them an atmosphere of freedom and political enlightenment, and refuse at the same time some field on which these forces may have play or can find a vent.

NOTES UPON JAPANESE MUSIC.

By Dr. Mueller.

(*From the Transactions of the German Asiatic Society.*)

It is extremely difficult to procure information respecting Japanese music, not only on account of the innate reticence of the Japanese character, but chiefly also because the great majority of the native musicians know nothing of theory, and indeed have little conception that there is any system of musical notation. It is as if an investigator in Europe sought accurate information among tavern-fiddlers and strolling harpers. Musicians educated in the theory are rare and dispersed about the country; sacred music is of extremely difficult access to foreigners, and it is only by means of exceptionally fortunate conjunctures of circumtances that the close study of Japanese musical instruments can be arrived at. In my capacity of physician I have succeeded among the gentry and the learned in obtaining some acquaintance with these instruments, and have come in contact with many cultivated musicians. I shall therefore in the following lines give the results of my experiences, without, however, making any pretension to treating the subject exhaustively.

With a view of attaining my purpose I chiefly resorted to exciting among those I met a curiosity to see and hear some of our own instruments. If, however, I am asked what impression our music makes upon the Japanese, I am sure I shall not be far wrong in saying that they find it far more detestable than we do theirs. A prominent Japanese said—not to me, indeed, for their politeness would forbid it—"children, coolies and women may find pleasure in European music; but an educated Japanese can never tolerate it."

Musicians form societies which meet at certain times, and with very distinct secular or religious objects; besides which the Tycoon, the Mikado and individual daimios maintained, in olden times, private bands.* Then again, there is a large class of musicians who may be engaged to play in private houses. Musicians may be generally divided into the following classes:—

1st—Those alone who play sacred music are theoretically educated and possess a knowledge of the musical notation (*gakkunin*). They belong to an honoured class, and this kind of music could only be learnt by the *daimios*. It has disappeared from China, while it is cultivated in Japan even to the present day by the private band of the Mikado. The greater part of the text, however, has been lost, so that the music alone survives, and the players no longer know the meaning formerly attaching to it.

2nd.—Those who only play secular music, and do not know the notation (*gehnin*); the *koto* players alone are instructed in the gamut and in the notation of secular music. They are placed in the same social rank as merchants and such like, and belong to the inferior classes.

3rd.—Blind musicians have two ranks, *Kenggiô* and *Kotô*, the former taking precedence: these degrees are purchaseable. The players only perform ordinary music.

4th.—The great class of female musicians I here leave with but little mention, as women play a very inferior part in music. It is very rare that a woman has risen to any high rank in the art. Even the girls and women of the higher classes only cultivate the inferior order of secular music.

Formerly all these musicians had various ranks, though this is so no longer. Still, the leaders of musical societies dispense rewards and marks of distinction. For instance, one of the musicians I heard at a sitting on the 13th June last had obtained the privilege of tuning the first string of his *koto* an octave lower than is customary. Such marks of distinction may either be regarded as the reward of artistic skill or the fruits of a payment in money. The best compositions are the property of a certain society which alone has the right to perform them; though, besides these, there is a rich mass of national music.

The instruments chiefly played in Japan may be divided into :—

1st.—Instruments of percussion, made of metal or wood, and in which stretched skins are used.

2nd.—Wind-instruments of wood or shell: metal is only used for the tongues of wind-instruments.

3rd:—Stringed instruments which are either played with various kinds of sharpened appliances (*batschi*) or with a bow (*kiu*).†

Complicated instruments with valves, hammers and keyboards, are unknown in Japan.

All instruments are divided into :

1st.—Perfect, (*gakkuki*) *i. e.* such as are used exclusively for the performance of sacred music.

A. Instruments which are used in the performance of Chinese and Corean music.

1st.—Stringed instruments.

a. The seven-stringed *Koto.*

b. The *Biwa*, a kind of guitar.

2nd.—Drums.

a. The *Taiko*, the great drum which is struck with two large drum-stricks.

b. Kakko, the small drum, standing obliquely, and struck with two small sticks.

c. The *Yôko* or *Samo tsudsumi*, which stands between these two and is struck like the *Kakko.*

d. The *Shôko*, a percussion-instrument of metal.

3rd.—Wind instruments.

a. The *Shô*, of wood with metal tongues.

b. Hidschiriki, of bamboo with metal tongues.

c. Ohteki, the Chinese flute.

d. Komafuye, the Corean flute.

B. Instruments which are used in the performance of the pure old Japanese music.

1st.—*Wanggong* or *Yamato Koto;* six-stringed *Koto.*

2nd.—*Kangura Fuye*, the Japanese flute.

3rd.—*Shaku Biosh*, a wooden clapper.

II.—Imperfect instruments, only used for profane or secular purposes. The number of these is very large, and the perfect instruments are often used for secular music, but, in that case, with the form somewhat modified, a different order of the strings &c.

Specially are to be named among them :—

A.—The instruments which are used for the *No* dances. These *No* musicians and dancers were employed by the Tycoon and the Daimios, whose high rank did not permit them to visit theatres.

They are :

1st.—The great drum, *taiko.*

* The secular music of the Ryu-kiu-No, the sacred music of the Mikado *gakakki* or *gakku*; ... used formerly only in Nara, Tenodji and Kioto, ... ent music.

† *Kiu* also signifies the bow as a weapon.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

2nd.—*Tsudsumi*, two drums, one of which is placed upon the right shoulder while the other lies in the lap. They are struck with the fingers of the right hand.

B.—Besides these, are used for ordinary purposes :—

1.—The *samisen.*

2.—The three-stringed *kôto.*

3.—The *kokiu*, a species of violin. The combination of these three instruments is called *sankioku.*

4.—Various flutes and percussion instruments of metal.

III. Midway between the sacred and the profane music stand certain monochords, whistles, clappers, &c., only used as play-things ; but as they are put to these purposes in distinguished families they are held in some honour.

I have also seen other instruments used in olden times for the purpose of driving away snakes and venomous beasts from the fields. These were something like our sleigh-bells, three or four of them being fastened to a metal ring hung from three small chains, or held by some other contrivance. It was customary to hang up these instruments in the temples, in company with a mirror, the emblem of purity.

Looking more closely into the the theory of music, we find here the usual spirit of mystical Chinese speculation. The kingdom of sound is brought into conjunction with the signs of the zodiac and the lunar changes, and from this the following theory has been developed :—

All forces and phenomena of nature are based upon the number *five* :—we have therefore :

Five active organs : the stomach, the lungs, the liver, the heart, and the kidneys.

(I would here remark that in this and all following ranks of tubulation the order of precedence is from the top, so that each succeeding word implies an object of lower order and office.)

Five colours ; Yellow, White, Green, Red, Black.

Five varieties of taste; Sweet, Acrid, Sour, Bitter, Salt.

Five elements ; Earth, Metal, Wood, Fire, Water.

Five planets ; Saturn, Venus, Jupiter, Mars, Mercury.

Five regions of heaven ; Centre, West, East, South, North. And so on throughout nature. And as sounds belong to the phenomena of nature, there *must* be five of them.

The system of the five tones is called *gôin*, and is in the following order:—

1st tone	*Kiu.*	Temple.	Lord.
2nd „	*Shô.*	Trade.	Servant.
3rd „	*Kaku.*	Horn.	Peasant.
4th „	*Tshi.*	Signs.	Any material object.
5th „	*U.*	Pen.	Any abstract object.

Also in the kingdom of sounds the universal law prevails that the higher placed tones rank above those which follow them, so that in the musical primer *kiu* is written very large, and *U* very small.

These sound-names, however, must not be supposed to answer to any given notes on our gamut. They rather express our ideas of the second, third, fifth, &c., which, in different keys, stand in a constant relation to the key-note. They therefore may be compared to our intervals.

Although these five tones alone are recognized "officially," it must not be thought that the Japanese recognize only five tones in their scale. On the contrary, in stringed instruments they make use of chromatic divisions, which are produced upon the strings according to the nature of the instrument, by pressure or tension (applied on the other side of the bridge), so as to tighten or loosen the string.

The key-notes themselves stand in a definite relation to the months, and this relation is of such a nature, that in each of the twelve months the murmuring of the wind is confined to one special key, so that in such month a separate and perfectly defined key rules.

Thus in	Decembr.....	the	*Kôshô* rules.
„	January	„	*Tairio* „
„	February	„	*Taisoku* „
„	March	„	*Kôshô* „
„	April	„	*Kossen* „
„	May	„	*Tsakurio* „
„	June	„	*Suisehin* „
„	July	„	*Rinsho* „
„	August	„	*Goku* „
„	September	„	*Nanrio* „
„	October	„	*Bueki* „
„	November	„	*Osho* „

The order of succession of sounds is defined in the following manner :—

The names of the months and their appertaining keys are symmetrically described by a circle, and commence with December, working to the left. If it is desired to define the five tones which belong to a key, the following process is resorted to :—

Take *Koshô*, the tone of December, as the key-note, and count forwards from December as 1 (in Japanese order of right towards left) eight months, thus arriving at July as the second tone, *Shô*. Then count six backwards from July as 1, and you arrive at February as *kaku*; then again 8 forwards, arriving at September as *Tshi*, and 6 backwards bringing April as *U*.

Thus are the five chief tones reached and defined. Now again counting 6 backwards, November appears as an assistant-tone * to December; 8 forwards, June as assistant-tone to July ; 6 backwards, January as assistant-tone to February ; 8 forwards, August as assistant-tone to September ; 6 backwards, March as assistant-tone for April. May and October do not belong to the December key. The assistant-tone is a half-tone below the key-note. In precisely the same manner the five keys and their five assistant-tones are defined.

A second method of arriving at the tones appertaining to any given key-note is by mathematics.

The key-note *kin* is regarded as 9, and this as unity. This is divided by 3, and the third is substracted from the key-note, thus 9—8=6. The 6 is then taken as unity, divided by 3, and this third is added to the new unity, thus 6 + 2=8.

Having done this thrice, changing a third, and substracting and adding, and taking the product as a new root, we arrive at :—

$$\frac{24}{3} - \frac{8}{3} = \frac{16}{3}$$
$$\frac{48}{9} + \frac{16}{9} = \frac{64}{9}$$
$$\frac{192}{27} - \frac{64}{27} = \frac{128}{27}$$

By these relations the length of the strings belonging to a given key is regulated.

Thus, for instance, if the string representing any given key-note of 9 units of measurement is long, the second tone of a string of 6 units requires length. The octave is produced by halving the length of the string, and the other strings are regulated by the relations given above.

To make this more plain we will call unity for the *kin* 81 instead of 9, and the numbers then come out as 81, 54, 72, 48, 64.

The tones of the months may now be represented by tuning-forks, and December is found to be our E sharp.

From December, working to the left, the tones follow closely upon our own chromatic scale, (untempered) so that November becomes D.

Of such tuning-forks I have seen three different kinds :

1.—A small cylinder of bamboo or ivory, closed at one end and open at the other. It is pierced on both sides like a flute, and the tone is produced by flipping the closed end with the nail of the middle finger.

2nd.—Another kind of tuning-fork is made with 12 metal tongues, which are either set in a circle in a wind-chest, or placed near each other in a bamboo-stick.

To simplify the instrument and make it more accessible, there is a cheaper form of it, which only gives the six most ordinarily used key-notes, that is, three chief tones and their semi-tones.

3rd.—The third kind consists of 12 bamboo pipes, open at top and bottom, and set in a row. The required tone is produced by closing the pipe at one end with the finger, and using it as a Pandean-pipe.

If we now pass to the consideration of individual instruments, it is important for the sake of greater clearness, not to make too great a distinction between sacred and secular instruments. I shall, on the contrary, entirely disregard any such distinction.

Among stringed instruments the *Koto* ranks first as the basis of the orchestra.

The word *Koto* is applied to the whole class of oblong stringed instruments which are placed on the ground. The following are the best known forms.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

1st.—The *Kin koto* of 25 and 50 strings, now obsolete.

2nd.—The *Sono Koto* of 13 strings. I wish particularly to remark that this is the true denomination of this kind of *Koto*, which Von Siebold erroneously calls the *Kin Koto*.

3rd.—The 6th stringed *Yamatono-Koto* or *Wanggong*, which belongs, like the foregoing, to sacred music. *(Vide supra)*.

4th.—The two-stringed *Idsumo Koto* and the one-stringed *Summa Koto* are little better than playthings.

The *Summa Koto* is said to have been invented by a *Kuge* (noble) who was banished to the province of Summa (hence the name), and who made a single-stringed instrument by stretching a string across his hat. Under the string low bridges are placed, and the various tones are produced with the finger, upon which a section of bamboo stick is placed like a thimble.

The most important, therefore, is the *Sano-koto*. It is furnished with 13 strings, of like thickness, length, and tention, stretched from two immoveable and opposite bridges. Through one of these the separate strings are drawn round the other end of the *koto*, and back through a hole in the sounding-board to the starting point, where they are fastened. The strings are stretched by means of a piece of wood through which they are drawn.

There are certain rules applicable to the dimensions of the *koto*, but these are not universally observed. One placed at my service, as of the usual model, was 72 inches long, the distance between the two main bridges was 53 inches, the greatest breadth 10½ inches, the least breadth 9 inches, the greatest height 3½ inches in the middle, the least height 1½ inches at the side.

The sounding-board is made from very hard *kiri* wood, and has two openings on the under side. The instrument stands on four low feet.

The tuning of the separate strings is effected by means of a moveable bridge placed under them. The player, who is also the singer, fixes the key according to his voice; a good voice is regarded as the equivalent of a high voice.

When the player has thus fixed the key-note, he transfers it to the next string, which had been previously untuned, by shifting the bridge under it. The following tones are now calculated according to the foregoing scheme.

The second tone is transferred to the fifth string, the third tone to the third, the fourth tone to the sixth, the fifth tone to the fourth string. The tones now succeed each other, reckoned from the second string, thus; 1,3.5.2.4. If we seek these tones according to the astronomical method, and express them by means of tuning-forks, taking C as our key-note for the sake of simplicity, and working to the left through eight tones, we shall get G as our second tone; 6 to the right for the third gives us D; A as the fourth and E as the fifth. At the fourth and fifth tone, the semi-tone is used instead of the whole tone, thus, A sharp and E sharp. If we regulate the succession of tones as above we have the following:

1st string yet untuned.
2nd „ 1st tone C.
3rd „ 3rd „ D.
4th „ 5th „ E sharp.
5th „ 2nd „ G.
6th „ 4th „ A sharp.

Had we continued the tuning by twos, we should have had, as the 6th tone, (which would have come after the 4th) B flat, and G sharp as the 7th. The tone inserted between the 5th and 2nd, but lowered half a tone (because the G sharp as assistant-tone is too unimportant to be reckoned independently) would be F.

It is therefore obvious *that the tuning of the Koto harmonises with our minor scale*, the fourth and seventh being omitted, because, through the admission of these, the normal number of five, which is the foundation of all the powers of nature, would be over-ridden.

Instead of the astronomical method of calculation, had we taken the mathematical method above explained, we should have obtained the following results: The relation of the vibrations of these various tones is:

C = $\frac{81}{81}$ = 1
D = $\frac{81}{72}$ = $\frac{9}{8}$ = 1.12500.
E Sharp = $\frac{81}{64}$ = 1.26562.
G = $\frac{81}{64}$ × $\frac{8}{9}$ = $\frac{9}{8}$ = 1.50000.
A Sharp = $\frac{81}{48}$ × $\frac{27}{16}$ = 1.68750.

A comparison with our own perfectly verified system of physics shows that the relations of the whole tones coincide completely with those of our own scale. But the relations of C to E sharp, and C to A sharp, differ. Our relation of vibrations is

C : E sharp = 1 : 1.20000.
C : A sharp = 1 : 1.60000.

In the first relation we have a difference of 0.06562; in the second, a difference of 0.08750. Let it be remembered, however, that, according to theory, E and A should be used instead of E sharp and A sharp, when the difference would be yet smaller, as may be seen under.

Tone.	Vibrations according to Japanese scale.	Vibrations according to Nature.	Difference.
E sharp.....	125,562	125,000	0.01562
A sharp.....	168.750	166,666	0.02084

After the strings from the 2nd to the 6th have been tuned, the 1st is tuned the same as the 5th; that is, the tone G is given to it. (I showed above that one of the *koto* players had been granted the privilege of tuning the G of his intrument an octave lower than is customary.) Now the 7th to the 11th strings are tuned, for which purpose the half lengths (octaves) of the 2nd to the 6th strings are taken; and for the 12th and 13th, the octaves of the 7th and 8th are taken. From the key-note C, therefore, the succession of tones is as follows:

1st string G.
2nd „ C.
3rd „ D.
4th „ E sharp.
5th „ G.
6th „ A sharp.
7th „ C.
8th „ D.
9th „ E sharp.
10th „ G.
11th „ A sharp.
12th „ C.
13th „ D.

The ordinary *koto* players do not, of course, make all these calculations for themselves, but tune simply by ear.

The strings for all stringed instruments are made of silk drawn through wax. The strings for the *perfect koto* are only made in Kiôto. They are very expensive, (a set costs 5 dollars), because they are seldom wanted and can only be had by special order. The strings for the ordinary *koto* are made in Yedo and are cheap. The *samisen* and the violin have similar strings, the latter being somewhat thinner. The strings for the *Gueking*, a kind of guitar, come from China.

To denote the various sizes of strings, numbers are used, the higher numbers betokening the thicker strings. Strings of varying thickness belong to a set, and the set is called by the number applicable to the thickest string. The sets for the various scales bear the names of the discoverer of the scale.

The *koto* is played with ivory finger-caps about three-quarters of an inch long, fastened by means of leather rings to the inside of the thumb, first and middle fingers of the right hand; while the left hand is laid flat upon the strings on the *other* side of the moveable bridges, in order, when necessary, to produce the half-tones by pressing or pulling the string, as occasion may require. Before playing, the performer rubs his hands vigorously together.

The Six-stringed Japanese *koto* or Wanggong is 6.33 feet long; 0.5 feet broad at the small end; 0.78 at the broad end; the height is 0.4 feet, without the legs. It has on the under side, besides the opening for fastening the strings, another opening to permit the escape of the sound. I have not yet been able to arrive accurately at the system of tuning, but it differs fundamentally from the tuning of the three-stringed *koto*, inasmuch as the first string is the lowest; the fourth string follows this at a small interval—probably a second—then the second and fifth are alike, probably fourths; then the sixth is a fifth, and lastly the third is a diminished sixth. But, as I have said, I am not cer-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tain of all this, because I have not yet examined a properly tuned *Wanggong*, but have only got an approximate idea of it from a picture giving the relative positions of the bridges.

The seven-stringed Chinese *Koto* I have never yet had an opportunity of examining.

The *biwa* has four strings, two of which are of equal thickness: the body is 33.5 inches long, of which 7.5 are occupied with the finger-board on which there are four frets. The *biwa* has the appearance of a pear halved lengthways, and narrows from below upwards. The greatest breadth is from 11—12.2 inches, and the greatest depth from 8.7 to 16.3 inches.

The head, in which the four pegs are inserted, is 7.75 inches long, of which 2 75 are devoted to the crown-piece. The tuning is ; key-note, fifth, octave, and third—precisely the succession of sounds given by the Prussian call "*Das Ganze.*" The *biwa* is played with a beater made of horn, wood, tortoise-shell or ivory, about 6.3 inches long, and shaped like an axe-head, called the *batch.*

The *sumisen*, the most common Japanese stringed instrument, which is played by all the *geishas* (a class answering to our female harpists) has three strings, three pegs, and a flat bridge over which the strings are stretched at equal distances. The size, and other characteristics of the *samisen* vary according to the voice of the singer or songstress ; good, that is, high, voices require a small instrument. One for an ordinary voice that I measured was 37 inches long, of which 7½ constituted the body. It was 6½ inches broad and three inches deep, and there is a button at the back for fastening the strings. The four sides of the body are of wood, the upper and under side consist of stretched skin, the bridge standing on the upper side. This skin is said to be manufactured from the uterus of the cat, and the proof of its genuineness is sought in small black spots which testify to the thinness of the skin and which cannot be imitated. The most prized instruments have four such spots on the upper and under sides ; ordinary instruments have only two such spots ; and instruments without any such marks are very cheap. For the sake of greater convenience they are commonly so constructed that the body and finger-board can be separated, when they become easier of transportation. The *samisen* is also played with the *batchi*. In the case of the instrument referred to, the *batchi* was 7 inches long, the sharpened side three inches broad, and the neck measured from 1 to 1½ square inches. Regarded from the pitch of the fundamental note, the *samisen* can be tuned in five different ways, viz.

Hontziosi	— Prime,	fourth,	octave.
Niagari	— Prime,	fifth,	octave.
Sansagari	— Second,	fifth,	octave.
Itsisagari	— Prime,	fifth,	ninth.
Sansasagari	— Prime,	fourth and fifth of the lower octave.	

The *kokiu*, (violin) is in its whole construction very like the *samisen*, but instead of the *batchi* it is played with the bow (*kiu*). It is now but little played, and the performer whom I heard at the sitting referred to above, and who was one of a company of blind musicians, was the only player in Yedo. He has compositions of two kinds which he plays, *Fudjiyu* music which has been handed down by tradition and *Shohoyu*, the ordinary music. The accompanying piece of music * belongs to the former class and is old Japanese, being alternately accompanied with song in unison. Mr. Westphal, teacher of mathematics, to whom I am indebted for the notation of this piece, as well as for the table of vibrations and their relations, (and to whom, as well as to Mr. Holz and Dr. Funk, who have kindly assisted me in my researches, and lastly to Mr. Miyake, whose exertions rendered these researches possible, I would here express my warmest thanks) played over this piece to the blind man after it was reduced to notes, and the latter expressed the warmest gratification and acknowledgments in regard to its accuracy. There are shades of variation, of course ; and, indeed the blind man varied the piece slightly at each performance of it, but with these slight variations it is perfectly accurately taken down ; for the sake of simplification, however, it is written an octave below the pitch in which it was played.

* This refers to the Journal of the German Asiatic Society, from which this translation has been made.

The entire length of the instrument is 25 inches, from nut to bridge 14 inches ; the body, the sides of which sweep somewhat outwards, is five inches long and of the same breadth ; 2½ inches deep ; in other respects exactly similar to the *samisen*, and like it, covered with parchment. Instead of the button by which the *samisen* strings are fastened, the *kokiu* has a round metal tail-pin 2½ inches long to which the strings are fastened by means of a silken cord. The four pegs are conical, obliquely fixed, and changeable to either side.

The bridge is long and very low, and raised and arched in the middle. It has four grooves for the reception of the strings, three of which are placed at equal intervals from each other, the fourth being separated from the others by a very small space.

The strings were tuned to F, B sharp, E, and the two which were close to each other were unisons of E sharp.

The long bow, of 44 inches, is made of four pieces of red sandal-wood, held together by silver bands, and can be taken to pieces for convenience of transport. It is flat at the back and oval in front. The body of the bow at its upper end is bent nearly at right angles, the bend being 2½ inches long. The neck, which is about 9 inches long, has the same form as the *samisen*, as has the body, but it is somewhat thicker. The whole body is very elastic. The hair used for the bow is taken from the tails of white horses and is imported, as there are no horses in the country with such long hair. I at first imagined that, on account of this length, it must be vegetable matter ; but microscopical observation satisfied me that it was really hair. The hair is fastened above with a silver catch ; below with a silken cord. Before beginning to play the performer rubbed his hands with vigour—a practice, by the way, common to all the native musicians. He then took the bow with thumb, middle and little finger, laying the first finger upon the back of it, and with the out-stretched fourth finger he grasped the hitherto loose hairing, which then was held between the third and little fingers. He then took the *kokiu* by the neck, held it vertically before him, placing the body of it upon his knees, between which he fixed the pin which holds the strings. He then rested the edge of the bow against the edge of the sounding-board and pushed it simply backwards and forwards, using only the middle third of it. The strings of the *kokiu* he desired to use were brought under the action of the bow by turning the instrument on its vertical axis, the bow being quietly and regularly worked backwards and forwards. Of the two E sharp strings, sometimes he played on one alone, sometimes on both, and in like manner he used sometimes one of the other strings, sometimes the other. Double notes, as the piece shows, are very rarely employed. The tone of the instrument is something like that of the lyre.

As I must reserve my analysis of the wind and percussion instruments for the next number of this journal, I will only now say a word upon the system of notation.

A really perfect system only exists for the perfect instruments, and, indeed, for the *koto* the number of the string to be struck is the only guide ; in the flute the number is given of the aperture it may be necessary to stop. But the name or the number in the gamut of the tone may be given. When it is necessary to indicate half-tones a second sign stands next to the sign of the note, which dictates whether the string shall be tightened or relaxed. The lower octave is indicated by the addition of a small circle, the lower octave still by two concentric circles.

The value of the notes can be given by two methods ; either a circle is made near the note for the whole tone, a half circle for the semi-tone, and a quarter-circle for the quarter-tone ; or, as the notes are generally written one after the other, an interval corresponding to the desired length of the tone is made between the notes. Time and rythm are not specially indicated, though of all the music I have heard none of $\frac{4}{4}$ or $\frac{2}{4}$ time has ever yet come before me. The effect of a kind of rythm is sometimes produced in the old Japanese music by a pronounced *sforzando* upon a long sustained tone, which is then marked by a vigorous striking of the wooden *shaku bioshi* indicated by a kind of comma marked at the side of the note. For secular purposes numbers are likewise employed, but, in addition to this, and alongside, the sounds are indicated

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

by letters, as our tralalala, dideldum, taterata &c. Thus the Japanese write, *te, te ten* &c; the *te ten* indicating the prolongation of the tone. The system of letter notation varies with different instruments. The notes are written from the top downwards; the words to the left of these; other signs stand sometimes to the right, and sometimes to the left. The lines between which a larger internal is left, are, as is the case with all Japanese writing, written from right to left. Most compositions are so written that they can be performed with or without the accompaniment of other instruments or of the voice. The song is invariably in unison with the leading instrument; the accompaniment of other instruments may either be in unison or in harmonies. In the latter case, and in sacred music, there is no exception to the rule that the intervals (harmonies) must be the same throughout the whole composition: in secular music they may change. The musician who explained this to me sought to make himself the more clear by saying that in sacred music the melody and accompaniment must go in two parallel lines; but that in secular music the accompaniment might run in an irregular zigzag line.

[TRANSLATION.]

DESPATCH ADDRESSED BY THE MINISTERS OF ENGLAND AND FRANCE TO THE MINISTER FOR FOREIGN AFFAIRS RESPECTING THE REMOVAL OF THE ENGLISH AND FRENCH TROOPS STATIONED AT THE PORT OF YOKOHAMA.

(From the "Nichi Nichi" Shimbun of February 14th.)

Yedo, January 27th, 1875.

MONSIEUR LE MINISTRE,

In conjunction with my colleague the Minister of France, I have the honour of informing Your Excellency that our Governments consider that the time has now arrived when the small British and French force stationed at Yokohama should be withdrawn.

In making this communication we feel that we need not recur to the circumstances under which our Governments found it necessary to send a force to Japan for the protection of their Treaty rights, and to continue such protection pending the re-establishment of order and the constitution of a stable administration. The Government of His Majesty the Tenno will doubtless remember that throughout a period of trouble and difficulty, inseparable from a revolution so remarkable as that which has occurred in Japan, the presence of this force has prevented the serious embarrassments which must have ensued if foreign life or property had been attacked before the restored Government had succeeded in tranquillizing the country and in consolidating their authority. They will have seen that in proportion to the progress made in the attainment of these objects the allied force was gradually reduced, and they will now appreciate, we trust, the promptness with which the resolution of our Governments to remove the remainder of that force has been taken on the termination of those difficulties which threatened, until towards the close of last year, to disturb the peace of Japan.

It affords our Governments sincere satisfaction to be able to give His Majesty the Tennô this spontaneous proof of their good will, and also of the confidence they repose in the power and the desire of His Majesty's Government to ensure due security to foreigners resident in Japan.

On our own part we have pleasure in observing that the task in which our troops have been engaged in this country has been performed in a manner which reflects honour upon themselves and upon Japan. We feel that the cordial relations which have been maintained between them and the Japanese officers and people throughout their stay, and the friendly services which they have mutually rendered each other have materially contributed to the growth of good feeling between our respective nations.

I take this opportunity to renew to Your Excellency the assurance of my highest consideration.

His Excellency
TERASHIMA MUNENORI,
&c. &c. &c.

[TRANSLATION.]

REPLY OF THE MINISTER OF FOREIGN AFFAIRS TO THE MINISTERS OF THE SAID TWO COUNTRIES.

February 7th, 1875.

MONSIEUR LE MINISTRE,

It has given me much pleasure to peruse the detailed explanation which you have given me in your despatch of the 27th ultimo of the circumstances under which your Government and that of France have now resolved to withdraw entirely the force hitherto stationed at Yokohama for the protection of the Treaty rights of the subjects of your two countries.

Owing to the unsettled condition of this country before the revolution, these troops were sent here for the protection of your country's subjects, but in consequence of the re-establishment of a National Government by His Majesty the Tennô, and the increasing intimacy of our foreign relations, our nation, as actual experience has shown, has implicitly adhered to the policy of the Government in these two respects. The time, therefore, has arrived when (your Government and that of France) have resolved upon withdrawing your force altogether, a circumstance from which both our Governments derive the highest satisfaction. I have no doubt that the cordiality of the relations between them will be still more enhanced by this measure.

I should also observe that it gives me much pleasure to recognize the good feeling which has marked the intercourse, with all classes of our people, of the troops which are now to be removed, during the period of their stay here.

I need scarcely say that it is the hope of this Government to maintain on the same cordial footing the existing friendship between the subjects of our respective countries.

I have, &c.

(Signed) TERASHIMA MUNENORI,
Minister for Foreign Affairs.

SPIRIT OF THE NATIVE PRESS.

[TRANSLATION.]

There is a great deal of talk now-a-days about patriotism, and, being anxious to explain broadly what is of injury to our people, I wish to state before hand that this article is not intended to be read by, or afford any interest to, either women or children; but is addressed to those whom we call our learned men, that is, the scholars of Japan, the students of Chinese, Buddhist and European knowledge; and as these men differ widely from women and children, I doubt not that they will be brought to understand what true patriotism is. What they say and do has a great effect upon the people, either for good or evil.

It usually makes little difference what knowledge a scholar has acquired; he converts it into the means of subsistence, and no great distinctions need be made on this account. Such being the case none feel dissatisfied at the increase of their pupils. But there are many very one-sided men in the world. Forgetting how much goes to make up the word patriotism, they imagine that the knowledge they have acquired is the best, and should supersede all other kinds, so that thus they become very narrow-sighted. Not knowing or caring what true patriotism is, they lose sight of every thing but their own knowledge. These are our views, and as we entertain them earnestly, we request permission to state them more fully.

The patriotism of which we speak does not consist in the performance of reckless deeds, such as fighting duels with those formidable swords in which some of our people seem so greatly interested, or in committing *harakiri*. Deeds like these may be referred to in the verses found in the New Shinto books; but in order that people may not become confused we will at once say that our view of patriotism differs widely from that of the Shinto priests.

Chinese knowledge.—The two principal doctrines inculcated by the Chinese are "To be faithful to the master," and "To be obedient to the parents." There is no mistake

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that the idea of patriotism involves these duties. No scholar is ignorant of this. A man who conforms to the mind of the people, doing what they desire and abstaining from what they disapprove, will be made the ruler and called the father of the people. The views of a nation and regard to its principles are the true foundations of patriotism. But most of the Chinese scholars believe that ancient Chinese principles are the best, and disregard the present condition of the national mind. Some Chinese scholars of the olden times, careless of their real duties and hating the age in which they lived, hid themselves in the wilderness and among the mountains, and there wrote poetry and prose. We regret to say that some of our present Chinese scholars show a tendency to imitate them. This condition of mind is wholly useless. They would do far better to stay at home and instruct their children about this present and most important time. This would do far more good to the people.

Every nation was at first in a rude condition, and the people possessed no understanding. But as time advanced they became civilized and enlightened, and it is impossible now to anticipate the full civilization of the future. It is idle, therefore, to pine for the past, to condemn Japanese articles as ugly and foreign articles as displeasing, saying that both are unworthy, and to go to reside at Nagasaki because it is nearer to China, or to fret at the decrease of their pupils, or at the scarcity of the people who are desirous of acquiring Chinese poetry or prose, (written by themselves), or to rebuke the Government for its efforts to civilize the country. They may consider all this as very patriotic, but in our opinion it is just the contrary. We entreat them to confine their study and teaching of Chinese knowledge to such parts of it as are suitable to the present age, and if they then get this into the minds of the young, their service will be one of active patriotism.

Japanese knowledge.—This consists of the history of Japan, and of the periods of the changes in our laws and constitution. Japanese scholars believe that the ancient laws, customs and language which died away some thousands of years ago, are the best, and are attempting to place them before the children of the present day, and in so doing claim that they are acting patriotically. These Japanese scholars seem to us like over-indulgent parents, ever treating their children with softness instead of discipline, and thus doing more harm than good. When they make a convert to these views they call him a patriot, and think they have had a share in a patriotic work. But as our people are gradually becoming civilized, the scholars may cry out as they will that our ancestors were gods, but no one will listen to or believe them; and as geography teaches us that our country was not the parent of other countries, such teaching will no longer be very popular. Moreover, it is well known that, without any such unnecessary considerations, men will love their country, for even a dog will watch his master's gate, and a horse will return to the stable to which it belongs. There may be diversities in the forms of government of countries, whether republics or monarchies, or any other forms; but this implies no difference in the spirit of love of country among their inhabitants.

We entreat Japanese scholars to abandon their dislike to foreigners, for it is a great hindrance to the advancement of civilization among the people. They should also forego their hatred to the Buddhists, who are objects of hatred from the people. In the one case they injure the government administration, and in the other they arouse wrath among the people. This is not true patriotism, and we sincerely pity those who imagine it to be so.

Buddhist knowledge.—This is religious science. As Japan had no native religion, Buddhism came to us from India. Religion is out of the region of politics; but it is the guide of the people. The seven sects of this religion arose from the teaching of seven different founders, who were without the slightest intention of injuring the country to which they belonged, the Government under which they lived, or their fellow-countrymen, in founding these sects. Buddhist scholars, compared with other scholars, appear to be the least patriotic, and this, we think, is because their minds are constantly set upon the next world. The next world may be of importance; but so surely is the present. Religions undergo modifications as time wears on. The seven sects of Buddhism were not all formed at one time, and, looking at foreign religions, we observe that they also have passed through many stages. We must not keep our eyes too fixedly upon the past. It is true that the basis of a religion cannot be changed, but it may shoot out new branches, and from these our people may derive profit.

Buddhism is now gradually decaying in its native India, and becoming very unpopular in China. But as it is still very popular in Japan, those who love Japan should make its foundations strong and lasting, and think well about the present. This will assist our Government in its endeavours to diffuse civilization among us.

The Buddhist scholars seek to hinder the spread of Christianity among us. They say that Christianity is wicked, and whenever they see European articles or books, they say they are fruits of Christianity. But when they see the photograph of our Emperor in European dress, they are bound by this logic to say that this is also Christianity. There should be an end to such nonsense.

European Science.—The scholars of European learning deserve as much honour for the promotion of civilization in this country as the leaders in the last civil war. This being a new and enlightened form of knowledge, many advantages may be reaped from it, and as it is not long since it reached Japan, no one can claim that it has done us much injury.

The patriotic feelings of our European scholars have lately become a little too strong, and in some respects unsuited to the country. They are greatly desirous of introducing into Japan new and enlightened ideas from Europe and America, and of dispelling the old and dark ideas of our native land. This arises from their strong desire that foreigners should not consider this country dark and weak, but enlightened and strong. But in this they disregard the actual wealth of the country and the condition of the people. Many among us are desirous that our civilization should take equal rank with that of Europe and America. But as our country is poor and the people are ignorant, we must first promote agriculture, so that the land should yield more abundantly. We should promote commerce. We should promote the education of our children and compel the indolent to be industrious; and when all this has been done, it will be time to talk about rivalry with foreign countries. But our scholars who desire all these changes immediately are like those who would set a child to hard labour, or who imagine that the poor should abound in luxury like the rich.

We do not mean to say that we are in the same condition as we were several years ago. But, as we have said before, the first and most important thing to be done is to build schools, and to secure the diffusion of useful knowledge among the people; then to make an advance in commerce and agriculture, so as not to be decorating the outside only and doing so much expensive work in vain. Our scholars of European science ought to be assisting both the Government and the people. This is the manner in which they will best show their patriotism.

And we entreat them, too, to have a little more patience, and to cool their ambition that all these changes should occur at once. Let them prepare the way for them, so that when they come we may be ready for them, and they may really be to our profit.

In thus writing concerning the scholars of four different branches of learning, I have been forced in some places into lamentation, in others into contempt. But my aim has been not so much to rebuke, as to guide to the road of a true patriotism. I trust, therefore, that I shall not arouse anger in them, but simply prevail on them to ponder.

FREEDOM OF THE PRESS.*

We were always of opinion that our people were gradually becoming civilized, but that the Government had no desire to relax the weight of its hand on them. On the 21st of last month we had ample proof that this opinion was incorrect; in other words, that the Government was ceasing to be so oppressive, but that the people do not appreciate this. We lament this ignorance of our breth-

* Our issue of the 21st February contained the memorial referred to in this translation, with the reply so it sent by the *Sa-in*. The memorial was directed against the freedom of the Press. The reply of the Government was short and decisive in favour of such freedom.

ren, but are pleased to find that the Government is relaxing its stringency; and it is a source of great and unexpected happiness to us to find that even foreigners praise it on this account.

The proof of which we have spoken appears in the *Japan Weekly Mail* of the 21st January, in a paragraph of which we have given a translation elsewhere. We believe that this paragraph was published by the *Japan Mail* after an examination of the memorial sent to the *Sa-in* by Fujita Kentaro of the Ehime *ken*, and of the reply to that memorial.

We cannot but regret that there are such ignorant and obstinate men among our brethren. How was it that Kentaro reasoned in this foolish manner? Did he do this in ignorance of the difference which exists between civilization and barbarism? Or did he intend to flatter the Government and receive some salary or gratuity? We have often seen memorials sent to the Government on the subject of the Press, but we never saw one like Kentaro's.

Fortunately, our Government is doing its utmost to advance our real civilization, or this opinion of Kentaro's might have been put into effect; and had it been pronounced four or five years ago, the newspapers might indeed have been troubled. Kentaro, in trying to hinder the advance of our people, and the promotion of knowledge among them, has earned the displeasure of thirty-five millions. Nor is this all. His memorial was published in the *Japan Mail*, and thus he will be disgraced throughout the world. In his attempt to flatter the Government, therefore, he has earned universal disgrace. Hereafter, it will be well if men desirous of advancing the welfare of the country, reason everything according to their conscience.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Theatres.

Okuni Kabuki, a woman of the province of Idzumo, obtaining the assistance of Nagoya Sansaburo of Owari, thought of collecting money to rebuild the *Oya-shiro* of her native province which had been razed during a local disturbance, and about the year of Onin (A.D. 1467) proceeded to Kiôto, and erecting a shed in a place called *Go-jo-kawara* gave the first public performances on the grass, hence the name *Shibai*, now commonly called *Shibaya*. There are various other stories told as to the origin and the date of the first theatre or performances. About a century later OnonoO-tsu, the maid of Otanobunaga, composed a piece on the loves of Joruri Hime, a noted beauty of Sanshiu, and hence comes the name for subsequently composed pieces of the same class, *Joruri*. Chikamatzu Monzaiemon was the next great composer of these pieces, and his compositions are still in favour with the public.

Uji Kadaiyu introduced the *fushi*, the peculiar jerky tones introduced into the readings, so striking to the foreign ear, the exaggeration of which by coolies in the streets at night, sounds as if some one had given the vocalists an unexpected blow. Takemo to Kaku-taiyu and Toyobake Wakataiyu, are celebrated as composers of *Gidaiyu*, which requires the lower notes and the chest voice, and is more fatiguing.

After the establishment of the rule of the Tokugawas the peaceful state of the country permitted of great improvements in acting, and players were encouraged in Suruga. Afterwards when Yedo Castle was being built on the site of Ota Dokwan's *Oshiro* (now Nishi Maru), a celebrated actor called Saru-waka Kan-saburo was presented with a 'baton' *(saihai)* of gold, and sent from Suruga to Yedo in the timber vessels bringing material for the castle. He danced on the piled up timber and flourished his bâton as the ship came into port.

Since then actors have become popular, and as a consequence numerous; and although they have hitherto been looked upon as a degraded class, of late this disability, in common with those of the *yetas* and others, no longer exists. One family of actors formed an exception to this degraded state, that of Ichikawa Danjuro, now existing in the true line of descent, a rare thing in Japan where adoption is so general. He possessed special qualifications, great ability and was very accomplished. His descendant at present performs in the principal parts at the new theatre near Shiba, Tokio.

The arrangements of the stage, or *bûtai*, are the *mawari-bûtai*, or turn table, *seri-dashi* or trap, *seri-agi* or ascent from the stage, and *gaudo-gaishi* or topsy-turvey scenes. The passage through the pit by which the actors enter is called *hana-michi* (flower-path.) There are curtains or *makú*, some to drop, others that are rolleded up, and the *ten-makú*, or ceiling-hanging. These are invariably presents from admirers, and inscribed with characters, Chinese and *hiragana*, stating by whom presented, or in case of anonymous gift, *gozonji-yori*, also *shinjo*, or presented. Quaint figures are mixed with the characters, and all dyed in various colors, presenting a curious appearance.

The audience is accommodated in the *sajiki*, or boxes, the *udzura* or ground-tier, *taka-doma* or raised pit, *hira-doma* or level pit, and *shiki-fune* or gallery. The latter fronts the stage and is apportioned to the "gods" of the native theatre. There is also the 'official' box. The band, *geza*, is placed on the stage, as also the *gidai-yu* in a stage-box (*chobo*). The prompter is called *kio-gen-sakusha*, and follows the piece with the *MSS.* in hand.

In night performances men with candles fixed on the ends of long sticks hold them so as to throw light upon the actors' faces, in order that the audience may observe their grimaces distinctly. The dressing-rooms consist generally of three stories: the upper for the actors who take the female parts; the second for the superior actors; and the lower, or ground-tier, for the common herd. The principal 'star' is called *Za-gashira*, and the men who come on the stage as horses' legs and such like are called *pê-pê* or *inarimachi*.

Authors, *Kio-gen Saku-sha*, if successful are looked up to, but the unlucky ones can sometimes find employment only as *hioshigie*—men who rap two pieces of wood on a board at the "points." The *Furitsuke* looks after the costumes and general conduct of the piece, scene-shifting &c., the *Todori* announces before the rise of the curtain the names &c. of the actors, is in fact a living play-bill. There is a warm bath in the *gaku-ya* (dressing-room), and at each change of character or costume, the actor washes off the paint and cleanses himself preparatory to a new coating.

On the 18th day of the 5th month the actors hold a festival in honour of *Soga*, a piece founded on the revenge of two brothers of that name on their father's murderer, a popular play. It is invariably the opening piece at every theatre at the commencement of the spring season. All respectable playgoer first go to a *chaya* (tea-house) whence they are conducted; seats, refreshment and attendance being guaranteed by the *chaya* people. The "sandwich" of the theatre, called *maku-no-ouchi*, consists of handfuls of rice squeezed, *nigiri-meshi*, and a vegetable stew *nishime*—as a relish. But although it is not thought correct to bring one's own luncheon, *saké* and any delicacies may be ordered from the cook-shops in the vicinity.

From 6 A.M. to 6 P.M. are the usual hours in order to avoid necessity for artificial light, as in the case of outbreak of fire the panic would be alarming and accidents numerous. The *Maye Kiogen* is an introduction before the piece commences. Some of the inferior actors, dressed in the ancient court-costume, go through some droll antics, &c. sometimes in the characters of the seven lucky beings *Sichi-fukujin*, &c. or as at *Rai-ko-shi-ten-do-o-jie*.

A portion of a piece, or only the popular portions, or pieces from several plays—an act of each perhaps—may be given on the same day, or a play may stretch over several days. *Yesoshi* are play-bills in book form, and *bantske* the same in sheets. Hand-books of the parts are called *o-mu-seki* (parrot-books, *i.e.* speech without action or feeling).

Females were prohibited to act with men by the Tokugawa government, but there are companies of females who bring out pieces without the aid of men; they do not seem to be popular or numerous, and it is only in a certain class of play that they are at all successful. *Tozai*, East and West, is the "Oyez" of the native theatre;

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

yerai or *mai* are the expressions of approbation the audience use when pleased and sometimes *Nipon-ichi*. There are no "claqueurs," and nothing like our applause or hissing, and there are no *encores* nor calls before the curtain. The approbation of the audience is testified by inviting the popular actor to a feast after the Theatre is closed. *Geyshas* and *Kakoie-mono* vie in their endeavours to attract the actor's attention, and make him liberal presents.

The popular plays of the Japanese are very numerous: we give a few of their names:—

Soga is a tragedy based on the revenge of two brothers of the murder of their father: the scene is laid in the days of Yoritomo about A.D., 1186.

Chiu-Shin-Gura.—The story of the Forty-seven *Ronins* who in Yedo about 1699 revenged their master's judicial suicide, so well known to all.

Sendai Hagi.—Founded on a story of the attempt to poison the heir of the Sendai Prince, his nurse's devotion and her success by the substitution of her own boy who is poisoned and dies: this is a tale of the early part of the seventeenth century.

Imo Se Yama (The hills of Imo and Sei in Kioto), a story relating the loves of a frail beauty called *Hinadori* (a young-bird) and her sweetheart *Ooganoshe* in the beginning of the 16th century.

Kagami Yama.—About the year 1740, in the palace of Matzudaira Simôsá no Kami there was a lady in waiting, a pawnbroker's daughter named *Onoye*. Another of the ladies of the palace named *Iwafuji*, a *samurai's* daughter holding the rank of *Otsubone*, was jealous of the influence and style of *Onoye*, whose father supplied her with ample pocket-money and robes. The latter had amongst her own waiting maids the daughter of a *samurai*, who being heavily indebted to the *Shichi-ya* (pawnshop) begged to have his daughter *Ohatzu* taken into *Onoye's* service. *Iwafuji*, proud of her chivalorns ancestry and her own ability to fence, challenged *Onoye*, whom as a *Chonin* (townsman's) daughter she knew to be unpractised in this accomplishment. *Ohatzu* overheard the scoffs and jeers *Iwafuji* poured upon *Onoye*, and being *Iwafuji's* equal by birth stepped forth as her young mistress's champion and vanquished *Iwafuji* at her own weapons. In the subsequent absence of *Ohatzu*, *Iwafuji's* further insults to *Onoye* ended in the latter committing suicide and *Ohatzu* finally kills *Iwafuji*, and then attempts *gigai* (the female mode of judicial suicide by cutting the throat) but is stopped by the officers of the palace and is finally promoted to *Onoye's* position with the name of "The second *Onoye*," and is rendered happy.

Gem-Pei-Sei-Suic-Ki, the wars of the *Gengi* and *Heiki*; *Paiko-O-Ki*, the wars between the days of the Ashikaga and the Tokugawa, are full of warlike incident, a little illicit love and much murder and rapine. The incidents are taken from the books of the same name which are standard works.

Pen-jin-ki.—A story about *Tenmangu-Sugawara michisane* who was banished through court intrigue. A woman sacrifices her own child to save his, which was left in charge of one of his former retainers, now a writing-master. Another former servant hears that there is a plot to murder the child and induces his wife to substitute their own child for *Sugawara's*.

Ni-jiu-shi-ko, is a story about *Yaegaki-hime*, who, while her betrothed *Katzuyori* is at the wars, treasures his portrait, and, while gazing on it, sheds tears of grief at his absence, his dangers and the hardships which she is unable to share; and when she hears of his death hangs it up and performs her devotions before it. The fathers of *Katzuyori* and *Yayegaki* become enemies, and after many adventures, the former determines to see his betrothed wife, who, he hears, is a great beauty, and enters her father's service as gardener, but is discovered. Eventually by the assistance of foxes he escapes, and they further help the lovers to come together in return for some kindness shewn to the *kitsune* family.

Satomi-hak-ken-den.—A famous dog called *Yatzubusa* was requested by a celebrated warrior to fetch him his enemy's head, and, if obtained, his daughter, the beautiful Fushe-hime, was to be his reward. The dog was successful and brought the head, a great victory being the result. The lady is claimed, she flies to the hills, but in going to a pool for water, sees herself mirrored on its surface as a dog: placing her *judzu* (rosary) over her head she recognises her own features; the *judzu* slipping off into the water beyond her reach she sees again herself reflected as the dog. It seems Fushe-hime had been promised in marriage to a young cavalier before this, and he, in searching for his bride, met the dog *Yatzubusa* and shot it. Fushe-hime, although then *enceinte*, committed suicide, and the *fœtus* became a spirit, flying to the eight points, entering eight unborn children, who became brave men. Their adventures are contained in Bakkin's book of the same name as this play.

Inaka Genji is a play adapted from *Tanehiko's* book of that name. *Mitzu-uji*, a Japanese Adonis or Don Juan, has many adventures and love passages, the ground-work of the piece.

Hiza-kuri-ge, (shanks' mare,) a comic story of a tramp on the Tokaido by Yajirobei and his friend, full of coarse fun, comical incidents and "tricks upon travellers," much of which is quite unfit for translation.

Miage-no-shinobu, an eldest daughter, sold to be an *Oieran* (courtezan). After her father's death, the young sister goes in search of her elder sister, and is entrapped by *zegen* (pimps); eventually however, the sisters meet and are rescued from their degrading life.

Yao-ya-osichi. Osichi, the green-grocers's daughter, goes to pray at the family temple and sees there her fate, *Kichisa*, with whom she becomes so enamoured that when the gates of the city, dividing the wards, were closed and she could not pass, she, knowing they would be thrown open in case of fire, sounds the alarm-drum, and thereby incurs the penalty of being burnt alive. She is rescued by the discovery that she has been induced to raise the alarm by robbers, who are burned in her stead.

Oshun-Dembei, a piece called after two young lovers who commit suicide locked in each other's embrace, the love portion being tediously spun out to the length of several scenes.

O-han Chojemon.—*O-han*, a girl of fourteen, and *Ohoyemon*, aged forty, love not wisely but too well, and like the foregoing couple die together.

Hidaka-gawa. Kiyohime, the daughter of a hotel keeper, falls in love with *Anchin*, a priest who periodically stops at the *Yadoya* (hotel). Her importunities frighten the priest, who flees across the river that gives its name to the piece, and hides himself under a temple bell. The girl is, by the power of her love, transformed into a *Ja* (a kind of supernatural serpent), and tracks the object of her desire. Passing round the bell several times it becomes a molten mass by *majinai* (witchery), and consumes both.

Ishikawa Goyemon is a robber of the days of Taiko who is sentenced to be boiled to death in a large pot full of oil.

Kuzu-no-ha, the wife of Abe, when she bears him children, proves to be a fox.

Koku-sen-ya, in 1640, wished to restore the *Ming* dynasty in China. *Kin-sho-yo*, his wife, becomes the property of Kanki by capture, and wishing her present master to fight with, and not against, her former lord and master, arranges this by signal—assent being signified by pouring crimson water from her balcony into the stream beneath, dissent by ink-water. She finally succeeds, and the closing scene of the drama shews her on the balcony, pouring out the crimson fluid as a signal of acquiescence.

San-koku-yo-fu-den, is a Chinese novel of tales of three kingdoms, foxes and women, from which incidents are taken and worked up for the stage. *Kinbi-no-kitsune*, the nine-tailed fox is the mischief-maker, taking the form of beautiful women, and disturbing the peace of nations.

It would be as difficult to expunge the Chinese element from Japanese literature as it would to write about that of Europe without introducing something that had its origin in ancient Rome or Greece. There are no greater literary pirates than the Japanese, who in this respect are even worse than the American re-publishers. The latter sometimes acknowledge the rights of the author which the natives of Japan repudiate. There are other classes of theatres, something between the *hon-shibai*, or true theatre, and the *baba-shibai* or street performers; these are called *yosei*, assemblies principally open at night, most of them similar to the "Penny Gaff" of a seaport-town at home. At these may be seen or heard the *kiogen* of the larger theatres mutilated and murdered, *gidai-yu* and *Jorori*, recitations with musical accompaniment, *Koshaku*,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

stories of the wars, *otoshi-banashi* (dropping-down-talk) stories that carry the hearers interest to the sublime, and wind up with a sudden anti-climax.

Tsutsuki-hanashi, continuous talk-stories; *tedzuma*, sleight of hand; *kage* shadows and rudely-made magic-lanterns, illustrating practical jokes or stories; *hatchi-ningei*, eight-mens parts, one man rapidly changing his character and voice solely sustaining the piece. *Teri-ha-kiogen* is an imitation of *no*. *Chaban* are comicalities and sometimes "Pepper's ghost" is attempted. *Ayatsuri-niugio* is a puppet show.

Marionettes were first introduced by Haku Taiyu, the *Kannushi* of Nishi-no-miya. *Taik-o-ki*, the wars of Taiko in ten acts is a favorite piece for these puppet-shows. Latterly an additional attraction called *shin-bun*, news, has been introduced by those story tellers who cater for the poorer class: current events, items from the daily papers, foreign matters, scandal &c., are given, more with regard to the amusement of the audience than to truth or morality.

Baba Shibai (open air performances). The parts are frequently taken by young girls and boys, and *morceaux* of favourite scenes are attempted for the amusement of the crowd, who are expected to throw in a shower of cash at each telling point in the performance.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

The Annual General Meeting of this Chamber was held on the afternoon of the 16th instant with the view of receiving the Annual Report and Statement of account, and of electing a Chairman and office-bearers for the ensuing year. There was only a moderate attendance of the members.

Mr. A. J. Wilkin, Chairman of the Chamber, presided.

The minutes of the last meeting having been read and confirmed, Mr. G. K. Dinsdale, Secretary of the Chamber, proceeded to read the Annual Report, which will be found in another column.

On its conclusion Mr. D'Iffanger, seconded by Mr. Sitwell, proposed that the Report be adopted. This was agreed to.

The Chairman intimated that it would be incumbent upon the Meeting to proceed to the election of office-bearers for the forthcoming year. His numerous avocations would, however, forbid his offering himself for re-election.

Mr. A. Winstanley suggested that prior to proceeding to the election of Officers it would be advisable to bring forward the amendments to the Rules of which notice had been given.

The Chairman concurred in this course.

Mr. A. Winstanley said that the statement of accounts showed that it was now absolutely necessary to devise some mode of augmenting the income of the Chamber, and he had pleasure in proposing the following motion to this end for their consideration.

"That non-members of the Chamber be allowed to subscribe to the circular, an annual payment of $10 to entitle to two copies of each issue, and a charge of 20 cents to be made for every additional copy required, it being understood that subscribers shall furnish particulars of their import and delivery of staple goods by filling in forms supplied by the Chamber, in the same way as Members.

In such case, however, the circular should be regarded as of a confidential character and not intended for circulation in Yokohama.

Mr. Barlow seconded the proposition, and, in answer to some doubts expressed by Mr. Milsom as to the efficacy of this proceeding, said that no better mode of adding to the revenue was apparent. Failing this there seemed no alternative to increasing the subscription.

Mr. D'Iffanger said that the circular was already supplied to the *Japan Herald* and thus obtained publicity.

The Chairman stated that the Chamber circular had been issued to members only, and though he was not sanguine as to any very extended sale being attained by the removal of the exclusive right of purchase by members, he thought that the proposition was sound in principle and might fairly be tested. There were many persons who would, no doubt, purchase copies of the circular under altered conditions, who were at present debarred from doing so by non-membership.

Mr. Sichel remarked that as the newspapers had special reports prepared for them there must be some misapprehension in supposing that they copied the Chamber circular.

Mr. Winstanley, said that if the "Market Report" published by the *Japan Herald* were compared with that issued by the Chamber of Commerce it would be found an almost *verbatim* transcript of the latter compilation.

Mr. Winstanley's motion was then carried.

Mr. Dodds adverted to the heavy cost of telegrams and said that it would be most necessary to effect some econony in this detail of their expenditure. Their cost last year had been $2300 and he would now propose that "for the forthcoming year" the amount to be allotted to the purpose shall not exceed "$1,700.

Mr. Sichel thought that this would be a most unwise procedure. The scanty intelligence even now conveyed by the telegrams furnished matter for complaint. What were they to expect when even these scanty details were shorn down?

Mr. Dodds explained that the desired economy might be effected by reducing one out of two telegrams to six words, the other remaining as at present. Thus, long and short messages would be alternately presented to them, and once in each fortnight the telegram would be transmitted of its present length. He illustrated the effect of this briefly.

Mr. Sichel considered that this proposition should be absolutely negatived as eminently prejudicial to the interests of their Chamber. He foresaw the danger of curtailing the slender amount of matter the telegrams now furnished as likely to result in the retirement of many of the members, and would therefore move that the telegrams be not curtailed, but that the Committee should by other means modify their expenditure.

Mr. Winstanley said they could not see their way to effect this.

Mr. Sichel thought it would, in such case, be better to dispense with the telegrams altogether.

The Chairman pointed out that for the ample telegrams supplied to them the members of the Chamber should be prepared to pay. The motion seemed to him to suggest an eligible alternative to the present costly arrangement.

Mr. Dodds' proposition was then put to the meeting and carried.

The Meeting next proceeded to elect a Chairman for the the forthcoming year, when the choice of the Meeting fell upon Mr. A. Winstanley who took the chair vacated by Mr. Wilkin.

On taking the ballot for a Vice-Chairman, Mr. Wilkin was declared duly elected.

The following gentleman were elected as Committee for the ensuing year:—Messrs. Blakeway, D'Iffanger, Dodds, Evers, J. Walsh, Milsom and Barlow, Messrs. Vouillemont and Thurburn consenting to act as Auditors.

The meeting was brought to a close by a vote of thanks to the retiring Chairman, and a warm tribute to his untiring zeal in the discharge of the important duties of the office of President of the Chamber.

REPORT OF THE YOKOHAMA GENERAL CHAMBER OF COMMERCE FOR THE YEAR 1874.

The Committee beg now to lay before the Chamber their report for the past year, accompanied by the accounts duly audited.

The telegram, it will be observed, still makes heavy demands upon the finances, and as the additional subscription is insufficient to cover the cost, the message has, as last year, to be partly paid for out of the accumulated funds of the Chamber. It is needless to say that this is not as it should be, and it becomes incumbent upon the members, either to provide the additional expense, or to curtail the cost of this item.

Notice has been given, it will be observed, of a motion intended to meet the case.

The general expenditure of the Chamber has had the attention of the Committee, with a view to reductions where practicable.

During the last year, the scope of the telegram has been further extended by the use of an economical method

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of cipher, and Your Committee believe that it may be fairly called a valuable and trustworthy message.

Statistics of Trade.—Persistent attempts have been made to utilize the Customs and Machigaisho returns, with a view of obtaining not only fuller and more correct bi-monthly statistics, but also of making up daily details of imports and exports; but after several months' experience, all these attempts have proved abortive.

Hatoba Accommodation.—Annexed is a Report of a Special Committee upon this subject, which having been forwarded by the Board of Consuls to the Superintendent of Customs, obtained the reply from that gentleman as also annexed. It is to be regretted, however, that no steps have yet been taken in the promised direction.

Meanwhile, it is understood that the Government are about to commence some extensive harbour and pier works; and, without expressing any opinion upon the probabilities of any very large expenditure being directly remunerative, or otherwise, it is safe to assert that such works cannot fail to be of immense advantage to shipping and trade generally. Since, however, the opening of the Suez Canal, a large proportion of our Imports is brought here by steamers, and these succeed in unloading with far more despatch than was the wont of sailing vessels.

Storage of Kerosine.—A compound and building have been provided in a good situation at Nakamura; but, pending some alterations in the building, and the promulgation of the Storage Regulations, no use has yet been made of this depôt.

Some further correspondence has taken place on the subject of the dollar paper issues of the Dai-Ni Kokuritz Ginko, and it is hoped that ere long the position of the Bank and of its paper currency may be more clearly defined.

Revision of Treaties appears to be still in abeyance. It is satisfactory, however, to be able to record that the Foreign Representatives have obtained from the Japanese Government the concession for their countrymen of right of free travel in the interior, under a system of passports.

This has been largely availed of, and has hitherto led to no difficulties whatever; and it is to be hoped that the Japanese, seeing this, will soon finally abandon their remaining love of exclusiveness.

The right of *Exportation of Rice* has been safely left to the natural course of markets, seeing the rapid rise in the value of the article here, and the equally rapid fall at the home markets.

Some considerable changes have taken place in the management of the Mint at Osaka; the effect of which has still to be seen. Meanwhile the coins minted there are, from different causes, scarcely used for ordinary purposes of trade.

A. J. WILKIN,
Chairman.

THE HARBOUR SCHEME.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 20th February, 1875.

SIR,—Being anxious that the facts I have given in support of my views on this scheme, should be placed beyond question, I feel called upon to correct H. in his assertion that I was in error in attributing to the Colaba Land Company of Bombay a capital of £3,200,000. I maintain the correctness of the statement, and refer to the Bombay stock-list of December, in which it quotes this Company as possessing 4,000 shares of the nominal value of Rupees 8,000 each. It is quite possible that £1,200,000 may represent the capital paid up, although the above list quotes the shares "all paid up."

The Elphinstone Land Company is not quoted in the above-mentioned list, but on reference to other authorities I find that this Company was absorbed into the "Bombay Port Trust" about two years and a-half ago, and obtained a loan from the Imperial Indian Government of £2,000,000. With this loan it purchased the following wharf properties now forming the "Bombay Port Trust," Seuree, Tank, Kasara, Mazagong, Custom House, Apollo, and Chowpatta Bunders, also the Malet Bunder and basin, Moody-Bay estate, Wellington reclamation, and the foreshore from Worlee Fort to Mahim Causeway.

The above enumeration of wharfage properties in itself might be expected to prove conclusively to A. that the difficulties he stated to exist against wharfage works in Bombay are unfounded. On reference to the Receipts and Expenditure of the Bombay Port Trust from April 1872 to March 1873,

Receipts were	£ 100,224
Expenditure was	£ 25,632
Balance	£ 74,592

or about 3¼ per cent interest available to pay 4½ per cent interest due to the Indian Government.

With regard to this loan, the Bombay Port Trust acted wisely in borrowing the money direct from the Government

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of India, as experience abundantly proves *that loans with Government guarantees never find the same favour with investors as those made to a Government direct.*

The Indian railways, although constructed under Government guarantee, have paid one per cent interest more for their money than if the Government had borrowed direct. But doubtless the Indian Government would have declined giving its guarantee to a loan for works so proverbially deceptive. For if a loan arranged under such Government guarantee was found insufficient to complete the work, the Government would have to find the necessary funds to do so for the benefit of the holders of the stock.

I am, Sir,

Your obedient servant,

X. Y. Z.

THE COLD-WATER TREATMENT OF FEVER.

To the Editor of the "Japan Weekly Mail."

Yokohama, 20th February, 1875.

Sir,—The author of the letter published in your last issue and entitled "A Cure for Typhoid" has fallen into the usual error of claiming by far too much in favor of his subject. In the first place the treatment of fever by reduction of the temperature of the body is by no means new. The idea is as old as Hippocrates, although like many other of the wise suggestions of the Father of Medicine allowed to fall into disuse for centuries. The revival of this treatment in modern times is due to an English physician, Dr. Currie of Liverpool, who in 1787 proposed and carried out the treatment of fever by cold affusion. The patient being seated in a tub, water of the temperature of 40°—50° Fahr was poured over him in large quantities with the effect of reducing the abnormal temperature and often, in non-specific fevers, of arresting the disease altogether. Dr. Currie's system was extensively practised in a severe epidemic of fever in Great Britain in 1817-19, but for some reason, perhaps a misconception of the character of the disease, the treatment met with but little success.

Partly from this failure, but perhaps more from professional and popular prejudice, the cold water treatment of fever was again disused, and it is only within the past seven or eight years that it has been revived. With the application of the thermometer to exact observations of the temperature in disease—a comparatively recent thing—and the discovery that no symptom so certainly denoted the gravity of diseased processes as the amount of increase above the natural temperature, while an amelioration of the patient's condition was as certainly preceded or accompanied by a reduction of the heat of the body, came a rational deduction that to reduce the temperature of the body was to diminish the activity of those chemical and vital processes which are concerned in the production of febrile heat, and, so far, to conserve not only the strength of the patient, but the actual substance of his body, of which there is always an excessive waste in fever. For the scientific investigation and development of this method of treating fever the profession is indebted to Drs. Brand of Stettin; Jürgensen of Leipzig; Liebermeister of Basle; H. Weber and Wilson Fox of London; the Surgeons of the New York Hospital, but, above all, to Professor Ziemssen of Erlangen whose work, "Die Kalt-wasser Behandlung des Typhus abdominalis" is worthy of the careful study of every progressive medical man. So far the treatment has been more especially applied to typhoid fever, but it is equally applicable to any disease in which the rise of temperature is excessive, such as scarlet fever, measles or even small-pox. That this method of treatment has not become more general is due partly to the conservatism of the profession, partly to the difficulty and tediousness of its application in private practice, but most of all to the prejudice of the people themselves. In the present condition of popular sentiment a fatal event occuring in a case of fever treated by cold water would, be ascribed nine times in ten to the treatment instead of to the severity of the disease, and there are few practitioners of medicine in a position to run the risk of such mis-judgment. Perhaps this hesitation on the part of physicians is wrong, but it is at the same time natural, more especially as it is not yet fully known under what circumstances cold water treatment is *certain* to be beneficial. The tone of Mr. Stephens, letter would imply that he personally had been cured of typhoid fever in two days. That he was relieved of fever I do not doubt. But that this fever was typhoid is very unlikely; firstly, because an absolute diagnosis at so early a stage of the disease is impossible, and, secondly, because there is no evidence, even in the works of the most enthusiastic advocates of the cold water treatment, to prove that typhoid fever has ever been arrested before running its natural and inevitable course.

It is hardly worth while to criticise in a popular journal the decidedly original views of the pathology of fever given by Mr. Stephens. Suffice it to say that were he correct, a cooling poultice or a wet pack would act in a manner exactly the opposite to that which he describes. To secure a determination of blood to the surface of any special portion of the body the application of heat or irritants is necessary, not that of cold, which, to a certain extent, causes congestion of the internal organs. The object of the cold water treatment is not to equalize the circulation but to reduce the temperature of the blood as a whole and, so diminish chemical and vital action.

My object in these criticisms is two-fold. First, to show that the credit of what is undoubtedly a great improvement in medical practice does not belong exclusively to Continental surgeons. And, again, to prevent the confiding reader from expecting miracles from the treatment, such as the arrest of a case of typhoid in its second day would certainly be.

Ignorant and intemperate advocacy of a new method is the most certain manner of bringing discredit upon it, and a portion of the prejudice still felt against even the right and proper use of cold water in medicine is undoubtedly due to the action of the followers of Priessnitz, who have vaunted cold water as the panacea for all diseases. And now having, I fear, placed myself in the eyes of the careless reader among the conservative opponents of the method in discussion, allow me to state briefly the actual state of feeling among progressive members of my profession, in reference to this subject.

1.—An important indication in the treatment of fevers is the reduction of bodily temperature.

2.—The most ready and least injurious method of doing this is the intelligent application of cold.

3.—The sudden and excessive application of cold is not always safe nor is it the surest means of reducing temperature. For this reason the cold affusion of Dr. Currie, and the successive application of cold packs are objectionable to a certain extent.

4. The so-called graduated bath as employed by Ziemssen is open to no objections on the score of safety, and seldom fails, if properly used, promptly to reduce the temperature of the patient. (This method consists in repeated full baths, sometimes as many as eight or ten in the day, according to the temperature as shown by the thermometer placed in the axilla; the patient being placed in a bath of nearly the warmth of his body, to which cold water is gradually added until the required reduction of temperature is obtained).

5.—Neither the cold bath nor any other means can cut short the course of typhoid and other specific fevers, but the judicious application of cold is one of our best means of guiding the disease to recovery and often seems to diminish the period of convalescence by the preservation of the patient's strength.

6.—Statistics show that although the duration of typhoid fever is not notably shortened by cold water treatment, there is a great reduction in the percentage of deaths where the method is judiciously applied. Examination of a large number of reports gives the average death-rate from typhoid under ordinary treatment as about 18 per cent, while under the cold water treatment the deaths are about 7 per cent.

7.—The cold water treatment of fever does not and should not do away with other received treatment, especially such as general support and stimulants; nor does it afford the least assistance in combating many of the complications to which fevers are liable, which must be met by their own proper treatment. However, it does seem to render these complications of less frequent occurrence,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

8.—In applying the cold water treatment the condition of the patients must be considered, as well as the nature of the disease. Patients of broken-down constitution, especially drunkards, bear the cold water but badly, and used with this class it must be managed with the utmost care.

I am, Sir,

Your obedient Servant,

M. D.

Law & Police.

H. B. M.'s PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant-Judge.

February 13th and 15th, 1875.

Clataud *vs.* G. Domoney & Co.

Mr. Montague Kirkwood appeared for the Plaintiff. Mr. Gibson represented the Defendant.

The plaintiff in this case claimed $306.34 with interest for goods supplied to the defendants. It appeared that in the month of March 1874 the defendants, the well-known butchers and provision dealers of Yokohama, appointed Mr. Blockley to act as their representative in Yedo. Two months later Mr. Blockley acquired the business by purchasing the defendant's interest therein, paying for it by a promissory note and disposing of part of his interest to a Mr. Clarke. Mr. Blockley having failed in meeting the note on its maturity the defendants had resumed business in the month of September last.

The plaintiff contended that of the transfer of the business to Blockley he had received no intimation, and that he had been visited by Mr. Plummer (of the firm of defendants) who told him that he might supply the former with such goods as he required, he being agent for Domoney & Co. He therefore believed that he was acting for Domoney & Co. as this intimation had never been countermanded. It was further shown by the evidence of a Portuguese clerk that the bills were made out in the defendants' name, and that Mr. Plummer had paid him his wages up to October 1874.

For the defence it was urged (with the support of the evidence of Blockley and of Plummer), that the business had been in effect transferred to the former by the defendants in May 1874; that Clataud had frequently asked him to pay the amount now in question and had condemned his action in selling a portion of his interest to Clarke as unwise, and that the fact of the concern being his was well-known in Tsukiji. It was denied that Clataud had been apprised that he was at liberty to give credit to Blockley, nor was he informed by defendants that he was their manager. The transfer of the concern had been advertised. The defendants had paid the clerk's wages in order to save Blockley from becoming Bankrupt.

February 20th

His Honour delivered judgment to-day, in favour of the plaintiff with costs, allowing, however, as a set-off the claims made by the defendants.

U. S. CONSULAR COURT.

Before Gen. T. B. Van Buren, Consul-General.

February 18, 1875.

Kaitakushi *vs.* Martin Cohen & Co.

This was a claim for $40,000, being $20,000 paid as deposit by plaintiffs to defendants on a contract for 1,600 Remington rifles and accoutrements, with 200 rounds of ammunition for each rifle, besides 480,000 extra rounds of ammunition, and $200,000 alleged damages for the non-performance of the contract by defendants.

Mr. G. W. Hilll legal adviser to the *Shikosho*, appeared as counsel for plaintiffs; Mr. F. W. Marks for defendants.

His Honour said it would be necessary, in accordance with the rules of procedure, to draw for assessors, as the amount claimed was over $500.

Mr. Hill then made a motion that the answer of defendants be sworn to, as that was imperative by the rules.

Mr. Marks strongly objected to this. He argued that though the rule in regard to this question seemed imperative, yet it was in the power of the Court to decide as to the necessity of this being done. It was a peculiar case, and he should not advise his clients to do so.

His Honour said the answer would have to be sworn to. It was not a demur, which, it was true, need not be sworn to. Rule 14 was imperative as regarded this, and the Court was not sitting to frame

Mr. Hill prayed that the answer be struck out unless defendants verified it.

Mr. Marks desired leave to amend his answer, which his Honour granted.

His Honour said it would have to be sworn to.

Mr. Marks said he would swear to it for his clients.

Mr. Hill objected to this and, and said the defendants themselves must swear to it.

After some discussion it was decided that the defendants should swear to their amended answer.

Mr. Marks then made a motion that the petition be dismissed, or be substantially amended, on the ground that it sued defendants (Martin Cohen and G. Opitz) jointly, and G. Opitz was not under the jurisdiction of the Court, being a German subject. It was manifestly unfair that Martin Cohen should be called upon to answer for the doings of G. Opitz.

Mr. Hill argued against this altogether. It was not necessary to amend the petition filed. The law regarded firms, and not the individual members composing them. This firm was an American one, and the contract had been signed "Martin Cohen & Co."

His Honour said he could not see that the petition required amending, so long as Mr. Opitz's rights were not affected. The name of Martin Cohen & Co. would have to remain in the petition. He was obliged to overrule Mr. Marks' objection. He, however, made a note of it.

Assessors were then drawn for, and Messrs. E. S. Smith and C. P. Hall were ordered by the Court to be summoned to appear.

The Court then adjourned till 1 p. m.

On re-assembling, the assessors were duly sworn in, no objection being raised by counsel to either gentleman.

Mr. Hill said he should make no opening address—the petition spoke for itself. He then read it to the Court. He then desired to have some testimony from his learned friend.

Mr. Marks raised no objection, but said it was rather unusual.

F. W. Marks, sworn: He had seen the second agreement shown to him by Mr. Hill before now. [This was a second agreement between plaintiffs and defendants, allowing defendants more time for the arms, etc., to arrive, for a monetary consideration.] He had drawn it up; his signature was to it.

Question by Mr. Hill: Who are the parties mentioned in it?

Witness said the parties were mentioned in it.

After some discussion about this answer.

Witness continued: He received his instruction in this affair from Mr. Opitz. [The deed of partnership between Martin Cohen and G. Opitz was then handed into Court.] In drawing up the second agreement he received part of his information from his learned friend, part from Mr. Opitz, and part from the correspondence which had passed between him and his learned friend on the matter. Part of the second agreement referred to the original contract between plaintiffs and defendants. It was dated 21st September, 1874, and signed "Martin Cohen & Co., G. Opitz," and a Japanese name, purporting to be that of the agent of plaintiffs. [Mr. Marks, the witness, admitted Mr. Opitz's signature.]

The said document being now in Court,

Mr. Hill read the original contract to the Court.

Mr. Marks admitted the signature of G. Opitz on the contract, but said he knew nothing about the signature of Martin Cohen & Co., which was also on it.

Witness continued: He had never seen the red stamp on the document before. It was the first time he had seen the document.

Mr. Hill then said he should bring documentary proof in support of his case first, though he would have preferred to have brought his witness first.

It was decided in Court, after some discussion, that there were two points for the Court to decide upon, namely, the liability of the defendants, and 2ndly, the amount of damages.

His Honour decided that the question of liability should be first heard. If the liability was established, then the amount of damages could be settled.

Mr. Hill then called.

Mianabe Chuski, cautioned: He was an agent of the Kaitakushi The document shown to him is the original contract; it was signed on the 21st September, 1874. He recognised his signature and seal to it. He knew the contents of the contract. The contract was first made with Mr. Cohen. Mr. Opitz wrote the foreign signatures on the document and sealed it with red ink. Mr. Opitz signed and sealed it at No. 28 on the part of Martin Cohen & Co. The contract was never fulfilled. When defendants failed to fulfil the contract he put the whole affair into Mr. Hill's hands. Mr. Cohen brought to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

there. He could not remember the exact date Mr. Cohen brought them to the Kaitakushi, but it was before the contract was signed. He borrowed one rifle and some cartridges from defendants afterwards, but as they were entirely different from the rifles and cartridges contracted for, he returned them.—*Herald.*

Yokohama, February 16, 1875.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

CAMP, Yokohama, February 20th, 1875.

J. H. SANDWITH, Lieut., R.M.L.I.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, FEBRUARY 20TH, 1873.

IMPORTS.

Cottons.—Since our last our market has continued inactive. *Yarns*: There is a smaller disposition to operate on account of the extensive shipments which are daily expected, and hence a decline, although as yet no sales have been effected at reduced quotations. *Shirtings*: Low makes of 8¼ lbs. are in good demand although at exceedingly low prices: 7 lbs. weights are neglected and 9 lbs. are saleable at quoted rates. *Drills* may be reported in slight demand but *Taffachelass* are neglected. *Velvets* are not enquired for but may be quoted firm. There is but a slender demand for *White Shirtings*.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38¼ yds.	39 in. per pce.	$1.87½ to $2.10	56 to 60 reed 40 yds. 35 in. nom. per pce.	2.50 to 2.60
8 lbs.	38¼ yds.	44 in. „ nom		64 to 72 „ „ „	2.70 to 2.85
8 lbs. 4 to 8 lbs.	6 „	39 in. „	2.17½ to 2.55	Turkey Reds 25 yds. 30 in. 2¼—3 lb. per lb.	0.90 to 1.00
9 lbs.	„	44 in. „	2.17½ to 2.92½	Black Velvets	8.75 to 9.75
Taffachelass Single			2.55 to 2.75	English Drills	3.20 to 3.40
				Canvas, Navy, Red Stripe	7.00 to 8.00
No 16 to 24		per picul	33.00 to 36.50	No. 28 to 32 per picul	38.50 to 42.00
Reverse		nom.		„ 38 to 42 ...small stock nom. „	42.00 to 47.25

Woollens.—The market is extremely quiet and but little business may be reported. Cloth has been sold rather extensively at public sale during the closing week at rates which, taking the circumstances into consideration, are not unsatisfactory.

Plain Orleans	40—42 yds. 32 in.	6.25 to 7.75		Figured Mousseline de Laine .. 30 yds. 30 in.	0.28 to 0.32
Figured Orleans	29—30 yds. 31 in.	4.50 to 5.25		Multicolored „ „ 30 yds. 30 in.	0.30 to 0.40
Italian Cloth	30 yds 32 in.	0.25 to 0.37		Cloth, all wool plain or fancy.. 48 in. to 52 in.	1.00 to 1.30
Camlet Cords	29—30 yds. 32 in.	6.25 to 7.25		Presidents	0.75 to 0.85
Camlets Asstd.	56—58 yds. 31 in.	18.50 to 19.00		Pilots	0.45 to 0.55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14.50		Union	0.70 to 0.85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19		Blankets, scarlet & green 7 to 8 lbs. per lb.	0.45 to 0.48

Sugar.—Since the 13th instant, sales of Formosa descriptions are 7,700 piculs, at $4.25 to $4.40. We quote prices as follows:—

Sugar:—Formosa in bag	per picul	4.50 to 4.55		China No 5 Kong-fun	per picul 6.00 to 6.30
in Basket	„	4.30 to 4.35		„ No. 6 E-pak	„ 5.50 to 5.70
China No. 1 Ping-fah	„	8.50 to 8.70		Swatow	„ 3.90 to 4.00
„ No. 2 Ching-pak	„	7.60 to 8.00		Daitong	„ 3.70 to 3.80
„ No. 3 Ke-pak	„	7.10 to 7.40		Japan Rice	„
„ No. 4 Kook-fah	„	6.60 to 6.90		Kerosine Oil	„ 4.25 to 4.50

EXPORTS.

Silk.—Since the 12th instant, prices for Common Hanks have been easier, and purchases amount to 220 piculs, a good deal of which being still under inspection cannot be reported as settled. Arrivals are 106 bales.

We repeat our last quotations with the following remarks: Prices for Extra Hanks are nominal; Common and Inferior may be quoted from 400 to 440; Intermediary grades remain without change. Oshius are scarce; Fine grades much inquired for, and firm, Medium neglected and weak at former rates.

	Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.			*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.*		
Hanks—						
Best (No. 1/2)	520 to 540	19s. 11d. to 20s. 8d	frs. 55 to 57	Medium (No. 2½)	460 to 475	17s. 9d. to 18s. 3d. frs. 49 to 50
Good (No. 2)	480 to 500	18s. 6d. to 19s. 2d.	frs. 51 to 53	Common No. 3	420 to 450	16s. 5d. to 17s. 5d. frs. 45 to 48

Tea.—Business in this article still continues in the same depressed state as reported in last issue, transactions for the closing week only amounting to 190 bales.

Prices remain, as before, purely nominal, and no animation can be expected before the Japanese dealers fully apprehend the course of affairs on the New York market and reduce their demands to a proximate of $33 to $35 for "Good Medium," which figures, however, would shew but little inducement for extensive operations taking the general tone of wire intelligence from the States.

Stocks of merchantable teas in Yokohama, at present are about 8,000 piculs, and there is still some further supply to come forward from the interior for the current season.

Common	nominally	$27.00 to 30.00		Fine	$45.00 to $48.00
Good Common		32.00 to 34.00		Finest	nominally 50.00 upwards
Medium		36.00 to 39.00		Choice	„ None.
Good Medium		41.00 to 43.00		Choicest	None.

EXCHANGE AND BULLION.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to those great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may befound on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles by all Chemists.

CAUTION.—☞ The public are requested to observe that all the above preparation bear the Trade Mark ashereinshown. THOMAS KEATING, LONDON, EXPORT CHEMIST AND DRUGGIST. Indents for pure Drugs and Chemicals carefully executed.

TRADE MARK.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 9.] YOKOHAMA, SATURDAY, FEBRUARY 27, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 28th December, 1874, at Woburn Park, Surrey, Mrs. WILLIAM J. ALT, of a daughter.

DIED.

At Ganges (Hérault), France, on the 3rd January, of Bronchitis, CHARLES VALMALE, late of Yokohama, Japan, and Senior Partner of the firm VALMALE, SCHOENE & MILSOM.

Notes of the Week.

The *Nichi-nichi Shimbun* has commented with some little asperity upon the remarks made last week in our daily issue upon the garrisoning with native troops of the barracks at present occupied by the marines.

We do not reproduce the article in which it has done this, for two reasons. The first is, that it says the Government has no such intention as was attributed to it by common report. And the second is, that, under these circumstances, we should do ill in saying another word which might tend to disturb the excellent feelings which the Japanese have shewn towards the troops on their approaching departure from this country. We may remark, however, that the reasoning in the article in question is fair enough. It is obvious that the desirability or otherwise of replacing the foreign troops with native troops was the real question underlying our words. The reported intention of the Government came to us on excellent authority and was currently believed, and our mention of it has at least had the good effect of eliciting what amounts to an authoritative contradiction of it.

The Marines, instead of going home, are under orders for Natal, where there has been some trouble of late, owing, we are inclined to think, to some mistaken action there on the part of the Government—at least it may be inferred so from the fact that Bishop Colenso, one of the best, and certainly the bravest of Englishmen who wear lawn, has been working night and day to secure justice to the Zulus. Considering how much we are indebted to this fine race of men, one of whom was the proximate cause of the Bishop's books, we ought to treat them well, and we hope that the friends who are leaving us will find no more serious occupation in Natal than they have found here. A welcome they will find averywhere, but it will hardly be warmer than the farewell Japan has bidden them.

The ball given to the French and English Marines yesterday evening was a token of the good will which has subsisted between them and this community during the period of their stay in Japan, and of the regrets with which we all regard their departure. It seems but the other day that we bade farewell to the 10th, but three years and a-half have slipped past since the Marines relieved them, and now they in their turn are shaping their course westward. But we have already bidden them farewell, and must turn to the entertainment given in their honour, at which more people were assembled under one roof than on any previous occasion in this settlement. The upper rooms of the native town-hall were converted into the ball-room, drawing and refreshment rooms, the first being prettily decorated with shrubs and evergreens. The ball-room has an immense area, but sadly wants height, and proper ventilation. The main stair-case—a feature of first-rate importance in a large building—is also wholly unworthy of a town-hall. (But the stair-case building faculty always becomes paralysed in this country, and leads to faults of omission or commisson which would elsewhere lead to lunacy enquiries.) The ball-room was thronged with guests, the scarlet uniforms of the English marines affording a pleasing contrast to the more sombre ones of the various naval and military services represented, and as we have lately paid some attention to the question of the European dress of the Japanese, it is only fair to say that they looked very well in their uniforms. The most interesting feature, however, of the ball-room—after the guests, of course—was the band of the Japanese Marines which performed on the occasion. It consisted of about thirty young men who have been instructed by Mr. Fenton late Band-master of the H. M. 10th Regiment, and who certainly is entitled to much credit for the proficiency of his pupils. The brass is a little too heavy for the wood, perhaps, and the exuberant vigour of these children of the Rising Sun displayed itself in an unbroken *fortissimo* from the beginning to the end of the evening. But they played otherwise extremely well, and did themselves and their instructor great honour. Their time was generally correct, and if we could only have had some *piano* passages to temper the effect of the music, we should have accorded them unqualified praise. The ball went off with spirit, and appeared to afford great satisfaction to the guests, who gave a hearty farewell cheer at supper to those of their number in whose honour the entertainment was given.

Colonel Richards and four of the officers of the R. M. L. I., together with Captain Woolcombe as Senior Naval Officer and Captain D'Arcy, commanding H. M. S. *Adventure*, were presented to H. M. The Mikado by Sir Harry Parkes on Thursday afternoon. In taking leave of Colonel Richards, His Majesty graciously remarked upon the cordial relations which had always existed between his officers and those of the battalion, and upon the benefit which the former had derived from their intercourse with the latter. His Majesty also presented each of the officers named with his photograph and that of the Empress.

We hear that the officers of the French *Infanterie de la Marine* were also presented to His Majesty the same afternoon by the French Minister.

Captain Rice of the *Vasco de Gama* has addressed a letter to one of the local papers on the subject of some remarks, also publicly made, in regard to the provision of coal with which he started from San Francisco, and which was said to have been stinted by the parsimony of the P. M. S. Company. He states that this charge—a very heavy one, and one which, would, unless disproved, carry great weight with it—is

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

wholly unfounded; that any coal or stores which he thought necessary for the vessel were always supplied upon his requisition, and that such supplies were always of excellent quality; that he took in as much coal as he considered necessary, and as he still considers to have been necessary; and that he arrived in port with enough of it still left to have steamed for two hundred and fifty miles more. But he encountered a series of westerly gales of a very severe nature and of wholly exceptional violence and duration, and these necessitated his running southwards under sail. The best nautical opinion in this place credits him with having acted with the best judgment under very trying circumstances.

He also seems to us to have entirely disproved the charge made against the P. M. S. Company, though the misadventure with which he met would suggest an extraordinary provision of coals during the two or three months of the year in which these westerly gales are prevalent.

We need hardly inform our readers that our translations from the Japanese newspapers are intended to reflect, so far as they may be held to do so, the passing currents of Japanese thought and feeling, and are not chosen by us as representing any opinions with which we necessarily coincide. We publish one to-day, for instance, on Religion, the extreme shallowness of which, both as regards the power and objects of religion, and of some of the historical references, is very apparent. A writer who disputes the value of religion because it tends to impede the activity of inventive genius, has yet to learn that "man's life consisteth not in the abundance of things which he hath," and he may even be referred to the Chinese as his instructors, for, in theory at all events, they place the acquisition of knowledge and the practice of virtue far above all questions of material condition and welfare. It is impossible to conceive a much lower view of religion coming from a man as far instructed as the Japanese writer of this essay must be, than that which he holds. The essay, however, is not the less interesting as indicative of the working of the national mind in this country.

There is also one headed "Reforms," containing a curious mixture of sense and nonsense. The last suggestion of the writer is particularly comical.

The following is the paragraph from the *Economist* commented on elsewhere:—We suppose from the definiteness and particularity of a Reuter's telegram from Hongkong, published this week, that there is at length no doubt of the fact that China is to be added to the number of States having a public debt. It is stated that a loan has been actually contracted on account of the Chinese Government, that the amount is £627,675, that it will bear 8 per cent. interest and be issued at the price of 95 per cent. through the Hongkong and Shanghai Bank, that it will be secured by the Customs Revenue, that £300,000 is to be placed in China, at the exchange of 4s. 11·40d. per dollar, and that the subscription lists will close on the 16th inst. The operation is thus one which makes it resemble some of the worst issues of foreign loans which come into the market. The rate of interest particularly is very high for so small a loan by a country of such vast population and resources as China, and almost implies that the Chinese Government must be wastefully using its home resources, since with proper economy and without the burden of a great funded debt it ought to be able to borrow temporarily at a much less rate of interest than 8 per cent., or do without loans altogether. As regards the way in which such a loan should be treated by investors here, we do not think there can be much doubt. The moderation of the amount of the proposed loan is no doubt an element in favour of China, but whatever the amount, the points to be kept in mind by investors are that China is practically an unknown country undergoing a tedious political and social revolution in consequence of its enforced contact with Western Powers, and that it is quite uncertain whether such a country can possess that kind of political stability which is essential to financial good faith. Lending to China may be a good enough speculation for those who know something about it and can afford to take the risk, but the case is one where much knowledge is required and should be used, and where the risk, judging by the rate of interest, will presumably be appreciable. It is greatly to be feared, however, that China, like Japan and other new borrowers of recent years, will be demoralized by the cordiality of its welcome to the money-markets of the West, and will be tempted to exceed the proper limits of indebtedness, even if it should now be keeping within them. Yet why should China be able to borrow a sixpence without first producing its accounts of revenue and expenditure?

It is reported from Peking that since the late Emperor's death, one of his morganatic wives has proved to be *enceinte*. If such is the case, and the child should be a son, it will cause a curious complication of affairs in China, but doubtless the ruling court party are fully alive to the situation. Under any circumstances, nothing can be worse than the present appearance of affairs, so far as the cause of progress in China is concerned.

The Translations in our last week's issue under the heading "Spirit of the Native Press" were from the *Choya Shimbun*.

The decision in the case of the Kaitakushi *vs.* Martin Cohen & Co. has not yet been given.

(From the Japan Mail Daily Advertiser.)

As recent advices from the Cape afford no ground for serious apprehension, the correctness of the reading of the telegram which alters the destination of the Marine Battalion is fairly open to doubt. It seems difficult to believe that there can be urgency for their services in South Africa since, had the emergency been pressing, troops could more quickly have been landed there from England, Gibralter or Malta, and moreover their period of foreign service is at an end. We shall not be surprised to learn that the telegram has been misinterpreted.

THE English Marines will leave their barracks at six o'clock this afternoon and headed by their drum and fife band will march to the Machi Gaisho where they will be entertained at dinner.

The officers of the Royal Marine Battalion were entertained at dinner yesterday at Hamagoten by General Saigo, General Dyama, Colonel Fukuwarra and other of the chief officers of the Imperial War Department. Prior to the entertainment they inspected the barracks in which the Artillery of the Imperial Guard is quartered, passing subsequently to those of the Infantry of the Guard. In the latter, where two regiments are quartered, the men were put through their manual and firing exercise which they performed well. The firing of volleys by battalions was executed with much precision. The scrupulously clean condition of the barrack rooms, the Infirmary, prison &c., and the good order in which arms, ammunition and accoutrements are maintained elicited warm commendation from the visitors.

Colonel Richards and four of the officers of the Royal Marine Light Infantry had the honour to be presented to H. M. the Mikado yesterday afternoon. His Majesty graciously took leave of them and presented each of the officers with his photograph and with that of the Empress.

THAT "imitation is the sincerest form of flattery" is an aphorism which will scarcely satisfy English distillers and brewers who, by a long course of honest dealing and manufacturing experience, have succeeded in conferring a valuable reputation upon their products. It is no secret that spirits and beer of inferior quality are largely sold by Japanese under cover of much esteemed brands at a price which, while it largely exceeds their value, forbids any faith in their genuineness; that the servants of foreigners are encouraged to preserve bottles bearing labels of liquors in repute, and that in some cases these labels have been successfully imitated. The trade

Digitized by Google

in bottling spurious beverages in Yedo is represented as being very considerable, and as pursued by Japanese without any shame—and probably in ignorance of—its dishonest character; and we think it right to warn merchants who are entrusted with the representation of manufacturers in esteem that it behoves them to take action. The respectability and reputation of their principals is unquestionably jeopardised.

A heavy fall of snow began on Sunday morning at an early hour and continued without intermission for the greater part of the day.

YESTERDAY, being Washington's anniversary day, was celebrated by the American ships in harbour in the usual manner.

THE *Meiji Maru*, the new Lighthouse steamer which arrived yesterday from the Clyde, has won a favourable reputation for good sea-going qualities during her outward passage.

Judgment was given yesterday in the case Sosuki *versus* Haskell for the full amount claimed.

THE following particulars of the Lighthouse screw steamer *Meiji Maru* which has just arrived from Glasgow will no doubt prove of interest. Her length over all is 250 feet, extreme breadth 30 feet and depth 22 feet. Her engines are double, on the compound principle, giving a speed on her trial trip of 13 knots. Her gross tonnage is 1000; net 560 and her classification of the highest grade ($A\ 1^{100}$). She possesses excellent accommodation for thirty main-cabin passengers and her saloon is neatly arranged for their convenience. In addition to this she is fitted to carry 100 steerage passengers on her main-deck forward, comfortable berths being provided for them and arrangements for berthing the crew of fifty officers and men have also been made there. She has space for a large number of deck passengers. The upper or spar-deck is roomy, fitted with all requisite appliances for handling cargo and with powerful purchase to facilitate the raising of her anchors, a small engine being provided for that purpose alone. She has been specially constructed for the Japanese Lighthouse Service by the eminent firm of Napier and Sons of Govan Works on the Clyde, and having sailed thence on the 11th December has occupied 71 days on her outward passage.

M. Plichon, Acting French Consul here has received the appointment of Acting-Consul at Hongkong. He will be succeeded by M. Krätzer, Chancelier of the Consulate.

WE are informed that the Saibansho has undertaken to investigate and to punish such cases of fraudulent imitation of trade marks or brands as may be brought to its notice. We may add that the Japanese code visits the crime of forgery with unusual severity.

THE claim of Mesaka Sosuki against H. B. Haskell, for a balance on account of wages alleged to be due by the defendant, was tried yesterday at the U. S. Consular Court. The Consul-General reserved his decision.

ITABASHI, close to Odawara, has been completely destroyed by fire,—the work of incendiaries. Several other large fire. in that locality are supposed to have had a similar origins Six men have been captured, and others are concealing themselves in the hills. The villagers have formed a kind of Vigilance Committee, and are hunting the wretches. Let us hope that they may be successful in their pursuit.—*Herald.*

TRAVELLERS from Echizen and Kaga report that the snow lies twenty feet deep in some places. This winter seems to have been one of unwonted severity, both in the provinces we have named and in some of the districts bordering upon Lake Biwa.—*Hiogo News.*

The Peking Gazette of the 18th January contains the remarkable suggestion that the Governor of Fuhkien should be required to reside in Formosa for the the future. The idea seems so impracticable that we are surprised it should emanate from a man of Shen-pao-chen's position. However valuable a possession Formosa may be, the great province of which it is a dependency must deserve the more immediate presence and attention of the Governor. A more practical idea would be to separate Formosa from Fuhkien, and make it an independent Government; but that would be the signal for exactions which would crush its trade. The proposal is at any rate notable, as showing the attention which has been directed to Formosa by recent events.—*N.-C. Daily News.*

The latest rumour which has reached us from Chinese sources is to the effect that Le Hung-chang, so far from being dead, is massing his troops around Peking for the purpose of performing a *coup-d'état* which is to take every-body by suprise. In the absence of any news from the north we give the rumour as it reached us without addition or subtraction. —*Celestial Empire.*

All day on Sunday the ruins of Messrs. Lane, Crawford & Co.'s auction hong gave out intense heat, and at intervals tongues of flame shot up from the *débris*, showing there was still a mass of fire beneath the surface. Towards 8 p.m., there was a considerable increase of these appearances, and it became necessary to send for an engine to play upon the ruins. The "Deluge" was accordingly sent there, and threw a large quantity of water over the area of the late building, until all chance of further danger was obviated. Yesterday, a number of workmen were set to work to clear away the remaining walls and ruins.

We find we were mistaken in saying the premises belonged to Messrs. Sassoon & Co. Messrs. Lane and Crawford the old partners in Lane, Crawford & Co. were the proprietors. The premises themselves were, we heard, insured for Tls. 6,500.—*N.-C. Daily News.*

WE learn that the fund for the widows and orphans of those who lost their lives on board the *Mongol*, reached over $2,000.—*China Mail.*

IT is notified that the Queen's Exequatur empowering Mr. Ando Taro to act as Japanese Vice-Consul at this port, has received Her Majesty's signature.—*China Mail.*

WE very much regret to learn that Mr. George F. Heard, so long known, and so generally liked a resident in this Colony, died on his voyage home. He left Hongkong a month ago, in a very precarious state of health, and the announcement of his decease will scarcely cause surprise, though his

LOANS.

IN commenting some two years ago upon the criticisms which appeared in the *Economist* upon the Japan Loan, we took occasion to speak of the high authority of that journal, and the secret—if it may be so called—of the authority with which it speaks on all financial questions, our object being to impress upon the Japanese Government the importance, and, indeed, the necessity, of presenting yearly to the public in Europe, who are its creditors, an account of the national receipts and expenditure of such a nature that it can not be gainsaid or contradicted, either at home or abroad.

The same journal, in a recent issue, has touched lightly upon the late China loan,—and, in the latter portion of its remarks, insists that the production of an account of receipts and expenditure should be a preliminary condition to the borrowing of any money in Europe. Japan has already published two budgets, the first of which was produced under circumstances somewhat misunderstood at the time. But, to this day, there is much discussion as to the discrepancy existing between the statement of the present Finance Minister and that of his predecessor, and though we have never had any sufficient reason to doubt the soundness of the views we expressed when the budget was produced, or the validity of those arguments we adduced in support of them, it is still certain that, whether with better or worse reason, many shrewd men took the less favourable view of the position, and hold it to this day. The second budget contained some errors, of no very important nature, in the mode of making up the accounts, and was further open to adverse criticism from the misapprehension it caused in regard to the amount of the public debt actually extinguished. Although we were misled by this, it is wholly improbable that the error of statement was intentional; and for this reason: It is absurd to suppose that a responsible minister would publish a document containing errors of fact which could immediately be exposed as errors. Supposing for a moment the intention to deceive, he would take other methods of effecting his purpose. The error was one arising most probably from the want of a scientific mode of dealing with accounts, other instances of which, it may be remembered, occurred in the same document. But, whatever its origin, each successive year should reduce the number of such errors, and improve the skeleton—the form of the budget—which the figures cover. After the important events of last year, the Financial Statement will be looked for with great anxiety and scanned with a sharp scrutiny. The expenses have been large, but what with the provision made for extraordinary disbursements in the last budget, and the larger revenue which we imagine was collected last year on account of the high average price of rice, we trust that the promise to extinguish part of the floating debt will have been redeemed, at least to some extent.

There is another point of serious importance to the credit of the country on which we have hitherto only touched incidentally: we allude to the extent to which the last loan of £2,400,000 has been used for the special purpose for which the money was borrowed. This, as will be remembered, was the extinction of the hereditary and life incomes of the *daimios* and *samurai* by a payment representing so many years' purchase of those incomes. The intention underlying the measure was excellent; but its terms were radically faulty, as was pointed out at the time by ourselves and others. We certain that they were looked upon with grea the important the discontent which subsequently assumed such a malignant form in Saga, and the drastic medicine employed, and perhaps necessary, to reduce this discontent, arose from the promulgation of the measure. In spite of all this, however, the applications made to the Government for such commutations of life or hereditary incomes, have been numerous, not, perhaps, relatively to the whole number of men or families on the pension lists, but in regard to the sum borrowed for the purpose, much of which has doubtless been absorbed in this manner. That all these applications have been granted is not to be supposed. Nothing could be worse than to place considerable sums of money in the hands of men unaccustomed to the possession of more than small monthly allowances, on which others besides themselves were dependent. Such a course would produce in every town and village of the Empire a number of disorderly men, demoralized themselves and the cause of demoralization in others, living in riot so long as the money lasted, and a source of trouble and expense when it was spent. The Government has accordingly made investigations as to the uses to which it was intended to put these capitalized pensions or patrimonies, and insisted on some sort of guarantee for the rightful or useful application of the money. Still, as we have said, the amount actually disbursed for the purpose named, has, we believe, been very considerable, and though no one expects, or would have a right to ask for, any exact account of this, a short statement by the Government of the amount so disbursed, and the effect of the measure, would have a good result among its creditors. If a loan is contracted for a railway, a harbour, or public works of any kind, they speak for themselves when completed, and the use to which they are put, or the amount of visible traffic upon them, is a justification, in some sense, of the borrower, and an evidence to the lender that his money has been used for the purposes for which it was demanded. The money which formed the last loan was borrowed for a specific purpose, and to this purpose alone is it properly applicable.

THE KAITAKUSHI.

WITH the proverbial gallantry of a soldier, General CAPRON has come forward in defence of the Department of which he is the foreign Commissioner and Adviser, and, in a letter which will be found elsewhere, has taken us to task for the criticisms which appeared in our issue of the 14th upon the operations of the Department in Yezo. Although we very distinctly pointed out where it seemed to us that the fault lay, and exculpated him from any share in it, he refuses, very chivalrously and properly, to take any comfort from his personal immunity from censure, and flies to protect his Japanese and foreign associates from what he considers our too sweeping and denunciatory criticisms. It is pleasant to break a lance with an opponent who comes to the tourney in such a spirit, and though he has not yet persuaded us that we were wrong, he certainly disposes to acknowledge readily every point he may fairly claim to make. We do not think he has been entirely just in bracketing us with those to whose covert aspersions or open attacks he alludes. So far as we can remember, nothing of the kind has ever appeared in these columns, and we have not only a very clear recollection of having welcomed him and his staff warmly to this country, but we have given to our readers several accounts of his operations in Yezo, to the usefulness and success of which we made those acknowledgments which they seemed to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

not be understood to deprecate the anonymous criticisms which have been made in a fair spirit elsewhere, even when somewhat severe; and if we connect these with a series of letters signed MATSUMAI which have appeared from time to time in the columns of one of the local daily papers, it is for the purpose of enforcing the saying *fas est ab hoste doceri*. A department so criticised may acknowledge that it has no monopoly of the stock of knowledge which might be brought to bear on its operations, and while it may flinch a little under the rod, it may learn to regard the chastisement as beneficial and even benevolent.

General CAPRON is wholly wrong, too, in imagining that our adverse criticisms have been confined to the Kaitakushi, and have spared departments of the Government under foreign administration in which more money may have been spent to as little purpose. A fair review of our work during the past five years will show that we have paid a very impartial attention to all these departments, though all have really not called for precisely the same kind of remark, and that whether the railways, telegraphs or mines have been under review, we have always warmly deprecated excessive and fruitless expenditure, and pointed out instances where we had good reason to believe that it had occurred. This is such a world of illusions that no man can be sure that some of his fondest beliefs are not dreams; but we have always cherished the hope that, in spite of such error as is incidental to our labours, and, we ought to add, of such frailty as is the common heritage of humanity, (but of which those who think aloud are impeached, somewhat uncharitably at times, by those who think only to themselves,) we had so distributed our reflections as to have earned for them at least a title to sincerity—an approximation to justice is all that can be hoped for on this earth, whatever the tribunal. He accuses us, too, of a sweeping denunciation of his Department, which we really have not made. We acknowledged the additions made to our knowledge of the physical geography of Yezo, of its mineralogy and geology, and we should be the last to undervalue these.

We would observe, however, that General CAPRON makes a general defence of his Department, some of the labours of which have been undeniably useful and successful. We quite agree with him regarding the service done to the country by the introduction of the fruit-trees, the vegetables, and the live stock, the nurseries of which may be seen in the Kaitakushi grounds in Tokio. The Japanese are rapidly becoming a meat-eating people, and the advantages they will derive on this score from the operations of the department are not to be measured by a debit and credit account of a few thousands of dollars more or less. But if he will examine our remarks a little more carefully, he will see that it is to the operations of the department in Yezo alone that we alluded, and we really fail to see that, so far as the main purpose of the Department is concerned, viz.: the colonization of the island, any substantial good has been done, while the attempt has certainly been a very costly one. If the Railway has cost a vast deal of money, at all events we have got a railway. If so much more per mile or per lighthouse has been spent on the telegraphs or lighthouses than might, even, let us say, ought, to have been spent, at all events we can send our messages by the one and steer our ships at night by the other. But though we have some new, scattered settlements in Yezo, we are afraid, as we said, that there is no root and life in them. lages which the courtiers of the Empress CATHERINE used to run up to convince her of the prosperity of the remoter districts of her Empire which she occasionally visited. We have had roads made in Yezo, but, if we can imagine such a thing, they are like ladders placed in the air. We have piers and landing-stages built, but no ship can approach them because they are built in shallow water. We have quarries opened either too far from the roads along which the stone could be conveyed, or too far from any water on which it could be transported. It is very well for the lounger at the sea-side to dig a hole with Mary's spade and fill it up with Johnny's; but work of this kind on a large scale, though indicative of great activity, can hardly be said to conduce to much usefulness.

The moral we have always preached in connection with other works in this country, where the money spent has been out of all proportion to the results produced, we have preached in the case of the Kaitakushi. The Japanese are too prone to get an adviser, ask his advice, and refuse to take it. Their task, we frankly confess, is a difficult one, for sometimes they have had bad advice tendered them. But they have most undeniably a tendency to act in matters which are new to them on their own view of what is best, instead of trusting to the experience of those who have been working all their lives at these very things. They accept the advice very politely when it has been asked for and given; and when all the mischief has been done they acknowledge with entire urbanity that it has arisen from the neglect of such advice. They permit some young, ignorant and self-sufficient official to air his ideas on an abstruse matter of which he has no experience, at the expense of the public purse, and the consequence is that we have ships on land and houses at sea. We do not wish to press against him the many admissions which General CAPRON visibly makes in his letter, in the last paragraph of which he concedes the very point we insisted upon, and which first prompted our criticisms. He knows the spirit of the Department better than we do, and he fears that criticism which disturbs it unduly tends rather to retard than to advance its usefulness. We care little what drug is used, provided the patient recovers, and if a little cinnamon and the use of a silver spoon make the medicine more palateable, in Heaven's name add a few grains of the one and administer the dose in the other. But let us get the poor creature out of bed, set him on his legs and give him some fresh air. It is no use calling in HIPPOCRATES, and, so soon as the sage has turned his back, handing over the patient to young BOLUS, who is only just out of his teens and has a love-letter in his pocket from KATE or JANE. SCHILLER says *Ernst ist das Leben*. The work of a nation cannot be done in "a jig or a cinq-a-pace." It will not do to go to Yezo in the spring "in a galliard" and come home in the autumn "in a coranto."

Our own view is—we give it for what it may be worth—that the true means of attracting population to Yezo would be by throwing open the fisheries, and encouraging by every legitimate means those who would turn them to account, whether for the home trade or an export trade. We hardly like to speak of bounties, for we have a dread of any such exploded forcing processes. But if there is any money which would otherwise be thrown away, we would shut our eyes and hear of its being employed in bounties, rather than sunk in unapproachable piers, and in building silver ladders set against the sky. The fisheries will attract population as nothing else will, and their earnings would gradually find their way to the agriculturist and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and muddling, would disappear; freedom would beget vigour, vigour trade, and the fire would begin to burn the stick, the stick begin to beat the dog, the dog begin to bite the pig, the pig begin to go &c., &c., *in sæcula sæculorum.*

SPIRIT OF THE NATIVE PRESS.

RELIGION.

(Choya Shimbun.)

It is said by some that religion conduces to civilization, and in view of its importance the Government has instituted the Kiobusho (Department of Religion or Public Worship) in order to make our native religion popular. Others say that both in Shintôism and in Buddhism there is much false teaching, but that Christianity is true and good, and tends to make people honest and upright, so that where Christianity prevails the people are enlightened. They argue, therefore, that if we should abolish Shintôism and Buddhism and introduce Christianity, our country would surely become civilized. We do not believe in the correctness of either of these opinions, and think that religion does harm but no good.

If a person sees, tastes or hears anything, and cannot understand by what peculiar action, or for what reason, his mind is affected through his senses, he thinks over the subject, which is involved in mystery to him. But if he continues to meditate, he discovers the reasons for this. And this also is the way in which every useful invention which contributes to the welfare, comfort and happiness of man has been discovered. But religion hinders people from acquiring useful knowledge and making new invention. For example. A man goes out of his house and sees a flash of light proceed from the ground. He returns home full of perplexity as to the cause of this, and demands an explanation from a Shintô priest. The priest would probably say that the light was caused by some god walking in the heavens, and would recommend him to go and worship it. If he went to a Buddhist priest, the answer would probably be that the light was the soul of one of his deceased friends, intimating that he had something to say to him, and that if he did not go and speak to him now, it would assuredly appear again. If he went to a Christian priest, the reply very likely would be that it was a light from God such as appeared to Moses in the desert of Arabia before he led the Israelities from Egypt into the land of Canaan. As all priests speak in something of this manner, they do not appear likely to enlighten the people, but rather to hinder them from enquiring into and understanding the operations of nature. The people under such guidance remain therefore in a state of darkness.

The fasting from meat, fish or salt is much the same. It may be regarded as very pious, but it diminishes vital force, and there are many superstitions resembling this which weaken both the physical and intellectual powers of man. We cannot believe therefore that religion promotes civilization.

Others say they can well understand that Shintôism and Buddhism are mere falsehood and nonsense from beginning to end, but that Christianity is manifestly not so, because in Europe and America, where it prevails, civilization is in its highest state, and new inventions are being constantly made. There is no reason, therefore, they urge, to suppose that Christianity is injurious. But it may be observed in Europe and America, that as the arts and sciences become more popular, religion seems to disappear, and we will attempt to give an explanation why this is so.

During the middle ages the nations of Europe were still in a very uncivilized state, and there was scarcely a day when the continent was in peace, or undisturbed by wars which had their origin in religion. The barbarities of the Crusades were appalling. The bodies of those who were slain in them would have formed a mountain, and their blood rivers. At that time the people were very zealous about religion, and therefore they made these wars. But after many [illegible] bloodshed, the people began to feel some perpl[illegible]d to this tion gradually progressed towards the point at which we now see it. If we should compare the religious zeal of the middle ages with that of the present day, we should probably find that it was then a hundred times stronger than it now is, while the knowledge of the present day is a hundred fold greater than it then was. This shows that civilization and religion change their respective places; when the first comes the latter gradually disappears. Are we then wrong in believing that religion has no efficacy?

I once went to the house of a missionary and said to him: "When the Israelites were flying from Pharaoh, king of Egypt, God wrought many wonderful miracles to assist and protect the Israelites, and led them through deserts with pillars of cloud by day and a pillar of fire by night, and divided the Red Sea, and permitted the Israelites to pass through it on dry land. But when Pharoah pursued them with his troops, the waters came together again and Pharaoh and his host were destroyed. Why did God treat Pharaoh so cruelly? If he possessed such vast power, why did he not prevent the king of Egypt from pursuing the Israelites? In ancient times God appeared to Moses and other prophets, but now he seems to have disappeared. When you teach this, do you really believe that it is so?"

The missionary somewhat lost his temper and said: "You are such a sinner that I am almost unable to speak to you, but as it is my duty to save people, I will give you a short explanation. In the gospel of St. John, 3rd chapter, 11th verse, it is said,—"He that believeth in Him is not condemned, but he that believeth not is condemned, because he hath not believed in the only begotten Son of God." A person like yourself does not think he is condemned, but if you will read the gospel you will understand more clearly." Of course, I did not believe this, but as the missionary evidently did, I refrained from further dispute on the subject.

Religion, as we may see from the above, does not advance the people in civilization, for as civilization advances religion undergoes certain changes. Religion is only the sign-board of civilization. Every one says that Protestantism leads the way, then Roman Catholicism, and that all other religions are inferior to and subordinate to these. The countries in the highest state of civilization are Protestant, those next to them are Roman Catholic, and the uncivilized countries are under other religions. Certainly the countries where Protestantism prevails are in the highest state of enlightenment.

Some may say, "France and Austria are in this condition of enlightenment, in spite of the prevalence of Roman Catholicism, while Scotland and Sweden have not progressed so far as those two countries. The facts do not bear out your argument. How is this?"

I reply; "These countries have troubled themselves greatly on religious questions. When a zealous Roman Catholic ruler ascended the throne, he would not permit any other than his own religion to prevail among his subjects, while a Protestant ruler would not permit any other form of religion than that to which he was devoted. If their subjects would not listen to them, they were burned. The people, unable to endure such cruelties, raised insurrections, but as this only produced bloodshed, they finally professed themselves to be of the same religion as their rulers, either Protestant or Roman Catholic, in order to appease them. But their mouths spoke one thing while in their hearts they believed another, so that no safe conclusion in regard to their belief can be arrived at. The tenets of the people of Austria and France may be Roman Catholic, while the essence of those tenets may be better than that of the religion prevalent in Scotland and Sweden. Am I wrong, then, in saying that religion is only the sign-board of civilization?

We think that our Government has established the Kiobusho to protect the country against the entrance of foreign religions, and to make our own religions popular. Being very ignorant, we cannot exactly understand the intentions of our Government; but as we think religion is a thing of no efficacy, while it effects much injury, it is hardly worth the while of the Government to take so much trouble about it. The faith of people can only be formed by their hearts, and it seems therefore improper for the

Digitized by Google UNIVERSITY OF CALIFORNIA

what not do (on this subject?) It would be better for the Government to permit the people to worship God as they please, provided that in doing so they do not violate the laws of their country. We are afraid that if the Government interferes in religious affairs, we may have such troubles as happened in Europe during the middle ages, or at least many offenders against the laws. As I stated before, the faith of the people is formed in their own hearts, and if they should be ordered to give it up, the fear of punishment would make them profess a different religion to that in which they believed, while they would be secretly embittered against the Government, and their faith would become stronger. But if men believe one thing and profess another, a country becomes a hot-bed of falsehood. This, therefore, is a thing to which our rulers ought to give the greatest consideration. Ye statesmen, what are your views?

BUSINESS SCHOOLS.

Our external and internal trade is growing daily. My opinion is that business transacted by a person not brought up to it is like fighting done by an undrilled soldier—either must be detrimental to the true interests of a country. The proper transaction of business is therefore a question of great importance. Still, I have not heard of any commercial schools being established. There are many besides myself who earnestly desire to learn business, but are prevented by their poverty. I am waiting to hear that some of our wealthy merchants intend sending their sons to Europe for some seven or ten years, in order that they shall gain a good knowledge of business, so that when they return they may teach us, and this will not only profit their fathers, but assist the country. If this does not seem practicable, I hope we shall not wait long before we see good commercial schools established in different parts of the country.

RECORDS OF THE KAITAKUSHI.

"Hochi Shimbun" of February 13th, 1875.

Application on the subject of the taxation of Exports and Imports at the various Kaikuwanjô (or places where a Marine Surveillance is exercised) of the District under the jurisdiction of this Department (*i.e.* Yezo.)

In the 12th month of the year of the Goat (1871) a notification was issued granting a remission of Taxes, foreign trade being excepted, for the space of three years, namely from the year of the Monkey (1872) down to the present year (1874), on all exports and imports,—namely, goods imported from different parts of this Empire into the District under the jurisdiction of this Department (Yezo), and goods exported from the District under the jurisdiction of this Department to various parts of this Empire, from and into the various Kaikŭwanjô by which are meant the six ports of Hakodate, Yesashi, Sudzu, Odaru, Mororan, and Atsukeshi—of the district under the jurisdiction of this Department.

As this period expires with the end of this year, from the 1st month of next year, the 8th year of Meiji, taxes would have been levied as before, but by notification No. 8 of the 1st month of the 6th year of Meiji it was notified that the levying of taxes in all the harbours throughout Japan was abolished. Although properly in accordance with this notification all Export and Import Dues should cease to be exacted at the Kaikŭwanjô, yet the same method as that which is employed in the *Fu* and *Ken* can be put into force in the district under the jurisdiction of this Department.

The principal reason is this. The people have their true occupation in the fisheries, and a tax on these* would correspond exactly to the Taxes on rice and arable land (in other parts of the country). The heaviest rate of taxation (formerly) was about $\frac{1}{3}$th (20 per cent) (of a man's earnings), and if this be compared with the rates of taxes in the *Fu* and *Ken*, we find that it is very light. Nor is this all. The various expenses which in other parts of the Empire the people are called upon to defray, and which amount to a considerable sum, are here paid with Government money. Therefore, even if taxes were imposed on both imports and exports it would not be in the least unfair. And this tax, coming as it does out of the pockets of the merchants who buy the goods, does not interfere with or injure the true occupation of the people, and therefore it is that the tax was formerly levied.

As this is a part of the country, however, which is deficient in products, we should wish to do away altogether with the import dues and thus gradually increase and promote the introduction and circulation of goods; but with regard to exports the old rules should be revised and these (*i.e.* exports) should be taxed at a fixed charge of 4 per cent *ad valorem*.

The amount realized by this taxation should not be included in the fixed estimates of this Department, but special rules should be drawn up for its expenditure, and it should be applied as capital (to assist) the various industries in which the people are engaged. And we should also wish to use the money to defray expenses in connection with objects which we have already made public—such as the repair of roads, the construction of dykes, and the lending and giving of money to those in want, all of which further and promote the interests and advantage of the people.

We beg you therefore to consider the true state of the case and grant the required permission as soon as possible.

Formerly at five places, Tôkio, Ôsaka, Sakai, Hiôgo and Tsuruga, goods-depositories were established (for the reception of goods exported from Yezo) and a certain tax was levied on the buying and selling of them, but when a remission of taxes† for the space of three years was ordered by the Government, this tax was also on application remitted for the space of three years. In future we wish it to be abolished for ever.

We also wish the name *Kaikuwanjô* (places where marine surveillance is exercised) to be changed to that of *Funaaratamejô* (or places where ships are inspected)—we wish by establishing a new port, that of Fukuyama, to increase the number of ports to seven, and we wish the taxes to be called *Shukkôzei* (taxes on goods sent out of a port)—so as to make a distinction between them and the taxes on exports and imports at the open ports in Japan.

Should the important matters above enumerated meet with your approval, we will frame rules in accordance with the Rules for Local Tea Transport which shall meet the circumstances of the case in the most suitable manner, and likewise prepare a draft of a notification (to give effect to the same), and we shall consult you with respect to them.

We beg you will grant the permission without delay.

REFORMS.

Tôkiô "Nichi Nichi Shimbun" of February 13, 1875.

A writer in the *Nichi Nichi Shimbun* of the 13th February says.

"There are at present five measures which are pressingly necessary for our national economy.

1.—The first is to make the silver *yen* the standard current coin, and to make all the other coins subsidiary to it. It should be made freely current over the Empire in the same manner as the Mexican dollar.

2.—The price of old gold and silver (coin?) is according to the present arrangement the price asked by the people from the authorities, and not the price asked by the authorities from the people. What then shall we say of the exchange of paper-money for gold? I have also observed that in the case of the old and new copper coins there are several cases of a great discrepancy in the weights. The prices of all these should be raised without delay, and the hoarding of coin by the people put an end to.

3.—The price of grain is very low compared with that of other articles. If we go back to the period Gembun (1736-1741), for instance, we shall find that the present rate would amount to no more than 1 *rio* and 1 *bu* per *koku* of rice. In the middle period (of Japanese history) 1 *rio* per *koku* was considered the exteme limit of cheap-

* Not really on these, but as the principal article of export is fish a tax on the exports would to a certain extent be a tax on the fisheries.

† Taxes levied at the *Kaikuwanjo* on exports and imports from and into Yezo.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ness, but if we allow for the present value of gold, the price per *koku* ought to be 1 *rio* in order to reach this minimum. But the cheapness of rice causes the people to be negligent. This may be seen from the distress produced in Oshiu and Dewa by reason of the great quantity of rice. The third measure is therefore to raise the price of rice either by Government buying up the rice, or by allowing it to be exported.

These three measures will have the effect of diffusing riches and bringing profit to all classes.

4.—The fourth measure is to fix the rate of interest on money lent, and to deprive people who take interest on a higher scale of the right of attaching stamps to deeds. Courts of law should take no cognizance of such transactions. This measure will restore equality to the restrictive laws of the Government, and to the rights of the people.

5.—If A sells to B and C to D, and one of them makes a large profit, he should be compelled to share it with the original seller. Again if D alone makes a large profit and does not share it with C, it should be lawful for A,B and C, to bring an action against him. This is the fifth measure.

These five measures will promote the circulation of money, and benefit equally the rich and the poor."

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Pastimes.

Music, as studied for pastime by men, includes the harp. The *Gaku* or Band, composed of several instruments used on Shinto festive or ceremonial occasions, or on official ceremonies of the court, is rarely heard in perfection by the people. The separate instruments are occasionally seen. These we have already described: they are the *sho, sichiriki, tziko, koto, biwa.* Some practice these instruments singly for pleasure, also the *shakuhachi.*

Chess is played in Japan, also *go,* a kind of draughts, deserving a special description, and we merely note them here as the most common games of skill played by both sexes.

In-door pastimes are such as are common to both sexes, though some of them may be but little practised by the gentler half of the nation; yet none of them are exclusively monopolised by men. Indeed, their united participation in these pastimes, here as elsewhere, constitutes at least half their fascination, both at home and in places of public resort. Little beyond a mere enumeration of these games will be attempted now; though, hereafter, a fuller description of the more important of them will be given.

It was not formerly fashionable to have the female members of an upper-class family exert their musical abilities for the amusement of the head of the house, exhibitions upon the *samisen* being particularly objectionable, as it is the instrument of the common people, and of the less respected classes even of these. On special occasions, however, the daughters were permitted to exhibit their proficiency on the *koto.* This rule has been somewhat relaxed of late, and in addition to the female members of the household, *geyshas (gei-no-aru-mono)* or "persons of pleasing accomplishments" are called in to wait on the guests, but in reality to add life to the entertainment.

Place aux dames:—When the ladies have finished their share of the household duties, which vary in importance with the means of the head of the family, and their actual respective positions in the house, have bathed, had their hair dressed, been painted, and have put on their robes and tied their girdles, there is little time left which they cannot wile away over the *hibashi* (charcoal brazier) generally with a tiny pipe and a little tobacco, or their singing or music lessons, if young, for their own benefit, otherwise for that of a young member of the family. Professional needle-women go to each house, so that ladies do little work upon their own clothing, or that of the family. Occasionally a group of young girls may amuse themselves for a while by cutting up scraps of paper and silk which they paste together into pretty shapes, such as flowers, pouches and fancy articles, as presents to their friends, though not to their sweethearts. And here I should remark that the Japanese girl does not have her room and toilet-table covered with those little odds and ends which seem so precious to the European maiden. Some few girls play the native chess, but, as a rule, women in Japan, as elsewhere, love nothing so much as a little gossip or scandal, under the guise of a social chat. If alone, reading a love story is the favourite amusement.

The great resource of men is the game called *go,* played with 180 white discs or counters, cut from the shell of a species of cockle, and 181 black, made from a pebble found near Nachi-no-take (Nachi-waterfall) in Kishiu. The board is divided by lines crossing each other at right angles into 361 squares (19 × 19), the original idea being one square for each day of the year. Each player endeavours to enclose a certain space and prevent his opponent doing the same; they play alternately, laying down one disc at a time. Underneath the *go-ban* or table on which the board is set, there is a square hollow called *chi-tamari* (blood collector). The ancient laws of the game state that if a third person interferes in the play, or tenders his advice or opinion to either party, the intermeddler's head may be chopped off and placed in the hollow of the reversed table which will collect the blood dripping from the severed head. Women often play at *go* together, and sometimes elderly women with men; young men and girls rarely.

Shogi, chess, is common to all sexes and ages, but requires more skill and is much more complicated than any game of this class. The *Shogi-ban* is divided into 81 squares, 9 long and 9 broad—(not 8 × 8 as with us). The *koma,* or chessmen, are, for each player, one *o-sho* king; two *kin-sho,* gold chiefs; two *gin-sho,* silver chiefs; two *kei-ma,* diagonal moving horse; two *kio-sha,* perfume-carriages; one *hisha,* jumping carriage; one *kaku-gio,* corner-mover; nine *ho-hei,* foot-soldiers; in all, twenty, or forty for both sides, which are placed as follows, commencing on the first line of the board next the player, and with the right hand corner: The *kio-sha, kei-ma, gin-sho, kin-sho, o-sho, kin-sho, gin-sho, keima, kio-sha;* in front of the right hand corner, *kei-ma, skisha;* in front of the left hand corner, *kei-ma kaku-gio,* and on the third row of squares nine *ho-hei.* The following are the moves of the respective pieces.

The *o-sho,* one square in any direction.

The *kin-sho,* the same.

The *gin-sho,* one to the front diagonally, to right or left.

Kei-ma to right or left and two forward, hopping over pieces. (Next but one of a different colour; our knight.)

Kio-sha, straight forward, but not backward, so far as the board is open.

Hi-sha in a straight line in any open direction.

Kaku-gio diagonal as far as the board is open.

Ho-hei, one square to the front only.

When any piece has been pushed into the enemy's lines, *i.e.* into those originally occupied by his men, the piece is taken back and becomes a *kin-sho;* except the the *hi-sha,* which becomes *riu-o* (dragon-king), and *kaku gio* which becomes a *riu-ma,* (dragon horse). Before opening the game the player of the first move is decided by the throwing up of a pawn, as we should a throw up a coin, the other calling *fu* or *kin,* as we should 'head' or 'tail.'

In giving pieces to a weaker player, one *kio-sha* taken off counts one point, two *kio,* two points, one *kaku-sho* three points, and so on. The pieces taken may be placed on any part of the board at the pleasure of the captor, and subsequently played. This game would require a separate chapter to itself in order to describe it fully.

Cha-no-yu. Drinking powdered tea is performed with many ceremonies, which differ for the *usuie* (thin) and the *koie* or thick. The utensils used are few in number, and frequently of great value, not perhaps always intrinsically, but bearing some special worth in the eye of the native *virtuoso*; special invitations are issued tothe guests, the usual hour named being noon. The guests assemble in an ante-room, and *o-yu* (hot-water) is presented them in small cups to drink from. They are then escorted into the *cha-dzashkie* (tea-apartment) when the host enters, and, bidding welcome to his guests, prepares to treat them to his tea. Meanwhile certain articles of food are brought in, and the host only attends upon these guests in accordance with minute rules laid down from time immemorial, after-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wards the guests withdraw to another apartment leaving the host to complete his preparations. When ready, he strikes a gong and the guests again assemble in the *chadzashkie*, and are served with the thick tea in a large bowl from which all drink in turn, each person taking three sips, and passing the bowl to his neighbour. All then retire to the adjoining chamber, where those who smoke are permitted to do so, and the severity of the ceremonial attending the drinking of the *o-cha* is relaxed. The thin tea is then served in cups, one to each guest, and this is replenished as often as may be desired, until the most important person present declares himself satisfied and begs the host to 'forbear,' when the others take the hint, thank the host, and retire with profound mutual compliments. The number of mats (*i.e* the area) of the apartments and other details are all strictly laid down by minute rules, and here various *riugie* or styles come in, each of which has its advocates. Women and servants are always excluded from this form of entertainment.

Ko-taki, incense burning, is a pastime of a very aristocratic kind, depending chiefly upon the power of recollecting perfumes. There is quite an elaborate set of instruments, or perhaps, rather toys, used, amongst which the principal is a box containing little tickets numbered from one to ten. Several kinds of incense are burned, one after the other, and labelled, after which minute *pastilles* of the same being burnt, each player has to guess the number it bore, depositing a ticket to represent his guess. He who guesses best is first, and so on. This is more a pastime for ladies than for gentlemen, but either may with propriety practice it.

Hana: flowers. *Ike-bana* is the art of arranging flower-vases or holders. The methods and ceremonies are so numerous that a class of men make it their profession, and often in former time made a competence by going from house to house and teaching the art. There are numerous illustrated works on the subject. The chrysanthemun is the *pons asinorum* of learners.

No. Native opera, studied by the higher classes, and practised as we do charades or drawing-room theatricals. Masks and gorgeous dresses are used. The pieces, chiefly tragedies, of which there are some two hundred, are based upon stories of the civil wars between the Genji and the Heiki, commonly called *Gempei*, commencing about A. D. 1,150 and continuing at intervals to the end of the century. Between the acts a sort of farce is introduced called *no-kiogen*, which is said to have had its origin in the following story.

A gentleman sent his servant to buy him a fan. The man by mistake bought an umbrella and a series of laughable incidents occur, from the ignorance of the man of his master's dialect. As the whole amusement of the piece depends upon play on words, it is difficult to understand and impossible to reproduce it. The end, however, is, that the servant dances about with the result of forcing his master to his legs, and and a grand *pas de deux* winds up the comedy of errors.

Musical instruments are a source of amusement to many, but few attain any proficiency on them.

Hon-sugoroku, is a game played with two dice upon a board divided in half and again sub-divided into eight parts. A black and a white disc, one for each player, is moved according to the number of the dice thrown.

Odori, posturing, is almost exclusively practised by little girls, though 'fast' young men practice it when unusually elated.

Painting, writing poetry, making collections of coins, swords, and various other articles, and exhibiting them to friends, are among the numerous modes of passing the dull hours of the well-to do idle people, such as *daimios* and retired officers. Exceptional hobbies, collecting birds or animals, botany, horticulture &c., are sometimes turned to profitable account now that the revenues of idle people have been diminished. Horsemanship takes the first place, although it is only a few years since the higher classes alone were permitted to ride in public. Of games on horseback, *dakiu*, or ball-throwing, is played with small balls like those used in racket courts, which are picked up off the ground with a stick on the end of which there is a small loop or net, and thrown through a hole in boarding at the end of the course. The players are divided into sides, for instance, the *Gem* and the *Pei*, and a certain number of balls is decided upon. The side which succeeds in holeing the greatest number of balls of course wins.

Kisha is archery on horseback, with a small target at one end of the course.

Tori Awase, was formerly practised at Kioto by the *kuges* (nobles), but, being prohibited, it is now not much seen.

Shamo, (Cochin China fowls are secretly matched in fight.

This is alsocalled *keai* (met to kick). Exhibitions of birds, flowers, plants &c. are numerous and common.

Pic-nics and mushroom gatherings, pleasure parties in the holdiays to the shrines, temples or gardens, the special occasions of the blossoming of the plum, cherry, *shobu acarus calamis* and chrysanthemum, or the special festivals of the more noted places of pilgrimage, are amongst the amusements of the year. Cockle-gathering is eminently the sport of girls and children, as is also herb-gathering.

Fishing with rod and line, or spearing, fishing with casting nets and trawling, are favourite sports with men of all classes.

Shin-kiku is an aristocratic game not much practised now. Archery has also been little practised of late. There are other sports of which he shall treat, but they will fall under a different heading.

Young men often have amusements not always of a kind to bear description in this place, the mildest form of these taking the shape of "sprees" or entertainments with their friends, plenty of *saké* and the company of singing and dancing girls the leading feature.

Besides the manlier sports and accomplishments being described elsewhere there is the usual round of dawdling pastimes for hours hanging dull and heavy; some of these we note to give an idea of their general charac ter. Many are only known to the officers, and the retired and old official, daimio, and wealthy trader devote much time to the study of one and all.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Society was held on Wednesday evening, 17th February, at the Grand Hotel, Dr. Hepburn in the chair.

The minutes of the last meeting were approved, and it was announced that Mr. Montague Kirkwood had been elected an ordinary member since last general meeting.

Sir Harry Parkes then read "A description of the coast "between Oosima and Toba Harbours, and an account of an "excursion among the forests and mountain ranges of the "province of "Yamato," by Captain H. C. St. John, Com- "manding H. M. S. *Sylvia*."

After the paper had been read a vote of thanks to Captain St. John for his interesting contribution was moved by the Rev. Mr. Syle, seconded by Mr. Drummond Hay, and carried unanimously.

Mr. Syle then remarked on the especially interesting and valuable character of the Paper just read; and questioned whether there might not be constructed on the hill-sides of Yamato such lumber-shoots or "slides" as were found in the forests of Germany and Oregon: also, it seemed very desirable, if indeed the true *chamois* is to be found in Yamato, that its skin should be utilized as leather, and its flesh for food.

Mr. Brunton said:—This country is no doubt, at present, badly off for timber, and it would be a great matter if the Government could do something towards utilizing the extensive forests described by Capt. St. John. The only really available hardwood at present in use is *kiaki* and Capt. St. John mentions oak trees as existing in this district, of immense size. We know of oak being found in Yezo, but I have not heard before of its existence on the Main island. If it is the true oak, this is an additional and a very powerful reason for some steps being taken to bring these woods into use. So long as the way to the sea is down hill I hardly think there can be any insurmountable difficulty in getting the timber to the habitations of men.

Professor Ayrton said mention had been made in the paper of the evening of the charcoal burners penetrating far into the forests to obtain the wood. Possibly this would furnish an

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

explanation of the comparative high price of charcoal, which could scarcely be found either in the cost of the burning or in the value of the wood, and therefore must be sought for in the difficulty of transport. In the case of the hard kinds of charcoal, which were much dearer than the soft charcoal the cause might really be the great difference of value of the woods. Although all the Japanese burnt charcoal the actual consumption really was not as large as it might at first sight appear to be since, the *hibachi* being closed at the bottom the absence of draught made the burning go on very slowly.

Mr. Brunton suggested that as Capt. St. John's paper was confined to a description of the coast between Oosima and Owasi Bay, a request might be sent to him, along with the note of thanks already agreed to by the Meeting, to furnish another paper describing that part of the coast between Owasi and Soba. From his own knowledge he was aware that the harbour of Mura Goza and Matoya were among the most wonderful natural basins in this part of the world, and as Capt. St. John had most excellent facilities for acquiring information, he was in a position to supply papers of the greatest interest and value.

Sir Harry Parkes undertook to convey the request to Captain St. John, and the meeting then terminated.

Correspondence.

THE KAITAKUSHI.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Tokio, February 17th, 1875.

SIR,—I have read with some surprise in your issue of the 13th instant, what purports to be a translation from the *Hochi Shimbun*, of certain private correspondence between one of the officials of the Kaitakushi and myself. Neither the publication of this correspondence, however, nor several grave errors apparent therein (incidental, no doubt, to the translation of my letter into Japanese and its re-translation into English), have given me so much concern as the manner in which you have seen fit to make these letters the text of criticisms of the Kaitakushi, and reflections upon its works, which, permit me to say, I consider much more severe than the facts warrant, and calculated rather to retard than to advance the interests of the Department.

It has always been a source of regret to me that the foreign press in Japan should have chosen to single out the Kaitakushi from all the other Departments of the Government as an object for covert aspersions and open attack. The anonymous communications which have appeared from time to time in the columns of Yokohama newspapers might be passed in silence, were it not for the editorial sanction they have received. Certainly the sources of correct information have never been so difficult of access as that implicit confidence should be placed, as is apparently the case, in the reports of anonymous correspondents, whose ignorance is only equalled by the presumption with which they take it upon themselves to scold and advise the Kaitakushi.

It is with sincere regret, therefore, that I have noted the spirit and tone of your editorial of the 13th inst. You are kind enough to intimate that none of the failures you lament can be ascribed to me, but upon reflection you cannot fail to perceive that every foreigner attached in any responsible capacity to the Kaitakushi must be included in the sweeping condemnation you have meted out to the Department and its work. If it be true that "for all practical purposes the work done in Yeso during these years amounts to nothing;" if there "is no more root in the thing than in an artificial flower," and "no more life in it than in a man of straw," it is impossible by any method of favorable exception to free from blame those whom the Japanese have selected to aid and advise them. If blame there be, speaking for myself, I can frankly say that I do not desire exculpation at such cost. Whether the advice of the foreign employés of the Kaitakushi has or has not been taken, and whether or not they look with favor upon all its operations, they cannot reasonably be expected to stultify themselves by acknowledging that "all that has been done up to the present moment is mere play and fiddle faddle." Ccertainly the chagrin they would naturally feel at the acknowledgement of so disastrous a result of three years labors could hardly be compensated even by the pleasure they might take in so alliterative a statement of their discomfiture. They may not have realized the, perhaps too sanguine, hopes with which they entered upon their work, but they would have ample reason for discontent and self-reproach were it certain that all they had vainly attempted must be left for accomplishment to the mythical "some one" who "will leave a thriving colony behind him as the result of a life's labor." This last clause embodies the gist of the mistake common to all criticisms upon the work of the Kaitakushi. The successful completion of that work is truly the matter of a "life's labors," and he may be an honest, but surely he is a mistaken, critic, who finds fault because the whole, or a great portion of the task, has not been completed in three years.

Allusions to the "vast sums" fruitlessly expended by the Kaitakushi might reasonably be considered ironical, in view of the blank silence maintained respecting the disbursements with comparatively less good results, of much larger sums than the Kaitakushi ever had at its disposal, by other Departments of the Government more immediately under foreign control.

In 1871 Yeso was considered a cold and barren country, having no value beyond its fisheries and, perhaps, some undiscovered mineral wealth. Extensive geographical, geological, mineralogical and hydrographic surveys have negatived these opinions, and have furnished the only reliable data from which it is now concluded that the Island may after all, be worth something. The best foreign fruits, vegetables and grains have been introduced and successfully cultivated, contrary to the universally expressed opinion that they could not be grown in Japan, or would prove worthless. The finest breeds of stock have been procured and have thriven beyond the most sanguine expectations. Labor-saving machinery of all kinds is largely in use, while the most approved agricultural implements are now manufactured by native workmen. A large number of Japanese youths are being thoroughly educated in the useful trades and professions. Many of them have already become good mechanics, and some have been found capable of taking charge of scientific work.

In brief, the Kaitakushi has sought in many ways to stimulate the growth and prosperity of Yeso, and develop its undoubtedly great resources. Nor have the good effects of its operations been confined exclusively to that island. The sphere of their influence has gradually and naturally widened, until to-day they have proved of benefit to Nippon. The time must come when it will be acknowledged that they have been of incalculable value to the Japanese as a nation, modifying and improving, as in the course of events they must, the habits and conditions of the people.

I have alluded to but few of the many signs of progress in the right direction. Nor have I mentioned even these few in a spirit of extenuation or apology, but rather to emphasize the assertion, that, notwithstanding the mistakes that have been made (and they are many), and the obstacles which remain to be overcome, there is ample promise of a successful and prosperous future. It must occur to you that a good result can be better secured by temperate criticism and useful suggestions than by indiscriminate denunciation.

In regard to the letters which appeared in your issue of the 13th I need only say that the proposition to send one or two of the more experienced officials of the Kaitakushi abroad for purposes of observation and inquiry, did not originate with me. I endorsed the suggestion for reasons the strength and propriety of which my position gives me the best opportunity for judging. The practical knowledge and experience thus gained would, I feel assured, be of inestimable service to the Kaitakushi in the future. Within my own memory some of the most flourishing States of the Union have been successfully settled and developed, and the same labor is now being performed in many parts of America. I can think of no more profitable undertaking for those connected with the Kaita-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

kushi than the intelligent study of operations so nearly akin to the work they have in hand.

I am, Sir,

Very truly yours,

HORACE CAPRON,
Commissioner and Adviser of the Kaitakushi.

HONGKONG & SHANGHAI BANKING CORPORATION.

NINETEENTH REPORT OF THE COURT OF DIRECTORS TO THE ORDINARY YEARLY GENERAL MEETING OF SHAREHOLDERS HELD AT THE CITY HALL HONGKONG, ON THURSDAY, THE 18TH FEBRUARY, 1875.

TO THE PROPRIETORS OF THE HONGKONG & SHANGHAI BANKING CORPORATION.

GENTLEMEN,—The Directors have now to submit to you a general Statement of the affairs of the Corporation, and Balance Sheet for the halfyear ending 31st December last.

The net profits for that period, including $7,042.19 brought forward from last account, after paying all charges and deducting interest paid and due, amount to $119,785.42, of which, after taking out Rebate on Bills not yet due, and Remuneration to Directors, there remains a balance of $109,059.44.

The directors again regret that they cannot recommend the payment of any Dividend to the Shareholders. The general working of the Bank during the half-year has been unsatisfactory, and, notwithstanding the profit derived from the Chinese Imperial Government Loan, the profits are comparatively small.

The losses and amounts written off require $106,000 of the Profits, together with $275,000 of the Reserve Fund mentioned in last Report, and a further sum of $400,000 from the same account. The Reserve Fund will thus stand at $100,000, and there will be a balance of Profit of $3,059.45 to be carried to the credit of New Account.

The poor result of the half-year's working is attributable to the bad state of trade in the East; business generally has yielded but little profit and that in Exchange has proved no exception. The demand for advances has been small and the interest obtainable on them consequently low, while the interest paid by the Bank on deposits has been heavy. These deposits are now larger than they ever were, notwithstanding that, more than six months ago, the Directors, resolved to receive none at a higher rate of interest than 5 per cent per annum.

The amount now set asides is required as follows:—

For London Accounts, ...	$160,000
„ Sterling Bills, ...	80,000
„ Head Office Accounts, ...	180,000
„ Sundry Accounts, ...	86,000
	$506,000

The $275,000, referred to in the last Report, has been required, as anticipated by the Chairman at last Meeting, chiefly by the Indo-Chinese Sugar Company's account and transactions connected therewith. The Company's estate now stands in the Bank's book's at half the value the Bank's Special Agent has placed upon it. The Directors purpose to realize the property with all despatch, and steps have been already taken to that end.

The amount placed against London losses is required on account of transactions entered into prior to the present half-year. Although these transactions were known to the Directors at the date of the previous Meeting, they had no reason, from the information then in their possession, to look upon them as bad. Subsequent advices, however, shewed that a considerable amount had to be provided for them, which has now been done.

The Directors at the last Meeting had hoped to recoup the Bank a portion of the amount then set aside for London losses from Mr. Vacher, the London Manager at that time as they believed he was possessed of considerable means, but he is unable to meet his own indebtedness (unwarrantably incurred) to the Bank, and although the Directors have obtained from him an assignment of his available property, they have to provide for a loss on his account. Mr. Vacher is no longer in the Bank's service.

The losses on Sterling Bills are chiefly due to purchases made previous to the half-year and are now provided for.

The amount placed against "Head Office accounts" is required for writing off considerable amounts from the value, in the Bank's books, of Sugar Refinery, Pier Company's property and other items, and for deficiencies on current advances during the half-year, securities of all kinds having depreciated greatly in value.

The sum placed against "Sundry accounts" is required mostly to meet losses on advances made at some of the Branches previous to the half-year.

Referring to their last Report and to the expectations there expressed as to the extent of possible future losses, the Directors greatly regret that their anticipations should have turned out much too sanguine. They cannot, however, close this Report without pointing out, that, although they have been compelled to lay before the Shareholders two successive unfavorable Statements of accounts, the general business and position of the Bank continue sound.

Local Committee in London.—The Directors, under authority of Article 144 of the Deed of Settlement, have now resolved to take immediate steps to appoint a Local Committee in London to supervise the transactions of that Branch.

Inspection.—Mr. David McLean has been appointed to make a special tour of inspection of the Bank and will be here shortly, but it will be at least two months before he can hand the Directors his Report.

Marine Insurance Account.—The Balance of this account now amounts to $33,981.06,—no losses have been sustained during the half-year.

Directors.—Mr. Thomas Pyke resigned his seat at the Board, in conformity with the notice he gave at the last General Meeting. Messrs. R. Rowett and S. D. Sassoon also resigned their seats at the Board, on leaving the Colony, and Mr. F. D. Sassoon has been appointed in room of the latter gentleman.

Mr. Adolf André has been appointed Chairman of the Corporation for the year 1875, vice Mr. Wm. H. Forbes, whose term of Office now expires, and Mr. A. F. Heard has been elected Deputy Chairman.

In conformity with the provisions of the Deed of Settlement, two Members of the Court, Messrs. Adolf André and A. F. Heard, retire from the direction, but they are eligible for re-election and offer themselves accordingly.

Auditors.—The accounts have been audited by the Honourable Phineas Ryrie and Mr. F. W. Mitchell, and the Directors have pleasure in recommending the re-election of these gentlemen as Auditors for the year 1875.

WM. H. FORBES,
Chairman.

Hongkong, 13th February, 1875.

Law & Police.

IN H.B.M.'s BANKRUPTCY COURT.

Before RUSSELL ROBERTSON, Esq.

HONGKONG & SHANGHAI BANKING CORPORATION *vs.* E. WALLACE.

His Honour to-day delivered the following decision in this case :—

I dismiss the petition on these grounds :—that the Hongkong and Shanghai Bank failed to protest the two bills of $1,980, and $2,475 respectively, drawn by the defendant on Mr Rivington, and debited to him on the 5th April and 24th June, 1869.

That the defendant had funds in Mr Rivington's hands at the time of drawing the bills.

That the defendant has not, by any subsequent promise to pay or acknowledgment of liability, waived due notice of dishonour.

In respect to the bill for $2,850, drawn by the defendant on Mr Sams, and debited to him on the 31st December, 1870, either this bill has been paid or not. If it has been paid, then the defendant should be credited with the amount; if it has not, then, inasmuch as it is admitted that the defendant had funds in Mr Sams' hands, the failure to protest, in the absence of any subsequent acknowledgment of liabity or waiver by the defendant, releases him equally as in the case of the two bills on Mr Rivington, the total amount of these bills, together with the interest ($3,049,34) claimed more than represents the amount, namely, $8,719.34, in respect to the alleged non-payment of which it was sought to have the defendant adjudicated a bankrupt.

The costs of these proceedings will be borne by plaintiffs.

H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq, Assistant-Judge.

(*Saturday Feby 20th*, 1875.)

CLATAUD *vs.* G. DOMONEY & Co.

The following is the decision in this case which was delivered this day by the Assistant Judge :—

In this case there is, unfortunately, a direct conflict of evidence as to some material points; but weighing all the circumstances, I come to the conclusion that the plaintiff has made out his claim for 306 02 less the sum of $80, which the defendant is entitled to set off.

It appears that the defendant, trading in Yokohama under the name of G. Domoney & Co, established a branch under the same name at Yedo, on 1st March, 1874. It was placed under the management of a Mr Blockley. With this firm the plaintiff carried on business from its commencement until the end of October. The plaintiff was well acquainted with both the defendant and Blockley. By a document dated Yokohama, the 22nd May, the defendant agreed to sell his interest in the Yedo business to Blockley, with a stipulation that all claims against the business (i. e. G. Domoney & Co.) were to cease from the preceding 5th May, and with permission to Blockley to carry on business in Yedo under the name and style of G. Domoney & Co. for six month from that date.

An advertisement which had appeared before the 1st March in the Yokohama paper (*Gazette*), announcing the setting up of the branch business, was continued for some months after this document had been signed, and it appears that the defendant paid for the advertisement up to May or June, but after that time declined to pay for it, without however, ordering it to be withdrawn, and merely saying that Blockley would pay for it in future. The sign-board bearing the name of G. Domoney & Co. was allowed to remain over the Yedo shop subsequently to the end of May, consistently with the permission given to Blockley to use the name There was absolutely nothing done to apprise the public that any alteration of interest or liability had taken place.

The plaintiff continued to deal with Blockley without any change in the manner of doing business, and all accounts were settled between them up to the end of June. On the 22nd September the business was transferred back by Blockley to the defendant, who, it seems, made the change publicly known, and disclaimed any liability for the transactions of Blockley previous to that date.

The question is,—had the plaintiff sufficient or any notice of the transfer in May, by which he could be bound, and by which the defendant was released from all liability as to the transactions of G. Domoney & Co., Yedo. Here we have a conflict of evidence The plaintiff says he never heard of the transfer. The evidence of Blockley is that it formed the subject of a conversation between himself and plaintiff.

It is clear, however, that no notice was ever given by the defendant to the plaintiff, either formally or informally, and the continuation of the firm name, and of the advertisement without alteration or explanation, was calculated to make the plaintiff believe that he was in effect dealing with the same person as before. With regard to the set-off, the witness Becker says that the goods he sold to the plaintiff after the taking down of the sign of G. Domoney & Co., on the 2nd December, were sold out out of the shop to the plaintiff, who personally took delivery, that they were G. Domoney & Co.'s goods, and that he gave plaintiff no reason to believe that he sold them as his own. He had for some time previously been acting as G. Domoney & Co.'s agent in the business. I think that the plaintiff had sufficient reason to know or believe that in this affair Becker was but the agent of G. Domoney & Co., and that he is not entitled to set off his claim upon Becker against these goods.

Verdict for $217 02 with costs.

Mr Gibson applied for costs on the set off of $80, but his Honour disallowed them.

U. S. CONSULAR COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

February 18, 1875.

KAITAKUSHI *vs.* MARTIN COHEN & Co.

This was a claim for $40,000, being $20,000 paid as deposit by plaintiffs to defendants on a contract for 1 600 Remington rifles and accoutrements, with 200 rounds of ammunition for each rifle, besides 480 000 extra rounds of ammunition, and $20,000 alleged damages for the non-performance of the contract by defendants.

Mr. G. W. Hill, legal adviser to the *Shikosho*, appeared as counsel for plaintiffs; Mr. F. W. Marks for defendants.

(Continued from February 19th.)

Mr. Hill handed into Court a mass of correspondence he had had with defendants' counsel.

Witness continued: The rifles and cartridges contracted for were "rim" fire ones, and the one he afterwards borrowed from the defendants was a "central fire" rifle, and would only use "central fire" cartridges. The original sample on which the contract was made had a bronzed barrel, and the one he afterwards borrowed had only a polished barrel. He never took any notice of some proposals made by Martin Cohen & Co., as everything was specified in writing in the contract. He never received notice in writing from the defendants to take delivery of the rifles.

Question by Mr. Hill: What damages did the plaintiffs sustain by the breach of contract?

Mr. Marks objected to this being answered.

Objection overruled.

Witness thus answered: A little over 10,000 rios was the loss sustained by the breach of contract. A deposit of 320,000 was paid into the Oriental Bank. [Bank receipt produced.] He had never received any of this deposit back again. He had sustained a loss of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

$10,000 besides the $20,000 paid defendants as a deposit. He had made a charter with the S. S. *Behar* to receive the goods on board by a certain day and convey them to Hakodate, but as they never came the charter-party was broken, and he had sustained loss by this. [Translation of charterparty read to Court.] According to his contract with defendants, he was to be allowed three days' time to examine the rifles before he took delivery of them. The Kaitakushi had suffered all the losses he was suing for. Other expenditure had been incurred,—such as travelling expences of Kaitakushi officers, etc., through the non-performance of the contract. He had paid $200 for interpreting documents to Mr. Wills. He had paid about 300 or 400 rios for travelling expenses. There had been no failure on the part of the Kaitakushi to perform the contract.

Cross-examined by Mr. Marks: He was an agent of the Kaitakushi and received no salary.

He received a commission on the amount of business he did for the Kaitakushi. He was a merchant. He did not know English. [He failed to read to read the signatures of G. Opitz and Martin Cohen Co. on the contract.] He could not say what they meant; he saw Mr. Opitz write them. He (Opitz) signed the signatures at the same time. He told Mr. Opitz nothing at the time. $20,000 were lost through defendants breaking the contract. He got nothing out of making the contract. He did not receive $1 000 from Mr. Opitz. He did not receive $2,000 as soon as the contract was signed. He knew a man named Omeya; he is now in Court. Omeya is a merchant of Yokohama. Omeya had nothing to do with the contract. He did not know if Omeya received anything from Opitz. He did not know if Omeya received $1,000 from Opitz. He received no part of such a sum. He did not know if Opitz had given any one $1,000. The sample rifle is now in the Kaitakushi. He did not know if Martin Cohen had taken that rifle to America to get the ones contracted for like it. The Kaitakushi had not supplied defendants with plans of the rifle. The rifles were wanted for the Kaitakushi, but for what purpose he would not say. He had never demanded his $20,000 from the Oriental Bank. He did not go to the Bank and ask for it, because if he went alone the Bank would not hand him over that sum. He did not know what had become of the $20,000. He could not read the receipt. He took it to be the proof of the deposit. He drew the contract up with defendants, and deposited the money into the Oriental Bank. He knew the meaning of the receipt. He did not understand that the $20,000 was a "margin of credit" for defendants to purchase goods with. The Kaitakushi paid the loss sustained through having to break the charter with the S. S. *Behar* in paper money. He expected to get a commission in the end when the transaction was finished. The contract was broken on the 5th December, 1874.

Court adjourned till Monday, the 22nd instant, at 11 o'clock a.m.

February 22, 1875.

This was a claim for $40,000, being $20,000 paid as deposit by plaintiffs to defendants on a contract for 1,600 Remington rifles and accontrements, with 200 rounds of ammunition for each rifle, besides 480,000 extra rounds of ammunition, and $20,000 alleged damages for the non-performance of the contract by defendants.

Mr. G. W. Hill, legal adviser to the *Shihosho*, appeared as counsel for plaintiff; Mr. F. W. Marks for defendants.

Court reassembled at 11 a.m.

Mr. Hill then called,

Susuki, cautioned: He was the chief clerk of the Kaitakushi. He was familiar with the subject of the contents of the contract with the defendants. That contract had never been fulfilled. The chief object of the Kaitakushi in making the contract for the arms was to arm militia-men with them when they arrived. The failure of the arms to arrive to time was the greatest loss to the Kaitakushi. Men were got together, and ought to have been drilled with the contract arms; but they never came. Every one connected with the contract was responsible.

Cross-examined by Mr. Marks: To three places in Yezo it was intended to send these militia-men. The militia were to be stationed in Yezo to prevent disturbances. The arms might, perhaps, have been wanted for Formosa. He was not familiar with the question, and could not say if the war was over. The Kaitakushi had not bought 1,600 Remington rifles since the contract had been broken.

Fughishima Funi Akira: He was middle clerk of the Kaitakushi. He was familiar with the contract made with defendants. The loss sustained by the contract being broken was first the charter party with the *Behar* was broken in consequence. The aggregate loss to the Kaitakushi was $20,000 (bargain money), besides about 7,400 yen breach of charter party with S. S. *Behar*, and more than 500 rios paid as wages to mechanics in December last, and 130 rios for the preparation of mechanics.

Mr. Marks: Washing them? (Laughter).

Witness continued: The 130 rios were paid the mechanics whilst they were waiting for the arms. Each man received pay at the rate of 30 cents per diem. There are also travelling expenses and interpreter's fees. Of course the money had been paid by the Kaitakushi. (A number of documents shown to witness, which he recognised).

Mr. Marks said he would be willing to believe it if witness, as treasurer of the Kaitakushi, would state what amounts had been paid by the Kaitakushi, without further questioning.

This was translated to witness.

Witness continued: About 400 rios were paid as travelling expenses, and 200 for interpreting.

Mr. Marks had no questions to ask the witness.

Court adjourned until half-past one o'clock.

Mr Hill had no more witnesses to call. He read two advertisements of defendants' from the *Gazette* Hong List for 1875, in which it said Martin Cohen & Co. were agents for the Remington Rifle Co. This concluded his case for plaintiffs.

Mr Marks then opened his case for the defendants.

Mr Marks wanted to call Martin Cohen.

Mr Hill objected, saying Martin Cohen was not competent to give testimony on his own behalf. It was not in the rules of procedure

Mr Marks was taken by surprise. He thought the question so plain that it needed no arguing.

Mr Hill proceeded to produce authorities.

His Honour overruled Mr Hill's objection. A note was made of it.

Martin Cohen, sworn: He was the defendant in this action. He was partner with Opitz when the contract was signed. In July, 1875, he heard through his native clerk that the Kaitakushi required rifles; he endeavoured to obtain the contract, in which he succeeded. The afternoon when he left for America, Mianabe, Omeya, and several others connected with the matter, were in his office at No. 82, and they had his sample rifle. He begged them through his interpreter that they would let him take the sample rifle to the United States to avoid all mistake, on account of not being personally acquainted with the arm business. This request they refused, but instead of the rifle, the interpreter for Mianabe made a drawing of the rifle. The drawing showed the rifle in a "locked" condition. That afternoon he went to America. He made a quick passage—19 days. Soon after arriving he left for New York, but while in San Francisco he telegraphed the contract to Remington in order that they might commence. He got to New York and went straight to Remington. The telegram had reached. He show his drawing and the sample cartridge at once. Mr Pond, manager of the Remington Co. in New York, said, "This is a 'central fire' rifle." This fact was at once confirmed by him firing off the cartridge with a central fire rifle in his presence. As soon as Mr Pond said this, he instantly telegraphed to Ilion to ship at once a quantity of cartridges that were on hand. These cartridges were shipped from New York *via* San Francisco to Yokohama The sample cartridge he brought was one made by the United States at the Frankfort arsenal. It was a cartridge made during the war, and of which no quantity was at the time to be found in the United States. Mr Pond told him this. He was not satisfied with this information, and went to the Skyley, Hartley Graham & Co., in New York, and asked them the same question and received the same reply He then went back again to Remington's and asked advice as to what was the best to be done under the circumstances, and he replied, "As you have a central fire rifle, you can only ship central fire cartridges" He then bought some central fire cartridges of the best kind. The rifles were made to order to fulfil the contract. The reason the cartridges were so expensive was because they could be reloaded innumerable times The sample cartridge he had could only be fired once. He had some information for what the guns were intended. He received information from Mianabe's interpreter that the rifles were wanted for soldiers; he heard the word Formosa often mentioned.

Question by Mr Marks: What impression was left on your (witness') mind after the word Formesa was used?

Mr Hill objected to this.

His Honour decided that it could not be put. He made a note of Mr Marks' objecton to this.

Witness continued: He considered it necessary on his part to fulfil the contract with as little delay as possible. A delay was caused by there being no cartridges like his sample one on hand in the United States, and they had to be manufactured. He had made

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

up a statement of what the rifles and cartridges cost laid down here. [Paper handed to witness and acknowledged.] $62,407.10 was the cost laid down here; that included the 800,000 cartridges. 600,000 are here now, and the other 200,000 will be here next steamer. $6,670 was the price of the 200,000 cartridges. He had seen one of the rifles and some of the cartridges that had arrived here. They are the identical ones he had bought from Mr Remington As far as he knew they were in good order; he had heard nothing to the contrary They are now in the possession of the Oriental Bank The $20,000 was used to partly meet the bills for the rifles, cartridges, etc He saw the Bank's receipt for the $20,000 in Court, The terms of that receipt were, to the best of his belief, in accordance with his contract with plaintiffs, He know Omeya, He was one of the parties who acted for the Kaitakushi with Mianabe Omeya did not always come with Mianabe to his office. They came together three times in connection with the contract. Both communicated through an interpreter to him. $1,000 was paid to Omeya by Martin Cohen & Co. [Cheque book shown and acknowledged by witness as being the firm's cheque book.] There is a cancelled cheque in the book, and when he returned he asked Opitz the meaning of it. [A cheque read in which it said "cash given to Omeya—$1,000," signed "G Opitz." It was dated 24th September, 1874.] There was a corresponding entry in his books.

Cross-examined by Mr Hill: He was a member of the firm, but not a party to the contract. The preliminaries of his contract were going on from July. He left on the 12th September, 1174, and no stipulation or contract had then been agreed upon. The first time he saw the contract was last Wednesday, when this action commenced. That was all he meant when he said he was not a party to the contract. When he said, in his examination in chief, that the guns were made to fulfil the contract, he wanted it understood that Opitz had telegraphed the contract he (Opitz) had made to him whilst he was in San Francisco. He had the telegram in his office. He received it on the 2nd October, 1874, when he landed in San Francisco It bore no signature. It said, "The contract is signed for 1,600 rifles and 800,000 cartridges on the 21st September." The telegram was in cypher; it is our code. No one else uses it, and though there was no signature he was positive it was from his partner. He acted throughout on these instructions in purchasing the rifles and cartridges. He never told Messrs Pinn, Liebermann, and Lichtenstein that he had a written contract for the rifles. He did not tell any one of those gentlemen that he had a contract for arms. He sailed for San Francisco on the 11th September, and he did not take with him a letter of credit from the Oriental Bank. He did not receive a letter of credit whilst in America The Oriental Bank telegraphed from here to New York to honour the bills for the arms. The statement in the *Gazette* Hong List advertisement was a correct one of his business. It is true that he is sole agent for the Remington Rifle Co. in China and Japan. He had a letter from Remington appointing his firm (Martin Cohen & Co) sole agents for China and Japan. He could produce that letter. He did not leave the original sample at the Kaitakushi. His firm's clerk left it with his authority That gun was bought from a Japanese, It did not come to us from Remington & Sons His firm were not agents for Remington & Sons at the time His firm did not represent itself during the negotiations as being the agents of Remington & Sons He did not know if another firm here were were agents for Remington & Sons He did not know the exact date when the firm was appointed agents for Remington. He knew Omeya about a month or a month and a half before he went to the United States about the arm contract He might have been present perhaps when she drawing of the rifle was made; he could not remember. When he went to New York he did not say he had authority to act for the Japanese Government, but he said he was buying the rifles for the Government. The cartridges could be reloaded many times. He did not know anybody made a business of it here. Omeya did not act as a principal during the negotiations between his firm and the Kaitakushi

To his Honour: The sample rifle left at the Kaitakushi was a Remington one. It bears Remington stamps. He thought it was a "rim fire" one. The "rim fire" cartridges were the proper kind for this rifle. He did not know when he left for America that it was a "rim fire" rifle. He found it out about three or four days after his return. In the drawingthe hammer was down, and prevented it being seen whether it was a "rim" or a "central" fire. If he received a "rim" fire cartridge as a sample, and had orders to get the proper kind of rifle to use such cartridges, he would get "rim" fire rifles. He procured "central" fire rifles on account of the long time it would have taken to make "rim" fire cartridges. He did not know when the first cartridges arrived here. 150,000 cartridges left New York on the 12th October; that was a few days after he arrived in New York; the 1,600 rifles left New York eight days afterwards. He did not know if these arms and cartridges had been tendered to the Kaitakushi.

Mr Hill said the plaintiffs, before the action, had offered to take over the arms, catridges, etc., on the terms of the two contracts, less $5,000 fine for over-time.

Mr Marks said that this was correct, but his clients' firm was not in a pecuniary state to accept these terms, and that was the answer given to the proposition.

Mr Marks then summed up for defendants, and Mr Hill replied for plaintiffs.

REUTER'S TELEGRAMS.

LONDON, February 22nd, 1875.

A German naval expedition against the Carlists in consequence of the Gustav affair has been concerted.

London, 3rd February.—France. The Assembly votes the President the right of dissolution of the Chamber with concurrence of the Senate.

London, 2nd Feb.—England declared? (qry declined) invitation to conference on the usage of war.

Bright presides at a meeting of Liberals on Thursday, Foster having declined the Leadership.

London, 30th January.—FRANCE. The Assembly has adopted the first article of the Constitutional Bill creating Chamber Deputies Senate and rejected by 359 to 335 the amendment implying a definitive Constitutional Republic.

The Emperors of Germany and Austria have received the envoys notifying the accession of Alphonso.

Versailles, 22nd Jany.—In the Assembly, the Committee of Thirty's Constitutional Bill has been introduced. The main features of it are the maintenance of the title of President of Republic and the establishment of ministerial responsibility. The two Chambers are again brought forward, discussion having been adjourned from last Seassion.

After two days excited debate a large majority decided to proceed with second reading of the bill.

This is a defeat for the Legitimist party whose motion last session respecting a suspension of the paper that first published Comte De Chambord's Manifesto brought about the drafting of the Constitutional bill.

London, Jan. 20.—Prince Leopold is seriously ill. An attack of typhoid fever has been followed by hæmorrhage. Doubts exist as to his recovery.—Don Alfonso has started for the seat of war to assume the command of the Army.

London, Jan, 19.—In Reuter's telegrams, dated London, 19th January, it is stated that Baron Rothschild has issued a Brazilian loan of five millions sterling. The verdict in the Great City Libel Case of Rubery versus Sampson and Baron Grant has been delivered, awarding plaintiff five hundred pounds damages against Sampson. Baron Grant has been acquitted.

Shipping Intelligence.

ARRIVALS.

Feb. 22, *Vasco de Gama*, British steamer, Rice, 2,200, from San Francisco, Mail and General, to P. M. S. S. Co.

Feb. 22, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Mail and General, to M. M. Co.

Feb. 22, *Nevada*, American steamer, Williams, 2145, from Shanghai, General, to P. M. S. S. Co.

Feb. 22, *Meiji Maru*, Japanese steamer, Peters, 900, from Glasgow, to Japanese Government.

Feb 24, *Abbotsford*, British steamer, Mann, 619, from London via Kobe, General, Van Oordt & Co,

Feb 24, *Surprise*, American ship, Johnson, 1,005, from New York, Kerosine Oil and General, to Mourilyan, Heimann & Co.

Feb. 24, *China*, American steamer, Cobb, 3,836, from Hongkong, Mails and General, to P. M. Co.

Feb 24, *Tokio Maru*, Japanese steamer, Dunn, from Shanghai, General, to M B S S Co.

Feb. 24, *Bombay*, British steamer, Davies, 1,327, from Hongkong, Mails and General, to P. & O. Co.

Feb. 25, *Evelyn*, British barque, Knowles, 760, from London, General, to Wilkin & Robison.

Feb. 26, *Lyee moon*, British steamer, Stevens, 611, from Hakodate, Ice and Seaweed, to P. M. S. S. Co.

Feb. 25, *Mia*, British steamer, Morgan, 1,200, from London via Hongkong, General, to Jardine, Matheson & Co.

DEPARTURES.

Feb. 20, *Scotland*, British steamer, James, 1,680, for Hiogo, General, despatched by Van Oordt & Co.

Feb. 20, *St. Kilda*, British ship, Atkins, 865, for Manila, Ballast.

Feb. 22, *Estepona*, British steamer, Hubback, 670, for Hiogo, General, despatched by Hudson, Malcolm & Co.

Feb. 23, *Massilia*, British steamer, Edmond, 1,066, for Hongkong, Mails and General, despatched by P. & O. Co.

Feb. 23, *Montego* British barque, Griffiths, 316, for Hiogo, General, despatched by Simon, Evers & Co.

Feb 24, *Golden Age*, American steamer, Coy, 1,943, for Shanghai and Ports, Mails and General, despatched by P M Co.

Feb 24, *Takasago Maru*, Japanese steamer, for Shanghai, General, despatched by M. B. S. S. Co.

Feb. 24, *Courier*, Russian steamer, Lemacheffsky, 472, for Nagasaki, despatched by Walsh, Hall & Co.

Feb. 26, *China*, American steamer, Phillips, 3,836, for San Francisco, Mails and General, despatched by P. M. S. Co.

Feb. 26, *Veloz*, German 3-mast schooner, Mueller, 197, for Chefoo, Ballast, despatched by Netherlands Trading Co.

Feb. 27, *Peter*, German barque, Richelsen, 397, for Newchwang, Ballast, despatched by Chinese.

Feb. 27, *Palma*, German barque, Binge, 299, for Newchwang, Ballast, despatched by Chinese.

PASSENGERS.

Per Japanese steamer *Tokio Maru*, from Shanghai:—Messrs Frederick Hayne, T. D. Skilly. Percy Young, Wm. Assiter, Wm. Bramser, M. Robins, J. H. Blair and servant, Wm. Peacock, F. Grimaldi, M. Leancigne, C. Johnson, H. Gribble, E Dupugn Line, Osak, Inokaue, Bepu, Shinajiro, Murishiki, Shikashiro, Kajiro, Sumimasa, Hideno, Kanemuri, Iwagoro, Sadanuri. Taka, Kozata, Ch. Jubin, Lohmann, Ullman, Goldman, Thompson, J. Jelowitz, Mr. and Mrs. Kido, Ito, Nakamisu, Kitahara, Enouye, Kuse, Okube Yoshida, Idzumiya, Shibuoa, Kasemasaka, Shibuya, and 90 in the steerage.

Per Japanese steamer *Takasago Maru*, for Shanghai and ports:—A. Helm, Plessis, Yanagisawa, and wife, Yoshida, Osano, Nagayashi, Kichie, Otani, Taktniyashi, Uyamura, Terasawa, Arima, Koyozima, Iyahashi, Sado, Matsumoto, Koniehi Hebe, J. Plichon, Kato. Yokoyama, Koowabara, Miyauchi, Shimatzu, and 102 in the steerage.

Per British steamer *Bombay*, from Hongkong—Messrs. Korthals, Lockhart, Volckhardt, and M. Jules.

Per P. M. S. S. *China*, for San Francisco: Miss L. E. Dickey, Mr. and Mrs. G. N. Mitchell, Mrs. Miller and child, Mr. Harber, U.S.N., Dr White, U S.N., Paymaster Redfield, Messrs. Hooper, Harwood, Hamilton, Macomber, Komichi, Gilbert, Fisher, Coryell, Wierner, Brock, Budd, Lyons, Montgomery, and Crase: In steerage: Mrs: Burns and daughter, Mr. and Mrs Pollak, Messrs. Burth, Cahill, Strandberg, Lanverier, Church Loomis, and 976 Chinese.

CARGOES.

Per American steamer *Nevada* from Shanghai: Treasure $6850.

Per British steamer *Massilia*, for Hongkong:

	England	France
Silk...	112	110 bales

REPORTS.

The *Vasco de Gama* reports left San Francisco, Jan. 16th, at 12 M.; experienced from San Francisco to meridian of 170 west strong westerly winds with heavy sea, thence to 152.17 east continued gales (westerly). The ship was placed under canvass for seven days to meridian 146.57 E; thence to destination under steam with strong westerly winds and moderate sea on 13th instant, sighted a barque bound N. N. E.: 21st 10 a.m. passed ship *Surprise* N. Y. bound north.

The French steamer *Volga* reports strong head winds throughout.

The American ship *Surprise* reports: experienced on Sunday last a terrific gale during which the ship was under the main spencer only; the barometer down to 29 20; shipped some heavy seas, one of which nearly carried the mate overboard.

The British steamer *Bombay* reports strong N. E. winds to Formosa and heavy gale across the Formosa Channel; from thence to Yokohama north to west N. E. winds to port.

The British barque *Evelyn* reports: left London, October 10th. Experienced strong easterly and variable winds down Channel and across the Bay of Biscay and had light trades and calms near the Equator. Passed eastward of the Cape de Verdes and crossed in 23 deg. west, 40 days out. Very favourable steady S. E. trades and had a fair run to parallel of the Cape, which was passed Dec. 9th. Ran the longitude down in 44°. South; Strong N.W. and westerly, and coming up through Allas Strait and Ilo Ilo passage entered the Pacific, January 25th. Thence through the Pacific met with strong northerly and N.W. wind till the 12th, since then had strong easterly and N E wind with heavy weather. Experienced a severe gale on the 21st inst., wind being from E.S.E. round by south to N.W. with a very heavy cross-sea running.

The British steamer *Lyeemoon*, reports light N.E. winds; much snow first day, yesterday, fine.

CAMP, Yokohama, 1875. J. H. SANDWITH,—*Lieut.*, R.M.L.I.

COMMERCIAL INTELLIGENCE.

YOKOHAMA, FEBRUARY 27TH, 1875.

[As no change in the local market has occurred in the interval which has elapsed since its publication, we reproduce the following from the *Japan Mail* of the 24th instant.]

Cotton Fabrics and Yarns.—During the closing fortnight the market for all classes of goods has exhibited a weaker tendency. Prices have, as may be observed from quotations, retrograded materially and the inclination would still appear to be towards lower rates. This change, while to some extent due to the depression of trade natural to the season, is chiefly attributed to the extensive contracts entered upon by Japanese some months since speculatively and which are now delivered, or in process of delivery, to the trade. Hence, their means being largely engaged, merchants are unable to operate and the reported tendency downwards may be said to mark fairly the probable course of rates for at least some little time to come. These observations apply mainly to *Yarns* and *Shirtings*; the enquiry for or sales of other goods being so trifling as to be unworthy of mention.

Woollens during the fortnight have been anything but brisk. With the exception, perhaps, of superior qualities of *Black Italian Cloth*, still very scarce and wanted, and a more favourable feeling for medium qualities of *Black Lustres*, all other Woollens seem neglected, and the approaching close of the season appears to tell sooner than usual. Importations having been plentiful in most descriptions during the season stocks in Japanese hands must be of some importance. *Blankets*, 7lbs. remain saleable at a reduction in price. *Mousseline de laines* would be in a sound position were they held in stronger hands than is the case. Large quantities are on offer and eventually find purchasers. Some large parcels of *Broad-Cloth &c.*, have been offered at Public Sale and have found purchasers at prices which, all things considered, are deemed not unsatisfactory. But in the regular course of business transactions would appear to be limited.

Iron and Metals.—Stocks of iron are moderate but the market continues deplorably dull and business is wholly nominal. We quote the prevailing rates below.

Sugar.—Low *Brown Sugar* may be quoted as firmer and in better demand under which rates have improved.

Kerosene.—The *Surprise* arrived from New York with a cargo of oil on the 24th instant. The bulk of this had been sold to arrive at $3.30, some 4,000 cases selling at $3.40. Quotations as we close are $3.60 There are no stocks in first hands.

COMMERCIAL INTELLIGENCE

EXPORTS.

Silk.—Since the 23rd ulto., the advices forwarded by mails and wire from the home markets have continued to be very discouraging, especially as regards Hank Silks the quality of which is generally reported to have disappointed consumers.

However, a further decline of $10 to $20 on Medium to Inferior Hanks has induced a moderate business in these sorts. For Superior grades—a very few parcels of which were offered for sale—prices remain quite firm at previous rates. Oshius are scarce, and being much inquired for have advanced nearly $10.

Settlements are 850 bales of Hanks, and 250 of Oshius and other sorts.—Shipments amount to 954 bales, making the total export since the 1st July, 8,389 bales against 10,818 bales last year for the same period.

Arrivals have been small, and the stock is reduced to 1,400 bales.

Tea.—This market, which for the last two or three weeks has been seriously affected by wire despatches from New York, appears to be completely disorganised by the telegraphic announcement under date 12th instant from the States, "that the Congressional Committee of Finance had recommended other sources for "increasing the revenue in preference to the re-imposition of tea and coffee duties." This has put a term to all further purchasing, and a very decided decline must be established before buyers will be inclined to operate further this season. The amount of stock at present in Yokohama is estimated at piculs 8,000 and some further small contributions may even yet be expected from producers in the country.

Settlements since the 12th instant, barely exceed piculs 300, making total since last American mail steamer *Alaska*, on the 24th ultimo, some piculs 1,100. Arrivals for the current month have been light and range between piculs 700 to 800.

At this juncture it is impossible to furnish quotations. Prices are quite nominal and native dealers are unable to realize the utter demoralization which the New York market now experiences from the failure of the speculative movement founded on the supposed re-imposition of duty. Some are anxious sellers, but, so far, are not prepared to reduce asking prices to $34 for "fair good medium," at which rate alone shipments at present would barely clear cost.

The *China* and *Vasco de Gama* are reported as having full cargoes.

KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may befound on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles by all Chemists.

CAUTION.—☞ The public are requested to observe that all the above preparation bear the Trade Mark asherein shown. THOMAS KEATING, LONDON, EXPORT CHEMIST AND DRUGGIST. Indents for pure Drugs and Chemicals carefully executed.

TRADE MARK.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m.

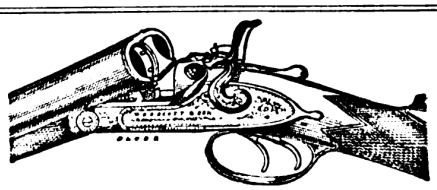
THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.



"Remaining, Gentlemen, yours very respectfully,

To the Proprietors of L. S.

On the 4th March, Mrs. AUG. EVERS, of a son.

MARRIAGE.

YOUD—CORLIES. On Tuesday, January 19th, at St. Ann's-on-the-Heights, by the Rev. Noah Hunt Schenck, D. D., assisted by the Rev. Thaddeus A Snively, SALLIE, daughter of E. W. CORLIES, of Brooklyn, to FRANK MILLS YOUD, of Shanghai, China.

Notes of the Week.

The departure of the Marines has been the great event of the week, and the depression in commercial affairs which is so marked seems increased by the unusual quiet of the settlement. Our landscape has lost 'its dash of red,' and is now colourless enough. The troops will be much missed by the Japanese in and near Yokohama, to whom they were a source of considerable revenue, and society loses an agreeable ingredient which, in a dull place like this, it can ill spare.

In our Summary of the year 1874 we remarked upon the dissatisfaction caused among the people by the publication of the Government notifications in the square Chinese character. The following paragraph from the *Hiogo News* shows that a change, which will be most acceptable to the mass of the population, is about to be made in this respect.

WE hear that the Government has ordered that in future all Imperial Notifications shall be written more plainly than hitherto. The more difficult Chinese characters are no longer to be used, but are to be replaced by more simple ones wherever practicable. This is a step in the right direction, and will, we hope, prove to be the forerunner of the adoption of a simpler system of othography than that which at present prevails. Every man, woman and child in Japan who learns to read at all is taught the *Hirakana* characters, but those who surmount the difficulties of the more complex Chinese characters form but a very small proportion of the reading classes indeed.

It is very commonly said that we owe the last two or three fires in the native town to incendiaries actuated by the hope of plunder, and reports from the country seem to show that the same crime has not been uncommon in the provinces this winter. Our foreign settlement has been more free from fires of late, and no reasonable man will doubt that the resolutions arrived at some months ago by the agents of the Fire Insurance Offices have had much to do with this salutary change. to this subject, nor, in any clearly proved case, will there be any pity for the criminal overtaken by the just severity with which Japanese law regards this great crime.

A very wise and delightful humorist of this century used to lament that no one had yet invented a *foolometer*, by means of which the approach of fools and the intensity of their folly could at once be indicated. Were any such instrument in existence here, we think it would have risen very high a day or two ago on the appearance in one of the evening papers of a letter signed "Daffer." The quality of the writer's wit may be inferred from the fact that he speaks of the *Japan Weekly Mail*, as a *weakly* paper. Admitting it to be so for the sake of argument, just try for a moment to conceive the quality or condition of any mind which would suggest to its possessor to sit down deliberately and commit this joke to paper, to put his letter into an envelope, close it, and send it off to his correspondent, possibly with something akin to a chuckle over his wit! The conception, of course, is difficult, and possible, perhaps, only to those who have been in countries where *crétins* are found. But try to conceive the ordinary life of a creature capable of this; or to estimate his value as a unit in human society, (except, of course, as an illustration of the possibilities of the human mind in a descending direction.) Better grope his way back to the ascidians at once, and forget the race on which he has brought shame. What a strange thing it is that man, so noble in reason, so infinite in faculties, should be able to fall as low as this, be content to remain there, and possibly go about clothed and not ashamed! This is the strange thing to us.

One evening this week, as Mr. Mason, secretary to General Williams, of the Okurasho, was returning to his house, he was set upon by three Japanese soldiers, and somewhat severely ill-treated. A Japanese interpreter, in front of whose house the affair took place, ran out to his assistance, was knocked down and repeatedly kicked; but succeeded in reaching the house with Mr. Mason and barricading the door. Fortunately, in the scuffle they secured the cap of one of their assailants, marked with his name and regiment, so that very little diligence is requisite to discover the offenders, who made off on the approach of some belated foreigners.

The Chinese Government are again in the money market as borrowers, and have arranged a loan of Tls. 2,000,000 with the Oriental Bank at 10½ per cent interest.

(From the Japan Mail Daily Advertiser.)

IN compliance with the invitation of the Committee of the residents of the settlement the soldiers of the Royal Marine Battalion met at the Machi Gaisho on Saturday evening last at half-past six o'clock. An excellent dinner was provided for them, to which every justice was rendered, and at the close of the entertainment the men repaired to the Gaiety Theatre. Sir H. S. Parkes took the chair at the beginning of the dinner, Mr. W. H. Smith occupying his place on his retirement. On taking the chair Sir H. S. Parkes thus addressed the men:

NON-COMMISSIONER OFFICERS, AND MEN OF THE ROYAL MARINE BATTALION!—I have been asked as a member of the British Community of Yokohama, who are your hosts of this evening, to say a few parting words to you on their behalf. We

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shall always look upon your stay among us with feelings of unmixed satisfaction. You have not only well performed your special duty of affording us protection, but when—thanks to improving times and the increasing good feeling of the people of this country—that duty become comparatively light, you proved your value to us by contributing in no small degree to the social well-being of this community. We feel that your conduct while stationed here reflects credit on your corps and on your country, and though many of you perhaps, if given the choice, would have preferred a more active field of service, still I think that no true soldier should disdain to take part in triumphs of peace or consider the promotion of friendship and good will—especially among nations—as an achievement unworthy of the profession of arms. I am happy to assure you,—and perhaps no one is better able than myself to give you that assurance,—that you have taken part in an achievement of this kind, and that by your good behaviour here and your friendly treatment of the people, you have materially assisted your countrymen, whose lot is cast in this land, in advancing an object we all have so much at heart, a cordial understanding between England and Japan. But though your departure is a sign of the termination of a good work, we shall regret your departure. The great art-critic Ruskin has said that a dash of red is essential to the perfection of a picture, and we have so long been accustomed to consider uniforms of that colour essential to the comfort and pleasure of this community that we shall doubtless greatly miss their absence after Monday next. We can only say that we sincerely hope you will form a bright ray to every scene in which you take a part. A report has just reached us that you are not homeward bound and that you are to be called on to render further service in one of our own remote possessions. Be this as it may, I do not doubt that wherever you go you will be true to your motto, and that whether "*per mare*" or "*per terram*" you will help to shed lustre on Old England as your country and on yourselves as men.

Let me again beg you to accept this entertainment as a hearty expression of goodwill on the part of the British Community.

At three o'clock yesterday afternoon the Royal Marine Battalion was marched to the English Hatoba for embarkation in the troopship *Adventure*. The road was lined with the friends of the departing troops, all anxious to say or signal an adieu to those whom they were so soon to lose, or to testify by their enthusiastic farewell the good-will which they entertained towards them. On approaching the French Barracks the Battalion was received with the cheers of the French soldiers, who subsequently joined in the march, and passing down the Bund, amidst a throng of admirers and well-wishers reached the English Hatoba where, at about half-past-three o'clock, they embarked in the boats provided for them. At about the same hour the French forces were embarked on the M.M. s.s. *Tanais* and shortly after seven o'clock this morning both took their departure for Hongkong. The following communication has been addressed by the English Minister to Colonel Richards, commanding the Royal Marine Battalion:—

H. B. M.'s Legation,
Yedo, February 27th 1875.

Sir,—On the occasion of the departure of the Battalion of Royal Marines under your command I feel it a duty to you and to your officers and men to express the sense I entertain of the services and conduct of your corps during its stay in Japan.

Your battalion has been stationed at Yokohama for three years and a half, and during two of those years I have myself been a constant witness of the high order and efficiency in which it has been maintained. You have preserved throughout that period the most friendly and harmonious relations with the Japanese officers and people, and with the French detachment associated with you in the service in which you have been engaged, and you have the satisfaction of knowing that in conjunction with that detachment you have well fulfilled the delicate task of protecting a foreign community on foreign soil without offending the feelings either of the Government or of the people of the country in which you have been stationed. Your work, indeed, has been one of cooperation with that Government, and they have not been slow to acknowledge the assistance they have derived from our troops during a time of exceptional political difficulty.

The departure of your corps terminates an occupation which it is gratifying to all parties to believe is no longer necessary. In view of this circumstance I think it not out of place to furnish you with copies of two despatches which have been exchanged between the Japanese Government and myself, and which have our troops, throughout that occupation, with all classes of Japanese. The friendly demonstrations which you and your French colleagues have received on your departure, both from the Japanese Government and from the foreign community, have afforded substantial proofs of their good will and regard, and also of the degree in which your corps has contributed to the maintenance of the happy relations above named.

In conclusion I beg to offer to yourself and also to the officers, non-commissioned officers and men of the battalion, my best thanks for the good service which I consider you have rendered to British interests in Japan.

I have the honour to be
Sir,
Your most obedient, humble servant
(Signed) HARRY S. PARKES.

Colonel Fleetwood Richards,
Commanding Royal Marine Battalion,
Yokohama.

The Spring Meeting of the Athletic Association has been fixed for Friday and Saturday, April 30th and May 1st.

H. I. M. The Mikado proceeds to Yokoska this morning in the Imperial corvette *Riojokuan*, in order to be present at the launch of the gun-boat *Seiki*, which will take place in the course of the afternoon. Should the weather prove unfavourable the launch will, we believe, be postponed until to-morrow.

An attempt to set fire to Homura was discovered on Wednesday evening, at about seven o'clock, fortunately in time to prevent any consequences. The incendiary is in the hands of the police.

We regret to learn that a telegram has been received announcing the loss of the steamer *Hongkong* bound to this port. The telegram, for which we are indebted to the courtesy of Messrs. Reuter's Agency, does not afford further particulars.

A telegram received on Saturday evening confirms the destination of the Royal Marine Battalion to be Natal. We understand that the camp equipage, &c. will be supplied from the Military Stores at Hongkong. The embarkation has been fixed for 3 o'clock this afternoon.

The P. & O. Steam-ship *Malacca* with the English mails of the 22nd January for this port, left Hongkong at 5 A.M. yesterday, three-and-a-half days in advance of contract time.

We observe that the *Hiogo News* Correspondent at Osaka, whose letter we publish, refers to the probability of the Imperial Court being held at Kioto or Osaka for a certain portion of each year. This, he says, has formed one of the subjects of discussion at the recent meeting at Osaka.

The Messageries Company's steamer *Menzaleh* left Hongkong for this port on the morning of the 28th ultimo, with European mails to the 17th January.

We are pleased to learn that the collection made in Christ-Church in aid of the General Hospital on Sunday last, amounted to $218. A further sum of $30 was raised by the collection in the Union Chapel.

The Russian man-of-war *Gaydamack*, and the war vessels of other nationalities in harbour, fired a salute of twenty-one guns at noon yesterday in honour of the anniversary of the accession of the Emperor of Russia.

A notification from the Imperial Post Office draws attention to the necessity for greater care both as to the number of stamps affixed to letters and the mode of affixing them, many, it is supposed, being removed by messengers. It should be borne in mind that the full postage to Europe must in all cases be prepaid to ensure the due despatch of letters. This is rendered necessary by the fact that as

We hear negociations are going on for transferring the Hongkew Wharf to Messrs. Jardine, Matheson & Co., on terms which commend themselves as advantageous for shareholders. The bases of negociation are said to be roughly as follow. Messrs. Jardine, Matheson are willing to take the Wharf premises on lease, guaranteeing 10 per cent on the paid up capital; a Reserve Fund to be formed out of any surplus profits of working, after this dividend has been paid and all charges and commissions have been met; a consulting committee to be formed on behalf of the shareholders, somewhat on the same principle as in the Hongkong Fire Insurance Company.—The majority of shareholders seem to view the arrangement favourably. There can be no doubt the Wharf property is very valuable; and the Company was, before the unfortunate rivalry arose between it and its neighbors, one of the best local investments. The proposed amalgamation would overcome this weakness and restore its earning power, so that there would be a good prospect of the anticipated Reserve Fund accruing; while Messrs Jardine, Matheson's guarantee cannot fail, in the meantime, to be satisfactory to shareholders.—*N.-C. Daily News.*

We hear that several dead bodies have been picked up by Chinese fishermen from the wreck of the *Japan* and that upon some of them considerable sums in dollars have been found. Meanwhile the local Insurance Companies concerned have not been idle. In addition to the steamer *Aden* chartered of the C. M. S. N. here, the schooner *Loiterer* has been taken up in Hongkong and placed under the charge of Captain Roberts who has been commissioned to superintend the salvage operations. We trust that the treasure will be successfully recovered and that the enterprise shown in attempting the salvage will be better rewarded than in the late attempt on

THE SILK TRADE OF JAPAN.

IN our number of the 6th February of this year we published some remarks upon the evil effected on the Silk of this country by what we consider an excessive exportation of Silk worms eggs. We are well aware that our views on the subject will not be accepted without opposition; neither are we disposed to think that the injury which has accrued is to be solely ascribed to the cause we have pointed to. The Japan Silk trade is now, and has been for some few years past, suffering from a variety of causes, amongst which that to which we have referred holds no doubt a prominent place; but there are others equally deserving of an attentive and mature study. We will now endeavour to pass them in review.

Without speaking of the faults inherent to the very nature of this country's produce, we may say in the first instance that Japan Silk suffers from the depreciation which weighs indiscriminately in Europe on Silk of all kinds and from all countries.

It were almost idle to speculate on the true reasons which have brought on the fall in value of so precious an article of trade,—changes in fashions, hardness of times, and excess of production over consumption, have simultaneously or gradually contributed to the present state of affairs. It is useless to disguise to oneself the broad, staring fact that trade is everywhere in a pitiable condition, and we know not one branch of business which has been more severely tried than Silk. It will be sufficient to inform those of our readers who are not immediately concerned with it, that Silk has fallen in value during the last three or four years, on an average fully 50 per cent from the highest point it had attained; and so uninterrupted has been the declining tendency, that it is impossible, even for the most experienced judges, to say whether or not it has yet reached its lowest limit.

Under these circumstances it would be surprising if, when all the other countries of the world are labouring under the same misfortune, Japan should be better off than the rest. Let native as well as foreign dealers take their share of a hard lot, and trust in better times for the future. It is not however in better times only that we must look for improvement. It becomes more and more evident that the supply of Silk from all parts tends to be in excess of the consumption. Not to speak of the disappearance of the disease of the silk-worms in France, Italy, and other districts of Europe, Turkey &c., in which it prevailed for a quarter of a century, and where the production may now be considered as large as at any time before the invasion, China brings forth a quantity of Silk increasing every year. It is hardly six or eight years ago that China Proper could not afford to spare more than 26,000 bales of Silk for shipment. This season, what with actual settlements, what with stock on hand at Shanghai, the figure of 70,000 bales has been reached, and, for aught we know, might be exceeded if tempting prices were to be offered to the dealers.

Herewith we submit a list of the total production of Silk for the season 1874-1875. It will be understood that whereas the figures indicating the produce of France, Italy, Turkey, Syria &c., represent the total production of these countries, the figures for China, Japan and Bengal indicate only the quantities spared for exportation, a further large proportion being retained at home for native consumption.

China (Shanghai)	lbs. 7,000,000
China (Canton)—	„ 1,400,000

France.....	„ 5,000,000
Turkey (Brutia, Syria), Spain and Greece	„ 2,000,000
Japan.....	„ 1,500,000
Bengal.....	„ 1,100,000
Persia and Central Asia.....Pro. mem.	
Total, English pounds avoirdupois.....	„ 25,000,000

We think this table is sufficiently correct to be depended upon. It does not, however, contain any account of the quantities of cocoons which are shipped from various parts of the Levant to Marseilles, from whence they find their way to the French filatures. The imports into Marseilles in 1874 amounted to about 2,680,000 of English pounds avoirdupois, which would produce about from 600,000 to 700,000 pounds of silk, and which may be considered apart from the silk actually grown in France.

The quantity of Japan silk set down in the above table is an estimate of the probable export of the entire season 1874-75, of which there are yet four months wanting; the actual quantity up to the present moment being only 8,626 bales, or in round numbers lbs. 862,000.

The following table shows the total export from Japan during the first eight months of each season since 1862-63, compiled from the records of the Chamber of Commerce of Yokohama:—

1862-63	Bales	19,088	or lbs.	1,908,000	in round numbers.	
1863-64	„	13,338	or „	1,338,000	„	„
1864-65	„	9,317	or „	931,000	„	„
1865-66	„	8,919	or „	891,000	„	„
1866-67	„	9,543	or „	954,000	„	„
1867-68	„	7,615	or „	761,000	„	„
1868-69	„	13,388	or „	1,338,000	„	„
1869-70	„	9,388	or „	938,000	„	„
1870-71	„	3,079*	or „	307,000	„	„
1871-72	„	11,816	or „	1,181,000	„	„
1872-73	„	9,441	or „	944,000	„	„
1873-74	„	10,818	or „	1,081,000	„	„
Total of 12 Yrs.	Bls.	125,750	lbs.	12,567,000	in round numbers.	
Average of 12 years, Bales.....		10,480	lbs.	1,048,000		
Export of 1874-75, Bales.....		8,626	„	862,000		
Deficiency, Bales		1,854	lbs.	186,000		

The two tables above show clearly two things: firstly, that the production of Silk in Japan, and consequently the portion of it which can be spared for importation abroad, bear but a very small proportion to the production and the consumption of the rest of the world. Secondly, that even the limited quantity which finds its way to the European markets, shows a sensible tendency to diminish, owing mainly to the generally inferior quality of the silk now produced in this Empire.

Of the quantity of lbs. 1,500,000 which may be estimated as being disposable for shipment, after leaving to the native manufacturers as much as they require for the interual wants of the country, only a little above one half has been hitherto bought up, and it may be seriously doubted whether the total export of the season 1874-1875 will exceed 12,000 bales, in lieu of 14,000 to 15,000 bales which has been for the last six or seven years the almost invariable figure.

That there is in the interior enough Silk left to complete and even exceed the accustomed amount of export, does not admit of a moment's uncertainty. There is at the present time in the market of Yokohama, and close at hand in Tokio, more silk than enough to swell the exports a good deal beyond the average; but the quality of the article is, three parts out of four, so inferior, that most of the buyers are extremely chary of adding to the all but unsaleable stocks of Japan Silk with which the European markets are already encumbered.

Meantime prices continue to fall both at home and here. The native dealers are known to be very severe losers; several large establishments have yielded to the pressure of the time, whilst numbers of others, as well as private firms, are said to be in difficulties.

Under existing circumstances it would occur to any one that with a view to facilitate transactions and to save themselves from ulterior losses, the simplest thing for the native dealers to do, would be to meet the market and sell at current rates, at least that portion of their produce which may induce buyers to make offers for it. Instead of that, as if by a common accord, the Japanese holders persist in pushing forward their inferior goods, which are undesirable to the foreign houses; with few exceptions they refuse even to show the good qualities for which alone there is a demand.

We shall not dispute the right of the owner of an article to dispose of it or not, as he thinks proper; but we reserve to ourselves the right to discuss and estimate the reasons or motives on which the said owner grounds his mode of action. In the present instance we are inclined to think that the Japanese dealers are wrong in withholding, at least for a time, their good Silk from the market, whilst they are pushing the inferior stock with might and main, in spite of the unwillingness of the buyers to take it. They can only justify themselves on the plea that if the foreign buyers can get nothing else, they may be compelled to purchase what is offered to them, however unfitted to their requirements. But in so doing they would show a singular ignorance of the natural laws of business in general.

Is it reasonable to expect that a trader will wantonly purchase goods which he knows he cannot resell? Or is it wise for any dealer to tell his best clients: *I care not if you have no occasion for the goods I offer you; but you shall not have those you are in want of, unless you first of all buy those of which I want to get rid.*

Indeed, what is the main reason of the fall in prices of all kinds of Silk in Europe? Obviously an excess of production over consumption. We hope that it may be only temporary; but it is enough to look at the first table we have published above, to understand that, as some branches of Silk manufactures are now situated, that of ribbons for instance, the supply exceeds the demand. In face of accumulations everywhere, the holders in Europe are anxious to move off their stocks, the more so as we are getting close upon another crop; hence a gradual reduction in the value of the article, which will only recover itself when the consumption shall again be upon a par with the production.

And now, how stands Japan in reference to what we have just stated? The quantity of Silk from this country disposable for shipment is so small, in the face of that of the rest of the world, that it needs a peculiar inducement to obtain for it on the part of the consumers, a preference over other products. That peculiar inducement consisted in its intrinsic quality, combined with a comparatively moderate cost. So long as the disease was raging amongst the Silk-worms of Europe, and reducing

Digitized by Google UNIVERSITY OF CALIFORNIA

tent; so long as China, suffering from the war of the Taepings and its consequences, could spare but limited quantities of its produce for shipment, every thing during a few years went right for Japan Silk. The quality of it had not yet degenerated, and it was received with favour on the Continental markets, whilst it kept on advancing in value, until it culminated in stupendous prices being obtained for some of its choicest kinds.† No wonder that both silk-growers and silk-dealers were intoxicated with their success. Thinking, no doubt, that so prosperous a state of things would last for ever, and imagining that their product had become indispensable to European consumers, they lost sight of the necessity of not only keeping up the good quality of their produce, but also of improving it, so as to insure a continuation of demand.

Convinced that they were *masters of the situation*, they founded a corporation under the authority and the sanction of the Government, which at times‡ attempted to stop the arrival of silk from the interior to this market; at other times § tried to dictate to the Foreign Houses the terms upon which they were to carry on commercial transactions with the Japanese.

Instead of endeavouring to facilitate and increase the business of this market, we should suppose that the main object of the Corporation has been to restrict and cripple it. It has looked at things in a mean and narrow point of view, and if we judge its intentions by its acts, it has shown in its resolutions and its management, an egotistical and one-sided tendency, but at the same time a blind ignorance of its own interest.

Let us now endeavour to discover what may be the argument of the corporate dealers for refusing to sell their good quality of silk before they have got rid of the inferior portion.

They must think either that the foreign buyers can content themselves with an inferior quality until they can get a better; or that prices will rise again ere long in Europe, and that they will then be able to make up for their losses more easily with Silk of good, than of bad, quality. But there again the *inexorable logic of facts* is against them. Now-a-days, a man who wants a certain article and cannot find it in one market, is pretty well sure of getting it in another. The Japan Silk of this season has turned out generally bad, and is consequently neglected. It would not do for a Silk merchant at home to tell his clients, as the natives tell us here: *First of all take what bad Japan Silk I have by me, and when you have consumed it, I shall then let you have better.* The consumer would repair at once to another dealer or another market, and if unable to meet the proper quality for his requirements, would try again somewhere else until his wants had been supplied; or he would make up his mind to leave Japan Silk aside, and use something else instead that would answer his purpose as well or better. Silk is not just now so scarce in Europe that a manufacturer may be compelled to use any description, however unsuitable, which is brought in to him.

Not only does it seem to us improbable that consumption will again readily take Japan Silk, unless of better quality and better reeled than this season, but we make bold to predict that unless there is soon such an improvement, the European manufacturers will turn their attention to the products of other countries and leave entirely aside that of this Empire. Again, we say, that it is in vain for the native dealers to expect that buyers will pay them higher prices when their Silk is getting a worse name day after day; instead of that they will soon see how difficult it is to recover the reputation they once enjoyed, and have so indiscreetly lost.

It appears to us that if the Japanese dealers were free agents, that is to say, if they were at liberty to manage their commercial affairs to the best of their abilities, without any restraint or interference whatever; in a word, could they shake off the incubus of their obnoxious Corporations, they would adopt a far different course from that which they are pursuing now.

Our readers will remember that barely eighteen months ago the Chamber of Commerce of Yokohama thought proper to put before the Representatives of the Foreign Powers an *exposé* of the baneful influence exercised on the trade of this place by the native corporations acting under the authority and the sanction of the Japanese Government. That the existence and the acts of these Corporations were in opposition to the treaty was acknowledged by the Japanese Government, who promised that the guilds would be abolished or at any rate remodelled on a new plan.

We cannot see that much has yet been done to remove this just subject of the complaints of foreigners. The treaty provides that any Japanese subject who has any goods to offer for sale to a foreign dealer, shall be at liberty to do so without the interference of any official whatever. That would of course imply that any native silk merchants would be at liberty to bring their silk down to Yokohama and offer it direct to the foreign buyers without the interference of any Kaisha, Corporation or officials of any sort. Is that the case now?

We are assured that no merchant can bring his silk from the country without passing it here through the Kaisha. One of the foreign merchants of Yokohama had occasion to go a few days ago to Yedo, to buy silk from a native at the latter place. As Yedo is an open port, our merchant had the undoubted right to buy silk there and have it brought down direct to his own godown here. Instead of that, the Yedo dealer told him that he would not be allowed to sell him the Silk without passing it through the respective Kaishas of Tokio and Yokohama, where not unimportant duties or squeezes would be levied.

We are assured further that country dealers are not at liberty to come and settle themselves here in business, namely, in the silk trade, without joining the native Kaisha and obtaining its consent thereto. It may be, nay, we believe it to be, the interest of the native silk dealers of Yokohama to bind up the ties of their Association or Corporation so close that scarcely any outsiders may be admitted. They thereby enjoy a monopoly of vast importance to themselves, but at the same time exceedingly injurious to the general trade of the place, native as well as foreign. One of the oldest residents of Yokohama recollects the time when there were quite a number of small native dealers who used to bring from the country parcels of Silk more or less important which they disposed of at the best market rates, and returned to the interior for further transactions of the same kind. That was before the establishment of the Yokohama Corporation; after that, the number of dealers in Silk fell from at least thirty or thirty-five down to twenty-four, and has gradually decreased until at the present time you cannot find here more than eight or nine native houses where

† Some parcels of Oshiu Raw Silk fetched at Lyons in the spring of 1870, fr. 115 per kilo, equal to 42 per English pound. The best Oshiu Silk is now barely worth fr. 60 per kilo.

‡ In 1864, the Ministers of the Foreign Powers went up to Yedo with a fleet of men of war to obtain from the Gorogio the rescinding of a decision of the Silk Corporation of that plan which was putting an end to the importation of Silk from the interior into Yokohama.

§ Our readers will remember the attempt made in 1873, by the Governor Oyo Taku to regulate officially the commercial relations of the Japanese dealers with the Foreign Houses.

Original from UNIVERSITY OF CALIFORNIA

Silk is dealt in. We generally say in England that competition is the soul of trade. Are the Japanese of a different opinion? And is it therefore with a view to cripple and restrict the Silk trade that the number of the dealers in that article are gradually lessened?

We know that other branches of the trade of this port, as probably of all the other ports of Japan, are suffering from the same grievances. The Corporation is as obnoxious as injurious to the importers of foreign goods, as it is to the Silk trade. But in writing these lines we intended to show specifically the baneful influence exercised on the most valuable source of revenue of this country, and assuredly we have not depicted the deplorable situation in as dark colors as we might have used.

We hesitate not to say, in the hope that this lines will meet the eyes of the members of the Government of this country, that the persistence of the authorities in meddling and interfering with purely commercial affairs, to the extent that we see round about us, especially through the agency of the Corporations, is surely leading the commerce of Japan on to its ruin. There are on many sides too evident proofs of it in the complaints of all the foreign Houses of this place, and especially in the resolution which some have adopted, of closing their establishments, as being no longer profitable. We have stated that the native dealers are likewise suffering considerably, so that the harm falls pretty equally upon natives as well as foreigners.

The Government is, perhaps, not aware that a century or two ago the most industrious and enterprizing commercial countries in Europe were also overrun and hampered by similar Corporations, which assumed the power, with the assent of the Governments, to regulate commercial pursuits, to restrict or extend at their own pleasure the limits of business, the modes and processes of working the materials that were to be used in certain industries, the right of settling on one plan or another, &c., &c. Wherever these Corporations existed, and so long as they remained in existence, trade continued, as it were, in leading strings. It is only since those trammels have been removed that the commerce of England, France, Holland, America and the rest of the world, has taken the extension it has reached to this day. We are convinced in our minds that the gradual removal of all restrictions and impediments would soon prove an immense benefit to this country. Let the classes which look to trade for their living be assured of the protection of an enlightened law, and feel the sweets of freedom in their own way of carrying on their trade, and no one need be anxious as the result of their efforts. At any rate the Government may feel certain that by letting private interests freely take care of themselves, they will do far more and far better for the welfare of their people than by that system of coddling or interference which it is the peculiar delusion of Oriental governments to suppose the true province of government.

Since the preceding was in type a communication has reached us to the effect that the Minister of the Interior had despatched two Officers to the Silk-producing districts with instructions to prepare a report upon the production of silk-worms' eggs in order that steps may be taken to introduce such ameliorations as may be found desirable into their production and further to explain the regulations affecting this industry to the producers. We may not unreasonably infer that the action thus taken by Government has been provoked by the warning we felt it necessary to address to it on a recent occasion, and we congratulate the Minister of the Interior on his promptitude in initiating precautionary measures in view of the grave emergency we indicated.

We earnestly hope that the two Commissioners who have been sent into the Silk districts will strongly recommend to all the growers of and dealers in Silk-worms' eggs to pay strict attention to the selection of the best seed that can be produced. More especially still we beg to insist on the absolute necessity for retaining a very large proportion of the seed for the sole use of this country, the silk-growing countries of Europe being now able to dispense almost entirely with Silk-worms' eggs imported from this or other markets. In conclusion, it is satisfactory to see that the first step in the right direction has been taken. Let the second be a gradual removal of the restrictions which still fetter the trade of the natives.

THE MELBOURNE EXHIBITION AND AUSTRALASIAN STATISTICS.

WE have been favoured with copies of the correspondence addressed to H. B. M. Minister on the subject of the Intercolonial Exhibition which it is proposed to hold in Melbourne in August next, and in which the Japanese, as one of the Powers in the eastern hemisphere, have been invited to join. Apart from the desire to see Japan represented at this Exhibition, we have allotted a large space to this correspondence and the statistics which accompanied it, for the purpose of drawing the attention of the Japanese Government to the astonishing results produced in Australasia in little more than one generation by a population which even now only numbers 2,121,456 persons, or little more than half the population of London. These results have been condensed into a table of statistics, to which we earnestly beg attention, as affording an example of what may be done by the enterprise and energy of a small population in the enjoyment of *freedom*. We have lately had to deal with the *Kaitakushi*, a word which means 'development,' 'opening up,' 'opening out,' and we are glad to find an excuse for showing what this means practically. It is not with the view of making invidious contrasts that we have brought forward these statistics. Our object is to show what may be attempted, and to some extent realized, here, by showing what has been done elsewhere. Japan, with her fine climate, fertile soil, and large population, ought to be enjoying a prosperity of a high order; whereas, with a taxation which is very high compared with her actual production of wealth, she is barely paying her way, and her trade is more like death than life. In the present condition of affairs this is the most vital question with which the Government has to deal. In another article we have attempted to show how the absence of *freedom* in one trade has restricted and crippled it, and we should be glad to think that the warning which the state of this trade affords would lead to clearer views upon the injurious effect of over-legislation and interference in commercial affairs.

THE IMPERIAL VISIT TO YOKOSKA.

Arrangements having been made for the launch of the gunboat *Seiki* (which has been for some two years past in course of construction at the Imperial Arsenal for the service of the Imperial Navy) in the presence of the Mikado, His Majesty left Yedo on Friday morning, shortly after eight o'clock by special train for the purpose of embarking on the corvette *Riojokan* which had been specially detached for this service and which was lying in the Yokohama roadstead.

On alighting at the Yokohama Terminus His Majesty was received by the Director of Railways, W. W. Cargill, Esq., Sir Harry Parkes, K.C.B. and several native officials and at once

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

proceeded in his carriage under escort of a party of the Imperial Lancers to the English Hatoba, where he embarked and proceeded on board the *Riojokan*. The embarkation was conducted with much order and precision in the presence of a large number of foreigners and natives. The war vessels in harbour, which were gaily decorated in honour of the occasion, manned their yards as the Imperial party passed on its way to the *Riojokan* the crew of H. M. S. *Thalia* cheering loudly as His Majesty's boat passed their vessel. The ships then fired a royal salute and after a brief delay the *Riojokan* got under way, and in company with the *Stonewall* and the Lighthouse tender steamed down the Bay, arriving at Yokoska at about half-past twelve o'clock. Preparations had been made for His Majesty's reception at a landing stage erected in front of the bureaux of the Dockyard, and a guard of honour of the Imperial Marines was drawn up on either side of the quay. On landing His Majesty was recieved by the Governor of Yokoska, Messrs. Verny, Thibaudier, Dr. Savatier and other foreign and native gentlemen attached to the establishment and accompanced by his suite, among whom we observed the Prince of Uwajima, the Prime Minister, Iwakura, Terashima, Kawamura, Okubo and Yamao, passed into the bureanx where he accorded a reception to the native and foreign officials. After a brief delay His Majesty proceeded to visit the chief workshops of the Dockyard. In one of these the engines which had been constructed for the use of the *Seiki*, were pointed out to him, and appeared to excite his interest. Passing subsequently to the Foundry he witnessed the casting of a heavy piece of metal intended as portion of a cylinder. His Majesty was then conducted to the slip on which the *Seiki* had been built, near which a balcony had been erected to accommodate him, and the members of his suite, and whence he witnessed the preparations. The launch was happily accomplished without hitch or hindrance, and the elegant vessel shot gracefully into the water on the last wedge being withdrawn from her side. His Majesty addressed a short congratulatory speech to the officers of the Dockyard, reading it in Japanese from a scroll which he unfolded, and on descending from the balcony received Mr. Verny's reply which was duly interpreted to him. He then retired to the Governor's bungalow where preparations had been made for his reception. We should add that the band of the Imperial Marines performed a selection of music, pending the arrangements for the launch, with the same creditable effect which we have on a former occasion found reason to praise. The loud blare of the brass instruments, which in a ball-room seemed to leave a flavour of copper upon the palate, was toned down into inoffensiveness in the open air.

The *Seiki* has been designed by and built under the superintendence of M. Thibaudier of the Imperial Arsenal. She is approximately 190 feet long, 30 feet in breadth and of 250 nominal horse-power. She is constructed of well-seasoned *kiaki* and is intended to carry 1 large deck gun and three smaller pieces, an armament by no means excessive. Her graceful lines were much admired and exhibit that elegance of design which still supremely distinguishes the naval architecture of France.. It may be added that the *Seiki* is the first purely war vessel built at Yokoska, a circumstance which lends a peculiar interest to the Imperial ceremonial.

The thoughtful attention of the chiefs of the Arsenal had provided for their visitors ample accommodation for reaching the dockyard, two boats leaving Yokohama, and, on the return journey, Yokoska, at half hour intervals. It is not improbable that a hundred foreigners availed themselves of the opportunity to visit the Arsenal, and it is pleasant to record that the success of the launch, the beauty of the weather and the cheery hospitality of their entertainers contributed to a holiday which yielded many pleasures and left behind it no regrets.

His Majesty on his return journey to Yedo landed under a salute from the men-of-war in harbour at about half-past-twelve o'clock to-day, and proceeded to the capital in a special train.

SPIRIT OF THE NATIVE PRESS.

(From the Choya Shimbun.)

Since the rise of the cry for a House of Commons there has not been a day that we have not observed in our native newspapers column after column of argument concerning it, some writers urging that it should be established immediately, and others that it would be injurious because we are still unripe for it. For our own part we believe that a House of Commons is an excellent thing, but it is first necessary that the people should have a sense of their rights. Without this a country has no foundation, and cannot advance at equal speed with other countries. If the people of a country have not strong, zealous and patriotic spirits, their Government may possess an army of several hundred thousands of men, or a strong navy and great fortresses; but all these will not necessarily strengthen the country nor aid the Government. Up to the present moment, our Government, whether for good or evil purposes, has acted according to its own will, the people being entirely subservient to it, never uttering one word against it, and being quite indifferent to the condition the country was in. Such were the ideas impressed on their minds, which were moulded by despotic rulers and governments. They thought that they had no rights, and no liberty to consider and discuss the acts of their Government; and, still worse, they habitually believed that the country was the property of their Ruler. To abolish these unworthy and injurious ideas is to stimulate their spirits and to instil into them a sense of their rights.

We have lately discovered that our present Government is not undesirous of according certain rights to the people; and it is observable that the Judicial Department is gradually less and less influenced by questions of rank in its decisions. Still, there are many impediments to the attainment of their full power by the people, many of our officials disliking to give up their customs of injurious oppression. The chief of all hindrances, however, is the idea which exists among many, that the true way of benefiting the country and strengthening the hands of a ruler is by making him as despotic as possible. To this effect they write, and thus they declaim; and it is against these I now raise my voice.

The Russian Government is despotic, but it cannot be compared in this respect with that of China or Japan. We are not only ignorant of how to urge, secure and promote our rights. We are ignorant of any such thing as the existence of these rights. Our rulers were unchecked in their selfish and avaricious proceedings; while the few who showed any true spirit of benevolence, and who were less addicted to such practices, were regarded and treated by the people as gods. Nor was there one among them all who understood that the people have rights, as we do to-day. But these oppressed and aggrieved people are now beginning to understand that it is of great benefit for themselves and their country that they should enjoy such rights, nor is there any reasan for hindering them in their advance towards reason and the enjoyment of natural rights.*

We shall not here contend against those who say that our country is not yet ripe for representative institutions, or those who say that they would prove injurious to us. What we wish them first clearly to understand is the importance to the people of knowing that they possess rights, because it is only by realizing this that the character and spirit of the nation can be formed and developed. When this is understood, there will be an end to all discussions upon the utility or advantage of a House of Commons. Any man who speaks against the rights of the people, which are the true sources of equity and justice among men, may be a person of great learning and talent, but his heart must be impure. His intention can only be to flatter the Government in order to secure some reward. He may call himself enlightened, but in most cases it is probable that he only knows a few letters of the European alphabet. He may constantly repeat that if we institute a House of Commons, a revolution like that which took place in France will take place in Japan. But this revolution was caused by excessive power being seized by the people of a rash race, differing widely from

* This passage is obscure, nor are we sure that our translator has caught what may be meaning of the original.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the meek and easily governed people of Japan. Why, it is only little more than five years ago that a master could have a disobedient servant killed (or could kill a disobedient servant?) without being indicted for the act by the Government, and if a farmer or merchant insulted a *samurai*, it cost him his life. To hear men, therefore, compare Japan with the countries of Europe, is like listening to the dream of a stupid person. Our daily desire and endeavour is to produce an earnestness in the people to assert their rights, so that they may realize and appreciate the blessings of being born human beings. But, oh! their degraded, uncivilized habits,—habits which cannot be expressed in writing,—their slavish subserviency, their contentment as slaves, or in performing work fit only for cattle and horses! These habits do not seem to disappear. And if one among us sees that it were better that men should enjoy their rights and the administration of an even justice, and speaks out his mind to this effect, so surely another rises up and speaks in the opposite direction to neutralize what has been said. It is not their arguments against which I exclaim; it is against their impure hearts, and against the fact that those whom they and even we, call scholars, patriots and officials, are still ignorant of what is truly good and necessary both for their country and themselves. We trust they will not imagine that our argument is intended to excite the people and urge them to demand their rights, in the idea that they may do exactly as best pleases themselves. This is far from our intention. We only desire they should have their natural rights as men, and learn to think that the country in which they are living is their own. At first some anomalies in the action of the Government may be apparent; but it must struggle and persevere through and in spite of these, such being its duty. But unless such rights are granted to the people, the day will come when Japan will be unable to maintain her independence. For several centuries before the late revolution, there were rulers called Shogûns between the Mikado and the people. Their administration was very despotic, but, during those many centuries, both the Mikado and the people were content with it, and dreamed of nothing better. But when foreigners arrived we soon discovered that such a form of Government was useless and no longer possible, and finally the power reverted to the hands of the Mikado. But for the advent of foreigners, we might have been under the old form of administration to this day; any change would merely have been from one Shogûn to another. It is due to this advent of foreigners that our country has, in some sense, come to resemble theirs, although so long as our people are undesirous of asserting their rights, and our Government does not concede them, we cannot, of course, say that Japan is like European countries. We imagine that no one who understands the relations of things as they actually exist in this world, would combat this position. There are, however, people who may say "This man is discussing popular rights without any definite aim or object, and does not seem to care about a House of Commons." This is not so. We have an aim, which is, to make our people understand that they have rights, and what is the value and benefit to them of those rights. Who, then, still desires to remain under oppression? Who is unwilling to struggle for his rights? It is quite true that we have argued little, or not at all, regarding representative institution; but this is because we know that when the people realize a sense of their rights, a House of Commons will be an indispensable necessity, and the people can no longer be governed except through their own representatives.

THE EFFICACY OF EDUCATION.

(From the Hochi Shimbun.)

Speaking briefly, Education teaches us how to support ourselves in this world, and therefore it is needless to say that it is a necessary thing. Without education how are we to earn our livelihood? Human society would be impossible without it, nor could any great or useful designs be achieved. It is a work, therefore, which must not remain undone. But as we meet many people who do not know the *i. ro, ha,* (Japanese alphabet) and who still supply their daily necessities, not seeming to look very dull, some may think that education is not necessary to human society. But such people do not understand the meaning of the word education. Education not only signifies book-learning, but any thing which affects the understanding of people, and this is the reason why many who are illiterate may still be enlightened. Japan is in her present condition because the objects which operate on the understandings of the people are of little worth; and it is certain that with better examples before us, our state would immediately be much raised. When we reflect upon men's motives, we conclude that they have a natural desire to benefit themselves, and it is for this reason that they struggle and persevere through difficulties, if they see any advantage in doing so. We see men toiling in the mud of the rice-fields under the burning sun of summer, or in the snows of winter, from morning till night, and not seeming very much distressed by it; indeed, they are much displeased if any one tells them to desist. From which we see that men will struggle and strive through hard work, provided they see some prospect of profit from their labour. Our impression is that people dislike education, which, after all, is much easier than such daily labour, because they do not know in what it really consists. Although education confers knowledge, comfort and happiness, what has hitherto gone by that name has been the reading and composition of prose and poetry by matching the square characters of China in rows, or reading and composition in the language of our ancients, who have been dead many thousands of years, and which can only be read or sung by a very few of our best scholars. This being the popular idea of education, it is no wonder that people found it difficult and repelling, and that not every one would attempt it; and thus it is that our country is in its present condition. When we attempt to make an important design, we cannot depend merely upon what we see and hear. It is necessary to consult books, and as there are now many useful works written, not in the square Chinese character, but in our own native langauge, education is now much less difficult, and more useful and profitable than it was some years ago. We think that if our people could understand this, they would strive to attain knowledge, rather than pass their lives in more laborious and repulsive pursuits. The important point we have urged is that people may get their living through the possession of an education acquired by a mere intelligent perception of external objects. It is needless, however, to say that the cultivation of the mind by books and letters tends to make us even still better and happier.

We will now explain in a few words what a man can become by acquiring an ordinary education, viz: a good, intelligent, sagacious trader or agriculturist, and one who can live happily; and should he continue to persevere with his education, he may become a philosopher, or a person loved and honoured by all. At all events he may rise to a higher state than than referred to above. † Education will always benefit us, but never does us any injury.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Music Teachers.

Shisho, or Teachers of Music in its higher branches, are generally men; but female teachers, though not considered such perfect musicians, are more commonly employed as instructors to girls and young women. If greater proficiency is subsequently desired, a male teacher is employed. The *Koto* is most frequently taught by blind men. Teachers who devote themselves to other instruments than the *Koto* and the *Samisen* are very rarely met with in every-day life. *Geyshas*, who are noted as good musicians, when they become elderly and less attractive to guests, frequently marry, and adopt the profession of teachers of the *Samisen*. Each instructor devotes himself exclusively to one of the hereafter-mentioned styles,

† The Japanese have such comical ideas about employments and stations of life, almost as comical, perhaps, as the ideas of the French about the Lord Mayor. A young Japanese, full of intelligence and ambition, once said in our hearing, "I hope some day to be a Judge, or a broker at the very least." Every one knows the story of a kindly French gentleman patting the head of a young English lad and saying to him, "My son, I hope one of these days to see you Lord Mayor, or at least Lord Chancellor."

and although some pupils attenpt several *riugie*, little, if any, progress is made under these circumstances, the teachers being opposed to the blending of different styles, while the difference between the methods of playing and of toning the voice, cause confusion.

With young children the teacher is obliged to hold the pupil's hands and place the fingers for each note, and when some progress has been made the pupil and teacher squat down *vis-à-vis*, the pupil watching the teacher's fingers and endeavouring to imitate each movement of them until a simple tune is learned. No scale or ideas of musical notation are attempted; the lesson is learned by simple imitation and memory. Some books have been printed to facilitate music teaching and self-instruction, but they are scarce and rarely used, and do little more than shew the position of the fingers on the finger-board. Sometimes the teacher plays the accompaniment while the pupil sings.

Samisen playing alone is rarely taught, singing and recitation with *samisen* accompaniment being much more usual. Those pupils who desire to become teachers receive a name from their teacher after having attained a certain proficiency; without this they cannot teach publicly, being without musical reputation.

With the exception of *Naga-outa*, all singing and recitation with *samisen* accompaniments, is called Joruri, after Joruri Hime,* whose loves and sorrows are said to have formed the subjects of the first compositions of which Oitsu is the reputed author *(Vide Section* Theatres*) Gidai-yu-buschi.* In 1575 lived Takemoto Gidaiyu, who was the originator of this style, and his music is written for male voices in the lower tones. The *samisen* used is of the largest size, the strings are thicker, and the *batchi* is heavier than customary, and the playing is *staccato*. The subjects are usually tragic and warlike, and more frequently draw tears from the audience than any other class of music. It forms the ordinary accompaniment to the native stage, and is mixed up with the actors' parts, joining broken links in the dialogue, or explaining the soliloquies, motives of the characters, &c. which the words and action of the players may fail to convey.

Tokiwazu. Komoji-idaiyu introduced this style at the beginning of the present century, and it is now very common among children. The falsetto is cultivated for this style, and the subjects of the songs are love-stories, nor is it in any way strange to hear innocent little girls straining their voices to the highest pitch, unconsciously reciting the most indecent love passages, stories of runaway matches, the joint suicide of lovers &c. The strings of the *samisen* used are of medium size, and the accompaniment to the *Tokiwazu* songs is called *kishi-sawa.*

Kiyomoto, was brought out by Yenjin-daiyu, also early in the present century. The head-voice is cultivated for this music, and the subjects of the songs are mostly love-stories, more lively and amusing as well as comparatively more decent than the *Tokiwazu*. This style is very popular with young girls, and is the style generally learned by the *geyshas*: The *samisen* used is of medium size.

Tomimoto. This style was introduced about fifty years ago by a teacher named Bungo, and somewhat resembles the *Gidaiyu* style, softened down, interspersed with love-stories, of a more sober character than the *Tokiwazu* style. The chest-voice is chiefly employed, the middle voice occasionally, the *falsetto* rarely, and a medium sized instrument is used. The accompaniments are called *Sasaki.*

Kishisawa was originally the accompaniment to the *Tokiwazu* singing; but about 1860 the teachers quarrelled and were brought before the magistrates, who, being unable to decide who was most to blame, permitted a division and the establishment of a new style. There is little difference between *Kishisawa* and *Tokiwazu* worth noting here, and but slight regard is paid to it now-a-days.

* Joruri Homi, whose love adventures are related by Otsu, and considered as the first of the now innumerable imitations and variations. She was a native of Yahagi-no-hashi of Sanshiu, the daughter of Kiechi. Her lover was Ushi waka maru, who afterwards became Yoshitsune, brother of Yoritomo, A.D. 1177 (about).

Ushi waka was fond of flute playing, and very clever. One moonlight night he wandered playing his flute when he approached a house where some one was playing the Koto. Presently the player changed the tune to match the flute to the mutual delight of both. This was a meeting between the unconscious and unknown duet players and mutual love at first sight. The sequel is a long life of fruitless love that forms an inexhaustible fund for the story tellers.

Kato, (East River); called after the music teacher who introduced this style. The stories are mostly founded upon heroic actions and celebrated occurrences mixed up with a few love-stories. The natural voice is used. The *Samisen* used is of a special size and form, smaller than the medium size. This style is not much taught at present. It has always been fashionable and is patronized by amateurs exclusively. A play called Otokodate-no-Skeroku requires a *kato* accompaniment, when amateurs must be obtained. They play with masks on, and, as they do not take payment, are entertained in return with feasting and fun. This is the only instance of amateur performances in theatres.

Ichi-ohiyu-bushi was introduced by Ichi-chiu, a teacher, some sixty years ago, and resembles the *kato*, but is more plebeian in style and more entertaining. Although most of the scenes are laid in the Yedo *yoshi-wara*, yet, as a rule, they are tolerably decent. Each song has some quaint name. The times are of two classes, *miako* and *uji.* There is a special form of *samisen* of medium size for these songs.

Naga-outa was improved and brought into notice by Kineya Rokuzamion early in this century. It consisted orlginally mostly of accompaniments alone, but songs were composed to suit them. These songs are called *Uta-utai.* There are various styles in singing, called *Yoshimura, Matzunaga, Fujita* and *Okayasu*, in which the highest notes of the falsetto to predominate. The burden of the songs is generally decent. One of them called *Oie-matsu* (old pine-tree) runs literally thus.

Shin-no-shi-ko
Mikari no toki
Ten niwakani **kaki kumori**
Tai yu shikirini fuir shikaba
Mikado ame wo shinogan to.
Ko matsu no kage ni
Tatchi yoreba
Kono matsu tatchi machi Tai boku to nari
Yeda wo tare ha wo kasane
Kono ame wo morasazari shikaba Mikado
Tai yu to iu shaku wo
Kono matszu ni okuri
Tamaishi yori
Matsu-wo Tai yu to mousu to kaya.

TRANSLATION.

Shin-no-shi-kô
Once a hawking did go;
But the clouds they lowered
And down the rain poured
Ho! the Emperor must not get wet.
That old pine tree
Good shelter will be,
And under it he did go
When the branches bent so
Through the leaves the rain could not get.
The Emperor's whim
Was to have the tree giv'n
A *Shaku* with *Tai-yu* writ thereon,
And immediately thus it was done,
For the pine tree's named *Tai yu* e'en yet.

The *samisen* used is the smallest, the *sawa* the thinnest, the strings the finest, and the *batchi* the lightest. This is the most difficult style to acquire perfectly, and is taught to all young ladies of good family. Whatever style may afterwards be taught, the gentry always desire that their children should begin with this.

Shinnai, introduced by Tsuruga Shinnai, fifty years ago, comprises songs about courtesans and their patrons. At night men and women may be met with, their faces concealed by the rag of the towel which answers so many purposes, twanging their *samisens.* Those who wish to hear them sing, call them, but do not admit them into their houses. A favourite piece is called Akegarasu—the story of a courtesan Urazato and her guest, Tokijiro, of whom she became very fond, so that when all his money was spent she still enticed him to visit her. Her master finding this out put Tokijiro into a cask, tied up the girl and beat her. Finally, they escape together. There are two styles; the *Okamoto* is considered respectable, but the *Fujimatsu* is very coarse and indecent. The *samisen* used is small; the voice falsetto with a nasal twang. Children are not often taught the *shinnai.*

Hayari outa. Outazawa Nourokusai, during the last generation, was the first and great composer of this class of singing, consisting chiefly of short verses. The *geyshas* entertain their patrons with this class of singing, and often improvise their own verses for the occasion. The words and accompaniment to the *Odori* are usually *Hayari-outa.* Teachers of *geyshas* study this style of

OFFICES OF THE VICTORIAN COMMISSIONERS FOR THE PHILADELPHIA EXHIBITION OF 1876.

MELBOURNE, DECEMBER 3RD, 1874.

SIR,

1.—I have the honor to inform you that the Government of Victoria have resolved that an Intercolonial Exhibition shall be holden in Melbourne in the month of August, 1875, to prepare for the International Exhibition to be held at Philadelphia in the year 1876.

2.—The intention is to assemble in Melbourne all the objects which it is desired should be transmitted to America and select from them those best suited for the purpose and to ship them conjointly to be placed in position at one and the same time in an Australian Court.

3.—It is conceived that delay consequent on the separate operations of individual colonies would be thus obviated and that the general effect would be more striking.

4.—The Commissioners (named in the margin)* charged with the duty of carrying out the operations have come to the conclusion that the preliminary Exhibition might be rendered more attractive and useful if the field of competition were extended beyond the limits of Australia, and if invitations were sent to the Governors of countries and settlements in the Eastern Sea requesting them to favor the Commissioners by promulgating intelligence of the proposal, at the same time using the influence incident to their high position, whereby the people of these different countries might be induced to send to Melbourne for exhibition examples of natural productions of the different localities as well as of the industry and genius of the inhabitants. Actuated by these considerations I do myself the honor to address you and (should the project meet with your approval which the Commissioners take leave to assume) to beg that you will have the goodness to give publicity to the project in the manner best calculated in your opinion to ensure the attainment of the fullest measure of success.

5.—There can be no doubt that contributions collected from several departments of the Japanese Government would furnish many things, such as: Botanical Gardens, Forests, Survey, Ship building, Minerals, completely novel to us, and also of the highest interest while articles of industrial value in the raw or manufactured state, such as, Tea, Tobacco, Camphor, Silk, Cloth, Wax, Vegetable, Tropical productions generally, Precious Stones, Jewellery, Tortoise-shell, forwarded by the growers or by mercantile men, would obviously enlighten the public of Australasia as to their value and the extent of supply, and tend to enlarge and improve commercial relations between them and the people of Japan, giving an additional impetus to existing branches of trade, and opening up new avenues in several directions to the mutual advantage not only of the engaged in the exchange of commodities, but of the respective communities also.

6.—The Commissioners venture to submit for your consideration that what is best calculated to accomplish the end they have in view is not so much a large collection of articles of the same kind distinguishable one from another in some slight degrees only but types of the highest excellence.

7.—They suggest also that it would be found beneficial if the chief articles of a commercial nature were accompanied with notes showing the trade price, the quantity available for export, and any other information.

8.—It is expected that arrangements may be made on favourable terms with the Steam Packet Companies for for the transit of the goods to Melbourne. They will be admitted through the Custom House here duty free, and at the end of the Exhibition they will either be handed over to the Agents of the Exhibitors or sold, the proceeds being disposed of according to the instructions received.

9.—You will permit me to impress upon you that it is highly desirable that immediate steps be taken by all disposed to contribute.

10.—Eight months only remain between the date of this letter and the proposed opening of the Exhibition, in August, 2nd 1875, Melbourne.

11.—Deducting the period to be [illegible] tran-

withstanding that much can be done if the work be undertaken with alacrity and prosecuted with vigor.

12.—Concluding with the expression of the hope of the Commissioners that you will be pleased to afford to them the benefit of your active assistance and powerful co-operation so that Japan may be adequately represented,

I have etc.,

(Signed) REDMOND BARRY,
Chairman.

HIS EXCELLENCY,
The Minister Plenipotentiary of Her Britannic Majesty.
Yokohama.

*Sir REDMOND BARRY, *Chairman.*
Hon. J. J. CASEY, P.M.
Hon. J. F. SULLIVAN, M.P.
Hon. C. J. JENNER, M.L.C.
JAMES MUNRO, Esq., M.P.
JOHN MCITRATH, Esq.
L. J. SHERRARD, Esq.
GEORGE COLLINS LEVEY, *Secretary.*

MELBOURNE, 30th December, 1874.

SIR,

1.—I did myself the honor to address to you on the 3rd of this month a preliminary letter on the subject of the Exhibition which it is proposed shall be held in Melbourne in August 1875.

2.—Recalling your attention to the particulars detailed therein I am now gratified at being able to announce that the Governments of the two Colonies of New South Wales and South Australia have informed us that they will join in our projected arrangements for an Intercolonial Exhibition here preparatory to that to be held at Philadelphia. This encouraging intelligence justifies the confident expectation that Queensland, Tasmania, and Western Australia will also concur.

3.—New Zealand may probably find it advantageous to make common cause with Australasia at the American competition; however, should it be deemed more advisable to send her contributions by San Francisco than by Melbourne there is nevertheless sufficient enterprize in her people to stimulate them to contribute independently to the Intercolonial Exhibition to be held in Melbourne.

4.—Thus I can certify the assurance I conveyed to you that an Exhibition would be held here of a nature and on a scale worthy to enlist your sympathy and to induce you to lend your aid to the undertaking.

5.—The Commission on behalf of which I wrote having concluded its labours, made its final report (of which a copy is enclosed). His Excellency Sir George Bowen was advised to issue another; the names of the Commissioners are in the margin.

6.—They are armed with full powers to conduct the Intercolonial Exhibition here and make arrangements for conbined representation of Australasian products at Philadelphia.

7.—The draft of a Prospectus of Proceedings prepared; it is expected that the Commissioners will adopt it without any material alterations. A copy is enclosed for your immediate guidance accompanied by a table shewing the classification of objects which it is intended shall be carried out at Philadelphia. I also send an extract from the "*Argus*" newspaper giving a condensed summary of the statistics of the Australian group of colonies.

8.—You will see by the latter that more than two millions of British subjects already occupy in detached communities the five colonies which fringe the sea-board of this continent and the island of Tasmania and new Zealand, and that their industrial activity and commercial enterprize are not unworthy of the country from which they have sprung. A strong desire exists to extend relations with their fellow subjects who dwell in the other dependencies of the Queen in the Eastern seas as also with the inhabitants of the possessions of other European Sovereigns within the same latitudes.

9.—The forthcoming Exhibition presents an occasion favorable for the establishment of such relations, and my duty is to represent to you on behalf of the new Commission that they will esteem very highly such exertions as you may be pleased to make in carrying out the object

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

10.—As you are much better acquainted with the resources of Japan than the Commissioners can possibly be, it is considered that it would be somewhat obtrusive were they to do more than indicate in general terms the objects which would be acceptable as contributions from Japan.

11.—They group themselves under two grand divisions.

1.—Natural Productions including all those usually associated under that heading as.

Cereals, Grapes, Fruits, Food, Fodder, Textile and medicinal plants.

Those used for preparing, Drinkables, Dyes, Oils, Essences, Timber bark, Resins, Varnish, Sugar, Tobacco.

The Animal Kingdom furnishing food.

Minerals of all kinds.

2.—Works of Art and Machinery.

Industrial Productions of every description of the indigenous materials in a manufactured state—with any special production of nature or of art peculiar to the country.

12.—To these might be added models of fruit, stuffed specimens of indigenous Animals and Birds, with preserved Fish and Insects.

Seeds of Trees, Shrubs and Plants likely to grow in the open air in Victoria or in Conservatories or Hothouses and living plants possessing useful properties or distinguished by their beauty and elegance in Wardian Cases which would be greatly prized by us.

13.—The experience gained by those who have been connected with Exhibitions in Europe and elsewhere goes to establish the fact that the collection and display of many varieties of raw materials suitable for commercial purposes and for application to industrial uses is attended with the greatest advantage, and that variety in its true sense does not mean a mere multiplication of specimens distinguishable one from the other by some trifling or minute specific difference, but a comprehensive association of the best procurable types of all products capable of being employed for the manifold uses of the human race.

14.—It is often found that in countries where nature has been most profuse in assembling the choicest productions of her bounty means are wanted to convert them on the spot to the right or most suitable purpose.

15.—I may be allowed to state that within the last few years Victoria has vastly augmented her manufacturing power and the increase of machinery has brought improved engineering skill and fabricating ability.

16.—If then there be any commodities natural to Japan and capable of being made available for such use they will be especially valuable.

17.—In conclusion I beg leave to assure you that the Commissioners have resolved to spare no pains or personal trouble to make the Exhibition as complete a collection of the works of nature and of the art and industry of the inhabitants of the portions of the Eastern Hemisphere addressed by them as is possible within the short period of time which remains for preparation.

18—This circumetance of itself calls for unusual diligence and activity in doing what is necessary and the Commissioners respectfully express their hope that the Government of Japan being animated by the spirit which has distinguished them on similar occasions, will see the advantage that may accrue to their country by securing in this new field an adequate representation of it's skill and productions.

I have, etc.,

(Signed) REDMOND BARRY,
President,

His Excellency
SIR HARRY PARKES, K. C. B.,
&c., &c., &c.,
Yokohama.

THE INTERCOLONIAL EXHIBITION OF VICTORIA, 1875.

GENERAL REGULATIONS.

The Commissioners appointed under the Great Seal of the Colony of Victoria for the purpose of taking all such measures as may be necessary to secure the effectual representation of the Arts, Manufactures, Products, Scientific Inventions, and New Discoveries of Victoria, at the International Exhibition, to be held at Philadelphia in 1876, have to announce that they intend to hold an Exhibition in the city of Melbourne, to which the inhabitants of all the British, French, and Dutch possessions in Australasia, and of the neighbouring countries are invited to exhibit.

The Exhibition will open in Melbourne about the 1st August, 1875, and and will close early in October, after which the Exhibits will be at the disposal of the Exhibitors. Exhibits not claimed within fourteen days of the close of the Exhibition will be sold by auction, and the net proceeds handed over to the Exhibitors.

All Exhibitors must fill up the official form, which will be supplied upon application, and must state whether they propose that the Exhibit should be forwarded to Philadelphia, and must make their entry not later than 1st July.

Means will be taken to guard against fire and protect property; but the Commissioners will not be responsible for losses by fire, robbery, accident, or damage of any kind in transit, while in the buildings, or during the Exhibition.

The Commissioners reserve to themselves the right of rejecting or returning any proposed Exhibit.

Medals in Gold, Silver, and Bronze, will be given for exhibits of merit, which will be determined by experts, appointed for that especial purpose.

Full information and all necessary documents can be obtained at the offices of the Philadelphia International Exhibition of 1876—Russell-street.

No goods of any description will be admitted into the Exhibition, even although the entry may have been received, unles they are the produce or manufaction, either wholly or in part, of the country in which the Exhibitor resides. Exhibitors violating this regulation will be excluded from competition.

SPECIAL NOTICE TO EXHIBITORS OUTSIDE VICTORIA.

The Buildings connected with the Exhibition will be licensed as a Bonded Store. All articles will be received free of duty. At the close of the Exhibition they may be either re-exported, or enter into consumption. Duty will only be levied if the latter course be adopted.

The Commissioners have obtained from the various steam-boat companies trading to Victoria very liberal concessions, in most cases amounting to a reduction of one-half, in the rate of freight usually charged.

The various colonial governments have been officially informed of the proposed Exhibition, and have been invited to appoint Commissioners for the propose of organising departments of the Exhibition. The Secretary should be notified of the appointment of such Foreign commissioners, and the quantity of wall or screen space which they are likely to occupy, on or before 15th April, 1875.

Application for space and negotiations relative thereto must be conducted with the Commissioners of the country to which the the applicant belongs. If no such Commissioner be appointed, the applicant can communicate direct with the Secretary to the Commissioners for Victoria.

Foregn exhibits will be received at the new annexe of the Industrial Museum not later than July 15th. No charge will be made by the Victorian or the Hobson's Bay railways for conveyance of these goods along the company's line.

Exhibits will be at the disposal of the Exhibitors, or their agents, after the close of the Exhibition. If not claimed within fourteen days of the close of the Exhibition, they will be sold by auction, and the net proceeds handed over to the Exhibitor.

An Official Catalogue will be published, but Foreign Commissioners may publish catalogues of their respective exhibits.

Exhibitors will not be charged for space. A limited quantity of steam power will be supplied gratuitously. Exhibitors must provide at their own cost, all their cases, fittings, &c., and all counter shafts, their pulleys, bellows, &c., for the transmission of steam power from the main shafts.

The removal of goods, except under special circumstances, will not be permitted prior to the close of the Exhibition. Facilities will be given for the sale of Exhibits; delivery to be made after the close of the Exhibition. and in no case will it be allowed that one article should be substituted for another.

Sketches, Drawings, Photographs, or other reproductions of articles exhibited will only be allowed upon the joint consent of the Exhibitor and the Commission.

Articles that are in any way dangerous or offensive; also, patent medicines, nostrums, and empirical preparations, whose ingredients are concealed, will not be admitted into the Exhibition, even although they may have been entered for exhibition.

(BY order)
GEO. COLLINS LEVEY, *Secretary*,

NOTIFICATION No. 26.

To all the Governors of Fu and Ken.

It is made known by the present, that if a foreigner employed in an office in the service of the Government wishes to see His Majesty the Mikado, the head of the bureau should first make the fact known to the Sa-in, who will judge whether or not the permission should be accorded him.

SANJO,
Daijo-daijin.

27th February, 8th year of Meiji.

NOTIFICATION OF THE DAI-JO-KUAN, No. 34.

To all the Ken, Fu, In, and Cho of the Empire.

The Government makes known to all the inhabitants of the Empire, that a grand festival is being organised at Nagasaki in memory of the officers and soldiers who fell in the Formosan war, and who have been buried in that town. The families and friends of the deceased are requested to assist at the solemn ceremony. An officer of the Imperial household will, in a short time, arrive in that town to superintend the necessary preparations for this festival.

SANJO,
Daijo-daijin.

28th February, 8th year of Meiji.

NOTIFICATION No. 38.

The Government has decided that a new piece of silver money, of a large size and greater weight than the yen, shall shortly be struck at the Mint at Osaka. The description of this piece of silver, comprising the stamp, weight, standard, and value will be published in a future notification.

SANJO,
Daijio-Daijin.

28th February, 8th year of Meiji. *Herald.*

ANNUAL GENERAL MEETING OF THE YOKOHAMA CRICKET CLUB.

The annual general meeting of the Cricket Club was held on the 2nd instant at the Y. U. Club, the attendance of members being, as is usual in Yokohama, very limited.

On the motion of Mr. Abbott, seconded by Mr. Dodds, Mr. R. Robertson was voted to the chair.

Mr. E. Abbott, the Hon. Sec., then proceeded to read the accounts as follows:—

The Yokohama Cricket Club in Account with Edgar Abbott.

1874.	Dr.
July 2—Expenses of Club for June, 1874	$ 33.76
Aug. 4—Expenses „ July	$ 44.08
Sept. 2—Expenses „ August...	21.92
Return to subscribers of Turf Fund	206.50
Oct. 24—E. J. Fraser, clover seed	52.00
„ 31—Expenses of Club, Sept, and Oct...	50.75
— „ „ „ Nov. and Dec.	18.50
1875.	
Jan. 31—Expenses for January	13.36
Feb. 27—Balance	318.88
	$759.75

1874,	Cr.
June 30—Balance H. & S. Bank, as per pass-book	$651.62
Aug. 5—Proceeds of clover seed	52.00
„ 31—Subscriptions collected	50.92
Dec. 31—Interest on balance to date	5.21
	$759 75

1874.
March 1—Balance with H. & S. Bank $318.88

[E. & O. E.]

Edgar Abbott,
Hon. Sec.

Yokohama, March 2nd, 1875.

There is also a dependency for a mowing machine, which reduces the actual balance to about $260.

On the motion of Mr. W. H. Smith, seconded by Mr. E. J. Fraser, the above accounts were passed.

Some conversation here took place as to the laying down of turf on the outer border of the ground, but the question was eventually postponed.

Mr. W. H. Smith proposed, and Mr. Henley seconded a vote of thanks to the retiring Committee. This was carried.

The meeting then proceeded to the election of a Committee for the ensuing year, when, on the motion of Mr. Dodds, seconded by Mr. Abbott, the following gentlemen were elected:—Messrs. R. Robertson, E. J. Fraser, Dodds, Wheeler, A. Gibson, W. H. Smith, and J. J. Dare.

Mr. Abbott declined to be again put in nomination.

The subject of the occupation of the ground by other clubs having been brought forward, the Chairman stated that by their deed the right and title to the ground was vested entirely in the Cricket Club, and that no other association could make use of the same without permission first had and obtained from the Cricket Club.

A long and desultory conversation then took place respecting the desirability of facilitating the entrance, as members of the Club, of naval and military officers who were temporarily stationed here; and eventually it was decided that a special meeting should be held to consider the point, and to make such alteration in the rules as may be nesessary, and also to alter the rule which requires the Committee to consist of seven members, which number is found to be inconveniently large. A vote of thanks to the Chairman, proposed by Mr. Abbott and seconded by Mr. Gibson, closed the proceedings.

THE DREAM.

(From the Japanese.)

I waited for my darling all through the summer noon;
The crimson flame of sunset came, and then the silver moon:
And, hearing not in silence deep a bird or blossom stir,
I laid me down and slumbered that I might dream of her.

In sweet and simple beauty, with blush the breezes gave,
As lithe as willow bending beside the wimpling wave,
She rises 'mid sleep's darkness, like star through mist that shines,
Or fairy flower in branching bower among the forest pines

The Spring is laughing from her lip, the Summer warms her breast,
Upon her head the darkling skies of cloudy Autumn rest,
While Winter takes her tiny hand, and covers it with snow:
Yet warm and soft its tender touch! My happy pulses glow!

Alas! the joy is fading, the lovely face grows dim,
The vision bright, the rosy light, in mingling shadows swim.
But o'er me bend delicious smiles, and eyes with love that beam:
Her own bright self has broken her image in the dream!

Kajin.

Correspondence.

PAPER MONEY AND THE COINAGE.

In the Editor of the *Japan Weekly Mail.*

Yokohama, 5th March, 1874.

Sir.

Your article of last week touching Japanese Finance is not, I think, as plain and incisive as it might have been. I gather from it however that you agree with *The Economist* in demanding that borrowing countries should exhibit a yearly budget; and *all* will concur with you in saying that money borrowed for definite purpose should be spent only in furtherance of those purposes.

As regards a Budget, the Japanese Goverument are under clear obligations to produce one. They very properly began the system, and they must continue it, or forfeit their position in the eyes of foreigners.

As regards their last loan, they must be presumed to have spent it on the purposes for which it was asked; any other dis-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

posal of the money would amount to a breach of faith which assuredly they would repent hereafter.

I must, however, draw your attention to matters more immediately before us, viz: to the two following notifications just issued by the Government.

[TRANSLATION.]

Nichi Nichi Shimbun, March 4th, 1875.

NOTIFICATION No. 35.

It is hereby notified that the weight of the silver one yen hitherto struck in the Osaka Mint has now been increased and its designation changed to that of "Trade Silver." (*i.e.* Trade Dollars.) The pattern of both sides of coin, the remedy allowed, the—mintage fee etc., have also been altered as in the accompanying Table.

(Signed) SANJO SANEYOSHI,
Daijo Daijin.

February 28th, 1875.

FORMER SILVER YEN.

Breadth. 1.24 inches Japanese, or 1. 5 inches English.
Weight, 7.176 *monme*, or 416 *grs* English.
Quality, 9/10 *ths* Silver.
Remedy, 1 grain per hundred Yen.
Difference of quality allowed-2 parts in 100.
Mint fee 2 per cent.

TRADE SILVER.

Breadth, 1.24 or 1.5 English.
Weight, 7.245 *monme*, 520 grains English.
Quality 9/10 *ths* pure silver.
Remedy, 1 grain per hundred yen.
Difference of quality allowed 2 parts in 1000.
Mintage fee, 1½ per Cent.

[TRANSLATION.]

NOTIFICATION No. 3.

TO SHI, CHO, FU AND KEN.

The manufacture of the new paper currency having gradually approached completion, it is hereby notified thet the Dajokwan and Mimbusho Satsu as well as the "notes exchangeable for gold" will all be exchanged for the new paper currency and their circulation will accordingly be discontinued after the 31st May next. It should be arranged that as far as possible all taxes possible in money should be paid in paper currency of these three descriptions.

The arrangement for conducting the exchange will be notified afterwards.

January 15th, 1875.

What is to be understood from Notification No. 35? By what means is the *yen* "hitherto coined to be increased as described? Does the Government undertake to give 420 for 416? Or does it wish to exact 420 for 416? The one would he foolish; the other unjust. If the former, the public will gladly take advantage of the offer. If the latter, they will have fair grounds for calling for punishment.

Notification No. 3 is simply the repudiation of an obligation to pay gold coin on demand. Surely there must be some mistake here. I am unable as well as unwilling to suppose that fraud is intended. Yet this is the only alternative.

I am Sir,
Your obedient Servant,
LYNX.

[We fail to see any obscurity in our article of last week. We pointed out that the production by the Japanese Government of a Budget was as necessary as our correspondent regards it, though there is no existing reason to suppose that it will be withheld. We went further, however, and insisted that it should be a budget which, whether better or worse, should be beyond all chance of cavil on the point of accuracy both of form and matter. We also pointed out the necessity for applying money borrowed for specific purposes to those purposes alone. And here, again, we went further than our correspondent, for on that point it is not presumable that the Japanese and ourselves would differ much. Our view was that some announcement might be made, at the proper time, of the extent to which the loan had been disposed of in the direction specified, and the amount of terminable or perpetual debt which had been extinguished by it. And we urged this quite as much in the interest of the Japanese Government as of the European creditors. The first element of confidence in Finance is entire frankness. Creditors do not greatly mind a bad budget, if they know the worst. It is the fear that there is something untold which disturbs men.

As regards the two notifications to which our correspondent draws attention, the phraseology of the first is not strictly accurate and definite, though the meaning evidently is, that the *yen* which will for the future be struck at the Mint will be a coin of 420 instead of one of 416 grains. The object of this clearly is, to put the Japanese *yen* forward as a rival to the Trade Dollar, and we have yet to see to what extent the competition will be successful. The Trade Dollar has the start, but it has not gone into circulation to any great extent.

The second notification, so far as it refers to a contemplated exchange of notes *Payable in gold* for a new inconvertible paper currency, demands the explantion sought by our correspondent, which we trust will be at once forthcoming. The measure, as it now stands, can only be regarded in the light of a distinct breach of faith with the public creditor.—ED. *J. W. M.*]

Law Report.

H. B. M.'s PROVINCIAL COURT

Before RUSSELL ROBERTSON, Esq., Consul.

March 2nd, 1875.

Wm. Whittead, second engineer of the S. S. *Abbotsford*, pleaded guilty to a charge of drunkenness and assaulting a jinrikisha coolie the previous evening.

His Honour fined him $3 and c sts, and ordered him to pay the jinrikisha fare, 1 boo, or in default, to go to jail for seven days. The fine was paid.

REGINA *ats* N. STIBOLT *vs.* J. WICKERS.

Charge—Unlawfully beating and assaulting complainant on the 28th February last.

Pleaded not guilty.

From the evidence it appeared that on the 28th February last prisoner and another man named Brown were going up one of the roads leading to the Bluff. Prisoner had with him a couple of sporting dogs, one of which was very young and did not follow properly, so prisoner commenced to beat it, and complainant, coming up at the time, remonstrated with him, and told him he was behaving cruelly in beating so young a d g. Prisoner told him it was none of his business, and high words passed. Prisoner and Brown then attempted to go through a gate which (it appeared from the evi ence) led to other houses besides complainant's. This led to resistance on the part of complainant, who called his servants, and a scuffle took place.

His Honour dismissed the case.

IN THE ITALIAN CONSULATE, YOKOHAMA

Before Signor CASTELLI, Consul, and
Messrs. MAMMEL-DORFF and CANTELLI, Assessors.

March 3, 1875.

BENZO *versus* AYMONIN & Co.

Mr. Motz, from the Saibansho, appeared for the plaintiff.

Mr. F. W. Marks appeared for the defendants.

The proceedings were conducted in French, and the cause was adjourned at 6 p.m. for the testimony of the parties and their witnesses to be taken before the Consul.

The action was brought in respect of a claim arising on a large shipment of silk worm's eggs to the value of over $12,000.

BARUCCA *versus* FRANCHI.

Mr F. W. Marks appeared for the plaintiff.

M. Michel for the defendant.

This was a suit for an account on a purchase of cards to the alleged value of $3,000.

Judgment reserved.

U. S. CONSULAR COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

March 5, 1875.

THE KAITAKUSHI *vs.* MARTIN COHEN & Co.

The following decision has been rendered in this case:—

After a careful examination and consideration of the evidence and testimony in this cause, the Court finds that the allegations of the plaintiff's petition are substantially proven to wit:—

First—That on the 21st day of September, A.D. 1874, the plaintiff and defendants entered into an agreement in writing, whereby it was mutually agreed between them as follows, to wit:—

That said defendants should sell and deliver to the plaintiff, within seventy-five (75) days from the date of said agreement, certain merchandise, to wit:—Sixteen hundred (1600) Remington rifles, together

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

with the accoutrements for the same; and also two hundred (200) cartridges for each of said rifles, at the rate of seventeen and 70/100 dollars ($17.70) for each rifle; and further, that said defendants should sell and deliver to plaintiff four hundred and eighty thousand (480,000) cartridges in addition to those before specified, and of a like kind at the rate of twenty-nine and 50/100 dollars ($29.50) for each eight hundred (800) cartridges.

Second—That said plaintiff should advance to said defendants the sum of twenty thousand dollars ($20,000) on the signing of said agreement, and should upon the delivery of said described merchandise, pay to the defendant the balance of the purchase money.

Third—That upon payment of said advance of twenty-thousand dollars ($20,000) by said plaintiff, the said amount should be deposited with the Oriental Banking Corporation, and that the receipt of the said Banking Corporation for the same should be held by said plaintiff.

Fourth—That if the said defendents should fail to deliver within the specified period of seventy-five (75) days, to the plaintiff the said described merchandise, they, the said defendants, should repay to the plaintiff the amount advanced as aforesid, to wit,—twenty thousand dollars ($20,000; and should also pay to the plaintiff the sum of twenty thousand dollars (20,000) as damages.

Fifth—That if said plaintiff should fail to take delivery of the said merchandise within three (3) days after notice given to it by the defendants, the sum of twenty thousand dollars ($20,000) should be paid by plaintiff to the defendants as damages.

Sixth—That the plaintiff did advance the sum of twenty thousand dollars ($20,000) on the signing of said agreement as agreed upon; and was ready at the time specified for the delivery of said merchandise to receive and pay for the same according to said agreement; and has otherwise performed all the conditions thereof on its part.

Seventh—That at the time stipulated for the delivery of said merchandise, the defendants wholly failed and neglected to deliver the same, or to repay to the plaintiff the said sum of twenty thousand dollars ($20,000) advanced as aforesaid, or any sum whatsoever.

Eighth—That thereafter, to wit,—on the 19th day of December, A.D. 1874, the parties, plaintiff and defendants, entered into a further agreement whereby it was agreed that in consideration of the sum of five thousand dollars ($5,000) to be paid and forfeited by said defendants to said plaintiff, the plaintiff granted to the defendants an extension of time for the delivery of said merchandise until the 19th day of January, 1875, and whereby the said parties again bound themselves mutually to the same covenants and under the like penalties as in the former agreement expressed.

Ninth—That the plaintiff was willing and ready to perform its obligations under this last mentioned agreement, but that the defendants failed to deliver any of the arms and ammunition therein specified according to the terms of said agreement, or to repay to the plaintiff the twenty thousand dollars ($20,000) advanced by it, or any part thereof, or any part of the five thousand dollars ($5,000) recited in said agreement, or of the twenty thousand dollars ($20,000) therein set forth as the liquidated damages on the failure of either party to perform the whole and every part of said agreement.

The Court further finds that there is evidence to show that the defendants did make efforts to obtain the arms and ammunition as stipulated in their agreements, but finding that the same could not be obtained without great delay, purchased certain other rifles and cartridges, but at a much higher price than the price fixed in the said agreements, which said arms and ammunition they offered to deliver to plaintiff at the cost price therefor landed in Yokohama.

That plaintiff declined to accept this offer, but offered on its part to receive said rifles and ammunition, and pay therefor the price as set forth in the agreements, which defendants refused.

On the other hand, the Court finds that by the terms of the first agreement between the parties, the defendants bound themselves to place the twenty-thousand dollars ($20,000) advanced thereon by the plaintiff in the Oriental Banking Corporation at Yokohama, and to deliver to plaintiff the receipt of said Bank, to be held by said plaintiff to await the fulfillment of the contract on the part of the defendants. That it was the clear intent of this provision, and so understood by both parties, that said receipt of the Bank for said twenty thousand dollars ($20,000) was to be a deposit receipt and that the money was to remain in the Bank and be re-delivered to the plaintiff at the expiration of the time fixed in the agreement, if the defendants should fail to perform their part of said agreement. But that the defendants, in fraud of said agreement, deposited in said Bank the said sum of twenty thousand dollars ($20,000) as a margin upon a pros-

($16,000), and that the same was afterwards drawn by said defendants, and used by them in the purchase of arms and ammunition in the United States.

The Court is of opinion that the liquidated damages, or penalty provided in the agreement, to wit, the sum of twenty thousand dollars ($20,000), cannot be recovered, inasmuch as the damages caused the plaintiff by breach of the agreement can be ascertained, and were proven on the trial.

The Court does therefore adjudge that the plaintiff recover of the defendants the twenty thousand dollars ($20,000) advanced by the plaintiff, with interest thereon at the rate of ten per cent. (10 o/o) per annum from the 19th day of January, 1875, amounting, together with said interest, to twenty thousand, two hundred, forty-one, 9/100 dollars ($20,241.09), and also the amounts paid by plaintiff on account of said contract, to wit, seven thousand four hundred dollars ($7,400), for breach of charter-party to receive and carry the arms and ammunition to their destination; six hundred and thirty dollars ($630) for pay of mechanics to examine rifles; two hundred dollars ($200) for pay of interpreter; two hundred dollars ($200) necessary travelling expenses, and forty dollars ($40) for hire of godown in which to store said rifles and ammunition, the whole amounting to the sum of twenty eight thousand seven hundred eleven, 9/100 dollars ($28,711.09) and plaintiff's costs to the amount of three hundred dollars ($300), and that the defendants pay the costs of Court.

THOS. B. VAN BUREN,
Consul General.

We concur.

C. P. HALL,
E. S. SMITH, } Assessors.

H. B. M. PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

March 4, 1875.

FELIX BEATO *vs.* JAMES DAVISON,
JAMES DAVISON *vs.* FELIX BEATO.

Mr. F. V. Dickins appeared for Mr. Beato; Mr. F. W. Marks and Mr. Litchfield for Mr. Davison.

The following jury was sworn in:—Messrs. J. Winstanley, G. C. Pearson, H. Liddle, F. S. Goodison, J. Rickett.

In this case the plaintiff (Mr. Beato) claims the sum of $5,459.85, being balance of account, and godown rent and interest.

Part of the amount claimed by Mr. Beato is admitted by Mr. Davison; but in his answer he brings a cross claim (cross-action) for $9,955, being balance alleged to be due, after crediting Mr. Beato with godown rent, balance of private account, charges on goods, and commission.

His Honour decided, in a motion heard some time ago, to consolidate the two claims, so that they could be heard as one case.

Mr. Dickins, in rising, wanted to be allowed to bring his client's case first, and then Mr. Davison might bring his as soon as he had finished.

Mr. Marks strongly argued against this.

His Honour decided that as there was more to be proved in the cross-action, it should be heard first. He made a note of Mr. Dickins' objection to this course. His Honour expressed the opinion that it would have been better if the claims of both parties had been heard by arbitration, as it was a matter of accounts.

Mr. Litchfield then opened his case for Mr. Davison's cross-claim. He called—

James Davison, sworn. He was Davison & Co. of Yokohama. They were general merchants. He was the defendant in this case, and plaintiff in the counter-claim. He first had transactions in this case in 1872. He was to look after Beato's goods, etc., and Beato promised to pay a commission of 5 per cent on all goods, except staple ones, that he sold for him. He was to receive 2½ per cent on staple goods. There were some French muslins that came under the head of staple goods. There were very few staple goods—nearly all were *articles de Paris*, etc. Mr. Beato has not always been a merchant; he has been a photographer. This was a new line of business for him. Goods came out to Beato through the Banks—in fact nearly everything. He arranged matters with the Banks; he had entire charge of the goods. It was a troublesome business, and many would have charged 10 or 15 per cent. There was such a number of articles, and sold in small lots. In selling the goods packages were often divided and a portion sold. He once sold an ounce of quicksilver. The amount of the sales he effected was about $60,000. Mr. Beato withdrew the balance of the goods from his hands in October, 1874, when he

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

expense, and he had understood that he was to have a commission, and the goods were then withdrawn and he considered he had a right to charge ½ per cent. commission on those goods. He had been 11 years in Yokohama, and it was his experience to charge ½ per cent. on goods withdrawn. He landed and stored the goods as they came to hand. He paid all charges on them. [A long statement of accounts handed to witness, who said they were correct. He read a part of it.] He charged 30 cents per package for landing the goods. He charged fire insurance at the rate ¼ per cent. per month. That was the rate determined by the referees in the late case of Davison vs. O. B. C.

Mr. Marks explained an item in the accounts.

The Court having adjourned re-assembled at half-past one p.m.

J. Davison, continued.—$6,579 65 is the amount of storage in my books. 1,709 packages for 11 months, at 35 cents, that was the amount allowed by the referees in the case of Davison *vs.* O. B. C. He had received $26 272 58 for sales. The amount he claimed from Mr. Beato was $9,055; he had credited Mr. Beato with $5,218 09 which he claimed and $9 055 was the balance he was suing for. Mr. Marks handed the accounts to the jury.

Mr. Dickins objected.

His Honour said the jury must have the accounts to understand the case.

Witness continued.—$78 52. was allowed on Landing charges by the referees and was deducted. $943. 20. was also allowed and credited. The next was fire insurance and $6288 was allowed.

Mr. Dickins consented to these rates being taken as correct.

Mr. Marks said this would shorten the case greatly.

(More accounts handed to Jury). Witness continued:—At the time we brought the action against the O.B.C. the balance of the goods was mortgaged to the Bank. He was the custodian of the Bank. He recovered from the O.B.C. $5,000 and odd dollars. The balance he was now suing for. The amount of the balance was 9.000 and odd dollars. That was after crediting Beato with everything that was due to him. The charges were all reasonable in his opinion. He thought this from the decision of the referees in the late case and from his own experience.

Mr. Dickins said Mr. Marks was putting leading questions and he must object.

Witness continued: His charge was 30 cents per package for landing goods.

He did not agree when Beato charged him $90 and $75 for two godowns on lot No. 37. He bought that property with Mr. R. B. Baker; he was a partner. Beato was a partner and it was agreed between the partners that the rent should be $15 per month. Mr. Beato never raised any question till the present troubles began. He ceased to have an interest in the property in May, 1874. He gave up his share in favour of Mr. Beato. He had credited Mr. Beato with $15 per month for each godown since. He remained as lessor till June or July. He gave Mr. Beato notice when he left the first godown in May or June last year. He had credited Mr. Beato with all the money due to him.

Cross-examined by Mr. Dickins. He first came to Japan about 1864. He came here under a three years agreement to a House as silk inspector in 1867. He started on his own account and had continued so since. He started as a silk inspector and commission agent. He was agent for Adamson, Bell & Co., and Lloyds'. He ceased being agent for Adamson, Bell & Co., because they opened again for themselves. In 1868 and 1869 he did a large business in shirtings, muslins, &c.

Mr. Dickins asked for the production of Mr. Davison's Books.

His Honour refused to make the order.

Witness continued.—He could not say the amount of his business previous to 1872. He understood the trade in *Articles de Paris* and staples in 1872. An agent is a man who acts for another man. He forgot when he first became acquainted with Beato; he (Beato) was here when he first came to Japan. He thought he had known Beato; up to May or April last year he had been friendly with Beato. In 1872 he sold some silk-worm eggs and bought some silk for him. He acted as his agent in collecting rents &c. In 1872 Beato telegraphed to him from Singapore to take charge of some goods. He was agent for Beato in 1872. He was appointed by telegraph. He had not that telegram. He believed Beato had run away with it and many other papers out of his office that he could not find. After Beato arrived he ratified the agency he had made with him (witness) by the telegraph. It was [illegible] writing. Mr. Beato told him he had goods arriv[illegible] e and asked him (witness) to do the business for him. 5 per cent commission was agreed on, on all goods sold except staples. The only mention of charges was that they were to be fair and reasonable. He considered this a definite arrangement. He had consignments on these terms. He never told Beato what his charges were; he did not consider it necessary. The goods when they came were landed and put into his godowns. He stored them on account of the Banks here.

Mr. Dickins showed a receipt to witness, who immediately claimed it as his property.

Mr. Marks said that a lot of receipts, &c., had been as good as stolen from Davison's office.

His Honour declined to allow the squabble to go on in Court.

Witness continued: These accounts were deliberately taken out of his office by Mr. Beato. The receipt shown to him was one of the ordinary forms.

A great dispute here arose as to the keeping back of certain receipts. Nothing was done, however.

Witness continued: The receipts of the banks were different; one had a printed heading, and the other a written one. The receipts were not substantially different. The receipts were headed, "Received from F. Beato;" that was done so that the bank might see whose goods they were. In 1873 he rendered no account sales; it was impossible, as boxes were opened and a few articles taken out. He rendered no account sales to the Hongkong and Shanghai Bank, and none to the Chartered Mercantile Bank. He told the late Mr. Baker, of the Chartered Mercantile Bank, what goods were sold; at times he rendered account sales in that way. He paid proceeds of sales to the different banks to whom they belonged. The goods were all mortgaged to the banks; they came out that way. He stated in the last trial that he retained money enough to meet his charges on the goods under the $45,000 loan, within a few hundred dollars. He sent no memo. of charges to the Hongkong and Shanghai and Chartered Mercantile Banks when the goods were transferred to the Oriental Bank Corporation. He did not do so, because the goods were his security. He knew that the goods were transferred; he did it himself. He did not know that the reason that he sent in no memo. for charges was because he had retained enough of the proceeds to meet them. He did not remember stating that at the last trial; he might have said that about the $45,000 loan. He hoped that all the statements he swore to at the last trial were correct. He could not remember making any incorrect statement at the last trial. At the time of the transfer of the goods to the O. B. C., he had not retained enough to meet his charges. If he had retained his charges at the time of the transfer, Beato would still owe him money for commission. He did not make a statement to the effect that the goods were free when transferred to the O. B. C. He had not had a holiday for three years on account of the trouble of his business, and the annoyance he had received from Mr. Dickins. He did not have account sales made up, because Mr. Beato had free access to his books. He brought the action against the O. B. C. to recover charges and commissions. A commission is a fee or reward given by the principal to his agent. In demanding commission from the O. B. C. he treated that bank as his principal. His relations with the other banks were the same as those he had with the O. B. C. He held no opinion as to whether the O. B. C. was his principal. He would say yes or no, just as Mr. Dickins liked, to this last question.

Court adjourned till Friday (morning), March 5th.

MARCH 5, 1875.

Court re-assembled at 10.30 a.m.

J. Davison, sworn.—Cross-examination continued by Mr. Dickins: There was a verbal agreement about agency with Mr. Beato in 1872. He had three or four conversations about it. He was to take charge of what goods came out for Mr. Beato. There was nothing said as to how long Mr. Beato would continue to import goods. Mr. Beato talked of doing a large business. He did not know if it was going to be a permanent business. After the rupture in 1874 with Beato, he sent Beato a special account; in that account he treated Beato as his principal. Afterwards he entered into negotiations with Beato with regard to arbitration on the charges, but it fell through. He sent in an account to the O. B. C. (Account produced). He did not know if his attorney had sent in a certain document to Beato.

Mr. Marks admitted sending it.

It was a document emanating from the O. B. C., Beato, and all whom it concerned. The sum of about $16,000, and threatening proceedings if not paid. It was for charges on the goods, &c., &c.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Witness continued: He sent in an account to the O. B. C., dated 15th Aug., 1874, in which he treated the bank as his principal. His first petition against the O. B. C. was dated 18th July, 1874 (Read).

Mr. Marks objected to Mr. Dickins bringing in the proceedings in the former case.

Mr. Dickins objected to being interrupted.

His Honor overruled Mr. Marks' objection.

Witness continued: Attached to the petition was a statement of account. That was followed by another petition dated 31st August, 1874.

Mr. Marks again objected.

Mr. Dickins said Mr. Marks had no right to interrupt him.

Mr. Marks said it was frivolous.

His Honor ruled that Mr. Dickins might make use of the late proceedings if it would assist his case.

Mr. Dickins read the second petition in the late case.

Witness continued: He had stated previously under oath that he was not agent for Beato in one sense—in the sense of the action he brought against the O. B. C. He said under oath that he did not agree to sell Beato's goods in the sense of the action he brought against the O. B. C. At that time his impression was that the O. B. C. was liable for the whole amount, and the Court decided that question. He said, in answer to his own counsel, that he was agent of the O. B. C. in the late action. He did not know in what position Mr. Beato and the O. B. C. now stood. (Witness admitted a number of answers he gave at the late trial as being correct.) He made a statement at the late trial that he was never agent for Beato, beyond collecting some rents for him. He said also that Beato was a speculator and not a merchant. At the time he said he wished Beato would not interfere with the goods, he considered himself Mr. Beato's agent.

Witness hesitated in giving an answer to a question put by Mr. Dickins, who observed, "You cannot evade me by saying that which is untrue."

The witness appealed to the protection of the Court against the use of such expressions.

His Honour rebuked Mr. Dickins, saying that it was not proper for Counsel to offensive expressions.

Mr Dickins said he had been provoked, and that he could if he liked.

His Honour said he would uphold the honour and dignity of the Court.

Witness continued: [He admitted more statements he made at the last trial: it is useless to repeat them.] He was agent for the Oriental Banking Corporation and Beato, too; that was what he meant by the dual agency.

The Court here adjourned till half past one.

The Court reassembled at half past 1 p.m.

Witness continued.—He produced the accounts before the referees in the late case. He did not know if he produced any other evidence before them. He landed and stored the goods on behalf of the Bank and Beato. He stated at the late trial that he landed and stored the goods on behalf of the Banks and not for Beato. He had been in the godowns on lot 37; he had never measured them. He did not know their capacity. He thought that the rate agreed upon was a fair one. He thought $45 was a fair rent as godowns go in Yokohama. He had no godown. He did not think he had rented a godown to any one during the past few years.

He did not remember renting a godown for the last 3 or 4 years. He rented a godown on lot 37 and one on lot 28. He had taken 28 for several years at $100.00 a month. He rented the godowns on lot 37 from the late Mr. Baker. It was about June, 1873 that Mr. Baker let him the godowns; it was only on a verbal lease that he rented them. There was no definite time mentioned; Mr Baker and he were partners in the transaction. He was a part owner of the godowns for a time. The property was then sold to Mr Beato, he never paid for his share. There was no written agreement signed. He could not remember. His name was good for the amount. The title deed was made out in Mr. Baker's name,

In the interval between the end of the O.B.C. trial and the present case he made demands upon Mr. Beato.

Mr. Dickins called for copies of those accounts; he could not lay his hand upon the originals.

Mr. Marks said he had not the copies with him.

Witness continued.—One account was about a transaction in silk he had had with Beato. He saw all the accounts before they were sent in to Beato. Mr Talbot made up the accounts for him. There was a charge for a commission on some silk in the accounts sent to Mr Beato.

He could not remember when the commission was first charged.

Mr. Marks admitted that there was a conspiracy between himself, Mr. Talbot and his client in regard to this item of commission on silk.

Witness continued.—The goods were withdrawn from him in October, 1874, about the middle of the month. When he gave up the goods he got receipts, (one receipt produced dated 28th Oct. 1874). The receipts are signed by Mr. Elder of the O. B. C. for the Agent of the Bank. The goods were delivered up on that receipt. The O. B C. paid the charges from the time of transfer till they were handed over at the end of October (an agreement produced and read.)

Witness continued:—The goods under that agreement were given up to the O. B. C. At this time he was agent for the O. B. C. and F. Beato. He never consulted Mr Beato about giving up the goods to the Bank. He was decidedly right in giving up the goods without consulting Beato. He estimated the value of the goods given up to the Bank at $175,000. His total charges on the goods came to about $28,000; this included payments for landing, duties, godown rent &c., and does not include commission on the goods sold.

He did not know of his own personal knowledge of back commission being paid.

(Items in the accounts gone into).—The amounts named are correct.

Re-examined by Mr Marks.—His object in bringing these actions was to get paid. He would be delighted to receive the money from the Oriental Bank Corporation, he would consider, if Mr Dickins offered it. There was a definite arrangement about commission.

Mr Dickins objected to such questions.

His Honour over-ruled the objections.

Witness continued:—There was an arrangement made, and it was distinctly understood that the charges were to be fair. If the accounts were made up strictly he believed as a matter of fact that he would be a loser.

Mr Dickins again objected saying that this was introducing new matter into the case.

Mr Marks denied this.

His Honour over-ruled the objection.

Witness continued—Mr Beato financially arranged the transfer of the goods from one Bank to another. He effected it himself after Beato had arranged it.

Mr Dickins again objected to the questions as being leading.

Witness continued,—He had considered Mr Beato liable for charges &c. besides the Bank. He had always looked to Mr Beato as being responsible. He was custodian of the goods for the O. B. C. when he brought the other action and he was responsible to the Bank for the goods. The Bank had a mortgage on them. If he had to choose he would prefer the Bank's liability for the charges to Mr. Beato's. He paid $120.00 a month for the premises on lot 28 which consists of a dwelling house and silk room &c. It is a very good house.

Witness was about to explain the partnership in regard to 37 and the godowns on it but

Mr. Dickins objected on principle.

His Honour ruled that it might be asked.

Witness continued:—Grigor, Baker, Beato and himself were in the partnership; eventually they all handed over their shares to Mr. Beato. Mr. Grigor first bought the property and sold shares afterwards. When the Bank in October took over the goods there were a number of unexpired fire insurance policies, and the bank bought these from him for $700 and odd dollars. He paid in advance for these policies. It was the custom.

John Grigor, sworn: He knew something about this business. Beato agreed to rent the godowns in June, 1873, from the owners. He bought lot 37. It was considered, that he had bought the property cheaply, and Messrs. Davison, Baker, and Beato desired to take shares in it, to which he consented. Mr Baker told them all that it would simplify matters if he paid all the money, and had the property registered in his name. This was agreed to. About this time Mr. Beato required godown accommodation to store goods, and he (witness) let the godowns on lot 37 to Beato. The rent agreed on was $90 per mensem for the two godowns. The goods Beato wanted to put in the godowns were *articles de Paris* and miscellaneous goods. He believed they were mortgaged to the O. B. C. Nobody had ever disputed the rent that Beato was to pay for the godowns, viz.: $90 per month.

Mr. Dickins did not desire to cross-examine.

Original from UNIVERSITY OF CALIFORNIA

N. P. Kingdon, sworn: He was a partner in the firm of Kingdon Schawbe & Co. He had resided in Japan since 1863. He knew about commission and storage business. If a man gave him goods for sale on commission, and then withdrew a portion of such goods from him, he would charge the full commission on the whole of the goods; he might or might not make a return of some of the commission. That would depend upon how he stood with the man who gave him the goods to sell. He had heard of a case in which the full commission had been charged on all the goods, though they were not sold, but simply withdrawn from the man's hands to whom they were given to sell on commission. It was a case in which goods had been shipped by a house in Singapore to a house in Yokohama for sale on a 5 per cent commission. He was instructed from Singapore to take over the goods in question from the house to which they had been consigned. The house here handed him the goods on his paying the full amount of charges and 5 per cent commission. He demurred to paying the 5 per cent. at the time, as his experience in Shanghai had been that when goods were withdrawn from a party they had been placed with for sale on commission, only one-half of the commission promised was to be paid. He referred the question to the firm at Singapore, but received instructions to pay the 5 per cent. commission agreed to. His house usually charged 75 cents for landing large packages, and the rate went down as low as 20 cent for all small ones. He did not consider Mr. Davison's claim of 30 cents all round unreasonable; it was moderate. He could not get the necessary policies of insurance on such goods for less than ¼ per cent. per month.

Mr. Marks asked Mr. Kingdon to take the accounts in his hand with the last page containing the rates charged doubled up, and, after satisfying himself as to the nature of the goods, to state what would be in his opinion a fair rate of storage.

Mr. Dickins, to Mr. Kingdon: You may as well say 35 cents at once, as you have been told to say—you have been well coached, no doubt.

Mr. Kingdon objected to the Court that such insinuations should be made,—entirely false and without foundation.

Mr. Marks stated that he had no conversation whatever upon the subject with witness, when,

Mr. Dickins said he did not believe Mr. Marks.

His Honor in strong terms rebuked Mr. Dickins, and said that his conduct was unprofessional and unwarrantable. It was like spitting in a man's face,—an offence for which he would be taken into custody by a policeman,—only here Mr. Dickins sheltered himself behind privilege of counsel. He would not permit such an abuse of privilege, and he would hear no excuses from Mr. Dickins. It was highly improper to make such imputations on the character of a gentleman without the least apparent cause. He expressed his regret to Mr. Kingdon that he had been so insulted in that Court.

Mr. Marks said that the Court was as much insulted as the witness by such an abuse of counsel's licence.

His Honor cordially agreed with Mr. Marks.

Mr. Litchfield said that it would be difficult to get witnesses to attend Court if they were liable to such attacks.

Mr. Dickins maintained his perfect right to say whatever he chose, but,

His Honor refused to hear anything more from him on the point, and asked Mr. Marks to proceed with his examination.

Witness continued: He charged 75 cents for storing, etc., bales of blankets, and 40 cents for muslins; 50 cents a case for hats, as they were bulky. His firm had a regular scale of charges.

Cross-examined by Mr. Dickins: The goods in the commission case he had spoken about belonged to a firm in Singapore. He did not know of any similar cases. He had never known a case like the present one between Davison and Beato. He considered that there was no commission due by the O. B. C. to Davison in regard to these goods, as Davison had acted as custodian only for the O. B. C. If an agent is forced to give up goods placed in his hands for sale, he might charge commission on unsold goods. He had not done much business in the line of goods now under issue. His firm only dealt in staple goods. He had an idea as to the size of some of the packages of goods in dispute.

Mr. Marks recalled Mr. Davison: He acknowledged receiving the letter shown to him by counsel. It was from Mr. Beato, notifying him that all business intercourse between them had ceased, and asking that a statement of accounts between them be made up at once.

Mr. Marks here read a letter he had received from Mr. Dickins demanding immediate delivery of the goods, and threatening consequences if refused.

Mr. Marks said that this evidence showed whether Mr. Davison had been forced or not to give up the goods.

Cross-examined by Mr. Dickins: He had not received any commission on the sale of goods since the rupture with the Beato. The O. B. C. had paid him his charges according to the verdict in the late case From the time of the transfer of the goods from the Chartered Mercantile Bank to the Oriental Bank, he believed he had charged the Oriental Banking Corporation with commission in the accounts he had sent in to that Bank. He had charged Beato with commission in the accounts he had given him.

Court adjourned till Saturday morning at 10.30.

SATURDAY, MARCH 6th.

The Court re-assembled at 10.30 a.m.

W. H. Talbot, sworn:—He was a public accountant. He was well acquainted with the parties in the action and with this business. He remembered the late case. After the verdict he prepared certain accounts from Mr. Davison's books. He had everything necessary to make the accounts in detail (accounts shown to witness and acknowledged.) They have all been proved by vouchers. He had seen the series of accounts rendered by the referees in the late case. The amount of the verdict has been deducted from the present claims (accounts handed to Jury). Mr. Davison was suing for unrecovered charges and commission on the goods from the date of their transfer to the O. B. C. from the other Banks.

(The report of the referees in the late case was produced by the Court on the application of Mr. Marks, who desired to show it to the witness.)

Mr. Dickins wanted it proved by the referees before being produced and shown to the witness.

Mr. Marks said this was frivolous and wasting the time of the Court.

Mr. Dickins argued strongly against this and said the documents must be proved.

Mr. Marks asked the Court that Mr. Bate prove the document. It was on the record.

Mr. Dickins insisted on it being proved by the referees.

His Honour desired Mr. Bate to get into the witness box and swear to the report.

Mr. Dickins said he should still object to it.

Mr. Marks said the objection could be noted.

Mr. Dickins argued that it was necessary that the referees prove the report.

Mr. Marks desired to proceed.

Mr. Dickins' objection was over ruled by His Honour, who made a note of it.

Clifford Bate, sworn:—He was the Registrar of the Court. He remembered the verdict in the late case. He held the report of the referees. There were accounts appended to the award. He recognized the signatures to the award.

Cross-examined by Mr. Dickins.—The accounts are not appended; they were handed in with the award. The schedules accompanied the report.

Mr. Dickins said that the accounts had not yet been verified. He must still object.

His objection was over-ruled and noted.

W. H. Talbot, continued; to Mr. Marks:—He had seen the accounts with the award by the referees in the late case. In the set-off he had these accounts before him and was guided by them. They were in accordance with the accounts. On some goods storage was allowed from the date of landing.

The accounts prepared by him for the referees showed a balance due of $11,105 by the Bank to Davison. The referees' amended accounts showed a balance due by the Bank to Davison of $5,218.00.

To Mr Marks.—He had lived with Mr. Davison sometime and was well acquainted with his business. All these goods stood in the Books under the head "F. Beato & Co." Accounts were made up last year. He did not know to whom they were sent. He thought that the originals were sent to the O. B. C. and copies to Beato. Beato had seen the Books in his presence and Beato had gone through several items in the Books. This happened on 2 or 3 occasions. Apart from the amount Beato never denied his liability; he always said he would pay reasonable charges. He made up the accounts for commission. Commission was charged on all goods sold by Mr. Davison; this was up to about June or July, 1874. The sales were the taken out of his hands. He was aware that commission was now charged on the withdrawn goods.

Cross-examined by Mr. Dickins.—Davison had paid about $7,000 for Fire Insurance, out of his own pocket. The policies covered

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

some unimportant goods of Davison's. But practically they covered Beato's goods only. Mr. Davison made a total charge of about $10,000 for Fire Insurance on the goods. (Witness explained how this amount had been arrived at.) There was only a few hundred dollars overcharged by Mr. Davison over and above what had actually been paid out for Fire Insurance. He began to make up Davison's books in June, 1873.

Mr. Dickins asked witnesss if he knew how many clerks there were in 1872 in Mr. Davison's office.

Mr. Marks protested against this being answered.

His Honour over-ruled the objection but made a note of it.

Witness continued.—About the end of 1872 Mr. Davison had only one clerk a Mr. Smith. He was employed to do Mr. Davison's work. After the commencement of the agency no other clerks were employed till the end of 1873; it was not necessary. In the end of 1873 Davison had two clerks, Mr. Maack and Mr. Englehardt. At the end of October 1873 he had only one clerk. Englehardt was there until the rupture. Mr. Davison paid all the salary of Mr. Englehardt up to rupture. Mr. Englehardt was paid about $120 and Mr. Smith $200 per month: Maack had the same as Smith. He believed Mr. Davison had three Compradores (account book referred to see what salary was paid to the Compradores). Davison had been put to no other expenses on account of Beato's Agency except petty ones which had been just in the charges. At the end of 1874 when he was called upon to write up the books they were not written up. They were four months in arrear. The cash book was written up.'

The Court here adjourned till half past one.

(To be Continued.)

LIVINGSTONE'S LAST JOURNALS.*

(Pall Mall Gazette.)

We do not intend to give our readers a sentimental review of this this book, for of such we imagine there will be enough, but shall examine and describe the rich legacy of scientific facts contained in the work, which, though written by the wayside, is less crude and fragmentary than might have been expected. In the first place, as to geography, two new lakes and many rivers have been discovered; and, what is of still more importance, Livingstone's journey to Manyuema has shown, we think, conclusively what are the general features of that vast space which is still left white upon the maps; and which, a continent within continent, is bounded on the north by Darfur, Bagirmi, and the Land of the Binué, that great tributary of the Niger; on the east by the Lakes Albert Nyanza and Tanganyika; on the west by the Congo and Gaboon: on the south by the kingdoms of Casembe and Matuimvo, and as Livingstone supposed, by the Fountains of the Nile. It is a marsh and forest plateau, deluged by heavy rains, which fill a number of enormous lakes and cause them to overflow in rivers and floods. It is, we may infer, inhabited by savage negro tribes, dwelling in small communities, frequently at war among themselves, seldom travelling more than a day's journey from the villages to which they belong, killing elephants for food, and leaving the ivory to rot upon the ground, yet not unacquainted with agriculture, and, strange to say, highly skilled in the manufacture of spear-points and knives. In this country is found the gorilla and the chimpanzee and perhaps other species of anthropoid apes at present unknown; and no doubt there are also wandering tribes of bushmen or pigmies, who remain in the hunting, root-eating condition, and are believed to be the original possessors of the soil. The Foulas of the Niger and the Moslem rulers of Bagirmi, Wadai, and Darfur hunt the plateau for slaves, and the Zanzibar Arabs settled on the shores of Lake Tanganyika have just commenced a similar practice; but these raids (for which we refer our readers to the works of Dr. Barth, Mohammed-el-Tounsy on Wadai, and the book we are reviewing) have not extended far beyond the border, and it will be very many years before this country is fully explored from the three great centres of future expeditions: the Geographical Society of London the African Association of Berlin, and the Palace of the Khedive, which last will perhaps be the most active and successful of all. We think, then, that Livingstone has cast a ray of light across this unknown Africa; but it seems to us that these seven years travel are scanty in result—that he showed a want of method and judgment in his expeditions—that his journeys are too much in the nature of wanderings. We cannot understand, in the first place, why, when Lake Tanganyika was to be his starting-point, he should have chosen a long and circuitous rote instead of going by the caravan road to Ujiji. Had he done so he would have formed friendships with respectable Arabs at that settlement and in Unyanyembe, and would not have been harassed and impeded by the constant robbery of his goods and the delay of carriers. We also venture to assert that it was a bit of bad workmanship leaving Tanganyika unexplored. A canoe voyage round the lake would have been nothing to him, and he must have known that it was of importance to geography. Mr. Stanley, in fact, informed him that Sir Roderick wanted the lake explored and he consented to go to the north end. This trip he called a picnic; but when Mr. Stanley proposed that they should complete the circumnavigation of the lake, or at all events coast its north-western shores, he refused. Some have supposed that he wanted to at get Stanley out of the way and to discover the outlet by himself; but it seems to us that he did not care about the matter; it was not *his* lake; and he did not think it worth while to complete another man's work. As it is, we do not regret that he left for the enterprising Cameron an important discovery; and we heartily congratulate the Geographical Society on the success of their emissary; but, nevertheless, it was a serious omission on the part of Livingstone. As for his supposition that the Lualaba is the Nile, he may be mistaken; but the manner in which he writes on the subject is really admirable. He was of course most anxious to believe that he had discovered the true Nile far above its supposed source; yet he fairly puts forward all the facts that tell against his pet hypothesis. For our own part, we believe that the Lualaba belongs to a system of waters distinct from those which supply the great lakes of the Nile; but we should no like to speak in that positive tone with which certain semi-geographers refused to accept his theory. It is quite an open question, and experience alone can decide it. All that Livingstone says about the Fountains of Herodotus must, however, be set on one side. The Nile may rise from the hill of the fountains lying west of Lake Bangweolo, but the fountains Herodotus described from Egyptian information were situated between Egypt and Ethiopia—that is, in the Nubian desert; and Herodotus merely reported but did not believe in so palpable a blunder. It has served in our own time to entrap travellers who were not scholars, and scholars who knew nothing of travel; and we hope there is now an end to an error so absurd.

The manners and customs of the natives are so much alike all over the African continent, and have been so fully described by Livingstone himself and by other travellers, that it is difficult to find any new thing: and those industrious collectors of anthropological facts, Mr. Taylor and Sir John Lubbock, must soon think of giving up African works in despair at the constant repetition. But we never heard before of a man using the hole bored in his nose for holding a needle. The despots of Casembe have also invented a new pleasure, such as despots proverbially sigh for. They crop off the ears of their subjects, and the State executioner carries on his neck the curious scissors-like instrument with which this operation is performed. A chief who inquired why Dr. Livingstone had come to his country was told that it was for the benefit of the natives; to which statement he replied by pulling down the underlid of his right eye. Naughty boys in Ashantee use the same gesture when they want to make game of their betters. The following passage bears upon the question of gesture language: "A deaf and dumb man appears among the people here making signs exactly as I have seen such do in England, and occasionally emitting a low, unmodulated, guttural drawl like them." The blacksmiths make several hoes in a day, and the metal is very good. "The hammer, which we hear from dawn till sunset, is a large stone bound with the strong inner bark of a tree, and loops are left which form handles. Two pieces of bark from the tongs, and a big stone sunk into the ground the anvil." Here, then, we have the stone age and iron age together. Dr. Livingstone states in this work that he never found any ancient stone implements in Africa, but no doubt they do exist under the soil in countries through which he has travelled, for they abound on the Gold Coast. He gives an interesting description of the manufacture of cloth from bark, which is first steeped in water till the outer of the two inner barks can be separated; it is then tapped with an ebony mallet to separate and soften the fibres. To the west of Lake Tanganyika are cannibal tribes, who eat their enemies that are killed in war. One of the cannibals told Livingstone that the meat was not nice: it made one dream of the dead man. In the Metemba country, near the Lualaba, a quarrel with a wife often ends in the husband killing her and eating her heart mixed up in a huge mess of goat's flesh. Such is the noble savage in his natural state when uncontaminated by the vices of civilization.

* "The Last Journals of David Livingstone in Central Africa from 1865 to his Death. Continued by a narrative of his last moments and sufferings obtained from his faithful servants Chuma and Susi." By Horace Waller, F.R.G.S. In 2 vols., with portrait, maps, and illustrations. (London: John Murray, 1874.)

Original from UNIVERSITY OF CALIFORNIA

Dr. Livingstone had no sporting taste, though he passed his young years in that paradise of hunters, Inner Southern Africa. But he was always fond of observing the habits of wild animals. He it was who first showed that there are many singing birds in Africa, though perhaps he should not have expressed his regret that the birds of Africa had never had an Aristophanes to describe them. Not that this is any worse than the Fountains of Herodotus. Not only the birds in Africa, but also the frogs are sometimes musical. "As I sat in the rain," he says, "a little tree frog, about half an inch long, leaped on to a grassy leaf and began a tune as loud as that of many birds and very sweet; it was surprising to hear so much music out of so small a musician." In Manyuema he saw an elephant with three tusks. He mentions the following curious fact:—"The poodle dog Chitane is rapidly changing the colour of its hair. All the parts corresponding to the ribs and neck are rapidly becoming red; the majority of country dogs are of this colour." We have not space to discuss whether the great ape called soko is the gorilla or chimpanzee, but must say a word about the tsetse, for on the Gold Coast we are now brought in contact with this troublesome insect, which kills cattle and horses. The highlands behind Accra, being comparatively healthy, and only a short day's journey from the coast, are well suited for Government head-quarters; and mission stations have for some years been there established. But when the German missionaries had been at the trouble of making a road for horses and carts, the horses all died, and it was found that the tsetse infested the woodland at the foot of the hills. Livingstone had asserted in his previous works that donkeys were not affected by the fly; but the missionaries tried these animals with no better success. In these last journeys of Livingstone he also found that he had been mistaken, and that donkeys enjoy no immunity. He brought camels over from Bombay; the tsetse attacked them by preference, and they soon died. But tsetse or no tsetse, camels will not live in the malarious parts of Africa. Lion fat smeared on the tails of animals preserves them from the fly; but as the lion is not found upon the Gold Coast the old system of hammocks and bearers must, we suppose, be continued.

Dr. Livingstone's revelations of the slave trade brought about Sir Bartle Frere's treaty with the Sultan of Zanzibar. The horrors of the middle passage by sea are well known to those who have studied the literature of the great Abolition movement at the beginning of this century; and it cannot be doubted that the slaves suffer no less when packed in small Arab dhows than in American clippers. But no one had ever formed an idea of the horrors which attend the first capture of slaves in the African interior until Livingstone had visited the slave hunting regions. Arab adventurers and half-caste Portuguese go with armed bands among the natives, stir up wars, and join the stronger side, being paid with human booty for their trouble; or attack on their own account peaceful villages. Those who are captured alive bear but a small proportion to those who are killed. Logs are chained to the necks of the survivors, and as they march down to the coast many fall down exhausted, and are left to perish of starvation. Sometimes the natives of the country take them, feed them, and sell them again; sometimes the slave masters kill them on the spot to frighten the other slaves and to make them bear up. It was once a popular theory that the negroes were intended by nature to be slaves; but when free-born negroes are made slaves by being made prisoners of war they show no aptitude for their new condition, but often die soon after their capture of pain in the region of the heart. The slaves, it has often been said, sing and dance in their captivity. But these songs are songs of vengeance, and their dancing dances of death. Livingstone heard six men singing as if they did not feel the weight and degradation of the slave sticks; he obtained a translation of the song, which was as follows:—"'Oh, you sent me off to Manga. (the sea coast), but the yoke is off when I die, and back I shall come to haunt and kill you.' Then all joined in the chorus, which was the name of each vendor. It told not of fun, but of bitterness and tears." In Africa it is believed that the ghost of a man has power to kill his enemies; such is the only hope which these poor wretches carry to the grave. Their sufferings cause a bitter anguish to this noble-hearted man, who found himself powerless to relieve them. On one occasion he witnessed a fearful massacre in which women and children were shot down without mercy. At another place he writes:—"The relatives of a boy captured at Monanyembe brought three goats to redeem him; he is sick and emaciated; one goat was rejected. The boy shed tears when he saw his grandmother, and his father too, when his goat was rejected. 'So I returned, and considered all the oppressions that are done under the sun: and behold the tears of such as were oppressed, and they had no comforter; and on the side of their oppressors there was power; but they had no comforter.' (Eccles. iv. 1)." It may be hoped that when the export of slaves from the east coast of Africa is suppressed there will be less of this murderous business. But we must not indulge in illusions. The African slave trade is indigenous; the wealthier tribes are always in want of slaves to hoe their fields, and so are the Arabs settled on the coast and in the interior. Slave-catching is also inseparable from ivory trading. For instance, an Arab comes to an ivory district and buys a number of tusks, but is in want of carriers to take them to the coast. Men are not to be hired, and he does not wish to leave the ivory behind him. How natural, then, that he should capture by force the people who sold him the ivory! First, he recovers the goods he had paid, and so obtains the ivory for nothing; secondly, he gets the ivory carried to the coast without incurring needless expense; and thirdly, he sells his carriers when he has done with them. Many a Christian it must be confessed, has yielded to lighter temptations; and we cannot expect too much of these wandering Arabs, who are half outlaws to begin with, and men of desperate fortunes. Nothing can extinguish slave-hunting in Africa except Egyptian annexation; there are some who consider the remedy as bad as the disease; but such is not our opinion, especially if English men are appointed to govern the regions annexed.

The work is well edited, and leaves nothing except an index to be desired. The map is excellent. These journals will have an immense circulation, and many persons who have no particular taste for books of travel will be glad to place in their libraries the last words of a great explorer and a good man.

REUTER'S TELEGRAMS.

London, 19th Feb., 1875.

Dr. Kenealy entered Parliament, and was introduced to the Speaker, who intimated that two Sponsors were required, to which Dr. Kenealy objected, and on a motion in the House of Commons, Mr. Disraeli waived the rules.

The motion declaring Mitchell disqualified to take his seat as Member for Tipperary, was adopted, and a new writ ordered.

In consequence of the tardiness of Spain to afford satisfaction in the "Gustav" affair, Germany is preparing a Naval Expedition to act against the Carlists.

London, Feb. 17th, 1875.

Sir William Gervois will probably succeed Sir Andrew Clarke.

Dr. Kenealy has been elected a member of Parliament for Stoke-on-Trent.

Mitchell landed at Queenstown to-day.

The refusal of England to attend a Conference, has produced an unpleasant impression in Russia.

London, 16th February, 1875.

John Mitchell has been elected Member for Tipperary without opposition. The Government moved for a certificate of felony, and the motion being adopted, a new writ will be applied for on Thursday.

Singapore, 16th Feb., 1875.

An outbreak has occurred amongst the Chinese prisoners at the criminal gaol at Singapore. Superintendent Dent was killed, and sixteen Warders wounded. Fifteen of the prisoners were killed, and thirty-five wounded. Order has been restored.

ARRIVALS.

Mar. 2, *Costa Rica*, American steamer, Conner, 1,917, from Shanghai, General, to P. M. S. S. Co.

Mar. 5, *Niigata Maru*, Japanese steamer, Walker, 1,680, from Shanghai and ports, General, to Mitsu Bishi Co.

Mar. 6, *Lutcken*, British barque, Lessing, 406, from Sydney, Coals and Kerosene, to Wilkin & Robison.

Mar. 6, *Mora*, British barque, Angel, 620, from Liverpool, Coal and Machinery, to Sitwell, Schoyer & Co.

Mar. 6, *Jan Peter*, German barque, Molsen, 336, from Taiwanfoo, Sugar, to Order.

Mar. 6, *Thomas Hilyard*, British ship, Campbell, 1,500, from Cardiff, Coal, to P. & O. Co.

DEPARTURES.

March 2, *Lycee moon*, British steamer, Stephens, 670, for Hakodate, General, despatched by P. M. S. S. Co.

March 2, *Tancais*, French steamer, Reynier, 1010, for Hongkong, Mails and General, and Marines, despatched by Messrs Maritimes.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

March 2, *Adventure*, H. M. S, D'Arcy, 1,600, for Hongkong, Marine Battalion and officers

March 3, *Nevada*, American steamer, Williams, 2,145, for Shanghai, Mails and General, despatched by P. M. S. S. Co.

March 3, *Tokio Maru*, Japanese steamer, Dunn, for Shanghai, General, despatched by M. B. S, S. Co.

Mar. 4, *Colorado*, American steamer, Dearborn, 3,628, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per French steamer *Tanais*, for Hongkong.—Mr. W. P. Kent, Mr. Wm. Assite, Capt. Corione, Lieut Adam, Sous-Lieut. Coiffier, 8 non-commissioned officers, 88 Corporals and soldiers, Messrs. Mangrie, Noyer, and Francois, Officer of Mission.

Per American steamer *Costa Rica*, from Shanghai and Ports.—Mr. P. Evans, Mrs. Evans and child, Miss McPherson, Messrs. E. H. Gower, J. Mercer, C. Rohde, M. Hunter, H. Francke, Wm. Govans, D. H. Tillson, H. J. Tripp, M. Hodnet, and 53 Japanese. and 4 Chinese, in the steerage.

Per P. M. S S. *Nevada*, for Shanghai and ports.—Mr. and Mrs. Heimann, Mr. and Miss Kelly, Mrs. Badge, Messrs. Lockhart, Wallace, Tillson, Hay. Heitman, Lavers, Walder. Stewart, Little, Keeles, Carroll, Escombe, Suri, L. J. Sa, Capt. Wise, Dr. Tripler, and 15 Japanese; 93 in steerage.

Per *Tokio Maru* for Shanghai and ports.—Messrs. Heize, H. Steele, W. A. Thomson, J. Herdman, Ftatusan, Osaki, Rev. C. Rubio, Wachtell and servant, Ito, Majima, J. Lescasse, Minami, L. Joseph, Tsuda, Mito Renta, L J. Sa and servant, S. Goldman, M. Roberts, Shibeta and wife, Horiguchi, Saka Jama, Okuda, Okugawa, Kaneisa, Shinradu, Masadu, Sasaki, C J. Frischling, Tanaka, Kimoora, Mori, Inonli, Harasa, Voigt, V. Pignatel, C. Johnson, Thos. D. Skelly and servant, F. Hague and servant, H. Requell and servant, J. H. Blair and servant, and 193 in the steerage.

Per Japanese steamer *Niigata Maru*, from Shanghai: Messrs. L. Dupont Syle, W. Power, and W. Lowe. From Kobe: Messrs. G. Dircks, A. O. Gay, J. A. Robertson, Coye Sungi Mata, and one Japanese; 33 in steerage.

Per British barque *Lutcken*, from Sydney.—Capt. Schultz, Mr. B. Wallach.

CARGOES.

Per French steamer *Tanais*, for Hongkong:—

Silk	237 Bales.
Waste Silk	39 „
Treasure	$28,000

Per American steamer *Costa Rica*, from Shanghai and Ports:

Treasure	$53,700

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, $10,000.

Per Japanese steamer *Niigata Maru*, from Shanghai.—Treasure $6,000.

REPORTS.

The British barque *Lutcken* reports left Sydney 29th December, and passed between the New Hebrides and Fiji Islands on January 6th. In lat. south 21° 30 and east long 172.43 passed discoloured water; steered along the southern edge of it for 13' to the westward not deeming it prudent to push through between the yellow patches on which appeared to be no more than 34 fathoms of water but no breakers were seen although rather high sea was running at the time. Was becalmed under the Equator for 10 days. Passed Ebon Island, January 28th; communicated with the German schooner *Meetantu*, Capt. Milne, bound for Yeluite Island. Had steady N.E. trades to 20 N. Latitude: from thence to port, a succession of Westerly and Northerly gales and heavy seas were experienced by which the vessel was much retarded in her passage.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

YOKOHAMA, MARCH 6TH, 1875.

IMPORTS.

Cottons.—The market for Cotton Fabrics and Yarns has continued dull during the closing week although buyers have exhibited a larger disposition to operate at lower rates. *Shirtings* of 7 lbs. weights are neglected by the trade though a moderate demand is apparent for the better makes of 8¼ lbs. weights. The value of 9 lbs. is unchanged. *Velvets* are in fair enquiry. *Yarns*, 16/24 are fairly saleable at quotations; 28/32 are less enquired for.

Grey Shirtings:—			White Shirtings:—		
7 lbs.	38½ yds. 39 in. per pce.	$1.87½ to $2.10	56 to 60 reed 40 yds. 35 in. nom. per pce.	2.40 to	2.50
8 lbs.	38½ yds. 44 in. „ nom		64 to 72 „ „ „	2 80 to	3 00
8 lbs. 4 to 8 lbs. 6	„ 39 in. „	2.17½ to 2 52½	Turkey Reds 25 yds. 30 in. 2¼ – 3 lb. per lb.	0 90 to	0 97½
9 lbs.	„ 44 in. „	2.65 to 2 92½	Black Velvets	8.75 to	9.75
Taffachelass Single	nominal		English Drills	3.20 to	3.40
			Canvas, Navy, Red Stripe	7.00 to	8.00
No 16 to 24	per picul	33.00 to 36.50	No. 28 to 32 per picul	38 50 to	42.00
Reverse	nom.		„ 38 to 42 small stock nom. „	42 00 to	47.25

Woollens.—Transactions in these goods have been very inconsiderable during the past eight days, at rates which, except for *Mousselines* exhibit no improvement. The demand for the latter has to a large extent subsided, but suitable assortments are saleable at full rates—if by full may be understood a slight margin over cost price. The market for the ordinary season's business may now be said to have closed.

Plain Orleans	40—42 yds. 32 in.	6 25 to 7 75	Figured Mousseline de Laine	30 yds. 30 in.	0.28 to 0.32
Figured Orleans	29—30 yds. 31 in.	4 50 to 5.25	Multicolored „	30 yds. 30 in.	0 30 to 0.40
Italian Cloth	30 yds 32 in.	0 25 to 0.37	Cloth, all wool plain or fancy	48 in. to 52 in.	1.00 to 1 30
Camlet Cords	29—30 yds. 32 in.	6 25 to 7 25	Presidents	54 in. to 56 in.	0.75 to 0 85

„ No. 2 Ching-pak	„	7.70 to 8.00	Daitong	„	3 70 to 4.00
„ No. 3 Ke-pak	„	7.40 to 7 40	Japan Rice	„	
„ No. 4 Kook-fah	„	6.60 to 6 90	Kerosine Oil	„	3.20 to 3.30

EXPORTS.

Silk.—Since the 24th ulto., arrivals are 187 bales, and purchases about 350 piculs, including some 34 piculs which were sold yesterday by public auction in the native town for the account of a Japanese firm in liquidation. There was a numerous attendance and the parcels were disposed of at the following prices:—

Lot No. 1,	11 piculs,	of Sinchu Szwa native "filature" 10/14d. good color, twisted skins					$565
„ 7,	6 „	Sinchu Hanks,	No. 1½ to 2				$495
„ 6,	5 „	do.	do.	No. 2 to 2½			$460
„ 4, and 8,	7 „	do.	do.	No. 3			$412½ to $420
„ 3,	2½ „	do.	do.	No. 3 to 4			$380
„ 2,	2½ „	do.	do.	very inferior			$355

Compared with our quotations of 24th ulto., which we reprint below, these prices show a decline of $10 to $15 on good and medium, and $25 to $30 on common and inferior Hanks. Silk similar to Lot No. 1, was quoted $600 to 620 in December last. With the exception of Lot No. 2, all the parcels were bought by foreigners.

Hanks—	*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.*	*Laid down and sold in London Ex. 6mos. at 4s. 2¾d. & Lyons, 5.35.*
Best (No. 1/2)	520 to 540 19s. 11d to 20s. 8d frs. 55 to 57	Medium (No. 2½) 450 to 470 17s. 5d. to 18s. 1d. frs. 48 to 50
Good (No. 2)	480 to 500 18s. 6d. to 19s. 2d. frs. 51 to 53	Common No 3 400 to 440 15s. 7d. to 17s. 1d. frs. 43 to 47

Tea.—For the past week, induced by a marked concession on the part of the Japanese, a little animation has been apparent and settlements for the period since the departure of the American mail on the 26th ultimo amount to about piculs 1,900.

Prices shew a decline of from $5 to $6 per picul at which "medium" grades are most in favor.

Arrivals have been only moderate and stocks are slightly decreased, amounting at present to some piculs 6,300 on the spot.

The weather so far promises well for the tea plant. The steady cold we have experienced for so long a period will probably preclude a premature development of the young shoots, and judging from reports amongst the Yokohama tea merchants, and the fact of excellent prices having prevailed for producers up to the present for the closing season, we may hope for an ample product for the coming one though, perhaps, such heavy supplies may not come in as early as last spring.

Common		$18.00 to 22.00	Fine		$40.00 to $44 00
Good Common		23 00 to 28.00	Finest		45.00 to 48.00
Medium		31 00 to 35 00	Choice		51.00 to 55.00
Good Medium		36.00 to 39 00	Choicest		None.

EXCHANGE AND BULLION.

Exchange.—There has been scarcity of private paper on offer, while there has been a fair demand for Bank bills. *Gold Yen*, are scarce, and higher, while *Kinsatz* have greatly declined.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2¾d.	On Hongkong Bank Bills on demand	Par.
„ „ Sight	4s. 1¾d	„ „ Private Bills 10 ds. sight	½ per cent. dist.

THE GREATEST WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

DIED.

On the 10th of March, at the convent of the Holy Infant Jesus No. 83 Bluff, Sister ST. WILFRID, aged 55 years of cerebral hemorrhage.

Notes of the Week.

THERE have been many rumours in regard to the specific object with which the return of Kido and Itagaki has been arranged:—the relations between Japanese and Corea, the establishment of representative institutions, &c. But though these and other matters may have been discussed and opinions exchanged upon them by the members of the Cabinet and their new colleagues, it may be doubted whether there is any more serious move contemplated in regard to Corea than was made a few weeks ago in the mission of Moriyama; and, so far as representative institutions are concerned, it is certain that the mass of the Japanese people, who now regard them in somewhat the light of a fetish, must show far more of the need for them than at present before the Government will concede that which must decrease its own power, whatever else it may do. The idea abroad among a certain section of the Japanese is that if a "House of Commons" is established, (we use their own phraseology), certain mysterious virtues will flow from it, which is about as rational as to place the customary musical instruments in the hands of eighty untaught men and suppose that you have formed an orchestra. It is the spirit of freedom which makes these institutions; not the institutions the spirit. A House of Commons is not a building or a mere assemblage of men in a building. If it exists at all, it is—we say it reverently—where Christ said that the kingdom of heaven was, not here or there, but "within you."

The return of Kido to the Cabinet is a circumstance of excellent augury, and will be hailed with great and general satisfaction. No man in Japan is more trusted; his honesty of purpose is undoubted and beyond suspicion; his courage was put to ample proof during the revolution; and his thoughtful sagacity will rather have been increased than diminished during his late retirement.

We do not speak with certainty, but we believe that Itagaki's withdrawal from the Cabinet nearly two years ago was due to his sturdy protests against the assembly of the Chihanji being offered as any sort of equivalent for the representative institutions for which there then was, as there is now, some clamour. He is, we imagine, less known to foreigners than Kido; but their names have lately been more or less coupled, nd Pollux has ever ranked with Castor.

A curious confirmation has just reached us of the views we have lately been urging with regard to the vitality—or, perhaps, we should rather say, want of vitality—of the scheme for colonising Yezo, views which are also urged in an article in one of the native newspapers a translation of which will be found elsewhere. The testimony we have received runs as follows:—"Colonization is at a stand-still. The colonists are leaving one by one. The stage-coach which ought to have run from Hakodate to Satsporo is stopped, the horses have been sold, and the new road is going to rack and ruin." We are persuaded that the Foreign Adviser to the Kaitakushi will deplore this even more than we do ourselves, for his heart has been in his work. But is there not somewhat more of truth in our similes of the straw man and the artificial flower than he was quite willing to give us credit for?

A notification has been issued by the Mombusho to the effect that, for the future, the provision made in aid of the primary schools of all the *Fu* and *Ken* except Tokio, shall be furnished from the funds in hand on their way to the Central Treasury, and will not be sent from Tokio as hitherto. This will tend to dispense with a great deal of official work now rendered necessary by the transmission of the funds from Tokio.

The amount set aside for the present half-year in aid of *Primary* schools is about 260,000 *yen*, and is distributed over 62 *Ken*.

WE have received another communication from our correspondent of last week "Lynx" upon the subject of his former letter. But we withold it at present in the hope that the Government will, by one of the many means open to it, explain the Notification to which the letter has reference, and justify our correspondent's view that it is susceptible of some explanation other than that which both he and ourselves are most unwilling to place upon it.

AT a meeting of General Committee appointed to carry out the wishes of the subscribers to the ball lately gived to the officers of the French and English Marines, a special acknowledgment was made of the services rendered by Messrs. Piquet, Glennie, Russell Robertson, Townley, Brunton, Dodds and the Hon. Secretary, Mr. Leckie, for the assiduity with which they discharged their duties.

YAMAGATA, Minister for War, returns from Osaka immediately. General Saigo leaves for Nagasaki on the 17th.

THE eulogiums with which the American Press greeted the appearance of the *City of Peking* in the waters of New York and which were, not unnaturally, attributed to the enthusiasm excited by a success in a new and unwonted national enterprise have been, it must be admitted, fully borne out by that vessel which arrived at an early hour this forenoon from San Francisco. We have already reprinted descriptive reports of both the new steamers from the New York journals, and it may be sufficient here to recapitulate the leading features of the first constructed of the two. Her total length is 420 feet, having 48 feet of beam and 38 of depth with a gross tonnage of 5,500. Her stowage power comprises 4,000 tons of cargo with 1,500 of coal and accomodation has been provided for 150 cabin and 1,500 steerage passengers. She is fitted with engines of 1600 nominal horse-power, working up to

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

3,200 horses, which possess a propelling power of 13 knots upon a consumption of 45 tons of fuel per twenty-four hours. Her crew is composed of 6 officers, 9 cadets and 180 men. Viewed from the water the *City of Peking* presents the appearance of the latest English model, a rise at the stern alone indicating some modification in the usual plan, and while her four masts are admirably distributed so as to secure the largest advantage from her sailing powers, there is an ungainliness in her top-gallant masts and yards which to a landsman expresses a want of elegance and graceful outline. In her interior arrangements, however, there is nothing for the most captious to take exception to, and it is sufficient to say that while no modern convenience for facilitating the performance of the work of a ship has been omitted the builder's art has left upon each contrivance the impress of skilled hands and honest performance. To passengers especially the *City of Peking* offers the extreme of sea luxury—a saloon replete with every appliance calculated to render the and dreariness monotony of sea life endurable, comfortable cabins, a long promenade and a *batterie de cuisine* of great possibilities. There is only one defect in this noble ship, we understand, and this—the fact of the screw being of cast metal in lieu of steel—has already exposed her to some inconvenience, the last occasion of this being chronicled in her report which will be found elsewhere. Whether this be due, as is alleged, to the protective principles which regulate the commerce of the United States, or to an error in judgment the result is undoubtedly much to be deplored.

The intelligence respecting the subsidy granted to the Pacific Mail Company is somewhat conflicting and embarrassing. We believe, however, that the subject was under consideration by a Special Committee when the mail left San Francisco.

THE case of Davison *vs.* Beato has occupied H. B. M. Court to-day. Mr. Dickins and Mr, Marks addressed the Jury and the Judge summed up the evidence. After a deliberation which lasted rather more than an hour the Jury brought in a verdict in favour of Mr. Davison, awarding him $8,302.65. a sum which disposes of Mr. Beato's counter claim.

(From the Japan Mail Daily Advertiser.)

IN accordance with their hospitable custom, the members of the German Club invited their friends to witness a dramatic representation on Saturday evening last. The pieces selected demand but little notice, the story in each being excessively thin and the dialogue unmarked by any peculiar brilliancy, but every justice was done to their representation which passed off with the success which has invariably distinguished these *réunions*. In the first of the two, Dr. Peschke, "Ernst Willmann is an applicant for a vacancy in the household of a nobleman, but his attempts to approach the master, in order to exhibit his testimonials have long been all in vain. In making the attempt with which the piece opens, he is roughly treated by the servants, and he decides to leave the house never again to enter it. At this moment *Peschke*, who is well known to and liked by the servants, comes in. He tells *Willmann* not to despair, but to confide in him, and shows him that his success depends upon his bribing the servants. Knowing the special weakness of each, the most attractive bait is held out, and they are all won over to *Willmann's* cause to the exclusion of *Proppendorf* whose recommendations led him to hope for the post."

The humorous character of the loquacious barber was pourtrayed with much breadth of fun by the representative of the rôle, who was ably supported by the other members of the amateur troupe. The second piece, "Kurmärker and Picarde" was undoubtedly less effective, but afforded a special opportunity for a display of the polyglot accomplishments of the buxom impersonator of the part of *Marie*. We append the argument which, like the preceding, we borrow from the programme supplied to the audience. "During the occupation of Paris by the Allies in the year 1815, *Schultze*, a soldier of the 3rd Regiment of Courmark Militia, find himself billeted upon *Marie*, a peasant farmer in Picardy. *Schultze* has, it seems, been grievously affronted by the insult offered to his sister by a *voltigeur* during the French invasion of Courmark, the soldier having gratuitously boxed his sister's ear; and he has vowed to deal alike with all French women whom he may meet. *Marie* hears him relate the story of his vow and deprecates his anger. They attempt a country-dance in which *Schultze* fails signally and afterwards a waltz in which *Marie* is equally unsuccessful, but the latter, meanwhile, has so won upon the soldier's heart that when a comrade arrives to apprise him that their march is to be resumed he resolves to abandon his vow for the nonce, *Marie* in return saluting him with a parting kiss."

THE appointment of Kido Takayoshi to the post of Sangi was gazetted on Wednesday, and is calculated to produce great satisfaction throughout the country.

THE *Choya Shimbun* mentions that although the meetings of the Governors of the various *Ken* have been for some time past suspended, a notification convening this body will, most probably, be issued about the middle of the current month. It adds that the renewal of the meetings is looked forward to with much interest and that some interesting discussions are likely to take place.

AT eleven o'clock last night a serious fire occurred at Kanda in Yedo. Before it could be successfully dealt with some twenty-seven houses were destroyed.

IN order to afford additional accomodation to the Public the Imperial Postal Authorities have caused letter-boxes to be placed in the Club and chief hotels in Yokohama. These will be emptied shortly before the closing of the various outgoing mails. The arrangement can hardly fail to prove a boon to the community.

WE regret to find that some sense of apprehension has been expressed of late by several of the residents in Yedo, caused by the rude conduct of the soldiers to passing ladies. This is a matter which should undoubtedly receive attention from the police authorities who appear to exhibit some negligence in the matter.

IT is said that a large body of troops has been despatched into Jōshiu for the purpose of repressing an outbreak in that district.

WE find that we were mistaken in saying that the Mikado was received at the Railway station on Friday last by Sir H. Parkes. His Majesty appears to have desired that his visit to Yokosuka on this occasion should be regarded as an informal one, as none of the Foreign Representatives were invited to attend.

WHILE the intelligence of the peaceful solution of the Formosa difficulty appears to have been received in Europe with general satisfaction, forming the subject of a congratulatory paragraph in Her Majesty's speech, the London *Globe* has become possessed of the extraordinary news that "the Government "of Japan has given occasion for renewed dissension by offer- "ing some objections to carrying out the stipulations of the Treaty." This intelligence will be received with some surprise in the Far East.

MESSRS. BOURNE & Co. sold lot 187 Homura Road at auction for $4,000.

A meeting of the Marines Ball Committee has been held for the purpose of considering the accounts and adjusting the liability of the subscribers. The Ball was, it seems, attended by some 400 persons, the majority of these being the guests of the subscribers who numbered more than 250. Before closing, the General Committee passed a deserved vote of commendation on certain of its members, to whose special exertions the success of the entertainment was undoubtedly largely due.

The Japanese Prince Yoslhisa--uncle to the Mikado—was received on the 8th inst. by the Crown Prince and Princess of Germany.—*L. & C. Express.*

We learn that the Chinese Government has decided to send some young men to England to learn the duties of naval officers. Four have been already selected from the Foochow Arsenal, and these young men are by no means novices to the work they will be required to undertake. One of them is Capt. Cheong Sing, at present commander of the Chinese man-of-war *Ching Yuen;* the next is Captain Lui Hon, of the man-of-war *Chen-wei*; the third is Captain Yip Foo, commander of the tender *Hai-toong-yuen;* the fourth is Mr. Lai Pun, first lieutee nent on board the *Chen-wei*. They will go in the Chinese corvette *Yangwoo*, the largest vessel built at the Arsenal. The cadets will be required to make the navigation of ironclads their special study, and are expected to acquire proficiency within two years, as by that time China will be able to boast of a few such craft, some being built at the Government Yards and others ordered out from foreign countries. Besides the four officers named there will be 26 others, making in all a complement of 30.—*China Mail.*

The *Daily Press*, of this morning contains the following:—An esteemed correspondent in Formosa, on the authenticity of whose information we can implicitly rely, sends us word of a disastrous affray between natives of that island and Chinese soldiers, in which the latter sustained a very serious loss. It seems that on or about the 12th instant, a body of China troops was attached by a large force of these savages in the neighbourhood of Hong-kong, a small village on the coast a short distance to the north of Langkiaou. A mandarin and upwards of two hundred Chinese soldiers were killed, and a large number wounded. The exact circumstances under which the attack was made, and the motive for it, are not known. Doubtless measures will speedily be taken to avenge the loss and retrieve the disaster.—*China Mail.*

We regret to hear that Opium is sent from Hongkong to Sydney for consumption by the lowest class of European females in that Colony. The spread of the use of this dangerous narcotic should be as limited as it is possible for customs duties to make it.—*China Mail.*

In consequence of the adoption of public mourning on the death of the late Emperor, barbers and actors will probably suffer badly. The first class Company now playing here does not intend to go back to Canton until the mourning is over, as while it lasts, no theatrical performances can be given.—*China Mail.*

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

The Ordinary Yearly General Meeting of the Shareholders of the above Corporation was held at Hongkong on the 18th ultimo, when a report was presented to them, which, if not unique in the history of banking, deserves an attention which it certainly has not received at the hands of the Hongkong Press. It would perhaps lead us upon delicate ground were we enquire how it is that those who are in some sense the guardians of the public interest and the exponents of public opinion, have treated with so extreme a tenderness revelations which demanded comments of a far more severe and searching nature. But this is less our affair at present than the business transacted at the meeting above referred to, and in order to do more complete justice to this, we shall give a short preliminary sketch of the history of the Bank as gathered from its yearly reports.

The institution was originally started as a Limited Company with a paid-up capital of two millions and a-half of dollars, and was incorporated in July, 1867, in its present title, with a capital of five millions of dollars. No better proof could be adduced of the excellent prospects of such an institution under able and honest management, than the fact that its formation was loudly deprecated as entirely unnecessary by those great mercantile houses who added more or less of a banking business to their own more strictly mercantile operations; and by the representatives of those London or European Banks who saw the enormous advantage over them which their new rival would derive from having its head-quarters on the spot. But objections so manifestly interested could only be regarded as additional incentives to the promoters of the Bank to hasten its establishment, and, accordingly, it burst into vigorous life and commenced a career of splendid promise. For the first six years of its existence its prosperity increased steadily, and by the end of 1871, a reserve fund of one million of dollars had been accumulated from profits already charged with an average dividend on the capital called up, of 12 per cent. The successes of some years appear almost fabulous. In 1869 a profit of $729,680 was realized on a working capital of $3,000,000. In 1869, on a capital averaging $3,250,000, ($500,000 having been called up during the half-year) $509,112 was made. In 1870, on a capital averaging $3,750,000, $644,636 was credited to profit and loss. In 1871, $734,093 was the profit on $4,250,000. In 1872, $616,990 on $4,750,000. In 1873, $542,287 was made on a capital of $5,000,000. In August 1872, the shares were sold at 77 premium for cash, and at 86 premium for delivery on the 31st December.*

But as the day for the half-yearly meeting in 1874 approached, rumours of an extremely unpleasant nature were circulated regarding the state and business of the Bank, and the utmost consternation was produced by the Chairman's statement that the profits only amounted to $104,193; that $334,000 (including $225,000 from the reserve fund) had been set apart to meet losses; and that a further sum of $275,000 from the fund would possibly be required for the same purpose. The shares, which had already given abundant indication of weakness, fell like Milton's angels.

> Nine days they fell!

and whether the pit in which they now lie is bottomless or not, is more than we can venture to assert.

* We are indebted to a very full and excellent article in the *Celestial Empire* of September 1874, for these statistics, and for much information on the affairs of the Bank.

But to what strife, calamity or mismanagement was this fearful fall attributable?

The main reasons would appear to be, gross and shameful mismanagement, and an entire departure from sound principles of banking.

The half-yearly report of 1874 throws some light upon these, and with the help of this we will endeavour to enumerate the principal results of this mismanagement.

First:—Considerable transactions were entered into by the London manager, Mr. VACHER, on his own responsibility, which involved the Bank in a loss variously estimated in July last at from £30,000 to $150,000, but stated by the Chairman of the Bank at the meeting now under consideration to amount to £71,000.

Second:—A Sugar Refinery had come into the possession of the Bank—we presume on account of advances made—which has been a constant drain upon the profits since this "old man of the sea" fastened himself upon our unfortunate Sindbad. The last report states that "it progresses favourably"—a phrase to which, under these circumstances, we do not attach the slightest meaning—but the determination of the Directors is to dispose of it as soon as possible, and, when this is done, the total loss it has entailed will be announced to the shareholders.

Third:—*A Pier & Godown Company's* property seems also to have come into the possession of the Corporation; probably for the same reasons as saddled it with the Sugar Refinery. The Chairman announced at the meeting that it was written *down* for much the same reason as the Refinery; but whether this means that the whole amount has been written off as a bad debt, or that a certain deduction has been made from the amount at which it stood as an asset in the books of the Corporation, we cannot be certain from the reported expression of the Chairman.

Lastly;—There was an *Indo-Chinese Sugar Company's* premises and plant (we suppose) taken over, and this seems to have brought a loss of $275,000.

It would be wholly unjust to the present Manager and Directors to omit stating the fact that, with the exception of one of the latter, none of them were concerned in the advances made to these companies, of which we might say with Banquo,

> The earth has bubbles, as the water has.
> And these are of them.

Turning now to the report of the meeting and omitting all reference to matters referred to, above we come to the cost of the Shanghai premises, estimated at Tls. 115,640, with which no reasonable fault can be found. The Bank has hitherto paid a yearly rent of Tls. 5,040 for those at present occupied by it, and by the present arrangements it will have to charge itself with Tls. 5782—a difference of no moment. As regards the £4,000 which it was proposed to spend on furnishing these premises, the remonstrances of the share-holders (amid cries of Shame! Shame!) to the advance of the Directors recall the old question "Now, you, Sir, where are you going?" and the prudent reply, "Back, again."

The gratuity granted to Mr. ROWETT is a matter with which it would hardly be delicate in us to meddle, further than by saying that the precedent it establishes—for the case seems quite new—is, to our mind, thoroughly objectionable. The motion made by Mr. MAY—with, as it seems to us, excellent taste and moderation—that the remuneration of the Directors be reduced from $20,000 to $10,000 a year, met with the unanimous approval of the shareholders, and Mr. [illegible] Director, greatly to his credit, [illegible] seconded it. [illegible] be discussed at the meeting without notice, and it was left to the Directors to decide on the course they would adopt regarding it. One course alone is open to them, and we shall not do them the injustice of even naming it.

And now as regards the future. There was a marked moderation, for the most part, in the speeches of the two shareholders who took the principal part in interrogating the Chairman, who would have been put on the rack—metaphorically speaking—had this meeting taken place in London. Mr. KINGSMILL, in particular, though he played the part of Principal Inquisitor, concluded his speech by saying that "the Bank was never in such a strong or solvent position as at that moment." Of course it may be, and we sincerely hope it is, so. But any moderately attentive observer of human affairs must have seen that where a thoroughly unsound system of business has been pursued at head-quarters—and that this has been the case, has already been shewn—it has infected every branch of that business. As soon as the bad times come on, first one thing breaks down, then another, then another. These are discussed and commented upon, and shareholders imagine and hope they know the worst. But men believe easily what they hope to be true. Among the assets of banks under these circumstances there are numberless items as bad in quality, if not as great in extent, as those which have been brought to light by the first brush of misfortune. We point at no particular institution when we say that the fatal facility with which advances of all kinds have for some years been made on enterprises of the most unsound or reckless character has done much to ruin the character of the trade of the East. It has encouraged the growth of an enormous class of mushroom traders or operators and of mushroom schemes, which, if swept off by one storm, is replaced, directly the storm is over, by a fresh crop of the same class. The desire to borrow money has been equalled by the desire to lend it, and this has again been stimulated by the pernicious system of offering for deposits a higher rate of interest than can be yielded by a sound and legitimate business. The stock of a bank doing a flourishing business during good times becomes a favourite article of speculation; speculators buy it and advances are made upon it, at least as collateral security, by the bank itself. It is reckoned as an asset, possibly at the quotation current in the good times. But when the rains descend, and the floods come, and the wind blows, and beats against such a house, what is its only possible fate?

Everyone knows the delicacy which besets "calling in another opinion." But there are times when this becomes a false delicacy, and we are surprised that some shareholder did not move for a committee of enquiry to investigate the actual quality of the asset of $9,759,524 which stands third upon the Abstract of Assets and Liabilities dated the 31st December. If this had involved the resignation of the Directors it is the worst that could have happened, and such a course does not amount to a revolution, but only to a change of ministry.

It is probable that we are approaching what will prove an epoch in the trade of the East—we mean something more than a crisis, for that we have at present. That things can go on as they have gone on during the past two years, is wholly impossible, and that epoch might be inaugurated by a radical reform of one at least of the institutions which has, concurrently with other causes, done much to bring about the present state of affairs.

But one word more. The Press of this part of the world—and we must include that of China—would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shamefully fail in its duty were it to allow this occasion to pass unnoticed and unimproved. Making every allowance for the strong disinclination we feel to "hit a man who is down," and, indeed, repelling any such accusation, we have addressed ourselves to the unpleasant task we have now discharged, in the interest of the shareholders of the Bank and of the commercial community of China and Japan.

VIEWS AND DUTIES.

A TRANSLATION entitled "A House of Commons," which we publish to-day under the heading "Spirit of the Native Press," affords a certain amount of evidence of the extremely crude views entertained in this country upon representative institutions even among those of the Japanese who think themselves qualified to instruct others on the subject. It is true that the translation published last week treating of popular rights went far more deeply into the question, and showed that there are native writers who see that representative institutions necessarily pre-suppose the possession by the people of certain natural rights, and the sense of such possession. But when we put these two translations together, and see that one of them denies the existence among the mass of the people of any such sense, and that the other betrays a strange confusion of mind in regard to the machinery of representative institutions, we are forced to admit that the spirit of imitation which is answerable for so many of the changes we have lately seen in this country is also playing a considerable part in that agitation for representative institutions of which the Japanese press affords so much evidence. But it would be unjust to say that this spirit has not a good, as well as a bad, side; and we are by no means sure that some of the manifestations imputed to it are not rather outward and visible signs of an entire change in the attitude of the Japanese mind towards the past and future, than mere indications of vanity or unsupported pretension. And if this spirit has at times run them into certain absurdities and extravagances, the higher ideal of civilization to which it is leading them is forced more upon their observation by the very desire to imitate it, and thus insensibly their minds become more or less imbued with the spirit which underlies all living forms. Against these extravagances we must in fairness set the facts that the criminal laws have been revised and their severities mitigated; that an improved system of education has been placed within reach of every child in the Empire; that we have a coinage equal to that of the European Governments; that we have the germs of a railway system, and some hundreds of miles of telegraph laid, with a fair prospect of seeing an extension of both; that the army is ten-fold as efficient as it formerly was, and that the navy is a respectable, if not a formidable, force—judged, at least, from an oriental standard. We should, of course, like to see an imitation of our far more severe economy in the management of the finances, more entire faith maintained with the public creditor, a more swift and impartial administration of justice, less official corruption, a more deliberate choice of ends and greater steadiness and determination in pursuing them. But, surely, from the first crop of fruit we may fairly argue for a second, and we can hardly be right in treating with harshness the spirit from which that first crop proceeded.

And if this spirit is showing itself in a desire for representative institutions, those who are solicitous for the welfare of this people should rather encourage and seek to guide, than sneer at and deride it. Should the future historian of the movement now going on under our eyes be forced to record that it ended in disaster or even in vapour, no small blame will lie on the shoulders of those whose efforts might have secured to it a different termination. Nor will the plea avail them that the Japanese erred against light and counsel and warnings. The answer will be that if these did not avail, they were administered in such a manner as to kill rather than cure, and therefore should have been administered in another manner. We must to a great extent test the ability of men by their success. It is thus that we test statesmen, writers and physicians and merchants; and, making all allowance for exceptions to the rule, it is, broadly and generally, true. If those, therefore, among us foreigners who have power or position which enables them to influence the course of this country—a course clearly based upon European models, and which should be guided, so far as they can be made applicable, by European precedents—fail in their efforts, they must look forward to a harsh judgment from posterity; nor will the plea avail them that the Japanese had this or that quality or deficiency which rendered all their efforts abortive. If a healthy child dies in convulsions, or from poison, medicine or inanition, there must be fault somewhere. If medicine has been constantly used which produces irritation and nausea, it should be changed. The idiosyncracy of the patient must be more closely studied, the symptoms more carefully watched, and measures adopted which show a more intelligent appreciation of this idiosyncrasy, and of the meaning of these symptoms. The large wisdom of GALEN'S saying, that "the second "best remedy is the best if the patient likes it best," must be recognised. If severity in the master makes boys stubborn and intractable, his method and temper are at fault, and if he is truly wise he will change them. It was from the ripe wisdom which WOLSEY gained—too late for himself, but not too late for us—that the rich fruit fell—

> Still in thy right hand carry gentle peace,
> To silence envious tongues.

A large sympathy with the struggles of a people lower in the scale of civilization than ourselves is the only worthy attitude of the dominant races; and if we forget this and adopt or persevere in one which arouses bitterness against ourselves, and a stubbornness in them which thwarts the efforts and intentions and the best interests of both sides, we become guilty both of crimes and blunders which assuredly will sooner or later come back upon us.

SPIRIT OF THE JAPANESE PRESS.

A HOUSE OF COMMONS.

(Hochi Shimbun.)

The Government of Japan from the Emperor Jimmu Tenno (B. C. 660) to Kotoku Tenno, the 5th year of Taikua, (or A.D. 649,) for a period of about 1300 years, was based on a feudal system. From the latter period to the reign of Minamoto Yoritomo (the first Shogun A. D. 1192, or for a period of 500 years,) the form of Government was a monarchy, after which the feudal system was again established, and lasted until the *daimios* were abolished in the 4th year of Meji (A. D. 1868) when the executive power reverted into the hands of the Mikado, on a monarchical system, similar to our form of government during the middle ages. At the time when the deputies of the *daimios* assembled to consult over the future form of the Government, the Mikado took an oath that the administration should be on a broad and liberal basis, and therefore it is that many now say that representative institutions ought to be established, otherwise the oath is of no effect. But we think that these people are rather unjust, because the oath of the Mikado was taken solely for the purpose

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the moment, in order that the deputies of the *daimios* should be fortified in their conclusion that our system of Government should thenceforth be a monarchy.

Although our ancient great and powerful monarch, Tenchi Tenno, put his ambitious Minister Soga and his son to death, he did not succeed in extending his power over all the provinces of the Empire, and he therefore appointed Dairio and Shorio * to govern each province. These appointments were almost always given to some of the nobles of the province, with the exception of those of Mutz and Dewa, which were governed by some of the Aino nobles and were constantly in a state of disquiet. Therefore it was that Hachiman Taro (A. D. 990) and his father finally made an expedition to those provinces, conquered them, and administered their affairs, and at that time there was not a man in Japan who was unacquainted with the fame of Hachiman Taro. Long after this, one of his descendants, Yoritomo, was exiled by his enemies, the family of Taira, to the village of Hiruga Kojima. But Yoritomo was not long in raising a rebellion against the Taira family, and by his valour and the *prestige* of his name he subdued the whole of Kanhasshu without a struggle being made against him. He then overthrew the Taira family, usurped the power held by the Mikado, converted the monarchy again into a feudal system, and became the first Shogûn. It will be observed that the power of our monarchs did not, as I have said, extend over the provinces of Mutz and Dewa.

The present form of Government, a monarchy, established the *Fu* and *Ken* throughout the Empire. Still the Sakata and Kagoshima *kens* are very different from other *kens*, and this, we believe, arises from the fact that the Imperial power does not extend so far. It seems to us unreasonable therefore for the people to desire representative institutions, i. e to have a limited monarchy (for the existence of such institutions forms the true and only distinction between an absolute and a limited monarchy), when the executive power of the monarch does not extend throughout the whole country. Therefore we think that those who say that our country is not ripe for such institutions, and those who say that they should be immediately established, are both wrong. In Europe we find that it is only during the last twenty or thirty years that Austria, Prussia and Italy have been governed as limited monarchies, and we are still unable to judge whether it would be well for Japan or any oriental nation, to skip from a phase something similar to that of Russia to a form of government like that of England. But as the journals in the capital are constantly urging the establishment of a House of Commons, and as this cry gradually penetrates into the interior of the country, the whole nation is beginning to understand it, and in a few years it is probable that we shall see it established.

As there may be many who say that a Parliament would be a good thing, but who do not understand the principles on which it is based, and are quite capable of doing many reckless things, we shall try to give a short explanation and illustration of what it really is.

In some countries of Europe there are three different sorts of representatives. First, representatives of boroughs: second, representatives of counties: third, representatives of the nation, and the representatives of the nation constitute an upper and a lower house. The upper house of England is composed exclusively of nobles, and these, with the members of the lower house, discuss the affairs of the whole country. Then the county members consult about the affairs of the counties to which they belong, while the borough members consult about the boroughs to the which *they* belong. The powers of these representatives vary greatly in extent, and we purpose to give an explanation of the duties of the county and borough members so that our people may clearly understand these duties and the composition of the Houses.

There are magistrates who have full power over the districts to which they are appointed, the people voting for their representatives, usually two or three, but sometimes as many as ten. They consult with the magistrates upon local questions, the necessities of the borough, hospitals, asylums, &c.; and any proposals in regard to these, if made and approved of, are afterwards carried out. There may be a few assistants and clerks, secretaries, clerks and errand-boys, whose salaries or wages are paid by the borough. The salaries of the magistrates are paid by the Government; the members receive no salaries.

In the counties there is the chief magistrate of the county, who has in his charge all the work to be done in it, the county members being elected by the people of the county, and numbering from ten to as many as thirty or forty, their business and discussions being managed in the same way as those of the borough members. In Europe the representatives of the boroughs are very powerful. But as our country is not yet civilized and is still unripe, the work to be done in the counties (or provinces) is very great, while that of the boroughs is little or nothing. Our circumstances differ greatly from those of the European races, and why? Because our respective conditions of civilization are so different. It is on this account that we believe that absolute monarchies are best for uncivilized countries. In countries where the boroughs are powerful, we may be assured that a limited monarchy is the most suitable form of government, and they imply a high state of civilization.

The great departments of state are divided into the Interior, Foreign, Finance, Religion, Education, Public Works, Board of Trade, Navy, Army; and the officials of these manage the executive work of the government. The House of Commons consists of the representatives of the people who regulate the taxation and the customs' duties.

The establishment of a House of Commons in this country would constitute a great change, nothing less, indeed, than the conversion of an absolute into a limited monarchy, and this is not an easy task. But as the people are continually crying out for it, the time for such an institution has probably arrived, and the Government should make the change. But we cannot be too careful, because our form of government might become like that of the French Republic. It would be well, therefore, to commence any such changes gradually, proceeding from the smaller to the greater. The wisest thing at present is not to stretch our arms too wide, and institute a House of Commons or elect members for provinces, but to commence with members for districts. This will be good for the people, and does not involve any great change. The members for given districts might be elected according to the number of people they contain, say, from three to twenty, and they should consult with the officials appointed by the Government regarding all questions affecting the welfare of the people. These positions in Europe are positions of honour, and no salary is attached to them; it will also be well for us to attach no salaries to these posts. Should the person elected be too poor to hold his office, it should be at his option to resign it. All should have votes who are over twenty years of age and of sound mind.

This is a short explanation respecting representatives of boroughs. Were members elected for counties, certain changes would have to be made in the officials. The establishment of a House of Commons is a more difficult task, and could not be achieved without great care and thought.

"ON THE NECESSITY OF DOING AWAY WITH UNNECESSARY THINGS."

CONTRIBUTED ARTICLE.

"Hochi Shimbun" of March 8th, 1875.

"There is," says the writer, "at the present time a "plethora of everything in the state, and thus to limit the "number of things which are actual necessities and to do "away with all superfluities—this is the cry both of high "and low and is one of the most important considerations "in the governance of the country which must not be "overlooked."

The writer proceeds to state at once what he considers as unnecessary. This is the Department of Religion. He would therefore abolish this Department, and sees a clear way of turning to great profit the5 0,000 *yen* which the Government annually expend upon it.

His reasons are these. Firstly: the histories of all countries may be divided into two periods, the religious period, and the literary period. Religion is all very well for a country before civilization is introduced. Religious teaching is necessary to keep men from giving way to

* Governors and Vice-Governors.

Digitized by Google UNIVERSITY OF CALIFORNIA

their savage instinct while they are as yet in a primitive state, but after civilization has made certain progress then religion is no longer needed.

Secondly Japan has passed through her "religious period." This is over and she has now entered on her "literary period." Therefore the Department of Religion should be abolished and the Government grant should be transferred to the Department of Education, in order that the literary progress of the country may be encouraged and her educational knowledge thereby increased.

"There are some," the writer observes in conclusion, "who urge the importance of religious instruction on the "ground that the lower half of the population are very "ignorant and therefore stand in need of religion, but the "extent of this is exaggerated—and though it might be "advisable to give a certain amount of religious in-"struction to the lower classes, yet the greater part of "the nation do not need it at all."

"ON THE ESTABLISHMENT OF A DELIBERATIVE ASSEMBLY, CHOSEN BY THE PEOPLE."

CONTRIBUTED ARTICLE.

"Nisshin Shinjishi" of March 8, 1875.

The writer points out that it is all very well for him and other writers to draw attention to the questions of the day, to clamour for "popular rights," and to talk about a "Parliament chosen by the people." All this may sound very well, but the people will not stir in the matter. The people of Tokio are lazy, apathetic, and ignorant. Trade is all they care for. What do they want with popular rights? say they, for they do not even understand what is meant by this right of the people and fancy it is something which concerns only officials and *shizoku*. If they were required to send representatives to take part in a Deliberative Assembly, they would not understand what they were required to do, but would instantly imagine they were to be burthened with a new tax.

Such is the ignorance, and such the low social standard, of the common people, that if a Parliament is to be established at all it must be done by degrees. And the writer thinks this might be effected by the representatives being taken at first only from the Heads of Divisions, *Kuchi* and *Kochô*, and Heads of Wards, and afterwards little by little by selections from the people.

ON THE ESTABLISHMENT OF A PARLIAMENT.

CONTRIBUTED ARTICLE.

("*Nisshin Shinjishi*" *of March 9th*, 1875.)

The writer asserts that the Government do not fall in with the proposal to found a "Deliberative Assembly chosen by the People;" they do not meet the people in their wish to establish a People's Parliament, but strive to carry out their own tyrannical purposes. The only way to stop this, the writer says, is for laws to be framed which shall clearly define and establish the rights of the people so that the Government shall not impose upon them, and these laws must be drawn up by a Parliament, not by Government; therefore as the Government will not agree to a "Deliberative Assembly chosen by the People" the scheme must be modified, and a "Parliament of able men" (*Genro Gi-in*) should be established, whose members should be selected from Government officials both past and present. In this the Government would be met half way. The writer lays great stress on the need for a Parliament of some kind or other, and to those who say that the country is yet unripe for an institution of this kind he would merely wish to observe that if this question is delayed, by the time it is decided to proceed with the establishment of a Parliament, the country will be in such a state of confusion that it will be a very hard task.

ADVOCATING AN EXPEDITION TO COREA.

CONTRIBUTED ARTICLE.

("*Nisshin Shinjishi*" *of Ma ch* 9th, 1875.)

The writer begins by stating that he agrees with the Ex-Sangis Goto, Soyejima, and Itagaki in thinking that an expedition should be sent against Corea, and he holds very strong opinions on this subject, for he considers that the Saga insurgents and the men who attacked Iwakura are to be pitied for having met with a melancholy end; because, although they may have resorted to means which were not exactly legitimate, yet they were filled with patriotism and love for their country, and the object they had in view was a right one. He does not wish, however, to be considered as a Saga insurgent nor as belonging to aclass of men of that kind.

With regard to the Formosan expedition, there were great difficulties in the way, such as the great heat, an unhealthy country, and difficulty of maintaining communications at such a distance from Japan and from her capital. The success of the expedition is due to the power of the Emperor and to the efforts of Okubo, Sanjo, Okuma and Yanagiwara.

No such difficulties lie in the way of a Corean expedition; and her conduct has been much more outrageous than that of Formosa. The latter may be said to have acted like a drunken man when he insults somebody, but the action of Corea has been that of a servant who is insolent to his master, which is a much more heinous offence.

Corea, the writer thinks, is cowed just now at the success of Japan in obtaining an indemnity from China, and considers that a Japanese force has only to make a demonstration and that the country will yield at once without striking a blow.

"ON MISMANAGEMENT."

ORIGINAL ARTICLE.

"*Nisshin Shinjishi*" *of March* 10*th*, 1875.

The writer asserts that the Government go about everything in the wrong way. What should be done at once that they postpone, and matters in the transaction of which there need be no hurry, these they take in hand at once. This way of looking at things upside down is not confined to witless people; men of ability must also plead guilty to the same failing.

The writer proceeds to say that Japan makes a great mistake in not utilizing her resources. It is quite wrong to suppose that because so much is imported from foreign countries, Japan has nothing. The resources of the country are many and varied, and all that is required is that these should be opened up and that the natural industries of the country should be fostered and promoted.

He then cites two instances in illustration of his argument; the colonization of Yezo and the policy of the Mining Department.

"In these busy times," says the writer, "when there is "so much business, both business connected with foreign "countries and that concerning our country alone, we "cannot afford to reverse the usual regular order of pro-"ceedure by doing what should be done last first, and "what should be done first last. Nevertheless we see the "Mining Department, instead of working the rich iron "mines of Rokuchiu, formerly known as *Oshiu*, as they "should be worked, taking only half measures and delay-"ing the execution of necessary work. And as for the "work of colonizing Yezo what has been done hitherto is "what one might expect from children. Although there "are many rich coal and iron mines throughout the island, "and numbers of foreigners eager to pay handsomely for "the privilege of working them, nothing has been done in "this respect, but instead a large road was made, a road "which has already dwindled down in extent and is "overgrown with grass and weeds."

The writer adds in conclusion that the same mode of doing business is observable in other public Departments, and he fears that the Government must be considered to be guilty of the mistake of looking at everything through inverted glasses till it appears topsy-turvy. He suggests that more care and precaution are necessary.

NEWS OF THE CAPITAL.

"Nisshin Shinjishi" of March 10th, 1875.

The meeting at Ôsaka has passed off without any result and its members have all returned to the Capital. It was rumoured that some great reform was contemplated but all that has been done is this: Kido Takayoshi has been made a Sangi and Itagaki has had an interview with the Emperor.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Japanese Cosmogony.

Konton, chaos, like an egg or embryo, was the normal condition of all things before the separation, according to the Chinese philosophy, of the two 'principles,' *in*, the female, and *yo*, the male. The ethereal ascended and became the heavens, the sediment was precipitated, from which the *ashi* (Ereganthus japonica) sprang up like a young shoot. This shoot grew until it became the first of the *kami*, now called Kuni-toko-tachi-no mikoto (the first being of the country) followed by the appearance of Kuni sazu chi no mikoto (the being who pushed his way into a circumscribed space), and Toyokumnu no mikoto (the being who made the land pleasant and lively), who represents the first fruits of the earth after chaos. Then successively appeared the following:—

Takami-musubi-no-mikoto (offspring of heaven and earth.)

Kami musubi no mikoto, (offspring of the gods.)

Uji hi ni no mikoto (offspring of the ground.)

Ama no toko tatchi no mikoto (offspring of the heavens.)

Kuni no soko tatchi no mikoto (the kami like unto kumi toko tatchi.

Toyokumuno kami (God of plentiful vegetation.)

Uhi chi ni no kami (God of the earth).

Sui chi ni no kami (God of sand).

Sahi no kami (God of useful timber).

Kahi no kami (God of unfelled timber).

Oto no chi no kami (God of harvests).

Oto no be no kami (God of husbandry).

Omotaru no kami (God of primeval habitations).

Aya kashi ko ne no kami (God of primitive dwelling places).

Up to this period the male principle *yo* being paramount, the sexes had not appeared. The foregoing represent the creation.

The five elements, wood, fire, metal, earth, water, were now divided, and in due order fulfilled their respective uses. Isanagi, the produce of the male, and Isanami that of the female, come next, and these constitute the first couple. The names are derived from the meaning of the first words spoken upon earth, the woman beckoned to the man, he nodding assent and going. They stood on the celestial bridge which spans the ethereal vault (amano uki hachi), the man waving the *Tama boko* (matchless falchion). The thought arose that there may be substance beneath the face of the unstable waters, and he plunged the mighty weapon into the watery depths, and the drops which trickled from it when withdrawn formed the dry land, called *Onokoro shima* (the inconsiderable island). To this they both betook themselves, designing to make it the pillar of a future continent, and started to make the circuit of it, the woman turning to the right, the man to the left. They met at the other side, when the woman spoke the first words uttered upon earth, *Ana ni-yashi ma hi otoko ni aiau* (Oh joy to meet a lovely man!) But the man was displeased that the woman spoke first and insisted that the journey round the island should be repeated, and when they again met, the man said *Ana n-yashi mashi woto-e ni aiau*, (Oh joy to meet a lovely woman!) Thus was the creation of man perfected, and the island grew into Oyamoto toyeakitsu-shi, (the everlasting great Nipon.)

The woman Isanami conceived and brought forth a female child, either as a punishment for having spoken before the man, or because the female principle, *in*, was more powerful. The man was greatly disappointed that a son was not born.

This female child became Tenshoko dai jin. Isanami brought forth a second female child called Tsuki yomi no mikoto, (the goddess of moon—the moon itself), and again a third child, a male, named Hiro ko (leech). At the age of three, being still unable to walk, his parents made for him a boat of *kusunoki* (camphor-tree) in which he was sent adrift, and he became the first fisherman. He is called Yebisu, and is worshipped yearly by fishermen and by traders—catching fish and selling them being considered the first commercial transaction.

A fourth child was born to them, Sosa no no mikoto, a goodly-shaped boy, who was doubly welcome after the former female children and the cripple, and their hopes rested on their last-born to populate the country. But they were fated to disappointment as the boy proved most unruly, and the older he grew the more intractable he became, murdering his countrymen, and tearing up trees and destroying vegetation. His parents were therefore compelled to condemn him to banishment and decided to send him to a distant land *Nenokiun*, whither he went. He returned, however, and continued his wild career, on one occasion turning a wild horse loose into the field his sister Tenshoko had planted with rice: the plants were trampled down and the fields destroyed. Again, after she had erected a dwelling in which to prepare the new rice for her food, he defiled it so that it could no longer be used; and on another occasion, when she was sitting at her loom weaving, he threw a reeking horse's hide violently upon it, and prevented her working further. This repeated misconduct became to her so unbearable that she took refuge in *Ama no iwato*, the celestial cavern, and drew a huge rock to the mouth of the cave to close herself in. *Rikugo*, i. e. *Ten-chi Shi-ho*, heaven, earth and the four quarters, became enveloped in darkness, and there was no distinction between day and night, and the *Yaso yorozu no kami*, eight hundred thousand gods, assembled at *Ama-no yasu no kawara* (the heavenly river-plain of Yasu), to discuss what was to be done to restore light to the world, and procured from Tokoyo, the country of perpetual day, a number of *naga naki nori tori* (continuously crowing domestic fowl) which were plentiful there. These irrepressible chanticleers were brought before the mouth of the cave, and Tatchi kara-o-no-kami, the strong-handed god, stood there waiting. From Ama-no-kaku yama, Futodama-no mikoto (exceeding beauteous god) uprooted and brought a large tree of the kind called *Sakaki*, from the top branch of which were hung five hundred jewels (*tama*); from the centre branch was suspended a *yadu no kagame* (a star-shaped mirror), and from the lower branch were hung green and white slips of paper (*nigite*) and this tree was also brought to the entrance of the cave. The gods now implored Tenshoku to show her face, but she was deaf to their entreaties. Then Ama no usume no mikoto (the heavenly glossy-countenanced goddess), advised their dancing before the cave to excite the curiosity of the self-imprisoned goddess, and she took the branches of the tree brought by Futodama, and decking her hair with the ornaments suspended from it, she took a bamboo to the end of which some *chikusa* (a grass) was tied, to look like a spear, tying up her long flowing sleeves with tendrils of ivy. These preparations completed, bonfires were lighted, and Ama no usume danced before the cave with all her might to the music of fifes, drums and cymbals. Tenshoku, hearing the music and dancing, wondered what it was that could cause such joy since Toyo ashiwara had become *Tokoyami* (darkness) by her entering the cave, and that there was therefore more cause for grief than joy; thus her curiosity led her to move the great rock slightly to peep out on the ill-timed scene. Tatchi-kara immediately seized the stone and drew it away, and grasping her hand drew out Tenshoku, when Waka tomi-no-kami and Imbei no kami (the god of shades), made a rope of rice-straw, which they twisted the contrary way, from left to right, and which they drew across the mouth of the cave. Then all was gladness, and the rotation of day and night was established again for evermore. As a punishment to Sosano, the cause of all this trouble, instead of death, his hair was pulled out hair by hair, his finger and toe-nails extract-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ed, and he was again banished to a far distant land. This story contains the first accounts of music, where the gods play to the dancing. It is the original from which the Kagura (dancing and music before the *mias*) was copied. It is also the first instance of a female receiving anything from the hands of a man to adorn her person, and this was used to place in her hair—hence the first hair-pins We also have the first allusion to back-handed straw-rope (*shiri-kume-nawa*, a rope to prevent return) being used, and, although with some modifications, the origin of straw-rope round trees, shrines, houses &c., often seen at new-year time and at Shintô festivals. The *taske* (sleeve-binder) is also first mentioned, although then ivy-tendrils. The adornment of the branches of the tree finds its counterpart to this day in the *magetama* (waving jewels), small willow trees with numerous trinkets suspended from them.

Isanami brought forth a fifth child, a male, called Hino-kami-kaku tsuchi (god of wild-fire) and on that day she was consumed by fire. In the agonies of death she brought forth Tsutchi no kami hani yama hime (the goddess of the earth and hills) also Midzu-ha-no-me-no-kami (goddess of water). Kaku tsuchi took Hani yama to wife, and in due time she bore him Waka-musubi, the first produce of man and earth, on whose head grew the mulberry and silk-worm, and from whose navel sprung the five cereals (*go koku*), rice, wheat, beans, millet and sorghum, the *Sundamono*, or purer principle, rising to the upper extremity as the silk-worm; the *Nigoru mono* (sediment) sinking into the produce of the ground. There are many versions of these accounts, differing somewhat in detail, and some of them have been translated and printed in Europe long ago.

Isanami's tomb is in Arima no mura, in the province of Kishiu, and when the blossoms appear on the trees flowers are taken to the tomb. Isanagi, finding the country he had created subject to thick fogs, wished to dispel them, and dispersed them with the force of his lungs, his breath becoming Shina tobe no kami (the god by the sea). Because his partner was consumed by the fire of Kaku tsuchi, Isanagi cut him into three portions; the upper portion became Ika tsuchi no kami (the God drummer, the god of thunder); the centre portion O yama tsumi no kami (god of abundant water); and Taka wo kami (the god of storms). Isanagi then ordered that his children should divide their duties properly between them. Tensho should control Takamanohara; Tskiyomi should assist Tenshoko; and Sosanono should control Awo nua bara (the plains of green sea), by which is meant the world. Tenshoko then enquired for the god of food and sent Tokiyomi for him. He appeared, and facing the land, breathed and his breath became *li* (boiled rice). He then faced the sea and breathed and his breath became fish, broad and narrow. Then, facing the hills he breathed again, and beasts with coarse hair appeared (boar, deer &c.) and beasts with fine hair (rabbits &c.). Collecting some of these he placed them before Tski yomi, who was enraged at being presented with what had come from the mouth of the god of food, and slew him, and reported this to Tenshoku who degraded Tskiyomi from joint rule and condemned her to appear only by night while Tensho slept. Ama no kuma hito was sent to see what had become of the slaughtered god, and found him dead, but his head had become horses and oxen; from his forehead grew millet; from his eyebrows crawled silk worms; from his eyes sorghum; from his bosom sprang rice; from his loins, wheat and beans. These were taken and presented to Tenshoku and she apportioned them as human food.

AN EXCURSION INTO THE INTERIOR PARTS OF YAMATO PROVINCE.

By

Capt. St. John, R. N., H. M. S. Sylvia.

Read before the Asiatic Society of Japan on the 17th February, 1875.

Before beginning a short account of an excursion I made in connection with the survey of this part of the coast, I should like, considering the little that is known about the east side of the provinces of Kii, Yamato, and Ise, to draw a slight sketch of the whole coast-line from Oosima, in the extreme south, to Toba in the North.

Oosima, in Lat. 34 27 N., Long. 135.52' E. with its two excellent lights, one on the East point of the Island, the other on Siwo misaki, the extreme south, and turning point of the Kii peninsula, is now well known to Europeans who have travelled between Yokohama and Kobe. Vessels also coming from Hongkong, or the ports of China, very frequently make Oosima, either by day or night, thanks to the two good lights mentioned.

From Oosima the coast trends N. E. for about 10 miles, to Arundel point, just inside and to the southward of which, is an excellent anchorage for small vessels, called Urakami; again immediately round and to the north of the point is another equally good but small harbour, named Katsura. The famed waterfall Natchi no taki, 275 feet high, is only 4½ miles from here, and strong hot sulphur springs are found close to the village, and within the bay. So strong and effectual are the waters, that seven days bathing is professedly ample time to cure the worst form of scabies; and fourteen for other diseases more serious than ordinary cutaneous affections.

The waterfalls—for there are three—follow at a short distance from each other, in the following order. The lowest is 275 feet high and has a clean drop, coming over a mass of rock which forms the back of an amphitheatre-shaped mountain. It falls into a deep pool, then rushing amongst great boulders for some distance, finds the more level valley further on, and reaches the sea just behind Katsura. On following the stream for 300 yards or so from the top of this fall, the second is reached. This, like the first, falls over a slab of rock seventy feet or so in height, into a beautiful clear pool, which is shut in all round; and so near do the trees approach overhead, growing out and almost hanging from the rocks, that at first sight they almost appear to touch. The only outlet to this extraordinary place for a river to find its way to, is its own course, as it flows, or to the great fall. Above the second fall there is another about fifty feet in height. They are all very beautiful, but the second is as wonderful as it is beautiful.

Near the lowest fall is a cluster of temples, with a grand old avenue leading up to them. One of the *sugi* trees, which had been cut down, I made out to be 283 years old; which agreed within a few years of the date given by the Japanese. Here the head of all the Shinto priests resides and the principal temple is built.

A short way north of Katsura, the previously broken and rugged coast line gives place to a long straight stretch of sand and pebbled beach, which runs N. E. without a break for 15 miles, butting up against a steep promontory, the beginning again of a wild, broken line of coast, which, still keeping the same N. E. direction, continues 70 miles to Toba, at the entrance of the Owari Gulf. Harbours and bays with water too deep for anchorages, are found all along this 70 miles of wonderfully beautiful coast.

Singo, a town eight miles north of Katsura, is the only place of any importance whatever, and this mainly from its trade in wood, which is brought down by means of no less than twelve rivers, which joining in one, near Singo, form a short way above the town a fine stream of water, with ample depth for large junks, which, however, can only cross the bar during calm and favorable weather. The population of Singo is about 4,000.

A few *ri* up the river there is a coal-mine, the coal is brought to Katsura in boats, stored in large quantities, and shipped off to Yedo and other places. I took in 50 tons for trial, excellent in appearance, but it simply refused to burn; when mixed, and so assisted, with some different kind I had on board, it did fairly well. It is very hard and heavy, and free from dust.

None of these provinces grow sufficient rice for their own consumption, but this is not surprising considering that the only rice cultivation of any extent is near to Singo, where a plain of some square miles extends back from the beach to the foot of the mountains.

There is one other place worthy of note, more for the employment of its people than for its extent or importance. This is Kozaura, five miles W. of Oosima, at the mouth of a river called Koza Gawa. Wood and whale's flesh are the two articles of export, and as the mode of catching this leviathan of the deep may not be without interest, I will try and describe the novel method which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is pursued. I believe the species of *cetacea*, which finds its way into the open deep bays, and in the different eddies, near points, caused by the great Kuro Siwo, rushing past the coast, to be the *Balena Mysticetus*, but this I cannot with any certainty affirm; it is not unlikely that other smaller kinds are often caught. In passing I may mention that in the east of Yeso I have seen on numerous occasions, the little known and rare species the high finned cachalot (*Physeter Tursio*). As soon as whales are seen, basking about the surface, or lazily moving near the coast, which very frequently happens during the winter months, several boats put off in pursuit armed with ***nets***, and rough iron spikes stuck in the end of long bamboos. As nets are rather curious implements to capture these great monsters with, a description of those which are employed is necessary.

The mesh is about a yard square; size of rope about three inches. It is made up in large squares, each side being 30 or 40 feet deep. These squares are attached to each other lightly, at the corners, and middle. The length of the whole net is about 200 feet, which is carried in two boats, and on getting within distance of the whale, the boats separate, dropping the net as they go, and again meeting on the other side, enclose the whale. If this is successfully done, and the great brute disturbed, he almost invariably strikes the net, as he dashes off. Whichever square of net he strikes breaks away from the rest, and now the faster he goes the more it clings to him. He dives, plunges and kicks to no purpose, and soon becoming confused and worried, returns to the surface, when the same process of surrounding him with another net is gone through. Again he dashes off only to become more confused and frightened, when coming to the surface once more, tired and worried, he is pierced with the primitive harpoons mentioned, until killed. He is then towed on shore, cut up, and sold for food—and very repulsive food it looks.

Owasi Bay, one of the numerous indentations I have mentioned as occurring along the coast, is situated about half way between Oosima and Toba. It affords excellent anchorage for vessels of any size, particularly in one of its long narrow arms, where the most complete shelter, easy of access in all weathers, is found. It was from here I had to go inland, to reach the summit of the highest range of a multitude of ranges of mountains, of which the Yamato province consists. Grand and beautiful mountains they are. The peak of Odai Yama is seen from seaward, when clear, for a great distance, the mountains north and south of it gradually rising and meeting in its flattish double-looking top. On enquiry I ascertained that it was possible to get there, but the inhabitants at Owasi knew little or nothing about it, beyond fabulous stories of wild beasts, and the wonderful distance to be seen from its summit.

Having made arrangements for a ten days' trip, I started to make the ascent on the 15th October 1874. The first five miles led up the course of a beautiful clear stream, which winds down between steep abrupt mountains, 2000 feet high, and falls into one part of Owasi Bay.

We soon left the level,—for in this five miles we had not ascended 50 feet—and for 5½ miles toiled up a single mass of mountain, to a height of 3113 feet. Of course the path zig-zagged, turned boulders, crossed streams, sometimes found a flattish spot, then wound round spurs, and, lastly, emerging on the Peak, opened on a magnificent view. What surprised me regarding these mountains was the mass of rock, the huge stones and little soil of which they are composed, and at the same time the wonderful exuberance of the *flora*.

Lowest down and particularly in sheltered valleys or dips, the *sugi* trees flourish, growing so thick and close together that it is all but perpetual night underneath their yellowish green tops. The *sugi* vies with the *wo matsu* (*Pinus massoniana*) which is the commonest and most utilized tree in Japan. The *hinoki* appreciates the same sheltered situations, but is never grown so thickly together. It also flourishes at the very summit of the hills and mountains, as high at last as 5000 feet. But these trees are self sown, and always isolated, growing straght and strongly, having evidently outrun or beaten their immediate neighbours, which appear stunted and twisted. Next to these,—I am speaking of the *coniferæ*—comes that lovely tree *Picea Firma*, the native *momi*. It is a true cedar in every way, and in appearance resembles that of Lebanon. Only one more beautiful species do I know out here, that is the *Abies Iezoniensis*. This magnificent tree I found flourishing in the far East of Yeso, and on the S. W. end of Kunishir Island *Abies microsperma*, a picturesque though much smaller tree (none that I have seen being over 40 or 50 feet in height) grows on the higher ranges, particularly on the summit of Odai Yama. There also I found *Abies Veitchii*, a beautiful species of silver fir. The cone of this species is very small dark purple, tinged with brown, growing erect near the axillæ of the branchlets. The scales are very horizontal, and the cone usually splotched over with resin. *Pinus Silvestris* (Scotch fir) is not plentiful, though found on these mountains.

I have now named most of the *coniferæ* growing in this locality. There are a few other species, less common and only found in a few places and then generally as single plants. But those I have mentioned constitute the cone forests, and of all these none grow to the height and large dimensions of the *Pinus Firma*. Many a magnificent old patriarch I came across, frequently a dozen or more, in the space of an acre or so, all colossal trees, and in rare perfection as timber; but as to their being made timber of, they are perfectly safe, as it would be impossible to transport them as such to the habitation of man. I am only 3100 feet up and have but named the Pines. To enumerate the deciduous shrubs which I have passed through would be an endless task. I observed great numbers of myrtles, camellias, the wild paper mulberry and innumerable other species.

From the summit of the first range, where we now were, and looking back, the whole sea coast lay at our feet, the indentations and harbours looking like threads of silver, running and twisting amongst the hills and valleys. The path now led away along the ridge of a range at right angles to the one we had ascended, and for 3½ miles we went very evenly, then dipped down 1,000 feet, crossing a mountain torrent, and immediately ascended to 4000 feet. Here was a great change in the *Flora*, nothing but oak, beech, chestnut and maple, no pines, the under cover bamboo grass, identical, I believe, with that in Yeso. Along this 4,000 feet ridge, we went for several miles, when suddenly the path reached the crest, and then descended with terrible steepness, along only one shoulder of the mountain, to 1,500 feet. What a wonderful spot we here reached! A few very poor inhabitants had clustered together forming a village of about 10 houses, called King umi, situated on the steep slope of the hill side, in an almost perfect crater, so steep and straight did the mountains rise all round.

There was but one opening where a clear stream of water rushed over great boulders, joining a large river close by, which flowed away to the southward for 70 miles, before reaching Singo. The small patches of potatoes and other vegetables round the cottages, were all barricaded in with stout wood, (quarter trees) to keep the deer and wild boar out. I was charmed to find here a domesticated bee, even then busily working, notwithstanding the lateness of the day and season. One cottage had six hives, rough square boxes, sheltered with some bark from the rain. The bee is similar to our own, but rather smaller, and as for the honey, it is excellent. I must just add before closing the first day that we had again left the oak and chestnut and returned to the region of the *henoki* and *sugi*. From here and along the course of the river these two cedars are grown, and when cut, floated to Singo.

Here I must remark that immediately after topping the first range of mountains from the sea, all the streams and rivers took a southerly direction, and though close to the sea coast—about six miles as the crow flies—none found their way there.

NOTIFICATION.

The undersigned publishes for the information of British subjects in Japan the following two Notifications, communicated to him by the Japanese Minister for Foreign Affairs relative to certain changes in the weight and designation of the Silver Yen.

(Signed) HARRY S. PARKES,
H. B. M.'s Envoy-Extraordinary and Minister-Plenipotentiary.

H. B. M.'s Legation,
Yedo, March 10, 1875.

[TRANSLATION.]

NOTIFICATION No. 35.

It is hereby notified that the weight of the silver one yen hitherto struck in the Osaka Mint has now been increased and its designation changed to that of Trade Dollar. The pattern of both sides of coin, the remedy allowed, the mintage fee etc., have also been altered as in the accompanying Table.

(Signed) SANJO SANEYOSHI,
Daijo Daijin.

February 28th, 1875.

FORMER SILVER YEN.

Breadth. 1.24 inches Japanese, or 1. 5 inches English.
Weight. 7.176 *monme*, or 416 *grs* English.
Quality, 9.10 *ths* Silver.
Remedy, 1 grain per hundred Yen.
Difference of quality allowed-2 parts in 1000.
Mint fee 2 per cent.

TRADE DOLLAR.

Breadth, 1.24 or 1.5 English.
Weight, 7.215 *monme*, or 420 grains English.
Quality 9.10 *ths* pure silver.
Remedy, 1 grain per hundred yen.
Difference of quality allowed 2 parts in 1000.
Mintage fee, 1½ per Cent.

[TRANSLATION.]

NOTIFICATION No. 5 A.

In accordance with the Daijokwan Notification No. 35, ordaining the new Trade Dollar of increased weight, the Osaka Mint will, from the first of April, next, coin into and return in the shape of the New Trade Dollar all silver bullion received by it and imported by Japanese or foreigners.

(Signed) OKUMA SHIGENOBU.

March 4th, 1875.

NOTIFICATION No. 28.

(Translation from "Nichi nichi Shimbun," March 12.)

To IN, SHŌ, SHI, CHŌ, FU, AND KEN.

Hitherto when Foreigners in the employ of public offices have at their own request returned to their country during their term of employment, there have been cases of half-salary being paid to them for the days they were absent. It is hereby notified that in future the payment of half-salary or allowances (under these circumstances) is not allowed.

(Signed) SANJO SANEYOSHI,
Daijō Daijin.

March 7th, 1875.

Correspondence.

ROBBERY AT THE CUSTOM-HOUSE WHARF.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 13th March, 1875.

SIR,—I am pleased to see that attention has been drawn during the week to robberies which have taken place at the Custom House Wharf. I am one of the recent victims; and while I shall not deny that I owe my misfortune partly to the want of care of one of my servants, I wish to air my special grievance, which is, I venture to think, one of singular hardship. I would have you know, then, Sir, that I ordered from England a few dozens of very fine Port, not for any base purposes of trade, but for the special delectation of myself and those of my friends who might do me the honour of drinking it with me, or, perchance, of accepting some of it at my hands. The assurances of my wine-merchant amply sufficed to persuade me that this precious fluid would have done me some honour, and given that satisfaction to my friends which a fine glass of wine produces in all rightly-constituted men. You will now be prepared for the expression of my annoyance and indignation at finding that one of three cases containing this wine, for the arrival of which I had long looked forward with an anxiety not wholly unconnected with the late cold weather, was carried away from the Custom House Wharf by some scoundrel who would certainly have been just as well satisfied with Bourbon whiskey, or who has probably sold my precious Port for a *boo* a bottle, in the native town, where it will be bought by some fellow who will curse it as poor stuff. I have always felt that if anything could reconcile an edible animal to a violent death, it would be the thought that he was certain to be well cooked, well served, and eaten with relish by some person with sound views on those most serious subjects. So with my Port. Were I sure that the wine would find its way down some truly appreciative throat, I should not greatly grieve either on its or my own account. But I shrink from the thought that some villain will in all human probability swallow it who has not the remotest idea of its lofty virtue or of my loss.

I am, Sir,
Your faithful Servant,
LUCULLUS.

THE TOWN-HALL CLOCK.

TO THE EDITOR *Japan Mail Daily Advertiser.*

SIR,—Although a visitor of comparatively recent date in your settlement—a "Globetrotter," indeed, to employ the elegant *argot* I find current here—I may, I trust, be permitted to draw attention to the fact that though Yokohama has been thoughtfully provided—by her native burgesses I am told—with a clock which is occasionally right, they have accompanied their boon by endowing it with a bell or gong which is distressingly wrong;—this, too, in a country which is second to none in the world in campanology. It first occurred to me that, like the bell of Miidera, which, according to the Author of "Our Neighbourhood," when removed from its home by Benkei "could only sob out from early morn till dewy eve, "*Miidera ye ikō, Miidera ye ikō*," * the bell possessed a sentimental attachment elsewhere, or that possibly it was suffering from the late severe weather. But the weather has changed and its insupportably crooning sound is as bad as ever. Pray, "reform it altogether."

I am,
Yours, &c.,
KUGELSTRABER.

Hotel Weissnichtwo, 10th March, 1875.

Law & Police.

H. B. M. PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.
March 6, 1875.

FELIX BEATO *vs.* JAMES DAVISON,
JAMES DAVISON *vs.* FELIX BEATO.

Mr. F. V. Dickins appeared for Mr. Beato; Mr. F. W. Marks and Mr. Litchfield for Mr. Davison.

Court re-assembled at half-past 1 o'clock.

Cross examination of Mr. Talbot continued: He had been through the accounts and seen the goods. He knew what staple goods were, such as woollens, shirtings, etc. There was a proportion of woollen cloth amongst the goods in dispute. There are about 65 bales of woollen cloth. Altogether there are 97 bales of cloth. The value of 32 bales was $8,700; they are insured for that amount. He considered blankets as staple goods. He did not not know how many bales there were. He did not consider paper, carpets, window-glass, etc., etc, as staple goods.

A discussion arose as to what were staple goods.

Witness continued: He considered staple goods to be those continually dealt in by merchants. Merchants are not in the habit of ordinarily dealing in goods for which they ordinarily find a market. There are many woollen articles in the goods that he would not call staples, such as pants, etc. There was

* "I want to go back to Miidera! I want to go back to Miidera!"

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

not $60,000 worth of cloth amongst the goods. The figures have all been proved by vouchers There is no voucher for commission. The vouchers consist of entries in Mr. Davison's books, assisted by policies of insurance, Custom-House receipts, etc, etc. He suggested to Mr. Davison to charge one-half commission on the withdrawn goods shortly after the rupture. The accounts were sent in to Beato in January this year. The full commission was charged up to the 6th June, 1874. That was the day on which the last sale was made. [Witness admitted a number of statements he made at the late trial] He saw the report of the late trial, but he did not read it.

Re-examined by Mr. Marks: He did not think that Mr. Beato's business had been remunrative to Mr. Davison, as the whole of the charges did not exceed 12 or 13 per cent, of the value of the goods. He based his valuation on that of the Bank Five per cent. was charged on the sales all through till it was discovered that there were 20 cases of mousellines, and this is a staple. He did not think the mouselline was worth $10,000. The mouselline was sold for $3,357

Mr Marks asked that 2½ per cent be deducted off this sum in the accounts, as 5 per cent had been charged through a mistake.

Witness continued: The charges upon the goods sold prior to the transfer to the O B. C. were very nearly covered by the amount previously detained from proceeds of sales.

To jury: There were a few staple goods. He had not ascertained the value of the staples; he would be able to get ready an estimate.

A. Vernede, sworn: He had been 11 years in Japan. He was in Mr. Davison's employment. He had been in it since October. Previous to that he carried on business here. He had been a partner in the firm of De Coningh, Vernede & Co. He had had considerable experience in all kinds of goods. If a parcel of goods were put into his hands for sale and then withdrawn, he should charge one-half the commission agreed upon.

Mr. Dickins objected to these questions, and it was overruled by his Honour.

Witness continued: He mentioned various cases of this, in which in two cases 2½ per cent. was charged as unsold commission, and 3½ in another case. Fire insurance is one-quarter per cent. a month He charged 30 cents a case storage for staple goods. For large bales he would charge 35 cents. He saw the goods in dispute delivered. He would consider that a charge of 35 cents all round was reasonable for such goods. Some were bulky.

Cross-examined by Mr. Dickins: It was not yet settled how much he was to be paid for his services.

Court adjourned till 10.30 a.m. on Wednesday next.

Court re-assembled at 10.30 a.m. Wednesday morning 10th inst.

J. Russell, sworn: He was the accountant of the Oriental Banking Corporation He remembered the late action. He was aware that a verdict was given against the Bank for $5,218.19. It has been paid. It had not been debited to Beato's account in the Bank's books. He did not know if it would be charged to Beato. The account was headed, "Law costs, etc., *in re* Davison."

Mr Dickins did not cross-examine.

A. Winstanley, sworn: He was Chairman of the Chamber of Commerce. There is a rule in the Chamber's tariff in regard to commission on goods withdrawn. One-half commission is charged on withdrawn goods [Rule read.] Landing charges depend on the size of the packages The usual charge for fire insurance is one-quarter per month. That is for the first month, and afterwards it is charged by a graduated scale. He had never charged more than one quarter per cent. for the first month. He would not consider glassware as staple goods; bots were at one time, but not now. He would not call cloth a staple article. [Witness here read a schedule of the goods.] It was such a miscellaneous assortment of goods that he did not like to express an opinion as to what was a fair rate of storage all round, He had not seen the goods.

Cross examined by Mr. Dickins: He did not know the date when the rules of the Chamber were printed. They were revised and printed about eighteen months ago. Beato and Davison are not members of the Chamber of Commerce. He did not consider himself bound by the rules except in cases of dispute. Cases in dispute had been referred to the Chamber. He charged 30 cents for grey shirtings. If goods were stored for a number of months he would make a small reduction. If for a year he might make a reduction of 25 per cent. He had never considered what would be a fair charge for cases of window glass stored for 15 months. He should not charge 30 cents a month for such cases. He had never imported any. [After a deal of consideration, he answered that he thought 20 cents per month a fair rate: it was troublesome stuff to have in a godown.] He should think 10 cents per month a fair rate for small cases of candles. Five bales of shirtings go to a ton, or about 4½ bales would be nearer. If the goods had been shirtings and staples, he would be inclined to charge rather less than one-quarter per cent. insurance, but miscellaneous goods give more trouble.

A. J. Wilkin, sworn: He was Vice-Chairman of the Chamber of Commerce. He was one of the referees in the late action, Davison *vs.* the Oriental Banking Corporation. [Referees' accounts handed to witness.] He was assisted in making them up by Mr. Hooper. It was extremely difficult. He and Mr. Hooper took every means in their power to arrive at some basis. He still stood by the referees' account. He thought it was a fair tariff. It was rather lower than the Chamber of Commerce, from what he had seen of goods. He and Mr. Hooper had only allowed 30 cents per package for landing the goods. One-quarter per cent. insurance is the rate of insurance allowed by the Chamber's tariff for the first and second months He would charge one-quarter per cent. He had been in Japan 11 years. The goods were inconvenient to store; they were all shapes and sizes. He had seen them.

Cross-examined by Mr. Dickins: He was appointed a referee by the Court; that was all he knew about it. There was a difficulty in adjusting the accounts. There was difficulty in arriving at data even by referring to the books. If they had been properly kept there would have been less trouble. If he had such goods stored with him, he would have made up monthly accounts,—certainly every three or six months. In making up the the referees' accounts he had had all the vouchers he could get. He saw some of the insurance policies; he did not care particularly to see them. He saw several hundred of the packages. He measured some cases as large as a ton; some were more than a ton. He saw about fifty of this size (nearly a ton). Some were a ton and a half. He could not say exactly how many he saw of any certain size. Some packages were very large. He measured the rest of the goods with his eye. He went all through No 28 godown. He did not go to the godown on lot 37. He saw about 100 empty packing cases in the yard at No. 28. The godown man said they were all empty. There were some very small cases on lot 28, measuring about a foot. Rule 59 of the procedure of H. B. M.'s Court was not brought to his notice to inform him as to his duties as a referee. He heard the evidence Mr. Dickins had brought before him as a referee.

A protracted argument took place between Counseland His Honour as to whether Mr. Dickins had the right to ask certain questions tending to show how Mr. Wilkin (the present witness) as a referee had arrived at the referees' verdict

His Honour declined to allow Mr Dickins to do this.

Witness continued: He had heard other evidence besides what Mr. Dickins had brought before him as a referee. He had heard three witnesses as a referee.

Mr. Dickins: Was the evidence of the three witnessess I called favourable to my tariff?

His Honour declined to allow this to be put.

W. H. Talbot, recalled, to Mr. Marks: He had prepared a statement of the two lots of staple goods that were amongst Mr. Beato's goods. The staple goods sold fetched $6,309.05. There was a considerable quantity of staple goods unsold, and the unsold commission had been reduced by one-half.

Mr. Marks explained to the Court that 5 per cent. had been charged on these staple goods in error; that 2½ per cent. was the proper charge, and that the accounts could be amended. Then again 2½ per cent. had been charged on the unsold staple goods; this charge would have to be reduced to 1¼ per cent., that being 1¼ per cent. due as unsold commission

The accounts were then handed to the jury.

Court adjourned till 1.30 p.m.

The Court re-assembled at half past one o'clock.

The cross-examination of A. J. Wilkin was continued:—

He did not import such goods as those in dispute; his firm often received consignments of such goods. His charges were based on those of the Chamber of Commerce. He had a tariff of his own. He charged 50 cents storage on a bale of Shirtings for the first month. His charge on a box of tallow candles would be about 10 cents It depends on the size. He would charge about 10 cents a month on window glass. He occasionally received consignments of soap; he generally charged 10 cents a box storage. He would charge rather less if the cases were put in his compound and not in the godown. He might take 10 cents per package for storage. His firm would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

probably make a reduction in charges for a long period. The Chamber of Commerce tariff is not a descending scale; but a descended one. For nine months storage he would charge the full rates on goods. (Mr. Dickins here read a letter attached to the report of the referees.)

Witness continued:—He did not notice any body taking notes before the referees.

Mr. Marks.—Every body took notes!

Re-examined by Mr. Marks:—The bulk of the goods averaged or equalled bales of Shirting in price. The value of goods may reduce the rate paid for storage, but size is the principal thing.

To Jury:—The goods did not pack well, they were all different sizes and shapes, and some were fragile and could not be packed upon one another in tiers.

To Mr. Dickins:—Some were packed upon one another.

Mr Marks handed in the petition and said that concluded his case for Mr Davison.

Mr Dickins said he would not trouble the jury with any remarks, but would proceed to call witnesses. He called Mr Marks.

F. W. Marks, sworn:—He was an attorney, and a solicitor. He remembered the late trial and was not likely to forget it. He could not remember his argument at the end of the late action—that was the details of it. He got his case up and did the best for his client (He admitted a number of statements he made at the late trial).

Felix Beato, sworn.—He was the defendant in this case. He was an importer and merchant at present. In 1872, he made an arrangement with Davison. He had known Davison 11 years, and had been on good terms with him. In 1872, he went to Paris and returned with about $60 to 70,000, worth of goods as samples to test the market. At Brindisi he missed the mail in which his goods were, and as there would be no protection for them on their arrival in Yokohama he telegraphed from Singapore to Davison asking him to take charge of them when they arrived. When he landed in Yokohama he found that the goods had arrived but had not been landed. He then went to reside with Davison; he told him he had brought out a French bookkeeper and that he was going to commence business. Davison gave him a little room in his garden for an office. He proposed to Davison that he (Davison) should give him godown room to store his goods and he would pay rent; he was to pay Davison 5 per cent on small and 2½ per cent on large sales. Davison was to land the goods and he was to repay him the actual expense incurred. He asked Davison what rent he paid for No. 28: he replied $120 per month. He said he would be glad to pay him $80 or $100 if he would let him have part of the godown and the house. Davison was to store the goods for the Bank and he would keep a French book-keeper and sell the goods so that Davison would have no trouble or expense. He asked Davison to insure the goods. He wanted to find out if the business would succeed before it became known that he was engaged in it. There was no agreement about charges; they were very intimate and he did not think it necessary.

The examination was here interrupted, Mr Dickins desiring to take the evidence of Mr. Anglin.

J. R. Anglin sworn.—He acted as land and estate agent. He knew the godown on lot No. 37. Godown A was worth about $80 to $90 per month, and B about $80 in his opinion.

Cross-examined by Mr. Marks:—He had several occupations. He was a general dealer. He was a land-agent, a printer and an importer. He had been a land-agent about eight years, and a general importer about as long. He had been a printer since he could remember; that was about nine years of age. He had not let twenty godowns in his life. He had been thirteen or fourteen years in Yokohama. (Witness recapitulated the properties he had sold.)

To the Jury.—The large godown would hold about 9,000 piculs.

W. Cheshire sworn.—He was a land and estate agent, and had been so for a long time. He knew the godowns on lot 37, they are about the same size. The rent of such godown taken from month to month would be about $90.00.

Cross-examined by Mr Marks.—He was a land and estate agent, and an average adjuster. He had been 2½ or 3 years in Yokohama. The property had at one time been vacant for a long time. There was a notice "to let" up for some time. He was now trying to let No. 89.

To the Jury:—The godown A. is 82 ft. by 26 ft.; B. is the same size.

F. Beato's evidence continued:—After the goods had been pledged to the Hongkong and Shanghai Bank he found he could make better arrangements with the Chartered Mercantile Bank. He got his accounts and paid the Hongkong Bank and transferred the goods to the Oriental Bank. Mr. Davison was custodian for the Bank. He was always willing to pay the charges that he agreed on with Davison. He was willing to do so now. (The accounts were here read and handed to the jury).

When the goods, were transferred from the Hongkong and Shanghai Bank to the Chartered Mercantile Bank he asked Beato for his account, and he replied he would give it as soon as he could. Mr. Davison retained more than was necessary of the proceeds of sales to meet his charges on them. He repeatedly asked for an account from Mr. Davison, but he always made excuses, saying he was so busy. When he transferred the goods to the O. B. C. he (Davison) told him that he thought all the charges were paid, with the exception of a few hundred dollars either one way or the other. He looked into a memo-book and found that was correct and that he only owed about $500 on the goods. He constantly asked Mr. Davison for an account, but he was obstinate and made excuses. He one day kept Mr. Davison in the office, and would not let him go till he made out his account. Mr. Davison then promised to get Mr. Talbot to make up the accounts. Mr. Davison, a few days afterwards, said, "Don't bother me; the goods belong to the Bank." He told Davison that the goods were his, and that they were worth double the amount advanced on them by the Bank. Davison at last gave him an account, saying that he had sent copies to Mr. Robertson of the O. B. C. There was a dispute about the amount, and he proposed to refer the matter to arbitration. To this Davison agreed, and an arbitration was commenced, but broke down. After this he wrote and told Davison to leave his house, and Davison told him not to come any more to his office.

To Mr. Dickins: Davison put himself to no extra expense; he sent his (Davison's) clerk away. His clerk fell sick, and had to go home again. Mr. Smith was told by Davison that he was no longer required. For nearly two months there was no clerk employed. Afterwards Mr. Crane was engaged. He effected all the sales himself. Mr. Davison only effected one sale and that was a bad one, as Davison made a mistake and $1,208 was lost. Davison sold nothing else. He never intended Davison to sell the goods, only to keep them in his godowns, and give the bank delivery-orders. Mr. Grigor made out his accounts. (Books referred to). During all this time Mr. Davison only wrote some godown orders, and some of his (witness') French correspondence. After the row took place he retired from Davison's office. Davison brought an action against the O. B. C., and Dickins seized the goods for the Bank. He asked Dickins what he meant, saying that the goods were double the value of the Bank's advance upon them. The Bank was more than secured by the goods. Davison never asked him about handing over the goods to the O. B. C. It had done very great harm.

A very long discussion took place as to this last answer, Mr. Marks arguing against such questions.

His Honor disallowed the objection.

Witness continued: If he had known about the goods being handed over to the O.B.C., he could have made other arrangements.

Court adjourned till Thursday morning, at 10.30.

March 11, 1875.

The Court re-assembled at 10.30 a.m.

F. Beato's examination continued—He had already stated that he had never withdrawn the goods from Davison; it was not to his interest to do so. It was not to his interest that they should be delivered to the Bank. He never give Dickins authority to withdraw them. He recognised a letter he had written to Davison, telling him he would have nothing more to do with him; it only referred to his rents. (Letter handed into Court and to the Jury)

Mr Dickins asked Beato to state in what way it was disadvantageous to him that the goods should be handed over to the Bank.

Mr. Marks objected to this being put.

His Honor disallowed the objection.

Witness continued: If the goods were kept by Mr. Davison he would have a chance to sell them, and that would enable him to pay Davison's commission and other expenses. As Davison gave them to the O. B. C., it gave the Bank the power to sell them as it chose—either at auction, or by handing them over to a firm for sale. He never rented the godowns on lot 37 from Davison, He rented them from Grigor, who bought them for him. He never asked for rent previous to the O.B.C. action. He never asked Davison to pay rent for godowns on lot 37. There was no

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

agreement between him and Davison as to the amount of rent he was to pay. He thought he was renting the godowns at the usual Yokohama rate. He thought $90 and 75 per month a fair charge to make for the godowns. Mr. Davison knew nothing about the class of goods he imported. (He Davison) never imported any of this kind. He did all the work in connection with the goods. Davison only made out godown orders for the bank. Davison brought no buyers, or any mercantile connection whatever. (Witness produced his sales book).

His Honour said all the questions were leading.

Mr Dickins denied this.

Mr Marks said he was tired of objecting to them.

Witness continued: (He read a number of items from his sales book). All the small sales in the book were to personal friend. He made no such small sales to Japanese. He wanted this to be understood, as Davison had said he had had a great deal of trouble through petty sales of the goods. (Sales book handed to Jury).

To Jury. Though there were some small sales in the book to Japanese, they were only payments for samples.

To Mr. Dickins: He never intended when he made Davison his agent in 1872, that the agreement should last for ever. Mr Davison never asked him for commission on the unsold goods. Davison always said he (witness) had nothing to do with the goods, as he (Davison) was agent for the Bank. He first saw the claim for unsold commission in the petition. After the O.B.C. trial Davison did not ask him for charges, &c. He did not know of a custom in Yokohama of paying unsold commission. He had had offers from five houses here to do his business for him.

Mr Marks objected to this last answer, saying that Mr. Dickins must prove the offers by producing the gentlemen who had made them.

Mr. Dickins argued against this, and said he had a perfect right to put such a question.

Witness continued: He could name the parties, and show the offers in writing.

Mr. Marks said that he objected to the letters being produced if they were not proved by the writers. Witness might mention the names.

Witness continued.—He had an offer from Van Oordt & Co. to do his business for him. They asked $100 rent a month, or 10 cents per package storage on the goods.

Mr. Marks objected to the particulars being given. The other side must produce the parties themselves to prove the offers.

His Honour overruled, and noted Mr. Marks' objection.

Witness continued—It was either to be a gross rent of $100 per month, or 10 cents per package. He was to insure the goods himself and Van Oordt was to have 5 per cent. on small sales, and 2½ per cent. on large sales.

Mr Marks quoted from "Taylor on Evidence" in support of his last objection, which he again raised.

Mr. Dickins said the letters containing the offers could be produced, and that they were the best possible evidence of the truth of what witness was saying.

Mr. Marks cited further from "Taylor on Evidence" in support of his argument.

His Honour over-ruled the objection again. He thought the letters good evidence.

Witness continued—He then went to Mr. H. Ohl, and asked him what terms he would do his business for. Mr Ohl agreed to accept a commission of 2½ per cent on any sale exceeding $500; for any sale less than this he asked 5 per cent. He asked 10 cents per package per month for storage, and 1½ per cent he was to pay for fire insurance. He (Beato) then went to Mr. Blakeway, who offered to do all his business for 82½ per cent commission. He (Blakeway) only asked 10 cents per package per month for storage. Blakeway agreed to do all the work for him in connection with selling the goods. Grosser & Co. and Maron & Co were willing to do his business on the same terms Gutschow & Co. and Raud & Co. also offered the same terms.

Cross examined by Mr. Marks: He never authorised Davison to sell his goods for him if he was present. He agreed to give Davison commisson for his trouble in opening cases and delivering goods; it was not for sales. Davison gave the compradore orders to land the goods, and wrote some godown orders for the Bank; he also wrote some French correspondence for him. Part of his sales books was a copy from Davison's; they were sometimes compared. (Books compared and items gone into) He made all the sales to the Japanese. He retired from his office in Davison's premises as soon as he found that Davison had brought the action against the O. B. C. He was not turned out of the premises; he left on account of the row. He never withdrew the goods from Davison. He did not know that the O. B. C. had commenced an action gainst Davison, to recover the goods. His promissory notes were payable on demand. He swore that the letter he wrote to Davison only spoke of his rents. (Letter produced,) He made a mistake: it also referred to arbitration, &c. Mr. Davison did him an injury by giving up the goods to the Bank. Dickins had no power from him to give the goods up to the Bank, and was not advising him in July. If Dickins wrote letters for him in July, 1874, he did so without his authority. Mr Dickins had behaved as badly to him as Marks had. (Laughter,) Mr. Dickins did many things without any authority from him. He had been between two fires—Mr Marks, Mr Dickins and the O. B. C. and had been nearly driven wild; he had been shamefully used. He came to get his rights and his money. (Laughter)

Mr. Litchfield read the letter referred to; it was dated 28th July, 1874, from Dickins to Marks, written on behalf of Beato. It was headed "Davison *vs.* Beato.

Witness continued.—He was aware that an action was commenced against him in July last.

Mr. Marks.—You just now said you did not authorise Dickins to act for you in July, 1874.

Witness attempted to explain.

Mr. Marks said the whole of the evidence of this witness was valueless, and that he could promise Beato he would commence criminal proceedings against him directly this action was finished. The evidence was simply disgraceful to Beato and his counsel. He did not believe a word witness had said.

Witness: Your Honour: See how Mr. Marks is treating me! It is shameful.

His Honour said the witness' statements were very difficult to reconcile.

Court adjourned till 2 p. m.

The Court re assemb'ed at 2 P M.

F. Beato, re-examined by Mr. Dickins:—The witness again explained the meaning of the letter he had written to Davison about having nothing further to do with him.)

Mr. Marks said this was the third explanation witness had given.

Mr. Dickins said his client had made a mistake in giving his evidence and former explanation of the letter, and had confused it with another letter he had written about the same time to Davison. He (Mr. Dickins) now desired to put in a letter about rates of storage written by Davison to the Oriental Banking Corporation.

Mr. Marks objected to it being put in and His Honour allowed the objection

Witness continued—The sales-books produced in Court this morning were two journals—one being a "rough" book and the other a "fair" one. He wished to explain an account he had with him, but

Mr. Marks objected; the account had not come up in cross-examination.

Mr. Dickins said the shortest way would be to let the witness show and explain it. He did not know what it was about.

Mr. Marks still objected.

His Honour decided it could not be allowed. Witness had employed counsel and must leave his lawyer to fight his case for him.

Mr. Beato to Jury:—He had seen the firms who had made offers to his business personally and had afterwards corresponded with them about the matter. The offers he had received were all subsequent to the rupture.

Geo Blakeway, sworn and examined by Mr Dickins.—He was the chief of the Société Anonyme Franco Japonaise. He had had experience in such goods as the ones now in dispute. He had been a witness before the referees in the late action. He had written a letter to the *Japan Herald* about the evidence he had given. Mr. Beato had asked him about charges and the substance of his answer was contained in that letter.

Mr. Dickins here read the letter; it ran as follows:—

To the Editor of the *Japan Herald*.

SIR,—I read in your issue of 16th January the letter of Mr. Ohl, with the utmost surprise and concern. I allude specially to the paragraph as follows:—"I considered that a charge of 10 cents per package per month on miscellaneous goods, and an additional 2½ per cent. (for not selling) amply remunerative.

Having endorsed before the referees Mr. Ohl's evidence, I feel it incumbent on me to declare that his mention of an additional 2½ per cent. *ad valorem* absolutely escaped me, and well it might, for I am at a loss even now to understand his meaning.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The question at issue was simply the rate of storage, on the understanding that a commission *for selling* of 2½ per cent. or 5 per cent., according to the nature of goods, was paid either by the owner of the goods or depositor of them.

Account sales are generally charged with:—selling commission; guarantee commission (sometimes); storage; insurance; remitting commission (sometimes); brokerage on remittance; duties; interest on disbursements advanced; postage and petties.

Outsides of these I know of no additional commission or benefit whatsoever, and I certainly never heard of such a thing as 2½ per cent. on value.

I therefore disagree entirely with Mr. Ohl, and in the matter under discussion wish to repeat fully the substance of my evidence.

I consider, having in the view the contingent advantages in the shape of commission, profit on insurance etc, etc, that a charge of ten cents per package was a fair and just remuneration

I will now go further, and say that a public warehouseman, or storer, doing a moderate business, would be amply compensated by a charge of ten cents per package without further benefit.

In a matter of such importance, not only to both parties but indirectly to the public, I consider that the closest examination is necessary, and I have brought to bear on it all the attention it deserves. With all due deference to the referees, I most emphatically disagree with their finding, and I maintain that a charge of 35 cents per package all round on the goods described is not only exorbitant, but even extortionate.

A repeated examination of the matter brings me to the same result. If the goods in question were measured, and the proper calculations made, it would be seen that at 35 cents a perfectly monstrous profit would be realised. I have made calculations with regard to storage on the goods now lying in my own godowns, and I find that with perhaps a greater proportion of bulky cases than is shown in the lists of Mr. Beato's goods, I should, at 35 cents per package, make about $950 per month on godown accommodation costing me $100 per month. Surely it is out of all reason to suppose that any owner of goods in his senses would consent to such a profit—more than 900 per cent—being made by his agent on the one charge of storage.

In my opinion, the upholding or charging of high or excessive rates is, in trade, an unsound policy, inconsistent either with commercial instinct or sense.

I remain,

Your obed't servant,

G. BLAKEWAY.

Yokohama, January 18, 1875.

Re-examined by Mr. Marks.—He messed at home and not at the Club.

Mr. Dickins put in the copy of the *Herald* containing the letter by Mr. Blakeway. He now desired to put in the letter from Davison to the O. B. C. about rates of storage.

Mr. Marks again objected. It had nothing to do with the present case. It only related to some wine stored for the Bank.

Mr. Dickins denied this and said it related to some cloth. He would swear to it.

His Honour after considerable discussion declined to admit the letter.

Mr. Marks desired to hand into Court a document he had forgotten to put in before closing his case.

Mr. Dickins objected to this as being irregular. His Honour had just excluded a letter he wanted to put in and Mr. Marks must be served with the same sauce.

After a little discussion between Counsel they agreed that both documents might be handed in.

Mr. Dickins said this concluded his case and as he felt unwell and there would not be time to-day for the summings-up it would be better to adjourn till Saturday morning next. He could not attend to-morrow (Friday) as he was otherwise engaged.

His Honour adjourned the case till Saturday morning at 9.30.

H. B. M.'s CONSULAR COURT.

Before C W GOODWIN, Esq, Assistant Judge

March 9, 1475.

COBB & Co. *vs.* J. WICKERS.

This was a judgment summons for recovery of the sum of $58,84, an amount awarded to plaintiff by a decree of the Court on 23rd July, 1874, and which defendant had failed to pay either in whole or in part.

In reply to Court defendant said that he had never been able to pay, and on being questioned by plaintiff, said that he had never received but two or three dollars at a time, and that he had not received any money for training ponies at last race meeting, but that he had a pony which plaintiffs could take over for the debt.

Plaintiffs applied that defendant should be ordered to pay a certain sum per month.

His Honour said that it was of no use his issuing orders which could not be complied with, but that plaintiff could have an execution issued if defendant had any goods.

Plaintiff said that the racing season was coming on, and defendant would have an opportunity of earning money; and he expressed his willingness to accept a sum of $5 per month.

His Honour therefore made an order that defendant should paid $5 on the 9th of next month, and $5 on the 9th of each succeeding month; and warned defendant that if he did not pay, and it should be proved that he had been in a position to do so, he would render himself liable to imprisonment.

Shipping Intelligence.

ARRIVALS.

Mar. 7, *Pardo*, British steamer, Power, 767, from London via Nagasaki, General, to Walsh, Hall & Co.

Mar. 7, *Ariel*, British barque, Mulson, 358, from Nagasaki, Coal, to P. M. S. S. Co.

Mar. 7, *Swatow*, British steamer, Ridley, 520, from London via Hongkong, General, to Van Oordt & Co.

Mar. 8, *Menzaleh*, French steamer, Pasqualini, 1,008, from Hongkong, Mails and General, to M. M. Co.

Mar. 9, *Oregonian*, American steamer, Harris, 1,914, from Shanghai, General, to P. M. S. S. Co.

Mar. 9, *Great Republic*, American steamer, Cobb, 4,200, from Hongkong, Mails and General, to P. M. Co.

Mar. 9, *Malacca*, British steamer, Bernard, from Hongkong, Mails and General, to P. & O. Co.

Mar. 10, *Otto*, German brig, Adamsen, 231, from Takow, Sugar, to Smith, Baker & Co.

Mar. 10, *Kanagawa Maru*, Japanese steamer, Roper, 1,325, from Shanghai and Ports, General, to Mitsu Bishi S. S. Co.

March 11, *Shoeyleen*, Japanese steamer, Froom, 600, from Osaka and way-ports, general, to Mitsu Bishi S. S. Co.

Mar. 12. *Toyoshima Maru*, Japanese steamer, Thompson, 653, from Nagasaki, General, to Mitsu Bishi S. S. Co.

Mar. 13, *Ly-ee-moon*, British steamer, Stevens, 611, from Hakodate, Ice, to P. M. Co.

Mar. 13, *City of Peking*, American steamer, Morse, from San Francisco, Mails and General, to P. M. Co.

DEPARTURES.

Mar. 7, *Abbotsford*, British steamer, Mann, 649, for Nagasaki, Ballast, despatched by Van Oordt & Co

Mar. 8, *Vasco de Gama*, British steamer, Rice, 2,200, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Mar. 9, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Mar. 10, *Lackawanna*, Am. corvette, McCauley, for Honolulu.

Mar. 10, *Costa Rica*, American steamer, Conner, 1,917, for Shanghai, Mails and General, despatched by P. M. S. S. Co.

Mar. 10, *Niigata Maru*, Japanese steamer, Walker, 1,680, for Shanghai and Ports, General, despatched by Mitsu Bishi S. S. Co.

March 11, *Great Republic*, American steamer, Cobb, 4,200, for San Francisco, mails and general, despatched by P.M.S.S. Co.

PASSENGERS.

Per British steamer *Vasco de Gama*, for San Francisco :—Messrs. Hunter, Wheeler, Hubner, T. Walsh, Hart, Crace, and Dr. Rendle.

Per French steamer *Menzaleh*, from Hongkong :—Messrs. Lippman, and Scully.

Per British steamer *Bombay*, for Hongkong :—Dr. Platt, Messrs. T. Mercer, J. Mercer, and J. N. Driscoll.

Per P. M. S. S. *Oregonian*, from Shanghai. For Yokohama.—Mrs. A. L. Fobes, C. Lucas, A. H. Cole, G. B. Hill, J. C. Abell, C. H. Cobden, C. de Bouille, Dr. J. C. Tripple, C. B. Colucousses, J. Wain, L. Tyler, Mr. and Mrs. Wagen and 2 childrens, R. S. Ogle, A. H. Paine, P. Rawley, R. Dowson, J. Fitzgerald, Captain Furber, Captain Wise, Carl Neilson, W. Sykes, and 31 Japanese. For San Francisco.—Mr. W. Patteson, Mrs. C. E. Cobb, Mrs. Marshall, W. Nicholson, E. L. Loomis, Mrs. J. K. Lancaster, J. S. Flason, R. Marshall, and 1 Chinaman.

Per American steamer *Great Republic*, from Hongkong :—R. G. Davenport, Master U. S. N., J. G. Bugman, U.S.N., K. Hurada, U. Yabara, and 14 in the steerage.

Per British steamer *Malacca*, from Hongkong :—Mr. D. Wise, Miss E. Forder, Messrs. J. G. Smith, L. Horsley, and 5 Chinese on deck.

Per Japanese steamer *Niigata Maru*, for Shanghai and ports :—Rev. J. H. Ballagh, Mrs. Ballagh, Mrs. Pruyn, Miss Withbeck, Dr. P. de Sautebenko, Dr. Roretz and servant, Dr. Rein, servant, and secretary; Rev. H. Loomis; Messrs. Clarke, John G. Smith, Lee Horsley, E. Davis and servant, D' Scully, C. Michel and servant, Morimoto, Ichisugi, Saba, Dupont; Tsugei, Shuzuki, Nagasaka, R. Beattie, Bishop Laucaigne, Rev. Mr. Péln, Schultz, Naga Oka, Watanabe, Tokano, Tsungiyama, Okada, Tsuda, J. Meredith, Kimmijima, Ruriya, Kanaya, Horiwo, and 116 in the steerage.

Per American steamer *CostaRica*, for Shanghai and ports :—, Mr. and Mrs. Evans, Miss M'Pherson, Mr. E. Amah and child. General and Mrs. Allen, Miss Allen and servant, Prince Kuroda, family, and servants; Mr. Davidson, Mr. F. J. Water, Mr. Burns, Mrs. Rice, Mr. and Mrs. D'Hauger, the Misses Cargill, 1 Japanese lady, Mrs. Murray, Mr. A. W. Glennie, Mr. Morris, 10 Japanese, Mr. Morris, Abell, and 143 in the steerage.

Digitized by Google

Per Japanese steamer *Kanagawa Maru*, from Shanghai:—Mr. and Mrs. Lewis, H. Barnett, E. C. Kirby, F. Vogelsan and servant, H. Steele, F. Hardee, and 75 Japanese in the steerage.

Per *Great Republic*, for San Francisco.—Mrs. Cobb, Mr. and Mrs. Hanzsche, Mrs. Patterson, Mrs. Lancaster, Mrs. Pratt and three children, Dr. and Mrs. Murray, Mrs. Marshall, Messrs. Buzing, L. D. Syle, J. T. Fearon, Loomis, L. Profama, and 938 Chinese.

Per Japanese steamer *Toyoshima Maru*, from Nagasaki.—Capt. E. W. Sikeineier, and four Japanese.

Per British steamer *Ly-ee-moon*, Mrs. Hawes and daughter, Mr. Thomson, and 10 in the steerage.

Per American steamer *City of Peking*, from San Francisco. For Yokohama.—Capt. Randall Jackson, Messrs. Oscar Busch, J. R. Morse, J. Wilson, C. A. Curtis, Charles Bowles, Tay Takaki, S. Ischisaka, Fr. Schmidt, James Sherry, Peter Williams, Christopher Myrtelus, Chas. Halat, M. Takie, S. Hase, Miss Kawase Osador, For Shanghai.—Mr. Wisner, Mrs. C. Campbell, Lung Wei Chune, W. H. Ricard, Mr. D. S. Mulford, wife and child. For Hongkong.—B. H. Coit, wife and maid; A. G. Bennett, Walter Hastings, and 107 Chinese, steerage.

CONSIGNEES.

Per American steamer *City of Peking*, from San Francisco.—Order: J. Busch & Co, F. R. Wetmore & Co., Geo. A. Potter, Henry Allen, jun., J. D. Carroll & Co., Augustine Heard & Co., J. Edwards, Mendelson Bros., Chipman, Stone & Co., Langfeldt & Mayers; R. Isaacs & Bro., Adamson, Bell & Co., Otto Kuntz (care of German Consul), Wilkin & Robison, their Excellencies the Governors of Kanagawa, Walsh, Hall & Co., H. Ahrens, Thomas Harris, agent; H. L. Cook, and P. Bohm.

CARGOES.

Per British steamer *Bombay*, for Hongkong:—
Silk.....202 bales.

Per American steamer *Oregonian* from Shanghai:—
Treasure.....$48,000

Per British steamer *Malacca*, from Hongkong:—
Sugar.....9,057 bags.
Sundries.....4,257 package.
Overland.....66 "

Per Japanese steamer *Niigata Maru*, for Shanghai: Treasure, $16,250.

REPORTS.

The British barque *Mora* reports very heavy weather with strong S. W. gales. Crossed the Equator Nov. 2nd in 30 deg. west. Came up through Ombay and Gillolo passages, passed Gaby Island Feb. 8th. In the Pacific had fine weather till nearing the Japan Coast while off the entrance of Bougo Channel during a very heavy gale with a tremendous sea running, at 10.30 p. m. of the 2nd instant, the carpenter George Harris a native of Dartmouth, fell off the main topsail-yard and was drowned, the night being too dark to render any assistance.

The British ship *Thomas Hilyard* reports a sea breaking on board while in the Indian Ocean which smashed in front of the cabin, damaging a considerable quantity of ship's stores, sails, and many of the captain's effects. On the rest of the voyage had fine pleasant weather: came up through the Gillolo passage.

The British steamer *Malacca* reports: left Hongkong March 2nd, 6 a.m., experienced fresh monsoon with fine weather to Yung Ying, from thence to Yokohama, light southerly winds and smooth sea, freshening to a strong gale towards Oosima, with high sea; from thence a strong northerly wind, hauling to the north east with high sea but moderating towards Omai Saki. Arrived at Yokohama, March 9th at 10 a. m.

The *Kanagawa Maru* reports:—Left Shanghai on the 3rd March, and arrived at Nagasaki on the 5th, Shimonoseki on the 6th, and Hiogo on the 8th; experienced fine weather and moderate sea all the voyage. On the 6th, at 11 p.m., met the S. S. *Tokio Maru* at anchor off the eastern entrance of the Straits; at 1 30 a.m., met the S. S. *Nevada* steaming to the westward for the Straits also. Arrived at Yokohama on the 10th.

The British steamer *Lyee-moon*, reports: On the 11th passed a two masted steamer and a schooner bound up; 12th experienced strong southerly gale. Remainder of voyage, fine.

The *City of Peking*, left San Francisco on the 20th of February, 1875, at 1 p.m., bound for Yokohama and Hongkong, with mails, merchandise, and passengers to the P. M. S. S. Co. On Saturday March 6th, passed a homeward bound steamer, supposed to be the Company's S. S. *Great Republic*. March 9th, at 7.50 a.m., it was discovered that an arm had dropped from her screw. This unfortunate occurrence greatly marred the enjoyment and expectation of all, the ship up to this time having made a very good run, the average distance per day, using seven boilers, 48 tons of coals, and the engines making 44 revolutions per minute, being 300 miles. The weather most of the distance was unusually pleasant. The *City of Peking* carries a crew of 180 persons, including the following officers:—H. G. Morse, Captain; Wm. G. Pitts, 1st officer; Barrett, Chief Engineer; John W. Meyers, Purser; F. [illegible] Surgeon; C. L. Gorham, Freight Clerk. On the 11t[illegible] encountered a strong gale from southeast to northwest;

COMMERCIAL INTELLIGENCE.

YOKOHAMA, MARCH 13TH, 1875.

IMPORTS.

Cottons Fabrics and Yarns.—No new feature in the condition of the market for these goods may be reported as having presented itself in the closing week. Arrivals have been considerable—mainly in satisfaction of former contracts—and prices, though somewhat easier than those last quoted, are on the whole moderately steady.

EXPORTS.

Silk.—Our fortnightly report, dated 10th instant, was as follows:—

Since the 24th ulto., arrivals from the interior have made but a trifling addition to the unsold stock which was estimated at about 1,400 bales. Although in excess of the average and containing no doubt some good parcels of Hanks and Oshius this stock has been of little avail to buyers, as medium, common and inferior Silks alone were offered for sale. We leave unchanged the prices quoted in our last for the better descriptions of Hanks and Oshiu, but having failed to induce sales they must be taken as nominal, and we have no further decline to report than $10 to $20 on common Sinchu and Bushiu sorts.

On the 6th inst. some 50 bales were sold by public auction for the account of a Japanese firm in liquidation at the following prices:—Sinchu Szwa, native filature, 10/14d. pretty clean, good color at $565 (resold, we hear, on the same day at an advance of $10).

Shinchiu Hanks,	No. 1½ to 2	$495
Do.	No. 2 to 2½	$460
Do.	No. 3	$412½ to 420
Do.	No. 3 to 4	$380
Do.	very inferior	$355

The last parcel was taken up by a Japanese dealer.

The settlements of the fortnight are 330 bales of Hanks, and 20 of Oshiu. The shipments are 448, making the total export 8,837 bales against 11,614 last year for the corresponding period.

The stock is reduced to 1,200 bales.

Since then a steady demand on the part of a few buyers has continued and deliveries are about 200 piculs of Hanks and Oshius. Arrivals are 165 bales.

A public sale of about 30 piculs of Sinchu Silk is to take place on the 16th instant.

	Laid down and sold in London Ex. 6mos. at 4s. 3d. @ Lyons, 5.35.		*Laid down and sold in London Ex. 6mos. at 4s. 3d. @ Lyons, 5.35.*
Hanks—

Good (No. 2)	480 to 500 18s. 6d. to 19s. 2d. frs. 51 to 53	Common No 3	410 to 430 16s. 0d. to 16s. 9d. frs. 44 to 46

Tea.—We published the following report on the condition of the local market on the 10th instant.

The reduction in price submitted to by natives holders has not been without its expected results. Buyers have again entered the market and settlements for the few days since the despatch of the last American mail steamer amount to piculs 950, an extremely liberal total considering the late period of the season.

The decline to be quoted amounts to $6 to $7 per picul on Common and Medium grades, and $5 on better classes: but considering that the leaf is dry and old, and therefore difficult of manipulation, the concession is barely sufficient to induce purchasers generally to enter the market. Some of the native merchants must be large losers on recent sales. It is to be hoped that next season they will not hoard up their fine goods in the hope of obtaining excessive and exorbitant figures, more especially when prices which should have paid a liberal profit have ruled so high as during the opening month of the current year: the fact of their having done so savours somewhat of Guild combination or interference.

Our market to-day closes rather weak, and native holders appear anxious to realize.

Since then prices remain as quoted below; though a somewhat weaker tendency is observable. During the past three days the arrivals from the provinces amount to 600 piculs.

Common	...$20.00	to	23.00
Good Common...	... 25.00	to	28.00
Medium	... 31.00	to	34.00

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOM LE PILLS, London.

Aug. 1. 26ins.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 13m.

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

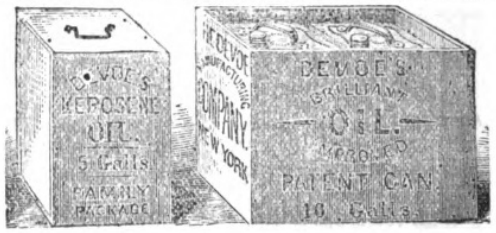
Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.



THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may befound on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles by all Chemists.

CAUTION.—☞ The public are requested to observe that all the above preparation bear the Trade Mark ashereinshown. THOMAS KEATING, LONDON, EXPORT CHEMIST AND DRUGGIST. Indents for pure Drugs and Chemicals carefully executed.

SUPPLEMENT

TO THE

Japan Weekly Mail.

YOKOHAMA, SATURDAY, MARCH 13, 1875.

H. B. M. PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

March 13, 1875.

FELIX BEATO *vs.* JAMES DAVISON,

JAMES DAVISON *vs.* FELIX BEATO.

Mr. F. V. Dickins appeared for Mr. Beato; Mr. F. W. Marks and Mr. Litchfield for Mr. Davison.

The hearing of this case was resumed this morning.

Mr Dickins, addressing the Jury on behalf of Mr Beato, said that a singular calamity had befallen the jury in regard to this case, in having to judge of a series of proceedings all muddled together and which ought to have been brought separately. The case of his client was a simple demand for rent and for balance of account between himself (Mr Beato) and Davison. The answer of the letter raised issues as to the amount and asserted a set-off. The other side had founded a counter claim and had brought a cross suit to recover that which they had failed to obtain in an action brought against another party (the O. B. C.). The nature of this claim was for rent which was admitted, but the amount of which was disputed. He was prevented from having the last words with the jury, because the actions had been fused together, which he conceived was unjust as the nature of the claims had no similitude in character. He was obliged to present his case and defend it in the same speech. No doubt his learned friend greatly rejoiced at the enormous advantage he had thus obtained, and he (Mr Dickins) had one consolation which was that he was dealing with a jury which was fully on the level of a special jury to try difficult questions [and thus the last word was not of such importance. He cared little how much his learned friend would deluge the jury with legal platitudes or disgust them with unseasonable jokes (or "goaks" as he wittily termed them!). No doubt he would use plenty of personal invective against himself (Mr Dickins) and would attempt to mislead the jury with false argument and false facts. The learned Judge had told them (the jury) that his client's claim was merely a set-off and that his client was the defendant in the action, and this too at the beginning of the action before he could open his mouth for the defence. He would ask the jury for their sympathy, and to extricate him from the toils in which the learned Judge had cast him, and if his statement was a little long he would ask them to consider that the commercial existence of his client hung upon their decision. His client was a foreigner, who imperfectly spoke English, seeking to protect himself against preposterous and unjust charges on the part of a man in whom he had trusted as a friend, but who had turned out to be a hostile and deadly enemy and who seeks to win his case by stating that which a few months ago he solemnly and repeatedly denied under oath. Before going further he would like to put a few figures before the jury. Davison by his own admission had retained out of sales :—from the Hongkong and Shanghai Bank $5,762, from the Chartered Mercantile Bank $2663, from the Oriental Bank Corporation $7751; being a total of $15,957, besides $5218 paid by the O.B.C. on the verdict given by the referees in the late action, and $786.00 for returned Insurance premiums: this gave a total of 21,961 actually received by Davison. Against this Davison had paid: Duties $4317, Insurance $7000, Rent of No. 87, $1500, or a total of $12,817. Thus it could be seen that Davison had already received the sum of about $9,000:00 clear profit, and there was nothing to show that he had been put to any extra expense, by Beato's agency, except the employment of a clerk for a month or two. And now Davison having obtained $9000 coolly asks for $13,000 more! For what? for effecting one sale, which entailed a heavy loss on Beato, for no other sale made by him had been proved. All that Davison had done for his client was to allow him to sell his own goods and have the run of his (D's) office, the use of his godown and a part use of his clerk and compradores and the anonymous advantage of the use of his name. Davison had made no advances, since by collecting Beato's rents, proceeds of sales &c., he always had been in funds more than sufficient to meet all actual disbursement. The defence of Davison to the claim of rent was only that a different amount had been agreed to by Beato. There was no evidence to prove this and Beato expressly denied it. Davison swears that the late Mr. Baker let the two godowns to him for $90:00 per month and that therefore Beato must be taken as having let them at the same rate. Mr. Grigor states that he let the godowns to Beato for $90 and not to Davison at all and this disposes of that, showing that Davison did not tell the truth. He admitted that Davison was in one sense was Beato's Agent, but not such an Agent as is alleged in Davison's petition. Though Beato did get Davison to insure the goods in his name, yet it is absurd to suppose that he agreed to pay such charges as are made by Consignees here against Consignors at home. All that Beato wanted was to do the business in Davison's name. Such an agency he was willing to admit (Mr. Dickins here gave a recapitulation of the facts connected with the case, and reviewed the evidence of the witnesses). In conclusion he said he had heard that Beato was not such a popular man as his opponent, but he felt sure this would have no weight with the Jury whatever; he felt he could safely leave his case in their hand and they would find a verdict for his client.

Mr. Marks replied for Mr. Davison.:—May it please Your Honour and gentlemen of jury, this case presents few, if any, points of law not thoroughly established in favour of the plaintiff. The action is purely one of liability of principal to agent for commission and reward and for money due for services rendered and for money out of pocket paid by agent for his principal. Defendant's answer, if it means anything at all, is a plea of general denial and of set off; but no particulars of set off are stated and the answer may therefore be taken as simply to delay, on the ground that plaintiff would move to dismiss it, as he might certainly have done had he chosen. The real defence disclosed by his evidence amounted simply to: First, that plaintiff by suing the O.B.C. originally, discharged the defendant from liability. Second, that on the former trial, not between the same parties, the plaintiff swore he was not the agent of defendant, and thirdly that the charges were too high. The question of negligence is not raised by the pleadings in either of the cross-suits, and cannot therefore be entertained and indeed is not shown to have existed, No question can exist as to the liability of a principal to his agent, or of one man to another—in the absence of an express contract to the contrary—for a reasonable remuneration for work done and a benefit conferred (Chitty on contracts, pages 512 and 519). The corresponding obligation to perform the work properly is admitted, and there is no denial from the other side as to due care and diligence. Here, then, there is a *prima facie* case against the defendant Beato for a reasonable commission, for reasonable rates of storage, insurance &c, and for money expended on his behalf. How does defendant meet this case? By citing a former judgment *inter alios* which if the defendant intended to be conclusive against plaintiff, he should have pleaded specially by way of estoppal. This he has not done; nor can he be taken as having so done. The case then for the consideration of the Court and jury is confined to two issues—both suggested by his learned friend, (the accounts as far as figures were concerned being admitted as correct by his opponent). First, the liability of the defendant Beato. Second, the tariff of charges. To these two issues alone, notwithstanding the great diffuseness of the evidence, should the attention of the Court be confined; as to the question of liability His Honour would instruct the Jury on that point and it was not necessary for him to adduce authorities on such an elementary principle of law. Any person employed by another to transact work for him is entitled at law—in the absence of an express agreement to the contrary—to a reasonable remuneration to be ascertained by a Jury. (Chitty on Contracts p. 512). In this case there was certainly no agreement to the contrary shown—indeed the defendant Beato, admitted agency and agreement. His learned friend had, for the first two hours, in his summing

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

up confined himself to his case, and had gone on like a gentleman, but like the cow which had yielded a good pail of milk, he kicked it over, and following his natural disinclination to conduct himself properly, had assailed him and insulted His Lordship However, comment was superfluous.

The case for the consideration of the Court, when reduced to its proper limits, was confined to a very small compass; much unnecessary evidence had been gone into by his learned friend—which was quite beside the issue. Almost at the beginning of the trial the defence had been confined by defendant to two grounds; first the liability or non-liability of the defendant Beato, second the tariff of charges. He would entirely confine plaintiff's case to these two points. First, then, as to liability. There were two points for consideration, law and fact. As to law, it was unnecessary to prove that any person was entitled to a reasonable remuneration for his services—if there was no express stipulation to the contrary. Defendant had not attempted to prove that there was an agreement to the contrary. Defendant in a slovenly and second-hand manner had sought to prove that although Davison did certain work he did it negligently and to the hurt and damage of defendant Mr Dickins had seen how faulty his answer of "never indebted" was (which by no means raised this defence) and had sheltered himself behind a rule in the Orders in Council that "at hearing a defendant should not be bound absolutely by his answer." This rule was never meant for pleadings drawn by professional men. The nature of the "negligence and damage" alleged by the defendant Beato was purely imaginary. It was true there had been some delay on the part of this client in making out accounts for Beato. But Beato and the Banks were as much to blame as his client in this matter, and when Davison really found that Beato wanted accounts he had them made up, and since April 1874 regular accounts had been made up and sent to the O. B. C. and Beato. Mr. Marks then referred in strong terms (too long for us to give) to the imputations of fraud, conspiracy, fraud and theft against Davison, himself, the O. B. C., the Court, the Referees in the late action and the community of Yokohama in general made by the opposite side. As to the performance of the agency by the plaintiff the books, the nature of the accounts themselves, the correspondence, the record and the evidence of the parties shewed that Davison *did* perform the agreement, that he landed, stored, warehoused and paid duties on Beato's goods, that he sold and assisted in selling a large portion of these goods and that those on which he has charged half commission were withdrawn and surrendered by due process of law in accordance with the written demand of the mortgagees and of Beato himself (shewn by the letter of July 31st 1874). Here, then, we have seen the contract fully performed by the plaintiff. Mr. Marks then briefly alluded to the question of charges: the referees of the late action had decided that point, and many respectable merchants at this trial had said that they considered the charges moderate. And because a number of merchants, hard up, were willing to store the goods for less; that did not prove that the proper and average Yokohama rate had not been charged. Mr Marks commented shortly on the charge for godown rent, and said he could safely leave his case in the jury's hands.

His Honour then charged the jury. He said this was an action brought to recover money as compensation for work and services done. It had been pleaded on the other side that work had never been performed or else had been done negligently. Beato in 1872, had gone to Europe, and purchased goods, and on his way back to Japan had telegraphed from Singapore, and made Davison his agent. When Beato reached Yokohama he made an agreement with Davison that he was to sell the goods and in consideration for so doing was to receive 2½ per cent commission on large sales, and 5 per cent on the small. There was no agreement as to charges; but it was understood between the parties that they were to be on a fair scale. This agreement was made, both parties at the time knowing the goods were pledged to the Bank. The Bank could at any time have taken the goods out of Davison's hands and have placed them with another custodian, but in this case the Bank did not object to the two kinds of Agencies which Davison held by being seller and custodian of the goods. Davison was selling agent for Beato and custodian for the Bank. He had to assist at every sale made. He Davison stood between the Bank and Beato, and this disposed of all the arguments about agency. In one sense he was the agent of the Bank and in another the agent of Beato; this continued till the goods were handed over to the Oriental Bank, and Davison's dual agency ceased. The first question is, is there any liability at all on the part of Beato to Davison? Beato still went and always did account to the Bank for the sales made. Then there was the question of how Davison performed the work he was now suing for. This was a point for the Jury to decide upon from the evidence before them. It appears that Beato did look after every transaction, and because he chose to live with Davison it did not follow that the latter did not do the work. It has been urged very strongly that Davison in handing over the goods to the Oriental Bank did Beato great harm. This question was disposed of by the fact that the goods were all pledged to the Bank. As regarded the accounts question it seems that Davison had not been as prompt and careful as he might have been. It might, perhaps, seem hard that after eighteen months Davison suddenly came down with a heavy account. With regard to the godowns, whoever took them from Mr. Baker must be in possession of them. Grigor says in his evidence that that they were let to Beato and that Davison hired them from Beato. The question of rent for the godowns was an obscure one and the jury would have to decide the point. The accounts were a very difficult matter to put straight and see what was due and what was not, but he felt the jury, being mercantile men, would find them less difficult than he should. The case altogether was really more simple than it appeared to be despite the long arguments of the counsel. The question of agency he considered settled: the goods being all along pledged to the Bank, and the Bank had the right and power at any time to demand them from Davison; thus Davison did not injure Beato's interest by giving up the goods when demanded, for he could not do otherwise. Next there was the question of unsold commission. Unsold commission was compensation to a person who had tried to sell goods placed in his hands for sale and which had been withdrawn from him by the depositor before he (the commission agent) could sell them. There had been evidence produced to show that there was such a custom. If there was no such custom it was for the jury to decide what was a fair compensation to be paid to Davison. Then again there was the scale of charges and there was the evidence that was taken before the referees in the late action. Mr. Wilkin still adhered to what he had said as regarded his evidence. The jury would have to decide the question.

The following is the verdict delivered by the Jury in this case.

In rendering their verdict the jury desire to state that they approach the subject with considerable diffidence, believing that the questions at issue might more properly have been referred to arbitration.

We find for the plaintiff Davison in the sum of $8,302 65-100 which we arrive at as follows, and which disposes of defendant Beato's claim or set off.

The total balance claimed by plaintiff Davison is $9,055 5-100, to which must be added the sum of $27 15-100, commission on $543 15-100, which has been omitted in plaintiff's particulars of demand: —

Say total		...$9,082 20
From this must be deducted the following sums:—		
Disallowed, being difference of commission on goods charged as miscellaneous which were afterwards classed as staple	$582.52	
Landing charges over-charged, as admitted by plaintiff's counsel	78 52	
Interest on charges to 31st December, 1874, disallowed	118.51	
		779.55
Balance found to be due Davison		$8,302 65

LANDING CHARGES AND STORAGE,

We consider the rates charged somewhat high, but in the absence of any reliable data as to the exact measurement and description of goods to which we (? can) refer, we adopt the scale determined upon by the referees in the late action, Davison v. O. B. C.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 12.] YOKOHAMA, SATURDAY, MARCH 20, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 18th January, at Dunedin, N. Z., the wife of EDWIN JOHN SPENCE, late of Yokohama, Japan, of a son.

DEATH.

At No. 14, Yokohama, on the 17th instant, THOMAS LEPPER, aged 35.

Notes of the Week.

A most important reform has been made this week in the taxation of this country. It consists in an abolition of the taxes on some two hundred and fifty articles, and the substitution for them of a tax upon tobacco and *saké*. The annual revenue abandoned is about $1.200.000, while the revenue which the new taxes may be expected to yield is about $2.000.000, leaving a balance of $800.000, annually in favour of the exchequer. As regards the very important question of the popularity of this change, we are assured there is no misgiving whatever on the subject in the mind of the Minister of Finance. Indeed, it is anticipated that the new measure will be very well received, as it will do away with a great deal of irritating interference in small matters which has hitherto been very distasteful to the people, while the revenue which it brought was comparatively small.

ANOTHER very important step taken is the revocation of the prohibition on the export of rice forced on the Government while the late dispute with China was pending. We have always regarded the throwing open of this trade as the key to the prosperity of this country, at least until such an extension of the relations between foreigners and the Japanese can be made as permits of the introduction, on a large scale, of foreign capital, by means of which its mineral resources can be developed. Rice-growing is the truly great industry of Japan, and every measure calculated to foster it should receive the warmest encouragement. The trade of the country is in a condition to cause great anxiety to the Government and to foreigners. In spite of a power in regard to the maintenance of the value of the paper currency greater than is possessed perhaps by any Government in the world, there is a steady drain of the precious metals from the country, and this is not a desirable feature. If gold were flowing away for machinery or anything which added to, or tended to develope, its wealth or resources it would be a different thing. The retention of the precious metals in a country is not *per se* anything desirable. They are only valuable so far as they are required for the purpose of facilitating the exchanges of produce, *i,e.* in commercial transactions, or as a fund with which useful or desirable things can be purchased. But, in this country, a metallic currency which, having a certain value all over the world, was available for the purchase of foreign commodities, has been forced out of circulation by a large issue of paper resorted to to meet the exigencies of the State at a time of great emergency, the exchanges have become adverse and the gold flows away, leaving in its place a currency with which nothing can be purchased outside of Japan. It is no wonder that the Government is anxious and even alarmed at this, or that we see notifications issued which, though capable of an explanation consistent with good faith being maintained with the public creditor, have certainly been dictated by a desire to close as far as possible those gates through which the steady flow of bullion has passed out of the country.

THE many references to the seven sects of Buddhism and specially to the Shinshiu Sect which will be found in our translations published to-day demand some explanation in regard to their distinctive tenets. The subject is one involving great difficulty, and nothing less than a history of Buddhism in this country would be sufficient to explain it fully. But the following notes may not be wholly without value to our readers.

In the form which Buddhism has taken in Japan there are two Gods, Amida, and Shakka Nuirai. The former is the Creator of all things; the latter his incarnation in Shakka (Sakya Mouni).

The seven sects and their doctrines are shortly as follows.

The Nitchirenshu Sect was founded by Nitchiren about the middle of the thirteenth century. It holds that temporal and eternal happiness may be achieved by piety and earnest prayer, but attaches the greatest importance to this life and temporal affairs.

The Zenshu Sect had its origin in China. It holds that the world was created out of nothing, and that the mind of man is a mere blank at his birth. But there are bewilderments in the world, and this blank in the mind of man involves him in darkness. These bewilderments and this blindness can be dispelled by prayer to God. But there is no future state.

The Todoshu, Shingonshu and Tendaishu Sects hold very much the same doctrines, with variations not easily appreciable by foreigners. The priests of these sects read to their followers the Chinese prayer-books containing the doctrines brought from India to China, and these sects, like the Zenshu, came from China. The priests of this sect exhibit great zeal, but the lay adherents of it are extremely indifferent. The doctrine teaches generally that virtue in this world will ensure happiness in the world to come.

The Shinshiu or Monto sect is divided into two, the East and West. It was formed by Shinran at about the commencement of the thirteenth century. It holds that our stay in this world is so short that we need not greatly take thought for its concerns. The use of the prayer-books of other sects is unnecessary, but prayer to Amida, the only God, is the ladder by which Heaven may be reached. The principal difference between this and other Buddhist sects is that the priests may eat meat and fish, and are permitted marry.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE following paragraph is taken from the Washington correspondence of *Alta California*.

THE JAPANESE INDEMNITY FUND.

The House Committee on Foreign Affairs agreed to-day upon a bill to pay back to the Japanese Government one-half of the Japanese Indemnity Funds, with interest, the remainder (amounting to about $300,000) to be under the control of the Secretary of State, and to be devoted to the education in the Japanese language of a number of American youths; also a number of Japanese youths in our language; the same to be under obligation to serve our Government not exceeding five years as interpreters and assistants to the Diplomatic Consulars *(sic)* and as commercial interpreters between the two nations, as recommended by the President in his annual message.

Comparing this paragraph with a short editorial in the same journal we find there are some discrepancies in the two, all the more difficult of reconciliation on account of the extreme obscurity of the editorial. If the above paragraph may be trusted, the U. S. Government will refund to the Japanese Government one half of the Indemnity Fund, that is about $600,000, and will retain the balance ($600,000, consisting of $300,000 in hand and rather more on the way) for the purpose of educating a number of American and Japanese youths for the American diplomatic and consular service in this country. We have already shewn the injustice of this proposal, and its entire want of logical consistency, nor is it now necessary to repeat the argument we adduced to prove our position. America feels—quite rightly—that there is no sufficient justification for her taking this money. If the Indemnity had in it something of the nature of a fine levied for a misdeed, its primary purpose was to defray expenses actually incurred in punishing those who were guilty of this misdeed. We are not clear whether the Governments of France and Holland could claim that the expenses to which they were put amounted to their share of the Indemnity, but we should say generally that they did not. As regards England, we may safely say that her actual expenses amounted at least to the share of the Indemnity which she actually received, on the total amount of which there was, it may be remembered, a first charge of over $400,000 for injury done to private property. But the navies of France and Holland were at least represented at Shimonoseki by vessels of war, and it was France who proposed that the total Indemnity should be shared *pro ratâ* according to the expenses incurred. But the American navy was only represented by a chartered steamer on which the national flag was hoisted, and the total expenses of participation in this affair by the United States was $30,000. There were no Americans killed; there was no devastation of lands or burning of homesteads such as occurs in war ashore; the blood of no fathers or husbands was to be avenged. There was a fair claim for compensation for expenses incurred, but there was no just claim beyond this. Yet America has $1,200,000 in hand to represent her claim, and by no possible pleading can it be urged that this is right. Not only so. America feels that it is not right—a conclusion we should as soon commend her for arriving at as we should think of praising a banker for wishing to restore to its owner money which had come into his hands through the act of an unscrupulous, or let us say, if you will, overzealous servant, who has procured it by means of which his master disapproves. But though Congress feels that America has no right to this money, she has not said to Japan that which we think she ought to say (of course, in perfectly diplomatic language)—"We have thoroughly investi- "gated the history of the Shimonoseki affair and have taken into "consideration the true nature of our claim to the share of the "Indemnity paid to us. We find that all the damage done to "American property was made good out of a first charge on the "total amount of the Indemnity, so that we have no claim on "that score. We further find that our actual expenses in connec- "tion with the action were $30,000, and, as against this amount, "we have $1,200,000 to the credit of the Indemnity Fund, by "far the greater part of which was paid by you. Without in any "manner desiring to reflect upon the act of the Minister to "whose agency we owe the possession of this money, and "attributing it partly to the want on his part of an entire know- "ledge of all the circumstances of the case,* and partly to "a superfluity of zeal which we cannot censure, we have "arrived at the conclusion that we are not justified in "retaining this sum, to which we have no just claim *in foro* "*conscientiæ*. The amount, therefore—minus $30,000 which re- "presents our actually incurred expenses—stands to your credit "in the accounts of the nation, and your drafts to that extent "will be honoured by the Secretary of the Treasury. The "position we have considered it our duty to take in this "matter forbids our making anything which could be con- "strued into stipulations in regard to the use of the money "on its return into your hands. But in view of the ardent "desire you have shewn to avail yourselves of the services of "some of our valued citizens hitherto engaged in the work of "education in this country, and of the mutual benefits which "will certainly spring from the education of your own people "in the learning of the western nations, it would afford us the "greatest satisfaction to hear that this money was be used for "the perpetual endowment of a college in one of your principal "cities, or in any other form, in the great cause of education." This is what we should like America to say. Is she courageous and just enough to say it?

* The American Minister in Paris arranged the qu-

THE case brought by Mr. W. P. Kent against White, the constable of the English Consulate, though, in all probability, decided by the Assistant-Judge as it would have been decided by a jury, who would have hesitated to convict him of an attempted embezzlement of money, wears anything but a healthy look for the defendant. But the chief moral of it seems to us to be, that men of this class should be entrusted with the very smallest possible amount of power compatible with the actual discharge of their duties, and that all money matters especially should be rigidly removed from the sphere of their action. The Court is the proper, and should be the invariable, recipient and disburser of all monies which change hands by its order, and the power of manipulating them should be entirely removed from men of White's class.

There is another matter which we have reason to think demands the serious attention of the Assistant-Judge; we allude to the calling of the names selected from the jury-panel on the assembling of the court when a case is to be tried by a jury. The names are taken from the panel in a certain order. They are thus taken, we presume, by a responsible officer of the Court—of course this is not left to the constable. Are they called in this order? In a recent case involving an issue of the gravest importance—an issue which could only be properly determined by men of a certain station in life, conversant with the feelings and motives of those who move in that station, fifteen names were down on the jury list as usual. But it is remarkable that all but one of those who were called first, and who ultimately composed the jury, were men wholly unfitted to try the issue brought before them, while there were at least eight or ten names on the list to which no possible exception could be taken by either side. The result was a miscarriage of justice of a very grave nature. In a little place like this, no man in the position of the constable should be entrusted—if, indeed, he is so—with the smallest power in a matter of this weight. There is, as there always must be in such a place, among men of this class a great deal of *camaraderie*, which, unconsciously, perhaps, to themselves, but not the less certainly, colours and even guides their decisions. Of all the evils done under the sun there is none worse than when the machinery put together for the very purpose of ensuring justice produces some monstrous caricature of it, as much to the dismay of him who seeks it as to those who may administer it, and this through the action of the most subordinate part of such machinery.

IN our issue of the 6th instant will be found a letter from a Correspondent signing himself "Lynx," on the subject of a recent notification issued by the Government touching the exchange of notes, bearing on their face a promise to pay in gold, for inconvertible notes. The wording of the notification most certainly laid it open to the criticism of our Correspondent, and to the remarks we appended to his letter, and demanded an explanation of what appeared to be an act of great injustice to the creditors of the Japanese Government whether natives or foreigners. This explanation is as follows.

There are three kinds of notes in circulation at present which are exchangeable for gold.

1.—The Notes known as "*Shoken Mitsui.*"

2.—Notes issued by the *Kaitakushi.*

3.—Notes issued by the First National Bank.

The Government notification has relation to the first and second kinds only. Of these there is in circulation at the present time a total of *yen* 1,394,628 against which the Government keep a reserve in gold in the Public Debt department of the Treasury, but no part of this reserve is in the country—it is all in Tokio. Many of the notes are, however, circulating in the country. On the 31st May the Government wish the new Frankfort notes to be the only paper circulating medium issued by them, but as they cannot possibly tell where the "Gold" Notes are, they cannot take it upon themselves to send gold out into the country to take them up. Hence the statement in the notification that the "Gold" Notes will be redeemed in *paper*. But the contract on the notes is not in any way modified by this notification. Persons who wish to get gold must bring their notes to Mitsui's Bank, when they will be paid in gold according to the contract. Mitsui will be refunded by the Public Debt Department for the gold he pays out, and the notes will be burned.

THE English Mail Steamer bringing European mails to the 5th February, sailed from Singapore from Hongkong on the 8th instant.

A party consisting of about fifty Loochooans arrived during the week from the South, having been summoned to the capital by the Government. It is believed that the head men of the islands have recently exhibited some remissness in obeying instructions, and that the deputation will be called upon to offer some pledge for their more perfect obedience in future.

UP to the date of sailing of the *Tanais* from Hongkong on the 12th instant the *Adventure*, troop-ship, had not arrived at that port.

(From the Japan Mail Daily Advertiser.)

A meeting of the Asiatic Society was held yesterday evening at the Grand Hotel, at which Dr. Hepburn took the Chair.

The preliminary business having been disposed of, Mr. Goodwin read a paper entitled "On some Japanese Legends," in which he showed, by several illustrations, that a marked similarity existed between some of these and stories which, in various forms, may be found among the peasantry in Europe.

At the close of the paper Professor Ayrton expressed some doubt whether these and similar stories were not the unrelated out-come of the mind of the various nations among whom they were found, and showed that legends or stories having the same underlying moral were to be found generally throughout the world.

Dr. Hepburn agreed in the main with Mr. Ayrton, and adduced the fact that proverbs teaching identically similar lessons are to be found among all nations.

Mr. Howell urged that the identity of the moral would not be sufficient to establish the claim to relationship, but that identity of illustration went far to prove it.

A paper by Dr. Geerts entitled "Observations on the Climate of Nagasaki in 1872," was then read, in the absence of the writer by Mr. Brunton, and the evening was brought to a close by some remarks from Professor Ayrton upon the value of meteorological reports, and some of the results which might be expected to follow from the accurate records which the Meteorological Commission of Washington proposed should be made simultaneously and regularly in various parts of the world.

A resolution was unanimously agreed to during the evening that every alternate Meeting of the Society should be held at Yedo.

IT would seem that there is a conflict of opinion in reference to further proceedings in the Ohno bankruptcy case between the authorities of the Finance Department and of the Sa In and Shihosho. It is now stated that the total liability of the concern amounts to 7,000,000 *yen*, and it is estimated that the assets will allow of a dividend of 55 per cent.

IT is said that a site for a residence for H. M. The Mikado has been purchased at Nogé.

AT intervals the native mind appears to recur to the mania for railway construction as a panacea for the torpor which has invaded business and in the hope of reviving commerce. Yedo is full of such crude schemes at this moment, begotten in the brains of men who have not the smallest conception of their practical conditions nor of the enormous cost they involve. For one or two short local lines—or, still better, horse-tramways—there is possibly a fair prospect, and the ambitious engineers who propose to run a line 240 miles into the interior would do well to try their 'prentice hands upon one of these minor operations.

THE *Nichi-Nichi Shimbun* states that the price of rice at Osaka, rose on account of the late Assemblage there of high officials.

WE observe that a telegram from London dated March 5th, announces that Congress has annulled the subsidy granted to the Pacific Mail S. S. Company.

Two attempts at incendiarism were made last night at the taverns known respectively as the "Pacific" and "Far East." In each case a rag, steeped in kerosene, had been employed for the purpose. Fortunately, however, the danger was averted by the promptitude of the inhabitants.

THE requisite repairs to the screw of the *City of Peking* having been effected she will be despatched to Hongkong at four o'clock this afternoon.

SHIPPERS OF SILK.

Per Messageries Maritimes steamer *Volga*, despatched 16th March.

ROCKS AHEAD.

IT was only on the 13th of last month that our issue of that day contained the following words in a leading article :—

"The Japanese are beginning to educate their people, "and are teaching scores of thousands of them a language "the very class books of which infuse new ideas into their "minds regarding the relations of the Governors and the "governed. *One of these days they will begin to ask "themselves and their rulers why they pay such a vast "proportion of their incomes to the State.* They have "already a press which has shewn a vigour in its youth "of a very remarkable nature, and the Government may "rely upon it that, one of these days, the activity which "now spends itself largely upon speculative questions,— "precisely as our own press did in the days of CHARLES "II.—will find *a material to work upon touching much "more nearly the daily concerns of each man's life.*"

If our readers will now turn to p. 243 they will find a translation taken from the columns of the *Japan Herald* which affords a startling verification of our prediction. A farmer writes to ask why he and his brethren and the peasantry should contribute the enormous proportion of their earnings which they now do, to a vast class of indolent and extravagant men who spend it luxuriously or viciously, without one thought of those by whose toil it is created. Of course this question brings us face to face with many of the problems and anomalies, if not injustices, which the institution of property presents, especially in old countries. As in Europe, the social arrangements in Japan have involved a distribution of property which was the result not of just partition or distribution, but of force, and notwithstanding the modifications brought about during many centuries by industry, the system retains most of the traces of its origin. At the late revolution, the entire revenues of the land, formerly enjoyed by the *daimios*, and administered by them for the benefit of themselves and their retainers, were seized by the State, in the interest of the commonwealth, and with the consent, forced or voluntary, of those from whom they were taken. This was of course done on conditions which, if not acceptable to, were at least accepted by, the landholders, and to these conditions the State bound itself by promises to the dispossessed landholders on the maintenance of which the constitution of society in Japan now depends. If the proletariat is to rise up and say to the State, "You take from us over one-third of the produce of our industry, and pay this to a class of men to whom we owe no allegiance or obligation, and who, by absolution from the military service they were compelled to afford their former masters, have no real claims on the State ; we now refuse to contribute this share of our earnings for this purpose"—if this is to be said and acted on, of course it would amount to a declaration of civil war, which might change the present relative position of feet and necks. It is clear that the protest of the "Farmers' Deputy" who has written this memorial, whatever principles of natural justice it may contain, is subversive of the present order of society. At this moment the State has guaranteed to certain individuals, not the fruits of their own labour or abstinence, but the fruits of the labour and abstinence of other men, transmitted to them without any labour or exertion of their own, and this guarantee is not of the essence of the institution of property, but a mere incidental consequence of it, which, when it reaches a certain height, does not promote, but actually conflicts with the ends which render private property legitimate. I hope it cannot be denied that this height has been reached ; and it is certain that, in view of the inevitable consequences which would there ensue from it, a tolerable mean will always be preserved between those who hold property and those whose exertions give it that value which makes it worth holding. Nor should it be forgotten that men's ideas of natural justice are very local, and that conditions which are regarded as tolerable enough in one part of the world would be regarded as absolutely intolerable in another. Still it may be doubted whether this "certain height" has not been reached in this country at which the possession of property, or that commuted equivalent for it which under the head of 'pensions to *daimios*' forms an annual charge on the national revenues of $20,500,000,* conflicts with the ends which render such a charge upon the labour of the lower classes legitimate. If we may venture to make another short quotation from our previous columns, we would point out that on the 13th February we said, "But the classes which produce "the wealth in this country do not"—we ought perhaps rather to have said, cannot—"accumulate it, and thus "there is no increasing fund of capital to put out at com- "pound interest, as there ought to be."

It must not be thought that we overlook or under-estimate the momentous issues which belong to the question brought forward by the writer whose letter or essay we are commenting upon, and we would not have the Japanese imagine that problems of this nature are treated with less than that seriousness which they demand. We should also be sorry to say a word calculated to lead to anything more than a consideration of the whole question at issue from a conservative and national point of view. The work of this generation consists mainly in building up a new polity from the ruins of the old one, and revolutions are such enormously expensive things, so much is always lost in acquiring the new gain hoped for from them, that the balance is not unfrequently against them. The desire to imitate has developed something of a passion for novelty, and if Japanese readers of European books only search in the required direction, they will find an abundance of works, written by men of the most earnest and ardently philanthropic disposition, treating questions of this nature in a manner which would not only lead to revolutions, but which, if attempted to be made the basis of a polity, would conflict with the whole idea of modern society, even if not with the very nature of man. Tempting yet visionary views of this nature are the dangers which specially beset young, earnest and speculative minds. They have been tried, sometimes on a larger, sometimes on a smaller, scale, always with high hopes, and often with a most alluring early promise of success. But they have, so far, always broken down, and the secret of their failure has been their want of harmony with surrounding circumstances, or with the fundamental constitution of human nature. The problem which has presented itself to the Deputy of the Farmers' is as old as the institution of property, and there is no patent solution of it. But there are two reasons which make us think that some early solution of it will at least be attempted ; the first is the desire shewn by the Government to free itself from the enormous charge entailed on the national revenues by the allowances promised to the *daimios* and their retainers, by buying them out ; the second is the establishment of those popular deliberative assemblies of which one of our translations this week gives such a remarkable account. These deserve a fuller consideration than we are enabled to give to them at present, and it is worth something of self-reproach that

our first allusion to them is incidental. But though they have at present no existence acknowledged by the law, and no place in the constitution, it is certain that, unless prohibited altogether—which could not be done without both injury to the people and danger to the State—they will very soon grapple with this very question, and it will require all the sagacity and prudence they may combine to discuss and solve it satisfactorily. The Government will, in all probability, rejoice to see it brought forward, because the masses will side rather with the moderate, perhaps insufficient, scale on which it was proposed to commute the present allowances. It will also be glad to have the *samurai* problem solved by the voice of the people, rather than incur the odium of a powerful class directed solely against itself. The status and many of the privileges of the nobles and *samurai* are things of the past and they will be swept away; but the classes themselves remain and have their rights, which must be regarded and treated in a spirit of moderation and justice. Meanwhile, this is a question which deserves, and, indeed, demands, careful and thoughtful discussion in the native Press; nor, when saying this, should we forget to add a word which may possibly reach this great rising power in the country, and we venture to say it only because we partly represent the older institution of Europe which Japan has taken for its guide. No Press has ever been so early and so heartily recognized by a Government as that of Japan. In Europe the Press has fought its way through a thousand obstacles, opposed partly by the timidity, partly by the selfishness and partly by the ignorance of rulers. In this country, it has taken a place which, so far, it has occupied with marked dignity and moderation, and it has been welcomed to this place by the Government—a fact wholly without precedent in the history of absolute monarchies. The wisdom which has dictated this course demands the fullest recognition, and imposes a special duty of prudence and moderation on all who are now engaged in this new sphere of action. It is well that they shall be liberal and courageous; but they can hardly be too circumspect in their opinions in regard to political changes or questions of a vital and organic nature. It is easy to pull down institutions, but very hard to construct them. Those who are often loud enough in denouncing mismanagement, are perfectly lost when they approach the practical difficulties of government. Most clever young men at five-and-twenty are republicans; at thirty, monarchists, and by the time they are sixty they hardly have a theory of government at all, but are content to solve the problems of the day as they arise—a conclusion, which, whatever else it may indicate in ourselves, we are strongly inclined to think is the only sound one. One of our old writers says, "He who would go about to persuade "a multitude that they are not as wisely governed as "they ought to be, will never want for an audience nor for "matter wherewith to illustrate his argument.†" We trust that Japanese writers will not fall into this error of rapid and unpractical declamation, but will, before giving their opinions to the public, carefully weigh their practical value, their justice and fitness. If they will do this, they may render an incalculable service to this country, and enormously lighten the very difficult task of guiding it through the obvious dangers which beset it.

† Hooker's *Ecclesiastical Polity*. We quote from memory, and certainly have missed the writer's beautiful diction; but the sense of the passage is retained.

MONEY!

THE elder PITT commenced one of his speeches, "Sugar, Mr. Speaker." Some thoughtless member of the House laughed, and he thundered out "I say, Sugar, Sir. Now, who will dare to laugh at Sugar?" We wish some member of the Council of State in this Empire would always rise with the word "Money" on his lips, and, if necessary, thunder it out again as PITT did the word 'Sugar.' For this is the real question in Japan at this moment. We wish to draw attention in the few following words to a translation from one of the native papers which will be found elsewhere, on the question of Travel in the Interior, but, following the example we have named, we wish to regard this, we do as every other question where any such relationship can be claimed, as a 'money' question. The last chorus of Handel's greatest oratorio is called the "Amen Chorus"—and a mighty one it is—because this word is the only one used in it, and we wish it were possible to produce something like a similar effect with a chorus which should have the word "Money" for its sole burden.

Before commenting, however, specially on this translation, we would endeavour to show very briefly how the relationship between it and our theme can be established.

It is obvious that the great want in this country is capital. For this all its intelligence and all its hidden resources languish. The enormous unproducing class which has been maintained for centuries out of the earnings of the people has eaten up all their savings. "He "hath eaten me out of house and home; he hath put all "my substance into that fat belly of his," as the Hostess says of Falstaff, No country ever was so enormously taxed for the maintenance of an idle class as Japan has been for the maintenance of her nobles, gentry, and above all, her *samurai*. Bring forty or fifty millions of good honest British money in here, and we should soon see the mountains dotted with sheep, the valleys covered with herds, the mines disgorging their rich contents, earth opening her fertile womb, and everything going as merrily as a marriage bell. We should see railways and canals, mills and filatures, and hear a blessed hum of contentment and prosperity throughout the Empire. The cottage of the poor man would improve, the small villa of the tradesman, the larger residence of the merchant, and the castle of the noble would be seen at one glance in these beautiful landscapes. The country would be laid down with good roads, the *jinrikisha* would wane before the four-wheeler or the Hansom, and the poor slave who now enlarges his heart, cracks his sinews and ruins his lungs in dragging it—there must be from fifty to eighty thousand of these poor fellows in the Empire—would find this hard occupation gone, and again join the ranks of the artisan or agriculturist from which he has come, for higher wages, perhaps, but, certainly for a shorter career of healthy life. And why should not all this be so? What is to prevent it? Want of the money in England? There are fifty millions there, or a hundred, for that matter, which could be had for the lifting up of a little finger. Want of hands here to set to work with it? No. We have three-and-thirty of as intelligent, cheerful people here as there are in the world, who, if they are not very industrious, which we by no means intend to admit, have an immense potential industry in them, as is proved by the way in which these very *jinrikisha* men work when they have the inducement. If there is any apparent indolence in this country, it is because there is so little capital in the working of which labour can be employed. The available fund of wages is so small that the bare neces-

saries of life are all that the majority of the population can afford. What, then, hinders the realization of the picture just sketched? One thing alone. An unreasonable jealousy on the part of the Government to allow foreigners to assist them in developing the country. Is there any such jealousy of or aversion to us on the part of the people? Most assuredly not. We appeal to the columns of this journal in which there have been endless records of travel in the interior from men of various professions and tempers. They agree, without an exception, in the picture they draw of the cheerfulness, politeness and willingness to oblige of the Japanese people, of the kind reception everywhere accorded in this country to strangers; but, alas! also, in the poverty of the country, the scanty clothing, the poor dwellings and food, and, above all, the miserable roads.

Turn, then, from this jealousy on the part of the Government to the manly and liberal views advocated in the article to which we have referred. Contrast the large-hearted breadth of this short essay with the restrictions under which travel in the Empire is permitted to foreigners. Cordiality and confidence on the one side; mistrust and jealousy on the other. From the subject, a hearty invitation and a clear view of the gain to the country which would accrue from the presence of the foreigner: from the Government, a pitiful restriction that unless on the plea of health, scientific investigation or some pressing purpose, which must be named in order that the authorities may judge of its validity, no foreigner shall go beyond the treaty limits. Above all, he must not trade. And here we come to the money question. Why should he not trade? Has trade a tendency to impoverish the country. If a man goes into the interior with ten thousand dollars with the intention of laying them out as cheaply as he can, is it probable that he will be a violent or an unruly man? When a customer goes to a tradesman's shop, does the tradesman immediately tie his arms and legs and tell him in what manner, and what manner only, he shall spend his money? If the tradesman is not an idiot, he will let his visitor roam about the shop, and it is ten to one that instead of laying out one pound, he will lay out two. The Japanese pretend to have outstripped the Chinese on the march of modern progress. But a foreigner may go all over China and buy what, where and when he chooses. In Japan, he cannot buy a picul of silk, or tobacco, or tea or hemp, and therefore the boast, at least in this direction, is a vain one.

The writer of the paper exposes what we shall call the *samurai* bugbear. We have always been told that the lives of foreigners are in danger in this country, and that acts of violence will be committed for which Japan will be called upon to pay heavy damages. The writer asks if the Government, or those who talk thus, are sure of this, and meanwhile he shows that it is a mere bugbear which ought not to be allowed to cramp a policy not by any means without a liberal side. The simple fact is that the *samurai* are such as their masters, for the time being, make them. Their professed hatred of foreigners was mainly owing to political instigation. The ruling classes or leading agitators of the day made use of them in opposing foreigners, just as the Chinese Government now use the *literati* of China, or as they used the people of Canton in old times. If this class were really so opposed to foreigners as they have been represented, or if they were such formidable subjects of the MIKADO, they would never have subsided so completely as, in point of fact, they have. The Government has ample power to deal with these men in everything, except, perhaps, a scanty pension; beyond this, we are persuaded they are neither better nor worse than they are made. They are mere clay in the hands of the potter. When it is found desirable to control them, their combs fall rapidly enough. If the Government could put down the Sagn insurrection in a week, it can have little to dread from the acts of isolated men dotted about the country.

We repeat it, this is a money question. When a sensible man has got into money troubles, he does two things: he spends less, and does all he can to make more. By these means he extricates himself from debt, stops the drain of his gold, and finds himself at the end of the year with money enough saved to give his wife a new silk dress. This improves his credit because he has shewn himself a sensible and an honest man, and the world, which eat his dinners and laughed at him while he was exceeding his income, makes him a bow with more of respect in it that the nod his impending bankruptcy formerly invited. He may thenceforward snap his fingers and laugh on whichever side of his mouth he pleases. If the Japanese are wise men they will take this translation to heart; if not, we shall hear Falstaff's ghost finishing the scene of which we caught a glimpse just now, and roaring out "Let it alone, you'll be a fool still." In any real distress or difficulty the Japanese always have had, and always will have, our sincere sympathy. But we have no pity for imaginary troubles, or troubles of their own making, neither shall we cocker them up in a policy which is as completely without sound justification as it is prejudicial to their true interests.

THE EXPORT OF RICE.

IT is with the greatest satisfaction that we publish the following notification announcing that the revocation of the permission to export rice, forced upon the Government at the time of the Formosan affair, has itself been revoked, and that the export will again be permitted on the 1st April next. It may have been a question, even while the dispute with China was pending, whether it would not have been better to allow the law permitting the export, to take its course. But there can be no question whatever that the step now taken for the second time is a sound one; and, indeed, in view of the present condition and trade of the country it might almost be called a necessary step. It has simply come to this, that without some early and sound legislation directed towards the development of the resources of this country, its external trade will sink into proportions so insignificant that a tithe only of the foreign merchants now in Japan will be enough to carry it on.

NOTIFICATION.

The undersigned publishes for the information of British subjects the following Notification communicated to him by the Japanese Minister for Foreign Affairs removing the prohibition on the export of rice from the 1st April next.

(Signed) HARRY S. PARKES,
H. B. M.'s Envoy Extraordinary and Minister Plenipotentiary.

H. B. M. Legation,
Yedo, March 20, 1875.

TRANSLATION.

NOTIFICATION No. 42.

The exportation of rice to foreign countries was prohibited by Notification No. 58 of May 1874. It is hereby notified that on account of the internal circumstances of this country the Exportation of rice to foreign countries is allowed from the 1st day of April next in the same way as by Notification No. 246 of July, 1873.

SPIRIT OF THE NATIVE PRESS.

Contributed Article on the Question of Permitting Travel in the Interior.

(*Nisshin Shinjishi of March* 17, 1875.)

The question of Travel in the Interior has at length sprung up, and arguments have been brought forward advocating the withholding of this permission to travel in the Interior. I will therefore state my views, ignorant though they may be, on the subject.

The Gods in causing nations to have intercourse with each other, instituted. as the basis of such intercourse, the principle of good-feeling and honesty-of-pupose, and the conclusion of treaties between all countries of the globe and the conduct of mutual intercourse between them, with this principle for a basis, are of old date. What I regret continually is that cordial relations have not been properly developed between this and other countries irrespective of any superiority or inferiority of the Japanese people. Ah! our country is not yet even half-civilized!

Permission to travel in the Interior, which should have been granted spontaneously by us, was denied even when it was applied for. This is indeed a thing to be ashamed of!

Those who thus expose the savage condition of the country, who imagine the existence of extraordinary and violent characters before they are sure that these exist, and who talk about the loss which will accrue to the country (from granting permission to travel in the interior),—only look at the small profit and loss which are immediately apparent, and do not consider the great and material gain or injury which it is reserved for the future to disclose.

The feeling displayed in the arguments which advocate the withholding of this permission to travel in the interior is like the behaviour of one who refuses to allow his relations, who have come to his house on a visit to the members of his family, to see them. How can a cordial and true understanding be effected in this way? The progress of the country is checked and a true understanding with foreign nations is impaired by bringing forward such insignificant pretexts.

There is no one, I venture to say, now-a-days who is not ashamed of the childish and injurious policy of exclusion in not allowing foreign ships to enter Japanese waters which was persistently carried out three years ago when the American Envoy visited Uraga. If we compare this former exclusive action with the present unwillingness to permit travel in the interior, we find that they are the same.

And arguing from this fact, even supposing that places of business were established in various parts of the country, and trade conducted there between Japanese and Foreigners, and that loss were to result therefrom, it would not be like the loss that the country suffered in former times, and the sums to be paid as compensation for the acts of violent and lawless characters would be small.

Therefore the best course to pursue is to overlook any small insignificant loss that the country might suffer, and to endeavour by increasing the knowledge of the people daily, to acquire great and material gain for the country, whilst making the attainment of future wealth and power secure.

Why then do the Government not permit travel in the interior! Why do the educated classes not desire it? To see one's way to doing what is right, and not to do it—this is weakness; to see one's way to securing profit, and not to secure it,—this is folly.

It is not the province of an illiterate and stupid individual like myself to discuss such a great question as this, but I have ventured thus to make known a few of my sincere convictions as the chirpings of an unfledged nestling to the scholars of the age. I shall rejoice if they will pronounce judgment on what I have written.

(Signed) SHIBATA, + + +
Resident in the Yehimé *Ken*.

Class Distinctions.

(*Translation from the Choya Shimbun.*)

There should be no class distinctions in society. Some persons may be said to be *kadzokus*, *shidzokus*, or *heimins*—or rich, poor, intelligent or ignorant; but the rights of man must be equally given to all. God loves us all alike, and, morever, God did not instruct or permit the *kadzokus* and *shidzokus* to receive the money that was made by the sweat of the *heimins*, and for them to be indolent, and spending it luxuriously, for good clothing and the like; nor did God make it the duty of the *heimins* to make the *kadzokus* and *shidzokus* the dependents of them, and to support them with their hard-earned money, which they gain through cultivation or trade. Since the revolution we have continuously heard that the four classes of Japanese were to be united into one; but the only one, by our observation, that has really united is the *yeta*, being permitted to join the *heimin*: for what we call *kadzokus* are the former *daimio*, and *shidzoku*, *samurai*—and they are the greatest do-nothings—Government being afraid that they may raise a revolution, because they are unable to support themselves, therefore it is obliged to give them their pensions. These people cannot bear heavy burdens, or do hard labour—indeed they are perfectly useless; and as they cannot do anything better than to be idle, they are supported by their pensions. They are even different from the former *samurai*: they are not compelled to fight for the Government, as the *samurai* were, during the time of its trouble.

The affair may be easily compared with a father having large number of children who are profligate, and are using money greatly in vain. The servants are very industrious, and bring all their earnings to the master, and the master immediately puts the money into the hands of the children, who spend it all. The rank of the *kadzokus* and the *shidzokus* is above that of the *heimins*, still they are fed by the latter. It is high time for them to become ashamed of these doings, and to give up their pensions to the Government, so as to make it both powerful and wealthy. We give subjoined a proposed memorial to the Government of a friend of ours, who is a farmer:—

"Since the change of the administration, the Government is treating us very kindly and it has also made the *yetas* people of the same rank with us, and we punctually pay all the taxes, &c.; but recently, on observing that it drew men of our classes for soldiers, we were very much astonished. We have been obliged to support the *kadzokus* and *shidzokus*. Whether it is under the burning sun of the summer, or in the snow of winter, there is not a day in the whole year that we do not discharge our duties diligently, and when autumn comes all our labour is given up to the Government, and what is left for us to eat is only the sediments of rice, other grains, or vegetables. When we inquire where all this money goes? we are told that it goes to Tokio, and is used towards the construction of brick buildings, iron bridges and in buying fire-arms, carriages, European costumes, and to make payments for champagne and beer, to reward the *geishas* and pay the salaries of the *mekakes*, and supporting two millions of *kadzokus* and *shidzokus*. We were very much astonished on hearing this. Is this true? If it is, we are very much annoyed, as all our hard labour is used in vain. Some brick houses, railroads, and ships, perhaps, must be used in civilising our country; but for rewards to the *geishas*, salaries of the *mekakes*, and supporting two millions of idlers, we cannot pay such heavy taxes, for it keeps us in a poor, miserable condition. We have heard that gas lamps are lighted in the streets of Tokio; this may lighten Tokio, but the interior is in utter darkness, and this does not tend to lighten our burdens. We are very anxious about this, and we hope that the Government will think of our hardships, and compare our labour and industry with the indolence of *kadzokus* and *shidzo-kus*, that this may cease. (Signed,) The Deputy for the Farmer of Japan."

Should there be such a memorial as this sent to the Government, what would the *kadzokus* and *shidzokus* answer?—*Japan Herald*.

Advocating Abolition of Board of Religion.

Translation.

Nisshin Shinjishi, of March 13, 1875.

(*Contributed Article.*)

The reasons for which the Government created the Board of Education are that they desired, by causing this department to exercise a control over the education of the people, to prevent the existence of any individuals in the country totally destitute of education; for education may be termed the root of civilization.

But the object of the Government in establishing the Board of Religion I cannot conceive. If we consider the duties which it performs, we find that the Board of Education itself exercises a control over religion. Then why was the Board of Religion instituted? This religion consists merely of exercising a control over religious sects, and the institution known as the Board of Religion would appear to owe its original and gradual development to two causes, namely, the desire (of the Government) to amalgamate all the various sects into one, and their wish to keep out foreign doctrines. And if my surmise be correct, then the idea was first started with these two objects in view and has gradually resulted in the creation of an actual Department of State. But on consideration this view of the question is, we find, very shallow, because the various sects cannot be amalgamated into one,* nor can foreign doctrines be successfully withstood. This much is patent to children only three feet high. The counsels of our illustrious Government cannot be so feeble, nor can their views be so shallow as this! There must have been some deep reason, some far-sighted motive for the establishment of this Department, but though I have looked everywhere for this deep reason, for this far-sighted motive, I am unable to discover it.

Again, if we examine the functions of the Board of Religion we see that all that it does is to conduct a supervision over the various Shintô and Buddhist Sects, and through the amalgamation of †Shintoism and † Buddhism to have actual jurisdiction over Shintô religious officers and Buddhist priests. It might therefore be called with equal reason the Buddhist Department (*Shin-bussho*) or the Department of Sects (*Shinbusho*). All that has been done has been to change the name *Seppô* (Lectures on the Tenets of Religion) to *Sekkiyô* (Lectures on Religion,) so that *Sekkiyô* are *Seppô* all the same. How can this *kiyô* (religion) of *Sekkiyô* be named in the same breath with the *kiyô* (religion) of *Jimmin no kiyôiku* (the instruction and education of the people)? Can it be that the functions performed by the Board of Religion amount after all to no more than what has been said? It should hardly be so! Indeed, it cannot possibly be so! Still I have searched for reasons why this should not be the case, and my search has proved fruitless.

Religious belief is a matter which should be left to the free will of the people, and not even the Government itself has a right to interfere with this free will.

Now, by way of illustration, I will give a short statement of the number of officers belonging to the Board of Religion and the amount of their salaries.

There are one *Taiyû* and one *Shôyû* who are natives of Yamaguchi (Choshiu) and Kagoshima (Satsuma) respectively; one *Daijo*, a native of Kagoshima; one 6th class attaché, a native of Suruga; two 7th class attachés, natives of Kagoshima, and Tôtori respectively &c &c, and more than 90 officials of the *Hannin* ‡ grade, of whom 14 are natives of Kagoshima, and 13 natives of Yamaguchi. The monthly salaries lavished on these officials come to more than *yen* 4,650, and the yearly outlay thus amounts to *yen* 55,800. If we estimate the yearly outlay on this Department for three years—namely, from the time it was first established until last year the 7th year of Meiji—at *yen* 55,000 per year—and make a calculation, we find that the total sum spent in that period has been *yen* 165,000. A great deal could be done with this amount of money. But let us arrive at a clear and distinct understanding as to what benefit has resulted therefrom to the Government of this country, what profit to the people, and how much do we find has been done?

In the "contributed article" which appeared in the "Hochi Shimbun" of the 8th instant, styled "On the necessity of doing away with unnecessary things," Mr. Sato, the writer, observes with regard to the Board of Religion, the subject which I have chosen for the present discussion, that it is any "unnecessary ‖ thing." Though believing in the logical correctness of Mr. Sato's able opinion, yet I would somewhat modify the expression he has adopted, and I will therefore call the Board of Religion a "superfluous" institution. The question of its being superfluous is constantly under discussion by many Japanese, but if they read what I have here stated that this department has cost no less than *yen* 165,000 at a monthly outlay of *yen* 4,650, they will, I think, be startled and grieved.

Therefore I, equally with Mr. Satô, am earnestly desirous that this monthly outlay of *yen* 4,650, this yearly sum of *yen* 55,800, should be transferred to the Educational Department and should be employed to defray the expense of educating those, who, though they have eyes, cannot read, and who, having ears, are yet unable to distinguish what is right and what is wrong.

A certain Englishman once made the following remark:—"The Board of Religion was established for the "sake of the two individuals Shishito and Kuroda." §

I am of opinion that this is merely the supposition of a foreigner. But this is only conjecture on my part. I will not guarantee that it is so.

My having written this article proceeds from my wish that what is of no benefit to the people may be done away with, and that what is useful should be adopted. If there should be any mistakes in what I have said I beg that they may be pointed out to me.

Representative Institutions.

Translation.

(*Tokio Nichi Nichi Shimbun, February* 28, 1875.)

The phrase 'rights of the people' has become a very important subject matter for writers in the newspapers. It is from these rights of the people that proceed the popular assemblies called *Min-sen-gi-in* (Deliberative Assembly chosen by the people) and the *Ken* and *Fu* Deliberative Councils. We have always held the view that the rights of the people are their original prerogative, and that the people ought themselves to procure their restoration; and that the Deliberative Assemblies should begin with the smaller assemblies of the *Fu* and *Ken* which should ultimately result in the establishment of a great National Deliberative Assembly. The announcement of our firm conviction of the justness of this view was met for a time by attacks from newspaper writers who maintained that the rights of the people should be restored to them by the Government and that Deliberative Assemblies should begin by the establishment of a National Assembly. Most of the newspapers were induced to fall in with the views of these writers, and our offence became graver and graver in public estimation. It must be admitted however, that the difference of opinion has arison simply with regard to the mode of giving effect to the rights of the people, and that we are agreed with our opponents that the people should come into possession of their rights as citizens. But as they asserted that we were wrong, and we on the other hand thought them equally wrong, this could only lead to a fruitless controversy; such as we had no desire to become involved in. We have therefore as far as possible kept aloof, and taken no part in the discussions about the rights of the people and Deliberative Assemblies, but have endeavoured for a time to turn our attention to the actual condition of the people's rights in this country.

But although we have thus purposely refrained from the controversy respecting the rights of the people, our thoughts are fortunately free, and we have always been convinced of the justness of our views on this subject. There is no day on which we do not earnestly pray that the views of the Japanese people may coincide with ours,

---

* The scheme of amalgamation does not appear to have answered. Already, on the petition of an influential Buddhist Priest of Kiyôto, the Buddhists have been allowed to deliver their sermons, &c. in different places to those set apart for the Shintoists, and the present agitation on the subject of the separation of the Shinshiu Sect from the other Buddhist sects would seem to point to the same conclusion.

† Literally "Shintô Gods and Buddhist tenets."

‡ The Lowest of the three Official Grades.

‖ Or "*useless.*"

§ Shishito is the Taiyu, or chief, of the Board of Religion. Kuroda is a *Sangi* and chief of the Kaitakushi.

and also that they may have the same idea in regard to the mode of carrying them into practice.

Since the month of January last Kido, Okubo and Itô, three statesmen of great influence in the Government and with the samurai, together with Inouye, Itagaki and others, held meetings in Osaka. We cannot tell whether these meetings were merely casual or for some object. Nor have we any means of ascertaining whether at these meetings the conversation was confined to ordinary social topics, or whether it proceeded from the discussion of secret affairs of state to the question of the urgency of the establishment of a Deliberative Assembly. From the point of view of the outside public, they are regarded as belonging to the class of those secret political negotiations of which past events may afford proof. We suspect, therefore, that they were not confined to social conversation, and we cannot help being anxious as to what decisions were finally arrived at in them and as to the influence they may have and the changes they may produce in the Goverment. Kido, Okubo, and Itô having already returned to Yedo, (Inouye also came on private business in the same ship), we now hope by attentive observation of their conduct to divine the nature of the decisions come to by them at Osaka, which will no doubt be now revealed by the actual results.

But we are very sorry not to be able to learn at once the present state of the question of a Deliberative Assembly chosen by the people.

On the other hand we have learnt a piece of news which gives us great satisfaction. It is no other than this. The Assemblies of the people advocated by us have already made a small beginning, and have given signs that in a few years they will gradually attain a great development. It appears by a communication received from the middle provinces (the provinces west of Kioto as far as Shimoseki) that Assemblies of the People, in the form desired by us of Ken Assemblies and Fu Assemblies, are coming gradually into operation, and that the duty of recovering their rights is recognized by the people. Amongst other places, the two Kens of Yamaguchi and Hiogo have already organized grave assemblies where actual business is transacted. A proof of this is that in both the Yamaguchi and Hiogo Ken there were certain local expenditures (probably there are the same in other Fu and Ken) which the Kenchô could not find a suitable method of providing for by taxation. The question had troubled the Ken Officials for several years without their having been able to discover any satisfactory plan. It was therefore laid before the Assembly of the people for discussion. After a few meetings no difficulty was found in drafting a satisfactory measure which was agreed to, carried into operation, and the difficulty of years was removed. Again, in settling an average rate for the rice-tax when paid in money, the Ken officials found it difficult to find a fair rate, the price for rice of first quality being low in remote districts, while that of rice even of poor quality was high in places more conveniently situated. This question was also submitted for discussion to the Assembly of the people, which framed a scale which was found to answer well.

These two instances merely exemplify in a small way the successful working of the assemblies of the people. There is still much that is imperfect in their regulations and constitution, but there can be no question as to the dissatisfaction which would be immediately expressed in such Ken as those of Yamaguchi and Hiogo if the Government were induced to prohibit these assemblies. We believe that the Ken officials watch their success with a friendly eye, and note the proofs of their practical value, and that the members of the Council of State also take a friendly interest in them.

It gives us the most sincere pleasure that the inhabitants of these Ken have recovered their due rights as citizens and that they have attained to the discussion of these matters, which by these rights they are entitled to discuss. If the Government took any repressive measures for interfering with these assemblies, we should describe their conduct as cruel and arbitrary. But not only do the Government not place obstacles in their way; on the contrary we see that they encourage them. Even the supporters of the schemes of a Deliberative Assembly chosen by the people, whatever objections they may have to this mode of witnessing these practical beginnings of such assemblies. Indeed we have no doubt that they do. But if some among them obstinately maintain that these assemblies really do nothing towards the recovery of the people's rights, what shall we reply to them? (We are informed that assemblies of the people are being gradually introduced in the Ken of Niigata, Chiba, Oda and others, but as we have no proof of their actual successful operation, we are sorry that we cannot adduce them in support of our argument.)

The proper time for the introduction of the assemblies must depend upon two things, the lead taken by the Ken officials and the progress made in the minds of the people. Neither the Ken officials nor the Ken inhabitants can be justly blamed on the score of these assemblies being introduced prematurely or in a tardy manner, except one had a thorough knowledge of all the circumstances. We only say that we have observed the principle that such assemblies should exist in the interests of both Government and people, and that it is our desire that they should be gradually introduced. We are not satisfied with bodies like the Kwaigishô (Municipal Council) or Shiugishô (Parliament) which were established chiefly for form's sake in order to gain a temporary and empty name.

In conclusion, we wish to go one step further, and to say a word to our fellow-citizens of Tokiô (Yedo). The people of Tokiô are proud of their position close to the Government and in the van of progress and civilization, and their boast is admitted by the nation. But in this important matter of the people's rights, the inhabitants of this great centre of commerce seem to be the only persons to neglect and pay no attention to them. If by any chance any one speaks seriously upon it, they care no more than China does for the civil war in Spain. What then is the success of which they are always boasting? Are the newspaper writers not right when they call them the "shallow and superficially civilized town population." It may be said that the Tokiô Fu (Prefecture of Yedo) does nothing to encourage the people to form popular Assemblies. We cannot accept such an excuse. Our reason is that the Tokiô Fu has never placed any obstacle to the development of the Municipal Council, and has always listened to its suggestions. Whatever explanations they may offer, we must affirm that the reason why the people of Tokiô do not enjoy their rights as citizens is their own sluggishness and apathy. The members of the present Municipal Council however are certainly not the men to bring about the success of an assembly of the people. How could we ever recover our rights through their influence?

Alas! to what a degree are the people of Tokiô regardless of their rights! Even when the Assemblies of the two other Fu and the sixty Ken shall have been fully established, and the time has at last arrived for the creation of a Great House of Assembly, this Fu will remain with its Municipal Council the same as to-day. Where can we now find in Tokiô the popular rights to which we, along with other writers, attach so much importance?

The Shinshiu Sect.

(*Nishin Shinjisshi.*)

Since Higashi Honganji of the Shinshiu Sect (one of the seven sects of Buddhists) returned from Europe the year before last, he has become rather anxious about his sect, as it was forced into union with the Daikioin; and, as the adherents to his sect could not be increased, he is desirous and endeavouring to free it from the Daikioin. This subject has excited much discussion, but the Shinshin Sect, having resolved to free themselves, would not abandon their determination. The dispute could not be settled by the Kiobasho, and it was therefore brought before the Daijokwan, which decided on the 29th February that the Shinshin sect should be free and could inculcate its doctrines independently. But the discussion in the Daikioin has not yet ceased, and some say that the Shinshiu sect have done right in freeing themselves, others that they have done wrong. It is impossible for us to judge how this affair will end.

United Duty.

(Nichi Nichi Shimbun.)

There is nothing better under heaven than that men should be united; nothing worse than that they should be divided. An ancient proverb tells that "The minds of men will construct a fortress and their breath will melt metal." Since the year 1872 the Kiobusho (Department of Religion) has been in operation, and the Daikioin has established *Chukioin* and *Shikioin* in the different *Fus* and *Kens*. The people are gradually becoming religious and lean towards honouring God and loving their country. But a wicked party has lately arisen desirous of divorcing the Shinshiu sect from our united force. They say that our righteousness is mere hypocrisy, and our union nothing but confusion. In this they speak unjustly, and thus excite our anger. The *Hochi Shimbun* states that the Government after due deliberation decided on the 29th February last that the Shinshin sect might liberate itself (from the Daikioin). Therefore the Daikioin has demanded that the opinions of each of the sects should be clearly stated, and this being now our duty, (so far as we are concerned), we desire to discharge it.

Those who are desirous of disuniting have sinned. If we are to make the native religions powerful and strengthen their influence, we must extend their fortresses and dig deeper trenches so as to defend them against the entrance of foreign religions.

Their first sin.—When the Daikioin was about to be instituted in accordance with the consultation and decision of the Buddhist and Shintô Priests, and after the signatures of the Bishops of each sect had been affixed to the document recording it, it was brought before the Kiobusho and copies of it were circulated throughout the country. But now the Shinshiu Sect is desirous of being disunited from the Daikioin, and we can only regard its previous protestations as falsehoods.

Their second sin.—Religion is an influence which unites and softens the minds of men; but the Shinshiu sect desires to be disunited and has thus brought strange doubts into the minds of men.

Their third sin.—We have arrived at a period when all things are changing, and it is our duty to struggle zealously and not to see ourselves surpassed by foreigners. But the Shinshiu Sect does not seem to care for the native religions, and is doing every thing for its own good.

Their fourth sin.—Christianity seems gradually to be becoming popular and powerful, while our religions are moving in the opposite direction and are decaying. But the Shinshiu sect shows only a selfish care for itself and thus prevents the extension of the native religions.

Their fifth sin.—The Shinshin Sect urges that religion is one thing and the administration of Government another, and that the people should be free and independent. But nothing can be more injurious to the Government than such opinions.

They cannot escape the imputation of the guilt of these five sins. The Shinshiuists do not care for any other God than their own, and worship no other native god. Their reason for going to Europe was that their religion was very much like that of the Christians, and in Europe they enslaved themselves to Christianity. Since their representative returned from Europe they have been under compulsion and repeat many falsehoods to conceal their slavery, their present intention being to override all the native religions and then convert all our people to false teaching. It was said by the ancients "Bring the lantern for the burglars." Now the Shinshiuists are the burglars.

Now that the Government has openly decided that the Shinshiuists may free themselves from the Daikioin, no argument can be urged against the introduction of Christianity should they come forward and urge that it be admitted. This being the case, the liberation of the Shinshiuists constitutes a basis for the introduction of Christianity

In the oath of the Mikado it is said that "the minds of the people shall *unite* and administer." What value can the Shinshiuists attach to this? Therefore, as we said before, "The minds of men will construct fortresses and and their breath will melt metals."

We do not consent to their disuniting from us, and it is on this account that we have shewn the necessity for our union.

The Encouragement of Navigation.

We read in the history of England that Athelstan, one of the famous ancient Kings of England in the 10th century, made a law that any merchants who traded with distant countries should receive the rank of *Jeeri*.

We think that this was the foundation of the advance made by England, and that the germs of the courageous, adventurous and enterprising spirit of the English was formed by this legislation. Some time before this, Athelstan's grandfather, Alfred, bestowed great care upon the navy, ship-building, and on his seamen, in fact, upon navigation in general, and brought over French teachers to instruct his subjects in the above sciences. Athelstan subsequently promoted all these endeavours, not so much by turning them to warlike, as to commercial, purposes, for trading ships have more efficacy even than men-of-war. Since that time navigation has greatly advanced, and now England is the mistress of the seas.

In thinking over the history of our own country about thirty or forty years before the time of Athelstan, we find that at the close of the ninth century Kanshejo (Oenjin Sama) went to the Mikado and advised him to discontinue the sending of scholars to China for educational purposes, alleging as a reason that we had an excessive number of scholars, and that it was thus unnecessary. The system was accordingly abolished.

This was a great mistake, and opposed serious impediments to our advancement, for our people were discouraged and dispirited by the action of Kanshejo. Moreover, he destroyed the fruits of all the laborious efforts of previous Emperors, and deprived our country altogether of the advantages of foreign influence. We cannot understand how it was that if Kanshejo was so acute a person as to observe that our countrymen had received enough book-education, he should not have also advanced the science of navigation. Oh! it was a deplorable thing, indeed!

Long after this, in the 17th century, Tokugawa Sandai, 3rd Shogun Iyemitsu, circulated a notification throughout the country to the effect that no square-rigged ships with two or three masts should be constructed or navigated, and this again put a fresh bar in the way of the intercourse between Japan and foreign countries. About thirty years before this occurred Toyotomi Hideyoshi (Taikô sama), the great hero of Japan, sent his army on an expedition to Corea with the intention of subduing the whole of China, though he himself did not join it. Our navigation promised then to emerge from the obscurity which had long surrounded it. But, unfortunately, Hide yoshi died before his instructions were accomplished. Still, soon after this event some of the more adventurous of our people constructed many large and strong ships, and navigated the rough and endless seas to trade with Siam and Annam. At this time Sakai was a port open to foreigners, and had the Government encouraged navigation, that port would have become popular and prosperous. But Tokugawa Iyemitsu, with his one notification, destroyed all the possible prosperity of our navigation. This was just reverse of what was done by Charles II. king of England, when the traders to India became dissolute and weak. Desirous of surpassing the Dutch commerce, he granted a charter of privileges to the merchants of London, and the trade of England became wealthy, famous and popular, as we see it to-day. England and Japan are both insular countries, but we can see how different is their relative strength. We have seen pictures of the men-of-war of the time of Hideyoshi (Taiko sama), and also of the trading vessels of the same period in which many navigators went over to the coast of China. From these pictures we can safely infer that they were good navigators, or they could not have handled these vessels. Tokugawa Iyemitsu's proclamation was not only a hindrance to the extension of our foreign trade, but also to the home trade, and this is the cause why our mails are at this day carried across the Pacific and other oceans by foreign companies. Japan at this moment has neither good ships nor good navigators. Goods can be transferred rapidly from one European ship to another, which cannot be done with

* Superior Church, formed by the union of [illegible] of Budd-

Japanese vessels, and European ships are constructed at relatively much less trouble and expense than ours. Thus it is that even our coast trade is carried by foreigners.

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Religion.

The two principal religions of this country are Shintoism and Buddhism; and, besides these, Confucianism has been rapidly gaining ground of late years.

Shintoism—from *Shin* (gods) and *To* (road) or *Kami no michi*, deserves the first place as the ancient *cultus* of the country. Little more than a bare outline of it can be sketched here, though some interesting matter connected with it will appear subsequently.

The Shinto idea of creation is that out of chaos (*konton*) the earth (*in*) was the sediment precipitated, and the Heavens (*yo*) the ethereal essences which ascended, man (*jin*) appeared between the two. The first man was called Kuni-toko tatchi-no-mikoto, but five other names were given to him, and then the human race appeared, male and female. Isanagi and Isanami begat Tenshoko daijin, the first of the five gods of the earth.

Jimmu tenno, the son of Fukiawasezu no mikoto was the first Mikado (B. C. 660) and from the date of his accession the Japanese *ki gen* commences, 2535 years ago. The present Mikado Mutzhito is the 123rd of the line.

The *Kami*, with one exception, are historical personages who have been deified, and petitions are offered to them, as will be presently explained, although in the prayers offered up at the Shinto shrines called *Miya*, *Gu*, *Yashiro* or *Jinsha*, there is nothing indicative of a belief in a future state, or of the possession of a soul by the petitioner. The priests of the Buddhist creed amalgamated their doctrines with the petitions of the Shinto faith, and supplied this deficiency, but the scepticism of the men of the day induced them to taken advantage of the low state of morality among the Buddhist priests to bring about a separation of the two systems of worship and belief, and Shintoism is once more the established religion of Japan.

The Japanese *Kami* (gods) number 13730, of which about 3700 are known to have shrines, to the more celebrated of these shrines have been erected throughout the Empire; those to Inari, for instance, may he found in every town and district.

Each province has its *Ichi-no-miya*, and each district, sometimes each hamlet, may have one or more local *Kami*.

The petitions offered up at the *Miya* (shrine) are called *Roku-kon-no-harai* (petitions of six origins), Anger, Grief, Kindness, Protection, Dishonesty and Avarice or Selfishness.

Sai-mon, or thanksgivings for favours granted, or successes attained, are offered up. *Notto*, or songs of praise are used by the *Kan-nushi*, or guardian of the *Miya*.

Each *Kami* has an annual festival, and many have particular days in each month, on which it is usual to visit the *miya*, besides which petitioners visit the shrines at all times, but rarely after sundown. The ceremonies and observances are most minute and vary for each *Kami*. We subjoin one of the more common prayers offered up by the devotees at the *Miya*. Generally, however, the hands are clapped twice and the genuflexions are made in silence. Both sexes may use the *harai* or prayers. Books are not generally used, nor are prayers learned by rote for the occasion. The *Kami* is supposed to read the prayer while yet but in thought, and before it rises to the lips in the form of words. Not being intended for human ears, eloquence is not needed.

Sai Yo no harai.

(*A prayer of the first importance.*)

God that in the high celestial plains exists! gracious monarch! godlike in substance and godlike in intellect! heavenly words of praise are offered up: able to give protection from guilt and its punishments, to banish such and to purify uncleanness. Host of Gods! give ear and listen to these our petitions.

Sai Yo no harai.

(*Taka ma no hara ni kami tadamari-mashi-masu, Sume mutzu kami roji kami romi no mikoto, wo motte, Hona tsu notto no Futo notsu to no koto, Nore-kaku-noraba tsumi to in tsumi toga to in toga wa araji mono wo to harai tamaye kiyome tamafu to mousu, koto no yoshi wo moro moro no kami tachi, sawo shi[illegible] no yatzu no on mimi wo furi tatete kiko shimese to mousu.*)

The world is often called in poetry, *Toyoashi wara* (the fruitful rush-plain) from the *Ashi* (*Eryanthus* Japonicus) the first-fruit of the earth after chaos.

Takama-no-hara are the high plains of heaven, where the gods dwell, but from which mortals are excluded.

Drums (*taiko*) are beaten on festive occasions, and at some temples the devotee calls the attention of the *kami* by shaking the *suzu*, a thin metal globe suspended above him containing several pellets which rattle when so shaken by the long tassel which is fastened to it for the purpose. All *miya* have a mirror on the altar, as an emblem of purity; therefore it is said that the word *kami* is a modern name for the gods represented by the Chinese character *shin*, and is derived from *kagami*, a mirror, omitting the repetition of the first syllable.

All *Miya* have one or more *Tori-i* (bird-perches) which are usually offerings by devotees or petitioners as thank erected. He who approaches the *Miya* must pass under the *Tori-i*, and then the *Hai-den* or place of prayer, is reached, at the rear of which is another building, the *Hon sha* or true *Miya*. With few variations the same style of architecture prevails throughout the Empire. Sometimes a gateway with a porch on each side is to be seen, and in each porch a figure seated or mounted, called the guardian of the right and the left, * called *Yuki* and *Suki*.

The Go-hei, made of paper cut in a peculiar form, inserted in the split end of a piece of bamboo, is an emblem of purity, and is enclosed in a box, thus forming the *Shintai* which is placed in the innermost shrine.

To be *fujio*, unclean, precludes worship at the *Miya*; on the death of a parent for fifty days; of a child, twenty; women after child-birth, twenty-one days &c.; eating flesh or shedding blood, until the next day; at the expiration of these periods, bathing and change of raiment are requisite.

The *Kannushi*, keeper of the *Miya*, also called *Shinshoku* (or Shinkan in correspondence) was an hereditary position, but of late the *Kiobusho* (Department of Religion) examine candidates. The subordinate positions vary in duties and titles with each *Miya*, men only being employed to read the *Notto* and keep the *Miya* in order.

The *kagura* is the music and dancing on the annual, monthly and other special days, offered up to the gods, but intended also to amuse the visitors at the *miya*. The *taiko* (large drum), *kakko* (small drum,) and *fuye* (flute) form "the band," while performers with special dresses and masks go through various antics in silence. There is no design and no set pieces, merely changes of dress. Some of the characters represented are predecessors of Jimmu fighting with evil spirits and defeating them; but a little comicality is introduced, practical jokes are travestied and the fox is not forgotten—the fox and the monkey have a trial of wit, and so on. This is generally preceded by the appearance of the *miko* (child of the gods) a female dressed in white, with a necklace of flax, hearing a *gohei* in her right hand, and jingling in the left a *susu* of peculiar shape. This is the only part taken by females in the Shinto rites.

The offerings, *Sonaye-mono* are *miki* or *onsake* in two vases with paper inserted in them; *arai-yone* cleaned rice in unglazed pottery; *mochi*, cakes of boiled and pounded rice; and, on special occasions, *kowa meshi* or *Seki-han*, rice boiled with *adzuki*, small red beans. Fruit and vegetables of all kinds in season; first, generally the *tai*, (*Serranus Marginalus.*) which are not allowed to spoil, but converted to the use of the *kannushi*, the *Shisho* or inferior officials and others connected with the *Miya*

* Columbus' Account of the Cemies, and the worship of ancestors in the islands of the West Indies bear a striking resemblance to the forms of the *Kami* worship.

The following are the most important *kami*, and the salient points in the adoration of each is merely noted.

Ten-sho-ko-dai-jin or *Ama-terasu-oo-kami*, is the first and principal of the *kami* and the only one of whom there is no historical record of life on this earth. This goddess is highly venerated as the ancester of Jimmu and therefore of the present Imperial family. The principal *miya* is in Ise, called *Dai-jin Gu*, where there are two, the older, called the "outer," the other, the 'inner.' There are shrines throughout the Empire, but there is no regular distribution of them, all depending on the local popular fancy. When a deputation of the subscribers to the proposed building undertake a pilgrimage to Isé and return with the *Shintai* (godly substance) consisting of a small box of papar on a wooden framework, containing paper cut and stuck on a slip of bamboo; on the box is written five Chinese characters meaning "Waved respectfully ten thousand times," equivalent to so many prayers. This is placed in the Holy of Holies concealed from vulgar gaze. Formerly every household procured a *Shintai* every new year from Isé, now the Kiobusho distributes them when necessary, but not annually.

In Isé there is no annual festival, but the number of pilgrims is greatest in the Spring. At the other *miya* annual *matsuri* (festivals) are fixed according to local convenience.

The pilgrimage to Ise is the most general: all devout men and women are supposed to go at least once, and pilgrims from the remotest corners of the Empire resort thither and receive the *Shintai* to take home. Poor people are frequently met begging their way thither, but they are not expected to wear any peculiar garb.

Sumi yoshi is the name of a celebrated *miya* near Osaka, erected in honour of Jin-gu-ko-go who was the 15th Mikado A.D. 200 to 268, and who is the patron *kami* of all who go on the water either as sailors or travellers.

Soko-tsutsus-no-mikoto (God of the bottom of the Sea), *Naka tsutsu-no-mikoto* (God of the middle of the Sea), and *Uwa-tsutus-no-mikoto* (God of the surface and controller of the waves), three *kami* who are placed after the time of Kuni toko and before Jimmu, and the Gods of the Sea are incorporated with Jin-gu, and called *Sumi-yoshi-shi-sha* (fortunate residence of the four incorporated *kami*).

Guion, Go-dzu-tenno, Suga jin sha (Ox, Chief, heavenly king) or Sosa no-ono-no-mikoto is the *kami* of the cavaliers: the shrines are to be met with in all provinces, the principal one being in Kioto. The great annual festival is on the 15th day of the 6th month, and was one of the principal festivals of Kioto. There are several shrines in Yedo, but the date of the principal festival differs there.

Inari, or, more correctly, *Uga-no mitama no kami*, is the God of the produce of the soil, cereals, vetetables, &c., commonly called *Inari* (rice stalk bearer) and the shrines may be recognized by the *Tori-i* or portal being coloured red with carved stone, foxes on either side. Besides the larger shrines met with at almost every turn, each landholder or farmer has one on his property.

The *Kitsune*, (fox), frequently seen at the shrines, attracted thither by the offerings of food, became gradually associated with Inari. The annual festival is on the first day of the horse, which occurs in the second month.

Hachiman is *Ojin Tenno*, the 16th Mikado, who reigned from A.D. 270 to 309, is the God of Warriors. He was buried at Usa in the province of Buzen where the chief shrine is, and there is no province, county *(korie)* or town without one or more dedicated to Hachiman. The annual festival is held on the 15th day of the 8th month.

Tate minakata no mikoto is the name of a God whose principal shrine is at Suwa in Shinshiu. On the festivals, a deer's head is placed before the shrine as an offering. Hitherto, the Japanese, who had a great dread of eating flesh, used to obtain a pair of the chop-sticks which are sold at this shrine, and with which they may eat flesh without evil befalling them.

To-sho-gu is Gongen or Iyeyasu, the first Tokugawa Shogun, who obtained this rank in 1603, and abdicated after three years in favour of his son Hidetada, himself becoming Ogoshosama. He died in 1616, and was first buried at Kunosan in Suruga, but was afterwards removed and buried in Nikko in the province of Shimotsuké. There are shrines throughout the Empire dedicated to him. The 17th day of the 4th month is the date of his chief festival, but his shrine is also visited on the 17th day of each month.

Ten-jin, or *Ten man gu*, Suga-wara-no michi-sane, who was Saki no Udaijin to Daigo tenno, the 89th Mikado. He was banished to the province of Chikuzen and there died in 903, and was buried in a place called Dai-sai-fu, where a shrine to him was afterwards erected. Others have since sprung up throughout these islands where he is prayed to as the patron saint of learning, and, of course, of scholars and students. The 28th day of the 5th month is his great festival or *matsouri*. In Yedo, *Kame-ido* is his principal shrine.

The accounts of Shintoism which have been published hitherto, from the days of Xavier's successors to the present time, contain much of the Buddhist rites, which had been engrafted upon the old faith. The latest important object of deification or canonization was Gongen, called Toshogu, who received the honour A.D. 1627. The *chokkio*, like a papal Bull, always emanated from Kioto.

On the thirtieth day after the birth of a male, and thirty first after the birth of a female child, it is taken to the *miya* of the district and, according to the means of the parent, so many *harai* are repeated, and the *gohei* is waved before the shrine. There is no baptism or similar ceremony. The *kami* of the *miya* to which the child is taken is called *ubusuna* (god of the place of birth) and becomes the patron *kami* of the child, who has received its name on the seventh day after birth from one chosen by his parents with the advice of friends or the priests. Thenceforth female children on the 15th of the 11th month of their third year, when the hair is allowed to grow, on their seventh year, the *obitoki*, time to wear the broad girdle, and thirteenth year, the earliest age to dye the teeth visit the Mia.

Male children, on the same day of the month, in their fifth year when first 'breeched' with the *hakama*, and usually when the head if first dressed after the manner of adults are taken to the ubusuna Mia.

Formerly *Junshi* (to accompany the dead) was practised by the upper classes. When the master died his wife and most faithful retainers prepared to accompany him and committed suicide. Later on, about the beginning of our era, Haji no tsukune, the ancestor of Suga-wara-no michisane, made figures of clay to substitute for those who intended to immolate themselves. Although the rite was prohibited, it was still at times practised in defiance of the law.† Penances, charity or alms-giving, self-imposed pain, fasting and mortification of the flesh and spirit are not required by the *kami*, but men must lead a pure life, be honest, truthful and chaste.

Good works consist in repairing or improving the *Miya*, but a number of Buddhist ideas are intermingled by the common people, who often hang up pictures, locks of hair and other offerings as they would is the temples.

When a person is dying no prayers are said by him or his friends. But when the last breath of life has passed away, the body is moved with the head to the North and a white cloth is placed over the face. Word is then sent to the officers of the ward and the *Kannushi* of the *Miya* in the vicinity, occasionally, if not too far, to the *ubusuna* of the deceased. The Kannushi performs the ceremonies for the dead called *Shikonsai*. A desk is placed near the head of the corpse on which lights and offerings are placed, generally salt, water, rice, saké, cakes, fish, fruit, dried seaweed, vegetables &c. The *Reijie* is prepared, consisting of a mirror, on the back of which the name of the deceased is written, and placed in a small tub, which is again covered with white material, and is, for the space of forty-nine days, daily supplied with offerings, and prayers are daily repeated before it by the members of the family of the deceased. Not sooner than twenty-four hours after death, is the body placed, by the immediate relatives, in a long coffin in a reclining posture—unlike the Buddhists. The *Kan*—coffin, made of *hinoki* or *momi* usually—has placed inside it a cotton quilt and a pillow of tea-leaves or chaff, and the corpse is robed

† In the days of Confucius images were buried with the dead, and the "great sage" predicted that eventually men would be sacrificed. His prophecy was verified, and instead of ability became scarce. When Hoji undertook to check the terrible custom, great improvement took place. Native annotators on the classics note this.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in a shroud of white material shapped like the ordinary dress. With the body is placed a garment suited to the season, a girdle, a suit of full-dress, a head-dress, an over-dress of the ancient pattern called *Ho*. Metals must be excluded, and the coffin is covered and put into an outer case called *kaku* and placed on trestles. The funeral cortège varies with the rank and means of the family, and upon arrival ot the cemetery the funeral service is performed. Over the grave a small mound is formed and a square post fixed in the centre, on the front of which is written the name and age, and on the sides the date of death, the place of birth and other particulars. The grave is fenced in with a paling of bamboo or wood, and at the gate, is placed a small *Tori-i* of rough wood stripped of the bark, and plants of the *sakaki* are placed at each side of it, and inside, a cherry tree is planted on each side.

Besides the *Rejie*, after one hundred days have elapsed since the date of death, the wood-post is changed for a pillar of stone. On every anniversary of the death there is a *matsouri* held in the house of the dead, and on that day a visit is paid to the grave. Every year, during the third month, a day is chosen on which a ceremony is performed in honour of the ancestors of the family, and prayers are offered up and petitions for prosperity during the year. Again in the autumn, during the ninth month, a thanksgiving is held and again the ancestral tombs are visited, both sexes joining in these rites.

A rough outline only has been given of these rites and observances. To enter into fuller detail would demand more space than can now be spared, as other subjects demanding notice await attention.

AN EXCURSION INTO THE INTERIOR PARTS OF YAMATO PROVINCE.

By

Capt. St. John, R. N., H. M. S. Sylvia.

Read before the Asiatic Society of Japan on the 17th February, 1875.

(Continued.)

Occasionally during the day I came upon men and women carrying immense loads of staves for tubs, all ready cut, and soon found that they went many, many miles into these wild forests, until finding a suitable tree they felled it, and there and then cut it up into tub staves; to do this they had to return to and fro frequently, a tiresome and laborious task. We had come from first starting at Owari Bay not less than 18 miles, all the way, except the first 5 miles, up and down mountains, the highest being 4,000 feet. At Kingumi we put up for the night.

Next morning we started at eight, getting almost immediately into the river's bed, and for 3½ miles followed its stony rocky, upward course, crossing it in that distance more than twenty times. Frequently the cliffs obliged us to crawl round them through the thick tangled cover, again taking to the slippery stony bed of the river, to leave it shortly for another scramble. Fortunately it was all rather up hill, which lessened the chance of falling. I know nothing more trying and disagreeable to walk over than smooth water-worn slabs of rock, and big boulders. It would be impossible to give an idea of the extraordinary steepness of the mountain sides as they rose from the river course, many of them crowned by magnificent castellated rocks, 2,000 feet above us. Marvellously grand they looked, covered with the lovely autumn tints of the oak, maple, &c. After three and a-half miles along the river, we breasted the hill, and after a continuous climb of more than three hours, reached the crest. Striking off along an irregular plateau, we arrived at our destination at half past three, being still four miles from the summit of Odai Yama.

The mass of mountains we had now reached, 4200 feet above the level, spread out for a great distance, in an irregular plateau, here and there varied by rises 500 or 600 feet high, and traversed everywhere by numerous streams.

The highest peak on this singular table land was the spot I wished to reach, and is called Odai Yama.

The whole of this immense extent of mountain is covered with primeval forest; generally there is no underwood, but a soft carpet of the greenest moss covers the ground. The trees are likewise coated with moss and lichen. As I gazed upon the great stems of these self-planted and never disturbed trees, all I may say of good size, and most of them of grand proportions, I could not help internally ejaculating, "What a waste of Timber!"

Five years since, the Japanese Government decided to form a settlement on this space of table-land, although there exists no way or means of getting there except by climbing the steepest and most precipitous mountains imaginable. They cleared away—or rather merely cut down—about 12 acres of wood, on a spot or glade through which three streams traverse, meet, and flow away in one. Here they built a house for an official to superintend the settlement, &c., set up a water mill,—what for, I could not make out, dug up a few square yards, certainly not more than twenty, and planted potatoes. Then, as might have been foreseen, they pronounced the enterprise impracticable, shut up the house, and left. The house, though partially in ruins, afforded us good shelter. It was built on the bank of one of the streams, which happened to be full of excellent trout. Here in half an hour, and with an impromptu wooden spear, we caught daily as many as we pleased.

The magnificent great oak trees which had been cut down, were lying about just as they had been left, many of them three feet in diameter, and fifty feet of clean stem. It appears unfortunate that none of the good timber, abounding on these mountains, is ever likely to be turned to use. I see no means of getting it down from these heights. It is an undertaking of very considerable labour for a man to get up or down when unencumbered, and the transport of large logs of timber to the river would be, I consider, impossible. The beech which flourishes on the nearer ranges, and which is of large growth, might possibly be utilized. There are no people more persevering than the Japanese in the way they farm the hill sides with timber. None appear too steep or rough, and wherever the *sugi* and *henoki* will grow, there it is sure to be found cultivated. This of course is on the mountains nearer to the sea, and close to the villages.

Having reached towards evening the dilapidated house I have mentioned, and caught enough trout for supper, I was not sorry to turn in and rest. Next morning, very soon after daylight, I started with only the guide, for the top, in hopes by going quietly to come across a bear, wolf, or *nicoo*. Crossing a stream, we came upon the fresh track of a bear, whose wet foot-marks were still on the stones, where he had left the water. But he was not to be found though I followed him some distance. In two hours the summit was reached, rather more than 1000 feet above the rest-house, the total height being 5400 feet. Here on climbing to the top of a tree, which most conveniently had its top twisted off, I found the Japanese had not exaggerated the view to be obtained. Although I shall never forget it, I feel it is useless to attempt to describe it. Suffice it to say, all the coast, and the interior as far as the eye could reach, lay before me. No higher range sprang up to intercept the view. Far away in the distance Fusi yama rose out of a curtain of mist, and another great mountain further to the North and West, the name of which I do not know, was also to be seen. The former was 150 miles distant; the latter not so far. It is surprizing how great an extent of country Odai-yama, notwithstanding its moderate height, commands. I had only half succeeded with the theodolite, when down came a shower of rain, from the N.W., which quickly settled into a wet afternoon, The next day was spent mostly in the clouds: it cleared away towards the afternoon, but not in time to reach the top and return before dark. The day after this I was again at the summit soon after daylight, but it thickened over before I finished, so I spent an hour or two roaming through the beautiful primeval forest. The perfect silence that reigned was only disturbed by the big black and white woodpecker, as he tapped the trees with his hard sharp bill in quest of insects. The wolves were not howling as they did when I first reached the tops two days before.

Next day it blew a good gale—and what a grand sight it was! These glorious forests, which yesterday were so still and silent, now roared and howled, as the gusts of wind rushed through them; branches were broken off and hurled away, trees felled, and cracked off like twigs, and the air was thick with flying leaves. It was a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wild and grand sight, the streams soon became good-sized rivers, for it rained in torrents the whole time.

The storm lasted throughout the following day, but towards evening the wind hauled to the north, and I felt sure fine weather would follow.

The next morning the sun was scarcely up, when I started for the summit. Bitterly cold it was, the ground was frozen and crisp and the frost still silvered the trees and grass. The soft curtains of mist which were floating lazily about the dips and sides of the rising grounds soon dispersed as the sun rose higher in the heavens, and an hour spent on the summit finished my work. I saw a *nigoo* when going up, but though I got a snap shot, he went away untouched.

Before quitting this elevated spot, on my downward journey, I must add a few lines relative to the different natural objects which I found there. To begin with the largest animal, bears; they are certainly numerous, almost every oak tree appeared to be scratched and clawed by these animals. The moss covering their rough bark was torn off and hung down in strips. They evidently climb these trees to feed on the acorns. It is a small black species of bear, not half the size of that inhabiting Yeso. Wolves are abundant; they howled even during the day time close to us. The *nigoo* is a true species of chamois, and a handsome animal. I saw one of them: as I have said, they are numerous and afford food for the wolves. Deer are scarce; they prefer the lower ranges. Wild boar abound, and hares likewise.

All the streams at the top besides those lower down literally swarmed with trout, which were busily engaged spawning, while that little robber the water-ouzel, was as busily employed destroying the spawn, singing and diving and thoroughly enjoying the good food before him. This bird I may remark is identical with our own species, with the peculiar and interesting difference of not having the white horse-shoe patch on the breast, which the British species has. A single snipe of that large species *Gallinago Australis*, remained several days about the water near the house, and then disappeared. The common wren, often in its funny, inquisitive manner, would appear from some thick bush, utter its very long song, and after watching me for a few moments, bob itself out of sight. I saw also a large spotted wood-pecker, a bird I have only previously found in the extreme North of Nipon, the common jay, copper pheasants, and the robin red breast. I was very pleased to find this latter bird, and to notice how exactly he resembled our own species in their bold impudent nature, as well as plumage; they appear only to differ in not having quite so much red on the breast, as those at home. I may also mention the bullfinch, whose note and habit are exactly similar to the English birds.

What delighted me greatly was the beautiful open woodland clear of brush wood and undercover, the soft green carpet of moss under foot and the perfect stillness and quiet. Oak, maple, beech, and chestnut, constituted the principal deciduous trees. Of these the oak, and beech, were invariably fine timber; the chestnut frequently if not generally sprang from the ground in two or three stems. The pines I have already mentioned, with the exception of a species of spruce, which I do not know, but which flourishes on the higher slopes. Yew of fair dimensions grew on the summit; *henoki* only moderately. I do not think the Japanese care much for the *momi* pine; at any rate I have never seen it cultivated. That wonderfully hard close gained wood of a yellowish tint, much resembling box, and from which combs are manufactured, is found on Odai Yama; its native name is *Tsagi*. Another very peculiar deciduous tree, I saw, but only here and there, called *sarta*; it has a red skin-like bark, and is very hard and close grained. I might go on almost endlessly in speaking of the numerous species of deciduous trees, which here, unmolested by man, spring up, flourish and die, but I fear I have already dwelt too long on a single subject. Once more I may add I see no means by which these great forests of excellent timber can be got from their high and difficult situations, to the habitations of man.

The rocky courses cut through the mountains by the innumerable streams and rivers, shew generally limestone, and rough coarse granite, with a sprinkling of sand stone; higher up the rocks and stones are smaller, and granite predominates.

I started about noon for the downward journey, but instead of returning the same way, struck away to the N. W. for four miles, along the ridge of a long spur of Odai Yama; here we dipped down a few hundred feet, and fell upon the main road, or rather path, between Osaka and Singo. Turning to the S. E. for eight and quarter miles along the path, we then suddenly descended from a height of 3,000 feet to 480, where in a village situated on a beautiful stream, swarming with trout, we found comfortable lodgings for the night. This afternoon we passed a cluster of huts on the hill side some way to our right and far up a deep valley. The old guide when I enquired the name of the village, said there was a gold mine there, worked by one hundred people, under the superintendance of a Government official. Unfortunately it was not feasible to reach the place that day or I should certainly have visited it. It rejoiced in the name of *Nishi no mura*.

After resting for the night at Totchi moto, where there may have been about 50 houses, I started next morning at eight, mounted immediately to 2,700 feet and then descended to a most rugged pass cut through the mountains, by a torrent of the clearest water, which after rushing down its headlong course over boulders and masses of lime stone rock, joined one of the main rivers at a level of 400 feet above the sea, where five houses constituted the village of Nagouchi. We reached this place about noon wet to the skin. It had rained in torrents since eight in the morning. From here we ascended again to a height of 3,000 feet. The coolies were nowhere, so I struck off along the sharp ridge, knowing by compass that the direction was right, but being enveloped in mist and rain. I was not sorry when in a couple of hours time I came across the same path I had passed along, eight days before.

Being now certain as to my whereabouts, I made the best of my way to Owasi, reaching the ship at six, having since starting at eight, done about twenty miles in distance, and ascended in the aggregate about 8,000 feet.

And here finished a cruise I shall always remember with pleasure and interest. I only wanted a little more time for exploring, as my hands were tied by having to watch my opportunity for making the necessary observations at the summit. Before starting on the journey I had estimated the height of Odai Yama as 5,000 feet, to enable me to calculate the temperature which proved however lower than I had anticipated. During the nights it was very cold, the lowest I registered the thermometer was 28°, and it froze pretty hard on two occasions.

I have only to add, that this wild region which stretches almost entirely across the peninsula, and far away to the north is full of interest to the naturalist, while to this as lover of scenery it presents views of the wildest and grandest description. The Japanese know very little about it; the charcoal burners are the only beings who penetrate far into the interior, and they never approach the inner masses of mountain, of which Odai Yama is but a single chain.

Correspondence.

THE HONGKONG & SHANGHAI BANK.

To the Editor of the "Japan Weekly Mail."

Sir,—Your remarks on the recent publication of the condition of the Hongkong and Shanghai Bank are no less than might be expected from a journal independent of private interests and desirous of keeping the public only informed of what so greatly concerns them.

The most painful part of these disclosures is the evident fact that the true condition of affairs had been concealed from the shareholders as long as possible, and after all it was only let out by degrees at successive general meetings when the truth could no longer be concealed. The effect of this course of proceeding has been both humiliating and disastrous. Faith in the judgment of the administration—to say nothing of the accuracy of the statements presented to their constituents,—is grievously shaken, and no shareholder can talk with confidence on the condition of his property or on his prospects for the future. What, for instance, can be made of the Chairman's announcement at successive half-yearly meetings that every

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

loss had been provided for, and at the last meeting that the profits realized by the recent petty Chinese Loan of £600,000 had alone sufficed to shew any balance of profit on the 30th June last? Or what value can be accorded to the declaration of the "Counsel learned in the Law" who appeared to support the Directors "that the Bank was never in such a solvent or safe state as at present?"

A very rigid scrutiny on the part of the shareholders is imperatively called for; both as to the nature of the assets held against advances and also into the kind of business the Bank has been carrying on under its Act of Incorporation, which is understood to exclude advances upon the class of securities described in the report.

The Bank has hitherto been very properly spoken of in the press of China as "our popular local institution" and there ought to be no reason why it should not deserve this title. It was originally established for the ostensible purpose of promoting the China Trade. A charter was conceded by the British Government on that plea and primarily for the advantage of British commerce, and it will be a severe disappointment to the Authorities at Hongkong should it fail to effect so legitimate an object. Every means was adopted to place the Bank on a proper footing, its privileges were the same as those accorded to the Banks already incorporated in London, and the same restrictions were imposed on its management as were laid on the London institutions so as equally to protect its shareholders and to advance its credit with the general public.

The question, therefore, now arises as to how advances came to be made of the nature described in the statement just published. The question may also be asked whether these are a fair sample of all or most of the Bank investments, and how it came to pass that in a British Corporation of this magnitude none of the present members of the Board appear to be Englishmen? Has all the business heretofore transacted been of the same class with that now in the books, or is it only of a late date that loans have been made to speculative concerns and on securities prohibited by the charter as well as utterly repugnant to all the principles of sound Banking?

Nothing short of a severe scrutiny will satisfy the Public who deal with the Bank, or ought to satisfy the shareholders whose money is embarked in its capital.

I remain, Sir,

Yours truly,

X.

Yokohama, March 17, 1875.

Law & Police.

H. B. M. PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

March 13, 1875.

FELIX BEATO *vs.* JAMES DAVISON,
JAMES DAVISON *vs.* FELIX BEATO.

Mr. F. V. Dickins appeared for Mr. Beato; Mr. F. W. Marks and Mr. Litchfield for Mr. Davison.

The hearing of this case was resumed this morning.

Mr Dickins, addressing the Jury on behalf of Mr Beato, said that a singular calamity had befallen the jury in regard to this case, in having to judge of a series of proceedings all muddled together and which ought to have been brought separately. The case of his client was a simple demand for rent and for balance of account between himself (Mr Beato) and Davison. The answer of the latter raised issues as to the amount and asserted a set-off. The other side had founded a counter claim and had brought a cross suit to recover that which they had failed to obtain in an action brought against another party (the O. B. C.). The nature of this claim was for rent which was admitted, but the amount of which was disputed. He was prevented from having the last words with the jury, because the actions had been fused together, which he conceived was unjust as the nature of the claims had no similitude in character. He was obliged to present his case and defend it in the same speech. No doubt his learned friend greatly rejoiced at the enormous advantage he had thus obtained, and he (Mr Dickins) had one consolation which was that he was dealing with a jury which was fully on the level of a special jury to try difficult questions and thus the last word was not of such importance. He cared little how much his learned friend would deluge the jury with legal platitudes or disgust them with unseasonable jokes (or "goaks" as he wittily termed them!). No doubt he would use plenty of personal invective against himself (Mr Dickins) and would attempt to mislead the jury with false argument and false facts. The learned Judge had told them (the jury) that his client's claim was merely a set-off and that his client was the defendant in the action, and this too at the beginning of the action before he could open his mouth for the defence. He would ask the jury for their sympathy, and to extricate him from the toils in which the learned Judge had cast him, and if his statement was a little long he would ask them to consider that the commercial existence of his client hung upon their decision. His client was a foreigner, who imperfectly spoke English, seeking to protect himself against preposterous and unjust charges on the part of a man in whom he had trusted as a friend, but who had turned out to be a hostile and deadly enemy and who seeks to win his case by stating that which a few months ago he solemnly and repeatedly denied under oath. Before going further he would like to put a few figures before the jury. Davison by his own admission had retained out of sales:—from the Hongkong and Shanghai Bank $5,702, from the Chartered Mercantile Bank $2663, from the Oriental Bank Corporation $7751; being a total of $15,957. b sides $5218 paid by the O.B.C. on the verdict given by the referees in the late action, and $786.00 for returned Insurance premiums: this gave a total of 21,961 actually received by Davison. Against this Davison had paid: Duties $4317, Insurance $7000, Rent of No. 37, $1500, or a total of $12,817. Thus it could be seen that Davison had already received the sum of about $9,000:00 clear profit, and there was nothing to show that he had been put to any extra expense, by Beato's agency, except the employment of a clerk for a month or two. And now Davison having obtained $9000 coolly asks for $13,000 more! For what? for effecting one sale, which entailed a heavy loss on Beato, for no other sale made by him had been proved. All that Davison had done for his client was to allow him to sell his own goods and have the run of his (D's) office, the use of his godown and a part use of his clerk and compradores and the anonymous advantage of the use of his name. Davison had made no advances, since by collecting Beato's rents, proceeds of sales &c., he always had been in funds more than sufficient to meet all actual disbursement. The defence of Davison to the claim of rent was only that a different amount had been agreed to by Beato. There was no evidence to prove this and Beato expressly denied it. Davison swears that the late Mr. Baker let the two godowns to him for $90:00 per month and that therefore Beato must be taken as having let them at the same rate. Mr. Grigor states that he let the godowns to Beato for $90 and not to Davison at all and this disposes of that, showing that Davison did not tell the truth. He admitted that Davison was in one sense was Beato's Agent, but not such an Agent as is alleged in Davison's petition. Though Beato did get Davison to insure the goods in his name, yet it is absurd to suppose that he agreed to pay such charges as are made by Consignees here against Consignors at home. All that Beato wanted was to do the business in Davison's name. Such an agency he was willing to admit. (Mr. Dickins here gave a recapitulation of the facts connected with the case, and reviewed the evidence of the witnesses). In conclusion he said he had heard that Beato was not such a popular man as his opponent, but he felt sure this would have no weight with the Jury whatever; he felt he could safely leave his case in their hands and they would find a verdict for his client.

Mr. Marks replied for Mr. Davison.:—May it please Your Honour and gentlemen of jury, this case presents few, if any, points of law not thoroughly established in favour of the plaintiff. The action is purely one of liability of principal to agent for commission and reward and for money due for services rendered and for money out of pocket paid by agent for his principal. Defendant's answer, if it means anything at all, is a plea of general denial and of set off; but no particulars of set off are stated and the answer may therefore be taken as simply to delay, on the ground that plaintiff would move to dismiss it, as he might certainly have done had he chosen. The real defence disclosed by his evidence amounted simply to: First, that plaintiff by suing the O.B.C. originally, discharged the defendant from liability. Second, that on the former trial, not between the same parties, the plaintiff swore he was not the agent of defendant, and thirdly that the charges were too high. The question of negligence is not raised by the pleadings in either of the cross-suits, and cannot therefore be entertained and indeed is not shown to have existed, No question, can exist as to the liability of a principal to his agent, or of one man to another—in the absence of an express contract to the contrary—for a reasonable remuneration for work done and a benefit

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

conferred (Chitty on contracts, pages 512 and 519). The corresponding obligation to perform the work properly is admitted, and there is no denial from the other side as to due care and diligence. Here, then, there is a *prima facie* case against the defendant Beato for a reasonable commission, for reasonable rates of storage, insurance &c., and for money expended on his behalf. How does defendant meet this case? By citing a former judgment *int r alios* which if the defendant intended to be conclusive against plaintiff, he should have pleaded specially by way of estoppal. This he has not done; nor can he be taken as having so done. The case then for the consideration of the Court and jury is confined to two issues—both suggested by his learned friend, (the accounts as far as figures were concerned being admitted as correct by his opponent). First, the liability of the defendant Beato. Second, the tariff of charges. To these two issues alone, notwithstanding the great diffuseness of the evidence, should the attention of the Court be confined; as to the question of liability His Honour would instruct the Jury on that point and it was not necessary for him to adduce authorities on such an elementary principle of law. Any person employed by another to transact work for him is entitled at law—in the absence of an express agreement to the contrary—to a reasonable remuneration to be ascertained by a Jury. (Chitty on Contracts p. 512). In this case there was certainly no agreement to the contrary shown—indeed the defendant Beato, admitted agency and agreement. His learned friend had, for the first two hours, in his summing up confined himself to his case, and had gone on like a gentleman, but like the cow which had yielded a good pail of milk, he kicked it over, and following his natural disinclination to conduct himself properly, had assailed him and insulted His Lordship However, comment was superfluous.

The case for the consideration of the Court, when reduced to its proper limits, was confined to a very small compass; much unnecessary evidence had been gone into by his learned friend—which was quite beside the issue. Almost at the beginning of the trial the defence had been confined by defendant to two grounds; first the liability or non-liability of the defendant Beato, second the tariff of charges. He would entirely confine plaintiff's case to these two points. First, then, as to liability. There were two points for consideration, law and fact. As to law, it was unnecessary to prove that any person was entitled to a reasonable remuneration for his services—if there was no express stipulation to the contrary. Defendant had not attempted to prove that there was an agreement to the contrary. Defendant in a slovenly and second-hand manner had sought to prove that although Davison did certain work he did it negligently and to the hurt and damage of defendant. Mr Dickins had seen how faulty his answer of "never indebted" was (which by no means raised this defence) and had sheltered himself behind a rule in the Orders in Council that "at hearing a defendant should not be bound absolutely by his answer." This rule was never meant for pleadings drawn by professional men. The nature of the "negligence and damage" alleged by the defendant Beato was purely imaginary. It was true there had been some delay on the part of this client in making out accounts for Beato. But Beato and the Banks were as much to blame as his client in this matter, and when Davison really found that Beato wanted accounts he had them made up, and since April 1874 regular accounts had been made up and sent to the O. B. C. and Beato. Mr. Marks then referred in strong terms (too long for us to give) to the imputations of fraud, conspiracy, fraud and theft against Davison, himself, the O. B. C., the Court, the Referees in the late action and the community of Yokohama in general made by the opposite side. As to the performance of the agency by the plaintiff the books the nature of the accounts themselves, the correspondence, the record and the evidence of the parties shewed that Davison *did* perform the agreement, that he landed, stored, warehoused and paid duties on Beato's goods, that he sold and assisted in selling a large portion of these goods and that those on which he has charged half commission were withdrawn and surrendered by due process of law in accordance with the written demand of the mortgagees and of Beato himself (shewn by the letter of July 31st 1874). Here, then, we have seen the contract fully performed by the plaintiff. Mr. Marks then briefly alluded to the question of charges: the referees of the late action had decided that point, and many respectable merchants at this trial had said that they considered the charges moderate. And because a number of merchants, hard up, were willing to store the goods for less; that did not prove that the proper and average Yokohama rate had not been charged. Mr Marks commented shortly on the [illegible] own rent, and said he could safely leave his case in the hands of the Jury.

brought to recover money as compensation for work and services done. It had been pleaded on the other side that work had never been performed or else had been done negligently. Beato in 1872, had gone to Europe, and purchased goods, and on his way back to Japan had telegraphed from Singapore and made Davison his agent. When Beato reached Yokohama he made an agreement with Davison that he was to sell the goods and in consideration for so doing was to receive 2½ per cent commission on large sales, and 5 per cent on the small. There was no agreement as to charges; but it was understood between the parties that they were to be on a fair scale. This agreement was made, both parties at the time knowing the goods were pledged to the Bank. The Bank could at any time have taken the goods out of Davison's hands and have placed them with another custodian, but in this case the Bank did not object to the two kinds of Agencies which Davison held by being seller and custodian of the goods. Davison was selling agent for Beato and custodian for the Bank. He had to assist at every sale made. He Davison stood between the Bank and Beato, and this disposed of all the arguments about agency. In one sense he was the agent of the Bank and in another the agent of Beato; this continued till the goods were handed over to the Oriental Bank, and Davison's dual agency ceased. The first question is, is there any liability at all on the part of Beato to Davison? Beato still went and always did account to the Bank for the sales made. Then there was the question of how Davison performed the work he was now suing for. This was a point for the Jury to decide upon from the evidence before them. It appears that Beato did look after every transaction, and because he chose to live with Davison it did not follow that the latter did not do the work. It has been urged very strongly that Davison in handing over the goods to the Oriental Bank did Beato great harm. This question was disposed of by the fact that the goods were all pledged to the Bank. As regarded the accounts question it seems that Davison had not been as prompt and careful as he might have been. It might, perhaps, seem hard that after eighteen months Davison suddenly came down with a heavy account. With regard to the godowns, whoever took them from Mr. Baker must be in possession of them. Grigor says in his evidence that that they were let to Beato and that Davison hired them from Beato. The question of rent for the godowns was an obscure one and the jury would have to decide the point. The accounts were a very difficult matter to put straight and see what was due and what was not, but he felt the jury, being mercantile men, would find them less difficult than he should. The case altogether was really more simple than it appeared to be despite the long arguments of the counsel. The question of agency he considered settled: the goods being all along pledged to the Bank, and the Bank had the right and power at any time to demand them from Davison; thus Davison did not injure Beato's interest by giving up the goods when demanded, for he could not do otherwise. Next there was the question of unsold commission. Unsold commission was compensation to a person who had tried to sell goods placed in his hands for sale and which had been withdrawn from him by the depositor before he (the commission agent) could sell them. There had been evidence produced to show that there was such a custom. If there was no such custom it was for the jury to decide what was a fair compensation to be paid to Davison. Then again there was the scale of charges and there was the evidence that was taken before the referees in the late action. Mr. Wilkin still adhered to what he had said as regarded his evidence. The jury would have to decide the question.

The following is the verdict delivered by the Jury in this case.

In rendering their verdict the jury desire to state that they approach the subject with considerable diffidence, believing that the questions at issue might more properly have been referred to arbitration.

We find for the plaintiff Davison in the sum of $8,362 65-100 which we arrive at as follows, and which disposes of defendant Beato's claim or set off.

The total balance claimed by plaintiff Davison is $9,055 5-100, to which must be added the sum of $27 15-100, commission on $513 15-100, which has been omitted in plaintiff's particulars of demand:—

Say total		$9,082 20
From this must be deducted the following sums:—		
Disallowed, being difference of commission on goods charged as miscellaneous which were afterwards classed as staple	$5 2.52	
Landing charges over-charged, as admitted by plaintiff's counsel	78 52	
Interest on charges to 31st December, 1874, disallowed	118 51	
		779 75

LANDING CHARGES AND STORAGE,

We consider the rates charged somewhat high, but in the absence of any reliable data as to the exact measurement and description of goods to which we (? can) refer, we adopt the scale determined upon by the referees in the late action, Davison v. O. B. C.

Before C. W. GOODWIN, Esq., Assistant Judge,
AND
R. ROBERTSON, Esq., H.B.M.'s Consul.
March 15, 1875.

PRELIMINARY HEARING.

F. E. White, constable of the Court, was charged by W. P. Kent with inducing him, under false pretences, to endorse over a promissory note for $222, by giving W. P. Kent $190 for the said note, when at the time (as is alleged) he had the full amount in his possession, namely, $222.

Prisoner pleaded not guilty.

Mr G. P. Ness appeared for the defence.

Complainant conducted his own case.

Mr H. S. Wilkinson begged leave to object to the prisoner being put in the prisoners' dock, as he was not in the hands of the police.

Prisoner said he had no objection to go into the dock and stay there.

His Honor thought this would be more regular.

W. P. Kent said he and Vernede and Dickins had stood in the prisoners' dock before now, on a criminal charge of libel

His Honor did not want to hear anything more about that case.

W. P. Kent, before being sworn, desired that Messrs. Moss Vernede, and Black, then in Court, should be ordered to withdraw. On a former occasion he had to discredit the testimony of Mr. Moss.

His Honour granted the request.

W. P. Kent, sworn: On the 7th September last, in consequence of a letter he had received from Mr. Vernede, he came to Yokohama. He had previously placed in the hands of the Court a distraint on the effects of J. R. Black.

Mr. Bate: It was a warrant of execution.

Witness continued: It was on account of a promissory note of Mr Black's, on which he had obtained a judgment in the preceding January, On the 7th September he saw Mr Bate about the matter, who referred him to White, of the Consulate, as he was intrusted with the warrant of execution. He went to the Constable's room and saw White, who told him that he (White) could not levy on Black's goods unless he (Kent) went and pointed out the things to be seized, as Mr Black had already given a bill of sale on his furniture. To this he (Kent) replied that he was pressed for money, and that he had been so often duped by Mr Black. White then told him he had better go and see the Assistant Judge, as Black had stated to the Judge that he only owed $60, and that the Assistant Judge appeared to think that he (Kent) was acting harshly towards Mr Black. He then told White that he was determined to press the claim. White then told him that Black owed him (White) a little money, and that Black paid off a portion on the departure of each Pacific Mail steamer. White then said if he (Kent) liked, he would take over his judgment against Black. He asked White what he would give him for it. White offered $150. He refused to take this, saying he would rather lose the whole. He told White he would take $200 for it, which would leave him a profit of about $25 for his trouble in getting Black to pay it.

His Honour: What was the amount of the judgment?

Witness: About $220 odd. White gradually increased his offers till he came up to $190, but he still refused to take less than $200. White then proposed that they should toss to see whether he was to give $195 or $190 for it. They tossed and he (Kent) lost it, and White thereupon paid him the $190 in notes, and took his receipt and the warrant of execution against Black. He endorsed Black's promissory note over to White, and gave it to him. He then left the Consulate and shortly afterwards met Mr. Vernede who derided him for having accepted a smaller sum than what was due to him by the promissory note, telling him at the same time that Black had paid into the Court previously the whole amount.

Mr. Ness objected to hearsay evidence being given.

His Honour said Vernede would be called as a witness.

Witness continued:—On hearing this he determined to get to the root of the matter, and he called on Mr Moss of the *Gazette*, to get some information. Moss refused to give him any, and he thereupon told Moss he would bring him before a Court of Justice, and make him tell what he knew. That day he procured further information, and he made a note of it. The next day he went to the Consulate and saw Mr Robertson, who called White into his office; and prisoner there acknowledged that he had received the money by cheque from Moss of the *Gazette*, and the facts were then narrated to Mr. Robertson. White told Mr Robertson that he had tossed to get possession of the warrant of execution by reason of his sympathy for Black, and that he thought that he (Kent) had treated Black harshly, and that he had endeavoured to make the best terms he could for Black. Mr Robertson then asked White if Black had authorized him to act for him in the matter. White answered that he had not, and told Mr Robertson that he had not returned the difference between $190 and the promissory note of $222 to Black. White said that he wanted to carry this sum to Black's credit with him on a private loan he had made to Black. Mr Robertson then advised White to return the difference forthwith, and White and he (Kent) then left Mr Robertson's office together. He went to the constable's room, and White sat down and drew a cheque for the amount (handed in), and gave it to him; but before doing so he stopped, and said he did not think he had any right to return the $5 they had tossed for, as he had won them fairly. He (Kent) insisted upon their being returned. White said to him that he did not think that he was so mean as to demand them. He felt very annoyed at the impudence of White, and told him he should bring the matter before the Minister, and he went to Mr Bate's office, and asked for a criminal charge sheet. He did not tell Mr Bate what he wanted it for. Mr Bate said he require an affidavit before issuing one, so he did not get one. He then returned to Yedo, and to the present day the matter had lain dormant. This occurred in September, 1874. When he was at the Consulate, White asked him when he should present the cheque for payment, and he told him the day after he (White) left the Consulate, That was all he had to say. He had not yet recovered the difference.

Cross-examined by Mr Ness: He did not cash the cheque, because he had been duped, and he wanted to keep it as a piece of evidence till the affair had been before the Court. He wanted to get White discharged from the Consulate. He had deposited the cheque with a Chinaman as security for a debt, and the Chinaman, without his knowledge, had taken it to the Bank to try and get it cashed. He had been paid the full amount due, if the cheque was considered part payment. He had been pressed very much for money. He had received money on judgments against Vernede from Mr Bate. He had not received money from White before, in satisfaction of judgments obtained in this Court. He considered White had got the promissory note from him under false pretence, because White had said, "don't think you can obtain the money any other way." As a matter of fact he did not know that White had the money in his possession when he bought the promissory note from him for a less amount. He recollected White saying to Mr Robertson that he was acting for Mr Black, but had no authority. He (witness) was excited at the time. Mr Robertson was very grave, and advised White to return the balance at once. White told him about the bill of sale on Black's furniture on the 7th September last. The interview lasted about 20 minutes. He did not remember seeing Bevill in the matter. He could not swear that Bevill brought him a message from White in September, He came down to Yokohama in consequence of the letter he received from Vernede. [Letter read.] He knew that Bevill had left Japan a few days ago under his (Kent's) name. White had embezzled $27. On the 8th September he had received a cheque for that amount. He never presented the cheque for payment. He brought this charge against White for the public good. He considered the public good could wait for six months, so did not hurry in bringing the action. He had been too sick, and had not the means to employ counsel. In any case he would have brought the action within the month. He gave the late Dr. Dalliston a promissory note of Vernede's for $400 due to him, in exchange for an I. O. U. of Black's for $300 due to Dr. Dalliston. He purchased the I. O. U. from Dalliston, as he was hard up for money. He did not buy it on purpose to worry Black. He had the interview about exchanging the notes with Dalliston during a consultation. Vernede still owed him money. He was not on bad terms with Black at the time he took Black's note over. He knew it was difficult to collect money from Black, but he bought the note because he wanted money immediately, and he knew that the promissory note of Vernede's, drawn on his brother in London, would only come back dishonoured. He gave a good draft of $400 to Dalliston, which he believed would be paid, for a note of $300, which he knew would be difficult to collect.

His Honour said he saw the reason why this had been done. Kent wanted money at once.

Witness continued: Previous to exchanging the notes with Dr

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Dalliston, he had offered to collect Black's promissory note for Dr. Dalliston gratuitously; but Dr. Dalliston was to allow him the interest for so doing. Dr. Dalliston did not want to appear in Court. He and Vernede gave a joint note for it and Dr. Dalliston was to allow them the interest, for collecting it. He was in the hope that if they collected it Dalliston would make him a loan to get back to England. He obtained the judgment against Black in his own name. Dr. Dalliston asked him to stay the proceedings, as Black had been entreating him to do so. It was five months after this that he had gone and offered to buy the bill from Dr. Dalliston. He had purchased the bill twice.

The Court adjourned, and re-assembled at half-past one.

On reassembling the prosecutors called

C. D. Moss, sworn.—I was connected with Mr Black in the early part of September on private affairs only, not in connection with the paper. I do not remember the exact date but I think it was on a Saturday about the 7th September on which I received some money from Mr Black, I think it was $222. My instructions were to go to the British Consulate and pay this money to Mr White. I went to the Consulate but did not pay the money as Mr White was absent. I saw Mr Hodges and told him I wanted to see White to pay him some money. I asked him if he would take it but he refused. As I did not want to keep the money in my pocket I paid it into the Hongkong and Shanghai Bank. On the Monday I sent Mr White a cheque for the amount. I think I sent it by a messenger. I do not think I saw Mr White. I do not think I told White that there were not sufficient funds in the bank to pay the cheque and requested him to hold it over for a few days. I received the money from Mr Black, the greater part, if not all, in notes, and at once took it down to the Consulate. I believe I told two people that I was going to pay the money into the Consulate for Mr Kent, knowing that they had bills against him. I only told them as a matter of friendship because you never pay your bills but at long intervals. The person were Mr Eyton and Mr Brett. I do not remember your coming to my office with Mr Eyton as to this money. I remember your coming to the office, and I told you that you had better go away or I might insult you. You went away. I have not the counterfoil of the cheque. I only received notice to produce it at 10.30 and I could not find it, as I had to be at the Court at 11 o'clock, and I think that I ought to have had reasonable notice to produce such documents. I do not destroy the counterfoils.

Mr Kent asked witness as to whether he had informed White some days previously that he was going to pay the money in to him. To this Mr Ness objected. The question was, however, allowed.

Witness continued.—I do not think any thing passed between us previous to the day when I brought the money to the Court. On 10th October 1873, I do not think that I told you in your house, and in the presence of others that I had a "down" on you because you had not treated my brother well. I did not tell you in the presence of Mr Vernede, that it was to be a *vendetta* between us.

Cross-examined by Mr Ness.—I know that Mr White and Mr Black had an interview previously about this money. I saw them talking in my office about it. My instructions were not to pay the money to the Registrar of the Court, but to Mr White. Mr. White was acting as a friend to Mr Black. He had acted in a similar manner on a previous occasion.

Re-examined.—I have never paid out an execution before. If a sheriff's officer were in possession of my furniture I do not know whether I should pay the money to him or to the Registrar of the Court.

A. Vernede sworn.—I wrote a letter to you about the 4th Sept. relative to an execution you had against Mr Black (letter produced); I wrote it at Mr White's request. I do not remember any particular conversation I had with you. The phrase "how to act" in the letter, means that Mr White had some proposition to make to you. I only heard from Mr Eyton that the money was paid into Court. I do not remember that White told me on the 7th September that Mr Moss had paid the whole of the money into Court. I can't say if I derided you for accepting a less sum of money. I am familiar with the circumstance of your receiving the promissory note from Mr Black. I was indebted to you, and you agreed to accept Mr Black's note and gave a draft on my brother to Dr. Dalliston. That draft was paid. The amount of $400 was paid by my brother. I do not remember being in your house with Mr. Moss on the 12th October, 1873.

Mr Ness again objected to the questions asked by the prosecutor as they did not refer to the case, but were merely intended to shake the previous witness' evidence. The objection was allowed.

Cross-examined.—I have heard Mr. Kent say that he had been treated very badly by White and that he would "serve him out." I have heard Mr. Kent said on this occasion that he had kept the cheque back as evidence. I understood that my draft for $400 paid for the promissory note. I am not aware of any consideration being given for the promissory note in January.

To prosecutor.—We jointly signed a promissory note in January.

Mr. Ness desired to know if it was necessary to proceed further with the enquiry. He thought the case had fallen to the ground. His Honour did not see the necessity of taking further evidence. He thought all the facts were now known. However he would go on.

J. R. Black, sworn:—He was the Editor of the *Nisshin-Shinjishi*. he was "generally" in the employ of the *Sa In*. He had seen the Assistant-Judge on this matter. He had no recollection of stating that he was only indebted to the amount of $60 00; he (Kent) had behaved very harshly to him in the matter. He had tried to make arrangements with the P. & O. Co. to get Kent a passage home. He had tried to get the money to pay for the passage. He paid the amount of the promissory note to Mr. Moss. He thought he told Moss to pay it to White.

Cross examined by Mr Ness:—He said to White if you can get Kent to take less you must. White came up to his house, and said he had got some money to return to him.

Re examined by Mr Kent:—He thought White came and told him on Monday; it might have been Tuesday.

Re examined by Mr Ness:—If White stated in Mr Robertson's office that he had acted without authority from him in getting Kent to take less it was a mis-statement.

Mr Robertson, sworn:—He remembered the day that Kent and White came into his office. He had almost forgotten what White had stated. He could not remember if White said he had no authority to act for Mr Black. He understood that White had tendered the balance to Black and White had gone on to say that Black had told him to place that amount to his (Black's) credit. He understood White to say that he had some authority to act for Black.

Cross-examined by Mr Ness.—It did not seem to him at the time that White had acted criminally. He understood that the case was settled before him, as he ordered White to pay over the balance. He was excessively annoyed that White had mixed himself up—as an officer of the Consulate—and a friend of Mr Black's in the affair. If White had still retained the money it would have been a serious thing.

Mr Ness said that by Rule 156 the case had already been heard.

Mr Kent argued against this; when he saw Mr Robertson, it was privately.

His Honour said he must dismiss the charge of embezzlement. But White had committed a breach of conduct. If White had retained the money for himself it would have been a serious thing. White had been very culpable in compounding with Black for his (Black's) benefit. White had committed a breach of discipline. But there had been no felonious intention on the part of White in retaining the money.

Mr Black applied that his expenses might be paid in coming from Yedo. He had been told by an officer of the Court in Yedo that his expenses would be paid.

His Honour said he ought to have asked before he had given testimony. Kent had paid nothing into Court for expenses.

Before C. W. Goodwin, Esq., Assistant Judge.

Wednesday, March 17th, 1875.

W. P. Kent *vs.* A. Vernede.

This was a judgment summons for the recovery of $625, awarded to plaintiff, one W. P. Kent, in the beginning of last year, and which, it was alleged, had never been paid.

A. Vernede, sworn, denied the debt altogether, averring that plaintiff had accepted a draft on his (defendant's) brother, O. Vernede, of London, for $400, as a settlement of the whole claim, which draft he had exchanged with Dr. Dalliston for a promissory-note of Mr. Black's for $300.

Plaintiff here asked that the reporters might be requested not to take notes of the proceedings. He had much rather that the enquiry should be private, as he did not wish to injure Mr. Vernede in any way.

His Honour replied that the case had been brought in the public Court, and he could not prevent the proceedings from being reported. There were cases which were heard in private, such as preliminary enquiries, but this had been brought as a judment summons, although the claim seemed to be disputed. Did plaintiff receive the draft for $400?

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Plaintiff stated that he did agree to take a draft on Mr. Vernede in London as payment in full, but the draft was dishonoured. He afterwards accepted a promissory note of Mr. Black's from Dr. Dalliston, for $300, in exchange for another draft for $400 on Mr. O. Vernede, London, on the consideration that the amount should be received as so much of the debt, leaving $225, so that there was a mistake in the amount on the summons; it should not have been $625 but $225. But it was expressly understood by both parties that the $225 should still be paid.

Mr. Vernede again emphatically denied this assertion, protesting that plaintiff had told Mr. Hall, the Court Interpreter, that the claim was settled.

His Honour here referred to the Court records, and found an entry made on June 29th, 1874, by Mr Hall that the matter had been arranged by a compromise. He then asked plaintiff how he accepted a second draft on Mr O. Vernede, when the first was dishonoured?

Plaintiff here produced a letter from Mr O. Vernede, of London, stating that he would pay the $400 in a short time, when he would be in funds.

Defendant asked that Mr. Hall might be called.

J. C. Hall, sworn, stated that, on the 29th June last, plaintiff came into the Registrar's office, and informed him that a case which was then pending had been settled. He had been able to make a compromise, with which he was satisfied. He asked him particularly (as there had been several summons cases for the recovery of the amount), if the claim was settled for good? Kent replied that it was, and that it would come into Court no more.

To Plaintiff:—You distinctly stated that the case was settled for good. I remember the day, perfectly, but cannot remember your exact words.

After a few moments' consideration, His Honour asked if the second draft was paid.

Being informed that it had been His Honour expressed an opinion that a compromise had been effected.

Plaintiff stated that he had refrained from acting so long in order to do a service to Mr. Vernede; he did not wish to put him to trouble, but he had now been in a situation for some time, and was able to pay the $225. It was distinctly understood that the money was to be paid, and if the case were dismissed he would be obliged to take other steps to recover it.

His Honour could not help it, whatever steps Mr. Kent might take. After the evidence of Mr. Hall he could but decide that plaintiff had agreed to accept the draft for $400 as payment in full; and that had disposed of his claim.

The case was therefore dismissed.

Before C. W. GOODWIN, Esq., Assistant Judge.

March 20, 1875.

REGINA *ats* MARTIN COHEN *vs.* W. P. MITCHELL AND COPE.

In this case W. P. Mitchell was charged with unlawfully beating and assaulting complainant, on Monday last, the 15th March, and F. A. Cope was charged with aiding and abetting in the same.

Prisoners pleaded not guilty to charges preferred against them.

Mr F. W. Marks announced that he appeared for the prosecution.

Mr M. Kirkwood said he represented the prisoners. He objected to Mr Marks appearing for the prosecution, as one of the prisoners (Mitchell) had consulted with Mr Litchfield, who was Mr Marks' partner, about the case, and stated all the facts.

Mr Marks said he was quite taken by surprise. Mr Litchfield had not mentioned the thing to him. He had come down to the Consulate a few minutes before on other business, and Mr Cohen, the prosecutor, had engaged his services. He did not know anything about the case, and would not defend such an assault case.

His Honour allowed Mr Marks to proceed. He called the prosecutor.

Martin Cohen, sworn: He first asked Mr Marks to act for him in this case about 10 minutes ago. He had not expected to meet Mr Marks at the Consulate. He had not made out the summonses himself. He had applied to the Court for them. He had been assaulted on Monday morning last. About 10 or half-past he was sitting at a desk in his own office. He was reading. Prisoners suddenly entered the office. He was taken by surprise when he found Mitchell standing before him. In May last year he had been a partner with Mitchell, and they afterwards admitted Cope as a partner. When they (prisoners) came into his office at No 28, Mitchell ordered Cope to shut the door, which he did. Mitchell then either read or said something to him (Cohen). He could not remember what it was, He was then struck senseless by Mitchell, but with what he did not know. On receiving the blow he instantly become senseless, and in this condition he was picked up by his servants. When he recovered consciousness he found himself in the arms of his boys. He did not know when the prisoners left his office, as when he had recovered they had gone. When he came to his senses he was suffering great pain, as Mitchell in striking him had smashed a kerosene lamp and some of the oil had gone into his eye. He did not strike Mitchell. He did not try to. He had no opportunity. On account of the assault he had been confined to his room up to Thursday last; he had been unable to attend to his business. Dr Eldridge had attended to his injuries. His eye which has bandaged was one of the results of the assault. He could see but badly with it. The light still hurt it. He took out the summonses on Thursday last. He had not been allowed by Dr. Eldridge to go out before.

Cross-examined by Mr Kirkwood. The assault took place between 10 and 11 o'clock on Monday morning last. Prisoners did not knock before coming into his office; the doors were open. Mitchell only spoke to him while he was at his desk. He did not ask them to leave the office. He was sitting down all the time. Mitchell either read or said something, but he was senseless. He had his senses now. He recovered at ten minutes to 12 the same morning. He did not lose his senses again. He did not know the purport of what Mitchell had read or said to him. [A letter produced by Mr Kirkwood, but not read.] He could not remember whether Mitchell read or said something to him. He could not recollect if Mitchell read the letter to him now shown him by Mr Kirkwood. Mitchell rushed at him. There was a ruler on his desk at the time. He did not take it up or strike Mitchell with it. He did not get up from his chair. He did no business at that day. After the assault he saw no one on business that day. The oil went into his left eye, and he suffered great pain. He did not think that his eye was closed solely by the oil: He did not know how the lamp got broken or how many blows he received, He did not work for three days after the assault.

Re-examined by Mr Marks: When he said, in cross-examination, that he did not know what had been read or said to him by Mitchell because he was senseless, he meant to say that he had become senseless after being struck. He had a faint recollection of Mitchell reading or saying something before he was struck.

To his Honour: He did not remember how long Mitchell was reading or saying something to him; it might have been a minute. He had no recollection of what it was about. Perhaps Mitchell had read out of the letter produced by Mr Kirkwood. He saw no letter in Mitchell's hands.

Kumaghrio, cautioned: He was prosecutor's boy. He remembered last Monday. He was sitting in his master's outer office. Prisoners came in and went into his master's private office. He heard some talking in the inner office. Mitchell was in the inner office and Cope was standing at the door of the private office. His master called him, whereupon Cope shut the door of the inner office He went to go in, but Cope shut the door. He heard the noise of the lamp falling off the desk. He saw Mitchell and Cope come out; they said nothing to him. He then opened the door of his master's office and went in, and found his master lying senseless, with blood coming from his nose and eye. He lifted him up and conducted him away by the hand, and bathed his face with water

Cross-examined by Mr Kirkwood: He thought it was about 10 o'clock when prisoners came to the office. He had no watch, and he would not say absolutely what time it was. The office door was shut, but his master's door was open; the door remained open a very little time after prisoners had gone in, and was then shut. It was about 15 minutes before the door was shut. He should think that prisoners were half an hour in the office. No person came in that morning before prisoners came in. He and the *bauto* were in the outside office. He picked up his master and put him in a chair, and then brought water and washed his face. His master recovered his senses as soon as he (witness) had washed his face. He was attending to his master for one hour, after washing his face, before he went home.

Mr Marks said this was his case for the prosecution. He should sum up. It was plain that a grave assault have been committed. There had been business differences between the parties, but that did not justify the defendants. This was a case that called for severe punishment.

Mr Kirkwood asked that the case against Cope be dismissed. There was no evidence to show that he took part in the assault.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr Marks said Cope had abetted by shutting the door, and preventing assistance being rendered to Cohen.

His Honor said there was no evidence to show *prima facie* that Cope had taken part in the assault.

Mr Marks argued that there was a *prima facie* case against Cope of abetting.

His Honor said Cope had only shut the door, but he would first hear the defence. There was a conflict between the statements of the prosecutor and his servant.

After some further argument, his Honor dismissed the case against Cope.

Mr. Kirkwood then opened the case for the defence, and reviewed the evidence. It was ridiculous that prosecutor did not remember what was read to him by Mitchell. It was a letter full of imputations on the character of Mitchell & Cope. They had gone to ask an explanation, and prosecutor had then ordered them to leave his office, and struck Mitchell with a ruler. Mitchell then knocked Cohen down, but the assault was a justifiable one.

F. A. Cope, sworn: He lived at No: 95. About 20 minutes past 10 o'clock on Monday last, Mitchell had asked him to go to prosecutor's house to ask him to explain statements he had made in a letter to a firm in New York. When they arrived at prosecutor's office, Mitchell said, "Can I have a few minutes' conversation with you?" Mitchell then asked prosecutor if he had written this letter? The affair took up about 7 or 8 minutes. The statements in the letter were read to Cohen three times, and Mitchell asked Cohen if he wrote it. At first he denied having done so, then he admitted it, and at last he said, "Get out of this," and refused to give any explanation. Mitchell said he wanted a satisfactory reply, and then turned round and closed the door. He closed the door and complainant rose from his desk and struck Mitchell a hard blow with the ruler across the hand. Mitchell took complainant by the throat with his left hand, and hit him twice with his right hand, and Cohen fell. He then called Mitchell to come away, and they left. As they were leaving, Cohen had risen to his feet, and Mitchell said, "I shall call again for an explanation." He (Mitchell) had no stick with him. He had a glove on one of his hands.

Cross-examined by Mr Marks: The documents produced had not been ironed to his knowledge; they had been smoothed and placed in the letter box, with a weight to keep them down. He said just now that he (Mitchell) had held the letter in his left hand all the time, and that he had seized hold of Cohen's throat whilst he he beat him. When he started for prosecutor's office he had no idea there was going to be a row.

W. H. Devine, sworn: He recollected Monday morning last. He went to Mr Cohen's office between half-past 10 and 11. He saw Cohen. He was sitting in a chair in his office. He made a business enquiry and got an answer. His (Cohen's) appearance struck him as being unbusinesslike. [Laughter.]

Cross examined by Mr Marks: His face was not businesslike; it looked as if he had received two or three smart blows. He did not remain any length of time at Cohen's. He only made a business enquiry and got an answer. He met a foreigner coming out as he went in. He did not know who he was. He did not get about a matter of business that required an examination of books to be answered.

His Honour thought that by the evidence a good defence had been made. If a man commenced by striking a blow, he must expect a return one. Cohen had not given his evidence in a satisfactory manner. He must take it as a fact that the first blow had been struck by Cohen. Case dismised.

[Loud applause.]

The Court room was filled during the trial.

Cecil Boothby and John Theed were charged with breaking a lamp in Water Street, and knocking down a street barricade.

Both pleaded not guilty.

After hearing the evidence, His Honour considered the charge proved, and fined them $5 each, besides ordering them to pay the damage to the lamp, 26 cents.

Shipping Intelligence.

ARRIVALS.

March 15, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and ports, Mails and General, to P. M. S. S. Co.

March 16, *Mathilde*, German barque, Lun, 238, from Hamburg, General, to Simon, Evers & Co.

March 18, *Hermann*, German brig, Petersen, 211, from Takow, Sugar, to Netherlands Trading Co.

March 18, *St. Thomas*, Swedish barque, Hjorth, 287, from Nagasaki, Coals, to P. M. S. S. Co.

March 19, *Takasagu Maru*, Japanese steamer, Eckstrand, 1,080, from Shanghai, General, to Mitsu Bishi.

March 19, *Tanais*, French steamer, Reynier, 1,003, from Hongkong, Mails and General, to Messageries Maritimes.

March 19, *Mosquito*, British gun-boat, Captain Lt. Comr. Paul, 295, from Kobe.

DEPARTURES.

Mar. 14, *Jan Peter*, German barque, Molson, 336, for Chefoo, Ballast, despatched by Grosser & Co.

Mar. 15, *Ariel*, British barque, Fullarton, 358, for Nagasaki, Coal, despatched by Captain.

March 15, *Swatow*, British steamer, Ridley, 530, for Hiogo, General, despatched by Van Oordt & Co.

March 16, *Surprise*, American ship, Johnson, 1,006, for China, Ballast, despatched by Mouriyan, Heiman & Co.

March 16, *Pardo*, British steamer, Power, for Hiogo, General, despatched by, Walsh, Hall & Co.

March 16, *Volga*, French steamer, Nondedeu, 960, for Hongkong, Mails and General, despatched by, Messageries Maritimes.

March 17, *Ly-ee-moon*, British steamer, Stephens, 670, for Nagasaki, Ballast, despatched by, Hudson, Malcolm & Co.

March 17, *Oregonian*, American steamer, Harris, 1,914, for Shanghai General, despatched by P. M. S. S. Co.

March 17, *Kanagawa Maru*, Japanese steamer, Roper, 1,325, for Shanghai, General, despatched by Mitsu-bishi Co.

March 19, *City of Peking*, American steamer, Morse, 5,070, for Hongkong, Mails and General, despatched by, P. M. S. S. Co.

Mar. 20, *Lizzie*, British barque, Jnokay, 385, for Newchwang, Ballast.

Mar. 20, *Otto*, German brig, Adamsen, 290, for Newchwang, Ballast, despatched by Captain.

PASSENGERS.

Per American steamer *Golden Age*, from Shanghai.—Messrs. F. R. Smith, A. H. L. Cole, J. C. Frott, J. Bryner, Les Casse, R. B. Cuthberton, B. Hiller, wife and child, Omare and wife, Yoshida and wife, 1 Chinese, and 10 Japanese officers, and 68 in steerage.

Per *Volga* for Hongkong.—Mr. Voguet. For Port Said.—Mr and Mme. Schaefer and 2 children. For Marseille.—Messrs. Jacob Holmblad, and Phil Colin.

Per Japanese steamer *Kanagawa Maru*, for Shanghai.—General Saigo, Mrs. Stuart, infant and servant; Messrs. Abell, M. Brown, Davidson A Tough, Oowaki, Chinichi, Hasigawa, Maida, Kanakichi, Sekino, Iya, Fukuya sanji, Mino, Mutakichi, H. Barnett, Hakayanago, Oku, Furumi, Fukusawa, and 82 in the steerage.

Per American steamer *Oregonian*, for Shanghai.—Mr. Stewart, 1 Japanese lady and child, W. H. Richard, Mr. and Mrs. Ito, 4 Japanese, Mrs. E. Mayfield, Wisner, Ahrens, J. F. Sutton, Trott, 1 Chinese, Mr and Mrs. Yamawura and child, Mr. and Mrs Takashishi, Kama, Kasho, Hall, Runfam and servant, D. W. Ap. Jones, F. R. Wetmore, 5 Japanese, Mr. Babut, and 1 Chinaman and servant.

Per Japanese steamer *Takasagu Maru*, from Shanghai.—Mr. and Mrs Van der Pol, 1 Japanese lady, Messrs. J. Symon, Geo. Withers, E. Berger, Johnson, C. J. Frishling, Capt. Mooney, P. V. Grant, M. Aschabey, and 6 Japanese in cabin, 112 in steerage.

Per French str. *Tanais*, from Hongkong.—Mr. & Mrs. Winton, Mr. & Mrs Mailians, Mr. Brossement, M. Callifford, M. E. Schmidt, Ito Cast, Ozara, Carlos, Myers, Sourin, Conte Morins de l'Etors.

Per American steamer *City of Peking*, for Hongkong.—Mr. and Mrs Coit and servant, Mrs. Hill child and servant, A. G. Bennet, and W. Hastings.

CARGOES.

Per American steamer *Golden Age*, from Shanghai.—Treasure, $54,537.00.

Per French steamer *Volga*, for Hongkong:—

Silk	129 bales.
Waste Silk	3 bales.
Treasure	$129,966

REPORTS.

The *Min*, left for Yokoska on the 13th.

The German barque *Mathilde*, reports; after leaving Hamburg, was detained in the Elbe for nearly a fortnight, after which experienced strong weather and head winds till well out in the Atlantic. Latter part of the passage favourable, till nearing the coast of Japan.

The Swedish barque *St. Thomas* reports having experienced very bad weather on the voyage. On the 11th instant, in a strong gale from the southward with heavy sea the cargo shifted but was trimmed right again without any danger. Off Oosima passed a quantity of wreckage consisting of pieces of hatchways, bulwarks &c.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

YOKOHAMA, MARCH 20TH, 1875.

IMPORTS.

Cottons Fabrics and Yarns.—Our market has not undergone any material change either in prices or in the disposition of dealers to operate, most of them being still well provided with goods contracted for. Arrivals continue to be rather heavy.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds. 39 in. per pce.	$1.87½ to $2.10		56 to 60 reed 40 yds. 35 in. nom. per pce.	2.40 to 2.50

8 lbs. 4 to 8 lbs. 6	„ 39 in. „	2.17½ to 2 52		Turkey Reds 25 yds. 30 in. 2¼—3 lb. per lb	0.90 to 0 97½
9 lbs.	„ 44 in. „	2.65 to 2 90		Black Velvets	8.60 to 9.25
Taffachelass Single		2.55 to 2.75		English Drills	3.20 to 3.40
				Canvas, Navy, Red Stripe	7.00 to 8.00
No. 16 to 24	per picul	33.50 to 36.50		No. 28 to 32 per picul	38 50 to 42.00
Reverse	nom.	nominal		„ 38 to 42 ...small stock nom. „	42.00 to 46.50

Woollens.—Except in *Mousselines*, for which a fair demand exists, business has been extremely limited, and rates are nominally unaltered.

Plain Orleans	40—42 yds. 32 in.	6 25 to 7.75		Figured Mousseline de Laine... 30 yds. 30 in.	0.28 to 0.32½
Figured Orleans	29—30 yds. 31 in.	4 50 to 5.25		Multicolored „ 30 yds. 30 in.	0 30 to 0.40
Italian Cloth	30 yds. 32 in.	0 25 to 0.37		Cloth, all wool plain or fancy.. 48 in. to 52 in.	1.00 to 1 30
Camlet Cords	29—30 yds. 32 in.	6.25 to 7 25		Presidents 54 in. to 56 in.	0.75 to 0 85
Camlets Asstd.	56—58 yds. 31 in.	18 50 to 19.00		Pilots 54 in. to 56 in.	0.45 to 0 55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14 50		Union 54 in. to 56 in.	0.70 to 0 85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19½		Blankets, scarlet & green 7 to 8 lbs. per lb	0.40 to 0.45

Sugar.—The Sugar market continues firm for Formosa kinds. No sales have taken place since the 13th instant.

Kerosene.—The market is still without stock in first hands.

Sugar:—Formosa in bag	per picul	4.50 to 4.60		China No. 5 Kong-fun	per picul 5.60 to 6.00
in Basket	„	4.30 to 4.40		„ No. 6 E-pak	„ 4 90 to 5 40
China No. 1 Ping fah	„	8.50 to 8.60		Swatow	„ 3.70 to 3.80
„ No. 2 Ching-pak	„	7.70 to 8.00		Daitong	„ 3 80 to 3.90
„ No. 3 Ke-pak	„	6.90 to 7 20		Japan Rice	„
„ No. 4 Kook-fah	„	6.20 to 6 70		Kerosine Oil	„ 3.30 to 3.40

EXPORTS.

Silk.—Since the 10th instant, arrivals are 220 bales, and settlements about 450 bales, including a few parcels of Shinshiu and Oshiu, which were sold by public auction on the 16th and 20th instant and realized full market rates.

Owing to the continuance of unfavorable advices from the home markets, prices for Hanks have further receded. There is a good inquiry for Oshius which remain firm at previous quotations. This morning a parcel of inferior Kakeda fetched $590.

We quote:—

HANKS.—Extra		$530 to 550
Best	No. 1 to 2	$500 to 520
Good	No. 2	$470 to 490
Medium	No. 2½	$430 to 460
Common	No. 3	$400 to 420
Inferior		$350 to 380
OSHIU.—Extra		$560 to 580
Best		$530 to 550
Good		$490 to 510
Medium		$450 to 470

Tea.—A moderate but steady business hass been done during the past week, settlements amounting to about 1,500 piculs, principally of the lower grades.

Native dealers seem inclined to clear off their stocks, and are willing to make concessions for fine purchases. Prices rule rather irregular and close weak.

Arrivals from the interior have been very limited for the past week, and the closing season's produce has probably come in to either this port or Yedo.

Common		$20 00 to 23.00		Fine	$40.00 to $43 00
Good Common		25 00 to 28.00		Finest	44.00 to 48.00
Medium		31.00 to 34.00		Choice	50.00 and upwards.
Good Medium		36.00 to 38 00		Choicest	None.

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been almost nil. With the exception of some transactions in *Gold Yen*, at about previous rates, little has been done.

Rates close as follows:—		On Hongkong Bank Bills on demand	Par.
On London, Bank, 6 Months'	4s. 2½d.	„ „ Private Bills 10 ds. sight	¼ per cent. dist.
„ „ Sight	4s. 1½d.	„ San Francisco Bank Bills on demand	100½
„ „ Private, 6 months	4s. 2⅝d. to 4s. 3d.	30 days' sight Private	103
„ Paris, Bank Bills 6 months	5.30	„ New York Bank Bills on demand	100½
„ „ Private	5.35	30d. s. Private	103
„ Shanghai Bank Bills on dem	[illegible]	Gold Yen	412
„ „ Private Bills 10 d	[illegible]	Kinsatz	419

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. CROSSE & BLACKWELL,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

Yokohama, May 27, 1872. 12ms.

CAUTION.

BETTSS'S PATENT CAPSULES.

The public are respectfully cautioned that BETTS'S Patent Capsules are being Infringed.

BETTS'S name is upon every Capsule he makes for the leading Merchants at home and abroad,

and he is the ONLY INVENTOR and SOLE MAKER in the United Kingdom.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m

THE GREATEST WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

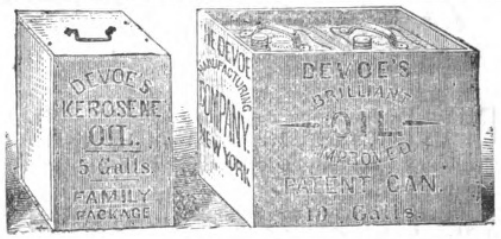
Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

THE GREAT CURE ALL!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kinds. It acts miraculously in healing ulcerations, curing skin diseases and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diptheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

THE "MOFUSSIL GUARDIAN,"



Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873. 52 ins.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this Journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

THE week has been singularly destitute of news, and the settlement has abandoned itself to holiday-making—a step in which we shall not be so impolite as to refuse to follow it. A gale of some violence, commencing on Thursday evening, has passed over this section of the country, and though the sky remained unclouded, the wind had that irritating effect which is somewhat inconpatible with the enjoyment looked for by pleasure-seekers.

IN writing last week upon the recent reform which has been made in the taxation of the country, we said that imposts upon 250 articles had been abolished. The actual list, however, comprises 1564 separate articles, and, though far too long for publication, is interesting as exemplifying the extreme minuteness to which the system of taxation in this country has been carried. The edict announcing the change is as follows.

"I hereby notify that the taxes known as *Yetz ze* (miscellaneous taxes), the incidence of which was very unequal, and which differed in different places, having been based on old and local customs, have been abolished from the 1st of January last.

* * * * * * * * * * *

To the renters of land. There will be no change in the amount payable to the Government either in rice or money for the rent of land."

(Signed) SANJO SANEYOSHI.

IN view of the great importance to the welfare of this country of developing its export trade, it is much to be hoped that the duty which is to be imposed upon tobacco from the 1st January next will not be allowed to interfere with the growing export trade in this article. It is one which gives a good promise of increase, and as it is a profitable one to the grower, no fiscal or other impediments should be placed on its development. Allowing that there would be serious difficulties in applying the system of drawback to the export, they could be avoided by putting the tax on the manufactured article in the form in which it goes into home consumption, and leaving the leaf, in the state in which it is exported, untaxed. It would be curious and interesting to ascertain the total quantity of tobacco grown in these islands. Certainly it must be large, and it may be some time before the export will bear more than a fractional relation to the quantity cured for home consumption. But the export trade in the article is well deserving of every encouragement that can be given to it. In a recent circular from one of the most prominent of the London tobacco brokers, the following passage is to be found. "This growth has now got such a hold on our manufacturers, that the attention of the Japanese should be especially directed to it."

IT is clear that "the troubling of the waters" to which the present movement of the national mind of Japan may be likened, has not left the religious world here undisturbed. So far as we can understand, the present Government, on its accession to power, established the Kiobusho, or Department of Religion, with the view of reviving the belief in Shintoism, a system of religious doctrines on which great light has recently been thrown by the careful and laborious analysis of it by Mr. Satow which was published in these columns, and which will be found in the Appendix to the first part of the third volume of the Transactions of the Asiatic Society, now in the press. An union of the principal Sects of Buddhism has been brought about under the name of *Daikioin* (Superior Church). But one of these, the Shinshiu Sect, remarkable, as it seems to us, for holding the doctrines of a rather high form of theism, and reproached by the other sects for its approximation to Christianity—which, of course, only means the theism of Christianity—has seceded from the union, amid the vigorous and bitter reproaches of the new body. The dispute was referred to the Kiobusho, who declared themselves unable to settle it, referring it in turn to the Daijokwan, who wisely refused to insist on a compulsory and unwilling union. It will be observed from one of our translations that the dispute forces into prominence the antagonism of the native religions to Christianity, and reveals the fact that even the Shintô priests have not escaped something of its influence, though this is apparent only at present in a reference to a tri-theism, which might *à priori* have been expected as the first fruits of our trinitarian doctrines.

A perusal of the list of articles from which the taxes have lately been removed recalls the following passage from one of Sydney Smith's articles in the Edinburgh Review (1820).

BRITISH TAXATION.

WE can inform Jonathan what are the invitable consequences of being too fond of glory;—TAXES upon every article which enters into the mouth, or covers the back, or is placed under the foot—taxes upon every thing which it is pleasant to see, hear, feel, smell, or taste—taxes upon warmth, light, and locomotion—taxes on every thing on earth, and the waters under the earth—on every thing that comes from abroad, or is grown at home—taxes on the raw material—taxes on every fresh value that is added to it by the industry of man—taxes on the sauce which pampers man's appetite, and the drug that restores him to health—on the ermine which decorates the judge, and the rope which hangs the criminal—on the poor man's salt, and the rich man's spice—on the brass nails of the coffin, and the ribands of the bride—at bed or board, couchant or levant, we must pay.—The schoolboy whips his taxed top—the beardless youth manages his taxed horse, with a taxed bridle, on a taxed road;—and the dying Englishman, pouring his medicine, which has paid 7 per cent. into a spoon that has paid 15 per cent.—flings himself back upon his chintz bed, which has paid 22 per cent.—and expires in the arms of an apothecary who has paid a licence of a hundred pounds for the privilege of putting him to death. His whole property is then immediately taxed from 2 to 10 per cent. Besides the probate, large fees are demanded for burying him in the chancel; his virtues are handed down to posterity on taxed marble; and he is then gathered to his fathers—to be taxed no more.

A letter from Captain St. John, of H. M. S. *Sylvia*, will be found elsewhere, bearing on the question of the isheries of Yeso. It is questionable whether a market could be found for the herrings which seem so abundant on the coast, though perhaps more might be done than at present in the way of converting them, by boiling, into manure. The hopes of this northern trade lie in the fisheries of salmon and cod, for which a large market could be found in China, Manila, Mauritius and the West Indies.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE severe weather of the past two days has not been without its consequences. The ship *Evelyn* which sailed from Yokohama bound for Kobé on the 24th instant, returned yesterday, one of her crew being disabled with a broken leg. Several of her sails were split in a squall she met with outside Cape Sagami.

IN view of his shortly intended departure from this country, M. Berthemy, Minister for France, was entertained at Hamagoten on the evening of the 25th instant by the Prime Minister and the other members of the Cabinet.

THE Great Northern Telegraph Company intimates that the Shanghai and Amoy cable has been repaired and that all the lines are in order.

THE Messageries Maritimes Mail Steamship *Volga* sailed from Hongkong this morning at 6 A.M. with the European Mails of the 14th February.

(From the Japan Mail Daily Advertiser.)

Since the publication of the Notification intimating that the export of rice would be allowed the price has again risen. The price now asked in Yedo is *yen* 7.17 per *koku* as against *yen* 6.80 prior to the issue of the proclamation.

A native newspaper states that the Loochooans have been summoned to Yedo to answer for the offence of having paid tribute to China.

Yesterday being the anniversary of the birthday of the Emperor of Germany the various German Hongs were decorated with colours in his honour. The customary holiday will be observed to-day.

THE *Choya Shimbun*, usually a well informed native journal, states that Okubo, Kido, Itagaki and Ito have been nominated Commissioners by H. I. Majesty to investigate and report upon the present system of administration. It expresses a hope that as the intelligence of these officials is generally recognized the country will profit by the reforms which may be expected to result from their labours.

A native journal intimates that a number of Japanese manufacturers have made arrangements for a display of specimens of their products at the forthcoming centennary Exposition at Philadelphia. Up to the present only some ten persons have expressed an intention to exhibit; the journal adds, however, that the list will doubtless be largely swollen as the period for closing it approaches. The exhibitors at present announced have notified their intention of sending goods to the value of $184,000, the exhibits consisting chiefly of porcelain, bronzes, lacquer-work, ivory and *objets d'art*.

THE *Adventure* arrived at Hongkong on the 13th instant having met with somewhat boisterous weather on her passage. After receiving the requisite camp equipment for the troops she was to proceed to Natal *viâ* Singapore and Mauritius on the 16th instant.

IT will be observed that the railway returns for the past week exhibit a considerable increase over the receipts for the week preceding and that corresponding to it in 1874. This is no doubt to some extent due to the *matsuri* at Kawasaki on Sunday last which attracted a large number of holiday-makers.

A fire broke out yesterday morning at 3 o'clock in Kowami cho, Tokio, and was not extinguished until it had destroyed upwards of fifty dwellings.

IN H. B. M.'s Consular Court yesterday, the boatswain of the British ship *Thomas Hilyard* was charged by two of the seamen with assaulting them while the vessel was at sea, on the 3rd March last. His Honour dismissed the case, as there was a conflict of evidence as to who struck the first blow. Two seamen of the same ship were then charged by the Captain with being drunk on board [illegible] and creating a disturbance. His Honour sentenced one to a week and one to 48 hours' hard labour.

SHIPPERS OF SILK.

Parcels.....	„	127.821
Goods	„	201.55
Total.....	Yen	4,757.761

THE rumour to which we recently alluded respecting the finding of the *Japan* turns out to be correct. The wreck was discovered after a very long search on the part of the boats engaged for the purpose by the Captain of the schooner *Scotland* on the 10th, in the neighbourhood of Cupchi point. The discovery was made by dredging and was confirmed by a diver who was sent down for the purpose. The schooner is now moored over the wreck, which has also been properly buoyed.—*China Mail.*

We understand that a correspondence has taken place between the United States Consul-General, the Agency of the "Mitsu Bishi" Steamship Company, and the Japanese Consul, in regard to the transmission of mails between this port and Japan by the Company's vessels. The Postal Convention between the United States and Japan provides that the mails shall be made up at the U. S. Postal Agency for Japanese mail packets hence to Japan. The question is, whether the vessels of the Company can be considered mail packets. The question has been referred to the Japanese Government and the United States Minister at Yedo, and it is hoped that a satisfactory settlement will be reached. This matter is of interest, as the "Mitsu Bishi" steamers have orders at present to receive no mails in Shanghai. These orders seem at variance with the purposes of Company, as expressed in the letter of their Agent, which was published in our issue of the 15th February.—*N.-C. Daily News.*

Reuter's Telegram about the *Ulysses* is slightly more disconnected than that about "the missing boat of the *Hongkong*." The courtesy of the agents enabled us to explain, a week ago, what had happened to the *Ulysses*, so Reuter's effusion becomes intelligible; otherwise—so far as it is concerned—the *Ulysses* might be just wrecked in the Channel.—*N.-C. Daily News.*

THE Peking *Gazette* of the 15th and 16th February, contains an interesting batch of edicts in regard to Formosan affairs. It is rather amusing to find military rewards given in connexion with the late difficulty; and rather remarkable to find the famous Kexingá dragged again into notice, and canonised.—*N.-C. Daily News.*

THE EXPORT OF RICE.

IT may fairly be presumed that financial exigencies have had something to do with the revocation of the prohibition placed on the export of rice while the late dispute with China was pending. This prohibition, though in accordance with the original treaties made between Japan and the Western Powers, was suspended in May 1874, and the Treasury and the agricultural classes alike would have derived considerable benefit from the measure, had it been allowed free play in accordance with the laws of trade. But, unfortunately, the export was conducted on principles which were as financially unsound as they were commercially unjust, It sometimes happens that the pipe conveying water for purposes of irrigation, is cut, and the fluid, instead of being projected in a beneficent stream, is spilled and wasted. Under these circumstances it may allay a local thirst, and produce a partial refreshment; but it fails to answer its intended purpose, while the waste disheartens those whom a more successful and profitable application of their labour should encourage and benefit. It was thus that the export of 1873 was diverted and wasted. The Government lost, instead of making, money; the foreign and native merchants, as a body, derived no benefit from the trade; the cultivators received no new incentive from it to increase their production; and a measure which might have conduced to or increased the popularity of the Government and enriched the Treasury, took the form of a monopoly at once odious and unprofitable. We shall not affect to dread the repetition of a policy so unsatisfactory in every way. A government will face unpopularity for a measure which enriches its Treasury or answers some important political purpose. But it will hardly do that twice which both brings it into disrepute and poverty at the same time. So long, however, does the odium last which attaches to measures of this nature, that the announcement of the revocation of the prohibition on the export has produced some reflections that the late rise in the price of rice has not been without intended advantage to the friends of the officials. We have no reason to believe that these reflections are just. But they are not unnatural, and prove how long the sense of injustice rankles, and how difficult it is to exorcise the spirit of dissatisfaction raised by unsound measures, or by an unsound method of carrying out sound measures.

It is now of great importance that entire reliance should be placed on the permanence of the permission to export grain. No trade can thrive which is exposed to an uncertainty attaching to its very existence. It surely may be remembered, too, that a trade of this kind, when once thrown open, will take care of and regulate itself. Its inherent sensitiveness will determine the value of the commodity, and regulate its movements as no edict of a government can. The export was recently forbidden because the price threatened to rise or actually did rise. But this fact in itself would equally have prohibited the export. There is little danger of an article flowing from one place where it is worth five dollars to another where it will only fetch four. It will hardly be forgotten that during the late terrible famine in India, the Government, in its wise and far-sighted dread of interfering with the natural operations of trade, refused to stop the export of grain. The question was one brought almost to a crucial test on this occasion, and was argued on both sides with extreme ability, Sir GEORGE CAMPBELL contending for the prohibition, and the GOVERNOR-GENERAL against it. The Indian Council sided with Lord NORTHBROOK, and the opinion of the soundest economists in England bore the party out.

What every one must wish to see in this country is an extension of its greatest industry, the growing of rice. The quantity of uncultivated land in Japan is enormous—we do not speak merely of upland, the cultivation of which is attended with great labour and expense, but the extent of valley and plain. It is not very easy to say whether, with the present enormous, and, as it appears to us, excessive, land-tax levied in this country, the production of rice would increase rapidly under the permission to export it. The extended cultivation would at first demand an increased outlay of capital, and it may be doubted whether the agricultural classes are able to do more than make both ends meet at the end of the year after the land-tax has been paid and provision has been made for the necessaries of life. Still, until the land-tax is reduced, the only means which can operate on a large scale as an incentive to increase the production of rice, is the permission to export it, and if the permanence of this can be relied on, the measure cannot but have a beneficial effect.

SPIRIT OF THE JAPANESE PRESS.

THE SHINSHIU SECT.

(*Choya Shimbun.*)

So few events of any importance have occurred since the opening of the year that the discussions in the press until lately have been of little interest. But last month the priests of the Shinshiu Sect desired to free themselves from the Daikioin. This created great discussion in the press and has led to a newspaper war. The *Kiokai Shimbun** especially spoke of the Shinshiu sect with great contempt. Our learned men may think it beneath them to discuss such a subject as religion. But we gravely differ from them in this, thinking that religion is a thing of great importance, and that as we have now arrived at a period when the whole nation is looking forward to a reign of equity, justice and freedom, the *pros* and *cons* on this subject must be determined, and it is our duty to inform the Government officials and to instruct the people.

The *Nichi-nichi*, *Choya* and other newspapers and many prominent men have already discussed this subject, and, with the exception of a few jealous priests, all who have been readers of the newspapers now clearly understand and are persuaded that the Shinshiu sect must be permitted to go free.

Now, we are desirous of asking a few questions, and to give some advice to the *Kiokai Shimbun*, which urged that it was unreasonable that the Shinshiu sect should be freed from the Daikioin.

Why do they say that those who are desirous of thus liberating themselves are the Devil's troops, or wicked or Christian-like? We should imagine from such expressions that the Shinshiu sect was one of the Christian sects. They are perpetually urging that all the strength of the native sects must be united so as to prevent the entrance of Christianity, and then they say that the Shinshiu Sect is little less than Christian and that it is evil. But if this is the case, why are they so desirous for union with such a sect?

Or do they fear that if the Shinshiu Sect separates from them, the Daikioin would not stand? If so they had better join the Shinshiuists. It is out of all reason that they should be jealous and speak scornfully of this sect, and, by saying that they are Christians, oppose a bar to their liberation.

We are desirous of asking these critics another question. If they are so opposed to the entrance of Christianity, why do they not raise their voices against those who are converts to Christianity neither at Yokohama, Kobe nor other places. Here, in Tokio, at Surugadai, there is Père Nikolai who has many converts, and at Tsukidji there is Mr. Thompson, and in various parts of the city there are many who preach the Gospel openly, and their lectures are numerously attended by natives. We should

* A religious newspaper.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

like to know how it is that our opponents do not go and discuss these questions with those who are really converts to Christianity, instead of inventing adverse pretexts and saying that Shinshiuism is the same as Christianity and so forth.

On full consideration we think that their pretended opposition to foreigners is but a blind and a falsehood, and they are only envious of the Shinshiu sect. We cannot forbear laughing at them, for it is obvious that the way in which our own religions may be defended is by all the various sects taking care of themselves and making as many converts as they can. A union of all these sects would be a strange mixture indeed, and would be destructive of the best efforts of each.

These men (our opponents) are perpetually saying that they are against the Devil's hosts; and we therefore invite their attention to a military comparison. In an army there must be cavalry, infantry and artillery. One arm may be useful at a certain time or place and the other useless. But these men act as if one should say to the cavalry, "Dismount, throw away your lances, shoulder a musket, and march along with us." But of course the cavalry could not turn round and immediately do infantry drill, and it would be the same with the artillery, which only knows artillery drill. This is the way to lose a battle. This enforced union and dislike to separation somewhat resemble the above. If their real desire is to fight against the Christians, it would be far better for them all to divide.† Every one knows that Shinshiuism is not Christianity. But even were it so, and were it to diffuse Christian tenets, what harm would there be in this? There are some among the Shintô priests who speak of a Creator or Father, a Son and Holy Ghost, a doctrine which was wholly unknown to them until quite recently. So that our opinion on this point is that the Shintôists have become a little somewhat Christianized.

Our reason for saying that there would be no wrong or harm done by introducing Christianity is that we care little for the name any sect may bear provided its teaching is not injurious. We may introduce what is good in Christianity, and would not the preaching of that be within the sphere of our duty? Or would it be better not to change our faith and have all our believers running away from us, and the stiffnecked priests preaching in solitude, crying out that their religion was decaying, and sighing that it could not be helped? It seems unnecessary to say which is the wiser course.

All this has been written by one who has nothing to do with religion, and we hardly know what the Shinshiuists will say to it. But as we have failed to discover any good ground for opposing the liberation of the sect, we have said these words in order that the people may be awakened. There are thousands of priests in these six sects of Buddhism, but there is not one of them who was aware of our line of argument, and, moreover, when they do speak, they talk such nonsense as would only be uttered by the lowest of the people, and this being the case I have propounded my views through this newspaper.

Moral Reform.

Since the late revolution there has been much talk of *Isshin* (renewal). What does this word mean? It seems that the Tokugawa government is abolished, and that the new government of the Mikado is established throughout the country. This being the case, the government has been reformed, but the hearts of the people remain unchanged.

The form of the government may be compared to a water-vessel and the people to the water. Should the water be put into a round vessel its form will be round; and should it be put into a square vessel, its form will be square. The shape of the water differs with the shape of the vessel, but its condition of purity remains unchanged. The form of the vessel was improved by the civil war, but the people remain the same as they were previous to it. Their minds are slavish. They flatter those above them and are insolent to those below them. They are ignorant. They love *sake*. They detest reading. They are unacquainted with the laws of nature. They do not know their respective duties. They are shallow-hearted, and their minds are small. They dislike labour, and have not courage to persevere. They do everything for their mere convenience. They are indolent, false-hearted and incapable of organization. They have no free thought and are always content to be dependent. They are thoughtless and do not know the use or value of money. They are addicted to breaking their promises, and are unfaithful, wanting in natural affection, and incapable of uniting. They never attempt to make a new invention. There are few of our people who can escape from these reproaches.

The change of these evil characteristics cannot be made by a change in the form of government; the round form of the vessel may be changed into a hexagon or an octagon, but the water will not therefore be purified. It were to be wished not so much that the form of government were changed as that the minds of the people should daily advance in the direction of purity and refinement.

Now-a-days there is a great deal of talk about a House of Commons. This is an excellent thing, and should it be established the whole of our people will turn their minds towards the advancement of the country; they will begin to dislike leaving everything to their officials, and their slavish feelings will gradually disappear. Men of fame from all the provinces will come forwards, and the choosing of the officials from only a few provinces will cease. The institution of a House of Commons is therefore a thing which will greatly aid in refining the minds of our people.

But there is one matter in connection with this question which demands serious consideration, and this is, that if the House of Commons is established, the people will receive some portion of the executive power and the Government will assume a different form. But the character and mind of the people, which is the really important question, will remain in much the same condition. By what means, then, can we refine the minds of the people?

There are two means by which the mind of the people can be elevated; one is arts and manufactures, the other is religion. These two are like the two wheels of a cart or the wings of a bird. Each will aid the other, and thus the people will be led to happiness. The arts may be highly cultivated, as they were in Egypt and Greece, but they are only one of the requisites and only decorate the outside. They do not purify the moral character of man. It is here that religion steps in, and, if extensively diffused, it will supplement the deficiency, and elevate and refine the moral condition.

The above argument is of a common nature, and does not pretend to be anything very exalted. But as our learned men are now only occupying themselves with the European arts, and detest the European religion, I am desirous of asking them, in this simple form, the question whether they know any other way in which the character of our people may be refined and become like that of the Europeans and Americans without these forms of assistance?

Nakamura Masanao.*

NOTIFICATION

No. 43.

I hereby notify that an Exhibition will be held at Melbourne in the British dominion of Australia in October of the present year. Should any persons be desirous of sending goods there for exhibition they may do so by application to the Exhibition Office.

(Signed) SANJO SANEYOSHI.

March 20th, 1875.

† The meaning seems to be that, though united in their object, they should play their separate parts like cavalry, infantry and artillery.—[Ed. *J. W. M.*]

* Our worthy reformer lays rather a heavy indictment against the character of his countrymen. Would not a little encouragement be more effectual towards producing that reform which he so ardently desires to see?—[Ed. *J. W. M.*]

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Buddhism.

The native accounts ordinarily received as correct relate that Buddhist doctrines together with the appertaining idols, descriptive books &c were introduced from Hakusai (Corea) in the winter of the year 552, being the thirteenth year of the reign of Kin mei Tenno, thirtieth of his line since the reign of Jimmu. The idols, books &c were given by the Mikado to his chief Councillor of State, Soga Iname, who deposited them in a part of his palace thenceforth named Kogen Jie (the temple facing the plains). In the year 577 the sixth year of Bidatzu Tenno, the successor of Kin mei the paraphernalia of the religion were again brought to Japan and its doctrines found favour at Court. In the fourteenth year of this monarch's reign—A.D. 585, a terrible pestilence raged in the country and a Councillor of State, Morinobo Moriya, expressed to the monarch his apprehensions that the visitation was sent expressly by the gods to mark their anger that the old faith should have been set aside by or alloyed with the doctrines of a new creed. He was, however, unable to gain full credence, though successful in obtaining an order that the rites of the new religion should not be celebrated. The temples were accordingly burned and the idols cast into the rivers. Hori ye in Osaka is still pointed out as one of the scenes of this iconoclasm. The spot is named after one of the victims of a local disturbance, killed while supporting law and order. Mayado Oojie, who was cotemporary with Moriya, was an active disseminator of the new creed and is highly venerated by all the various sects. His *okuri-na*, or subsequent name, by which he is at present designated is Sho-toku-tai-shi (virtuous son). Idols representing him in his teens or as at the period of his decease seated and crowned may be met with in nearly all the Buddhist temples. He was not of the priesthood and is the only layman on record as having been apotheosised.

The origin and history of Buddhism was soon disseminated through the medium of the Chinese literature which the priests received. They, or their disciples, would appear to have been the first to make use of the Chinese characters, Chinese writing not having been generally known at the date of introduction of the new belief.

In A.D. 624 two priests named Kan-ro and Taku-seki arrived in Japan from Hakusai. The former was elevated to the rank of *So-jo* (chief-priest) and the latter constituted *So-dzu* (vicar-general. These were the first members of the priesthood to whom a grade was assigned by the Court.

In A.D. 700 Do-sho, an O-sho (chief-priest of a temple), died and was cremated, and this was the first time that burial after cremation was practised in Japan.*

In A.D. 889 Udo Tenno, the fifty-ninth of his dynasty became a Buddhist priest taking the name Kam-pei-ho-o so called from the name of the year, in which he took his vows. During this period nothing was definitely settled as to the various sects, or with regard to their conflicting views as to rites and observances.

Simultaneously with the dissemination of the principles of the new faith the schisms which invariably arise when success and freedom from persecution have dissolved the bonds which unite coreligionists in periods of oppression, began to show themselves. Do sho whose decease in the year 700 A. D. at the temple of Ko-fuku-ji of Nanto (South capital) in Yamato no kuni we have already noticed was *Kai-san* (opener of the hill), founder of the above-named temple and of the old Buddhist sect named *Ho-so* (knowledge of ten thousand subjects.) The tenets of this sect were divided under five headings: the names of things; the forms of things; discrimination; true intelligence; form of the soul. There are older sects, but this took precedence of the others. The San-ron shin, or sect of three arguments, is the oldest of these. It was founded in A. D. 621 by Yeka who resided in Igami-dera in Kawachi. Its tenets are divided into the following: the medium arguments, the hundred arguments and the twelve gates. As a sect it has become extinct, absorbed by some of the more recent developments. It embraced principles enjoining complete indifference to mundane affairs—in fact thorough personal nullification—and ignoring all the actions of its disciples.

In A. D. 735 Gem-ba-so-jo founded the sect known as *gu-sha* the tenets of which were taken from the prayer-books of that name. They are comprised in 30 volumes. The temples in which these tenets were first imparted were known as *To-dai-ji* in Yamato and *Mi-idera* in Oomi. The principles of the sect are divided under two headings viz: the control of the passions, as selfishness, covetousness, &c, and the governance of the thoughts. This sect, or such portion of its tenets as have not died out, has also been absorbed by some of the more recent.

In A.D. 749 Do sho and Do ji proceeded to China and on their return thence brought with them a work on Buddhism, styled *Jo-jitz-ron* (the true argument) in twenty-seven volumes, and upon these tenets the Jo-jitzu-shin was founded. Its principles taught the utter absence of substantiality in all things. Life itself was but a prolonged dream, the objects about us mere delusive shadows or mirage, the product alone of the imagination. This sect is no longer represented by priests or temples, such of its dogmas as survived having been incorporated with the tenets of other Sects.

In the year 749 Kochi Dai-so-dzu of Todaiji, Yamato caused a small temple to be built and instituted a new Sect. that of *Ke-gon shin*, or Conspicuous. The book in which the special principles which guided this Sect were found were compiled by Ten-shin-bo-satzu of India, one of the original disciples of Buddha. It taught that the soul resembled a fair page upon which the artist might trace a design and that special care was needed to prevent the impression of evil designs in order to which the thoughts should be continually directed towards Buddha.

This sect, also, is a thing of the past, while many of its tenets survive amalgamated with those of existing sects.

In A.D. 754 Kan-shi-go-sho of Sho dai ji no Zamato was possessed of three thousand *shari*—the small pearl-like substance that remained after the cremation of the Buddhist saints,—also certain books named *Gen gi* (original signification *mongu*, rare and excellent collection; *Shikan*, perpetuation of that which is admirable. These he presented to Shomuketei the 45th Mikado who accepted them with pleasure, and, together with four hundred and thirty four of the chief officers of his Court, became a pupil of the priest. In close vicinity to the Imperial residence a temple was erected, Kai-dan-in, where the *go kai*, or five commandments were first promulgated. These five prohibitions, or commandments of Buddha, are against *setzush*i (destruction of life); *shinto* (dishonesty); *ja in* (adultery); *mago* (untruth); *on jin* (wine-drinking). To these are appended six radicals: *roku kon* (eyes, nose, ear, tongue, body, mind); *roku jin* (six unclean things (valueless as dirt) color, sound, smell, taste, touch). Maxim: the former of these to be kept under control and not to be led into error by the latter. This is the *Ritzu Shin*. In Uyeno, Yedo, there is a temple known as Ritzu In still in existence.

In Toodo, Morokoshi (China) at Tendaisan, Chi-sha-daishi taught the tenets of the creed afterwards brought over to Japan and thence known as *Ten dai shin*, the accurate Japanese name being *Hok-ke shin*. In the year 788 Dengiodaishi caused a temple styled Yen-riaku-ji, from the name of the year to be erected at Hiyesan on the boundary of the provinces of Yamashiro and Oomi. Here he founded his sect and taught the doctrine of *Chin sha* of which the leading principle is that the teacher must thoroughly estimate the character and ability of his pupil, and in accordance thereto so apportion his instruction within the range of his comprehension that the pupil may not be hurried beyond it. These are the Jesuits of Buddhism. At Uyeno, Tokio the temple of Kan ye ji was erected by the Tokugawa for this sect in the year 1624 and thither devotees proceed to prayer on the 3rd 18th and 30th day of each month. Their common prayers are *Asa-dai-moku-ju-nem-butzu* and the more frequently employed *Namu-amida-butzu*.

In 1th year 813 Kobodaishi, the compiler of the present Japanese syllabary *I, Ro, Ha* founded a temple at *Kongo-ho-ji* at Koyasan in the province of Kishiu where he

* Eleven-and-a half centuries elapsed before it was prohibited by the present *Shosei* officials as contrary to the principles of Shintoism.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

he taught the tenets he had learned in his travels abroad. He was conversant with much of the Pali, Sanscrit and Chinese literature especially in Buddhist classics.* He also founded the temple Ton ji at Kugo in Yamashiro. The sect is styled *Shin gon*, or two words. Its principles taught that the subtle points of an argument should be seized and elaborated. It points out three paths to *jobutzu* (perfect bliss) which means absorption into Buddha, *Ringun no jobutzu* or retention of detailed ways, so as to become *hodoke*, loosed or free (from earthly ties). On all sides are the six associated things, earth, water, fire, wind, air and mind—*Dai nichi niyorai*—(the same as *Ten sko ku* of the Shintôists) and the multitude are alike possessed of these six things, the proper control and use of which lead to perfection.

Gaku-tai jobutzu, or second road to bliss, is by the observation of and deduction from the buddings of Spring, the bloom of Summer, the fall of the leaf in Autumn, the withering of the verdure in Winter; when looking over the earth in contemplating its vastness, when on the water its roundness and, when examining three-cornered objects, fire. By meditation and solitude to become eventually equal to *Dai Nichi Niyorai* in Paradise.

Zentai-jobutzu, the true way. The head is compared to the high mountain on which the saints assemble and the body to the sea which encircles it. Within the mind are seated the thousand worlds; multitudes of *renge*, lotus flowers, should spring therefrom. The body is likened to a mountain guarded by an iron fence, the mind resembles the broad seas and rivers; the head is like Benten tai Shaku, the chief of the saints in Paradise; the eyes are like Yemma-ho-o, god of Hades; the body like Shodai ten nin and Ten yo ten do, good action, and a multitude of *yembudai* (evil thoughts and deeds). In the sixteen large countries, the five hundred smaller countries and the countless others as numerous as millet seed (grains of rice being thereby inferred), there exist goods great and small, and in all things exist the five elements, earth, water, fire, wind, water. The correct observance of these things leads to annihilation and bliss through absorption into Buddha.

In 1596 Chishaku In of Higashiyama in Yamashiro became the place of resort of followers of a subsect of this belief known as *Shin-gi*, or new faith, founded at that place by Gen-yu-sho-ken-so-jo. The prayers used are: a long one commencing *On-a-bo-kiya* also *Namu-dai-shi-hen-jo-kon-go* from *namu* to pray and the title of the founder and *Namuamidabutzu*, I pray to Amida Budha.

These foregoing eight sects are the most ancient forms of Buddhist worship in this country. Their priests were forbidden to eat other than vegetable food. *Saké* also was prohibited and celibacy enforced. There were many forms of prayer common to all these sects, and that in most frequent use, *Namuamidabutzu*, was used by the disciples of each and all. It is related that the priests used mushrooms in order to simulate as closely as possible the flavour of fish, and that they showed much culinary skill in preparing dishes resembling the prohibited articles of diet. Of these Sects *Tendai* and *Shingon* possess numerous temples and multitudes of followers; *San-ron* and *Ritz* exist only in name and have no temples, and the other four are extinct, certain only of their peculiar tenets still surviving among those admitted by sects now flourishing.

In A.D. 1202 the *Ten shin* sect was founded by Ye Sai at Kennin ji Kioto. Its professors teach that perfect tranquillity both of body and mind is essential to salvation. It is also styled *Butzu-shin-shiu*, or sect whose mind assimilates with Buddha from whom it claims to have received its articles of faith direct. These are divided into two classes. The Inner teachings have certain proverbial expressions of their principles such as: maxims of doctrine are without rule; gain that without rule for its doctrine cannot stand. *Riyo-jin-bo-satzu* is quoted for these and other similar expressions, such as that emotions that leave no impression upon the mind or that cause neither anger nor satisfaction are naught, as also such things as possess neither beginning nor end. The exterior teachings are in their minor details somewhat antagonistic to the foregoing. They are subdivided into *jisso* true form and *muso* formless. These teachings are styled *Kiyo-se-betz-den* (impossible to teach or learn†)

Hoben, or parables, are of three kinds, used by the priests as a means of convincing their disciples. *Rihi*, negation, is the leading principle. *Kikan*, the mind, is but a machine: an ox of clay swims on the ocean; a horse of stone mounts to the skies. *Kosho*, that which has neither head nor tail. There are prayers, known as *rinzai* or *saika souton* in numerous volumes. This sect existed at Oobaku in China and seeds of the faith were in time borne to Japan.

In the year 1278 at Nanzenji in Kiyôto Mukanzengi taught a new doctrine known as *Rinzai* and in 1655, Uji Mampukuji Oobaku Ingenzengi established another offshoot professing the pure Oobaku doctrine.

In 1233 Horinji Dogenzengi founded the more ancient branch of the sect known as *Sonton*. The priests are restricted to vegetable diet and are not allowed the use of *saké*. Celibacy is imposed upon them. The prayers are known as *Kamiyo-shin gon* (the brilliant unreserved words of truth) commencing with the words *On-abo-kiya* and the more familiar *Namuamidabutzu*.

(To be Continued.)

* The *Derana gari* alphabet of 47 characters bears a strong resemblance to the *Bonji*—priests letters—of the present, and it may be fairly inferred that the I. R. Ha was formed on this plan for convenience at a period when Chinese was little known in this country except by the priesthood. *A gongio* is the name of the book of prayers from which the characters are said to have been taken arbitrarily by him for the foundation of the Iroha.

† It is impossible to convey to the mind of the European in these brief notes a clear conception of the abstract principles which are mixed up with play on words in the rendering of the Chinese character. An effort, however, has been made to point out the more salient distinctions between the sects.

A JAPANESE SONG.

The woods are green in summer time,
And bright with blossoms gay:
The murmur of the happy leaves
Sounds all the golden day.

But here a tree, by lightning struck,
Is black, and bent, and bare.
It lifts its arms like phantom fell,
And dims the sunny air.

A bird, that built its dainty nest
'Mong branches blossomed-o'er,
Still sings upon the withered bough
As blithely as before.

O fond and faithful as the bird
That haunts the leafless tree,
Though darkest clouds of sorrow came,
My sweet love stayed with me!

K.

Correspondence.

THE YESO FISHERIES.

To the Editor of the "Japan Weekly Mail."

H. M. S. *Sylvia*,
Kobe, 12th March, 1875.

Sir,—From reading an article on "The *Kaitakushi*" in your number of February 27th, I am induced to send you a few extracts from notes made when surveying the Eastern parts of Yesso. I spent from the 6th of May until the 8th of August 1871 between Akishi bay on the South side, to Abishica on the North.

Akishi bay is a good harbor. Hamanaka, 10 miles further East, is a safe anchorage. From here round the East Cape Noyshap to Nemero is 25 miles. At the latter place shelter for a couple of small vessels is obtained. All the other settlements round by the North until you reach Otarranai, a distance of 400 miles, consist of a few Japanese and about double their number of Ainos. All are situated where some river runs into the sea. No harbor whatever is found along this 400 miles. The number of settlements with the number of Japanese and Ainos at each I will not trouble you with. At not one was any cultivation attempted. At Akashi roots had been tried

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

but failed. Snow lay thick on the ground all May and had not disappeared in June. On the higher ground it still lay in August, the soil was hard and frozen until June, and frost again sets in in September. The temperature of the sea was 37 Faht. in midsummer. Agriculture if not quite worthless would prove very unproductive. The whole country is covered with forest, tangled undergrowth and coarse bamboo grass. However, there is no language which can express the abundance of fish. In May and June the sea literally teemed with herrings, and unless, indeed, I had been there (at Nemero particularly), and seen the shore covered, for miles, seaward along the shallow water, every where in fact, I could not have believed in the amazing abundance of this fish. They were literally pushed on shore, driven out of the water high and dry, by the mass of fish behind them, and this as I have seen for miles. Seagulls, eagles, crows, foxes and dogs during the day, bears and wolves during the night, flocked here to their heart's content. It certainly was a wonderful sight—whales and seals played about the ship in the most promiscuous and bold manner. Flat-fish abounded—salmon had not commenced to run. But now I must add what to me appeared a sad state of things. The waste of fish by the Japanese was terrible. The mode of catching the herring was simple enough—a net, stake-net fashion, was run off from the shore for 200 yards, terminating in a bag. When the settlers wanted fish all they did was to go off in a boat—lift the bag and allow the contents to fill the boat.

A railed spot on shore was the receptacle usually kept filled to about eight feet deep by forty or fifty in length and breadth; ten men or twenty, as a rule, worked away at this, many picking out only the hard roe, this was salted and can be seen in any provision shop throughout the kingdom. The other fish besides that from which the hard roe had been taken, was flung aside to rot. A little, but a mere nothing, was done in the way of boiling down for manure. This was all. Now at Nemero, and along within the Yesso Straits, thousands of people could find ample room and employment curing fish—catching they hardly require.

The settlers at Nemero all longed to return South. Why? Because they had come from Nagasaki and south of there, and longed for the warm summer months of their native land, which they said they never saw now. These people had received 200 dollars bounty, and were always found in rice and house-room.

But if the Japanese Government had but sent Hakodadi-born people to the rigorous climate of the E. and N.E. coasts, and induced others from the north of Nipon proper to move across the Tsugar straits to Hakodadi—instead of taking those from the extreme south of Japan and placing them at once in the cold and hard climate of the N.E. of Yesso, probably they need not have offered a bounty, and would certainly have got more settlers to remain.

I must add that the herring found in the Yesso waters is larger and coarser than our own, and lives in a temperature that the British fish would not thrive in.

The Arctic stream washes all the eastern shore of Yesso. A portion of the Kuro Siwo, the western and southern, cuts Yesso in two. By drawing a line from Cape Zerimo to the mouth of the Ishcari, and devoting all the N. and N. E. parts to fishing, and the other but smaller half, the S. W. corner in fact, to agriculture as well as fishing, I have no doubt it would answer and pay. I have said nothing about the wood; but there is good timber to be had. At Akashi bay herrings and a white species of fish, were boiled down more systematically and in a far larger quantity. The process is simple enough. After boiling the fish is pressed by a rude but effective lever and windlass, afterwards allowed to dry, packed in straw bags and sent south, where it is used for manure.

I am Sir,

Your obedient servant,

H. C. ST. JOHN.

Law & Police.

U. S. CONSULAR COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

March 22, 1875.

CHUISIKI, owner of the Japanese junk *Kanke Maru*, by his attorney, TATSNO TOMOITCHIRO; TAKENOUCHI KANJI O, the owner of the cargo, by his attorney, SEBISHIMA UHEI, against the PACIFIC MAIL STEAMSHIP CO.

This was a claim for 823 yen, the value of the junk, and 5,793 yen, and 95 sen, the value of the cargo.

The plaintiffs allege in their petition that the junk was sunk and the cargo lost through a colision with the P. M. S. S. *Oregonian*, caused by the negligence of the steamer. The collision took place on the night of the 15th February 1873.

Defendants, in their answer, plaeded non liability, and allege that the collision occurred through the negligent navigation of the junk.

Mr Wills, interpreter to the Saibansho, and the above-named Japanese attorneys conducted the case for the plaintiffs; Mr F V. Dickins appeared for defendants.

Messrs S. Mendelson and G. P. Spooner were drawn as assessors.

Chuski, cautioned to speak the truth: He was the owner of the *Kanke Maru*. On the night of the 15th February he saw the lights of a steamer approaching his junk. He lowered down the sail. He made every preparation by lowering down his sail, and called out in a loud voice. The steamer came along, running over his junk, which was broken. He, being an old man, gave himself up for lost; but he saw several of the people of the junk climbing up the steamer. He called out in a loud voice to be saved; the steamer, however, passed on. He still kept calling out, and presently a Japanese boat of about 60 piculs burthen passed, and took him on board. The captain of the boat landed at a place called Okimura. He reported the matter to the officials, and they, at his request, sent out boats to look after his wreck The search was carried on for four or five days, but nothing was found, and the search was given up. After the search had been given up, he arrived in his own province on the following 23rd March. After getting back to his own country he became very ill and remained so till March, 1874. Some of the people interested in the matter met at Yedo, and after some investigation threw some light on the matter. When he first saw the steamer she was about 16 or 17 *cho* off. The steamer struck his junk, and carried it on about half a *cho*. No help was rendered to the people on the junk, though loud cries were made for help. When the junk was struck she did not entirely sink on account of her construction. His junk drifted about 10 *cho*, and he was up to the waist in water before he was rescued by the Japanese boat. [Witness here showed a Japanese chart to Court, and explained the positions of the junk and steamer] His junk was going with the tide. The steamer was going against the tide, which was running very swiftly. He did not put the helm either one way or the other, but only pulled down his sail. Before he saw the steamer the tiller was a little to the right, so as to keep the junk's head nearer the land. When he saw the steamer he put the tiller amidships. He saw no lights on the steamer, nor did he hear any bells or sounds come from her. He was the owner of the junk, which will be about seven years old this May. She was about five years old when sunk. She could carry 100 kokus, or about 250 piculs. The junk had been in use since she was built. She was built to his order. He paid 550 rios for the junk fitted with all necessaries and ready for sea. At the time she was lost she would have brought 350 rios if sold. He lost 28 rios in paper money, three rios in silver boos, 25 large cotton sea coats, four *obi* (men's), and 11 beds or quilts. The 25 sea coats would have sold for about 79 yen. The four *obi* were worth 6 rios. The articles he had just named belonged to the crew (four in number); he was responsible. The cargo consisted of 6 boxes *tofu*, and 72 bundles of iron. The *tofu* was worth 12 *rios*; the iron was worth 351 *yen*. The iron was Japanese, and came from the province of Geishu. There are 20 pieces, about a yard long in a bundle. There were 104 bundles of *itonna* on board (blue dye), 30 tubs of white sugar, 500 pairs of Japanese socks, 80 pairs of assorted shoes, 8 cotton coats, 3 overcoats, and 2 *obi*. The total value of the cargo was the same as stated in his petition. The cargo belonged to Takenowa Kanjiro.

Cross-examined by Mr Dickins:—He had no papers; he lost everything except the coat he had on at the time the junk was lost. He knew what cargo was on board because the agent of the junk kept a list of goods shipped (documents produced). There were some small islands ahead of him when he first saw the steamer, but

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

none astern. There was some land lying to the right of him. They were called "island hills." As soon as he saw the steamer he put the helm amidships. There were four men altogether on board the junk. A man named Bunjiro was steering. He and the other two men were forward. He and the other two men kept calling out from the time they saw the steamer till the collision took place. The collision took place on the morning of the 15th February, 1873. He guessed the time by the moon. He was steering W. a little southerly. He was struck soon after sighting the *Oregonian*. She was going in the opposite direction to what he was. It was a fine morning; the moon was nearly round. He saw the hull of the *Oregonian* and all her lights. His junk was showing one small lamp. It was hoisted to a little pole in the bow. It was a white glass foreign made lamp. It was burning brightly. The steamer's bow came against his bow. He was nearly 2 hours on board the junk before he was taken off by a boat. Bunjiro stayed by the junk; one man saved himself by climbing on board the steamer and the other man floated away on an oar, and was picked up by the same boat as he was. He was about 7 *cho* from the land on the right hand side. He was about 8 *cho* from the islands on the left hand side. He did not see the junk sink, but she drifted out to sea in a sinking condition. He could not say if she sank rapidly. The junk became quite unmanageable so he abandoned her. He was holding on and was up to his chest in the water. The junk was struck on the bow and sank head foremost. There were about 70 fathoms of water at this place. There were no villages near the scene of the shipwreck. There were some to the rear and some ahead. The nearest was about 13 *cho*. He did not notice if the steamer stopped her engines when the collision took place; the junk was dragged about ½ a *cho*.

It was partly on account of sickness and partly because he did not know who the defendants were that he had not brought this action before. He first learned that it was the *Oregonian* on the 4th March, 1874. The man who got on board the *Oregonian* was quite a youth—about 16 years of age—and though he was sometime on board the *Oregonian* he (the boy) could tell him nothing about that vessel. He lowered the sail when he was about 16 *cho* off the steamer.

To Court:—The current was the same when the collision took place as when the steamer was first sighted.

Yoshi'awa Mesabi, cautioned—He was a fancy-goods dealer and lived in Yedo. He was a passenger by the *Oregonian* in February, 1873 from Naga-saki to Yokohama. He saw the collision with the junk. He had gone on deck and hearing some uproar looked forward and saw a Japanese vessel with a light. Shortly afterwards the vessels collided and he then felt the shock. He saw the junk entangled with the steamer. One Japanese man climbed on board the steamer from the junk. Just after this he heard cries for help from the junk. There was confusion on the deck; the man who had climbed up was on his knees and asking why his ship had been so run into by the steamer. The wreck of the junk could be seen and two foreigners were walking at the stern of the steamer and looking at it with a telescope, they were talking, but he did not understand. He made enquiries from the boy who had climbed up on the steamer, but he seemed quite stupid, and it not being his business he did not trouble himself about it and afterwards he went to Yedo. The affair passed out of his memory, but in March 1874, he was in a street where freights are collected for Japanese vessels. He was in a hotel and some men were talking about their losses and the collision case, and he then told them that he had been a passenger on that trip of the steamer. In May 1874 he was called upon by the lawyer of the owner of the junk.

Cross-examined by Mr Dickins:—When he first got on deck he judged the junk to be 5 or 6 *cho* off. The collision took place almost at once. The cries came from the junk. He heard the cries before the man climbed on board the steamer.

Case adjourned till Wednesday, at 11 o'clock.

Wednesday, the 24th March, 1875.

[It was agreed to take the evidence of Capt. Dearborn, a witness for the defence, to-day, out of its usual order and in view of his approaching departure.]

Captain H. C. Dearborn said.—He was a master mariner in the P.M.S.S.Co.'s employ and at present Commander of the *Colorado*. In the early part of 1873 was in command of *Oregonian*. (Ship's log produced.) On the morning of the 16th February, 1873, he was on the northern passage. It was customary to enter the passage early. His ship came into collision with a Japanese boat. He should say it was about 4 or 5 o'clock in the morning. At the time of the collision, or rather just before, the ship was going between 10 and 11 knots. At the time the collision took place the vessel was stopped. The current was running about 4 or 5 knots. The ship was going against it. He was on deck shortly before the collision. He was on the deck with a Japanese pilot and one of the officers. He was forward with a quartermaster and the pilot. It is the custom in going through narrow passages. The ship's lights were all up and burning brightly. The Japanese boats were coming in the opposite direction with a fair wind. The sea was quite smooth. We were passing junks continually. It is usual to find numbers of junks in the passages. Ships have to dodge all about to get out of the way of junks. It was about five minutes after seeing this particular junk that the collision took place; the junk was coming down with a fair wind in the opposite direction. He ported his helm to let the junk see which side he was going to take. He blew his whistle on entering the narrow passage and blew it at intervals. When he got the junk on his port bow he steadied his helm; the junk then starboarded so as to put her course across his bow. He then put the helm a-starboard and stopped the ship, so as to bring the junk on his starboard bow. When he starboarded his helm the junk might have been the ½ of a mile off or less. He starboarded to run inside of the junk, when the junk ported her helm. The junk then struck the steamer abreast of the pilot house and swung round and drifted under the wheel which was stopped (chart produced and examined). He saw no light on board the junk at any time. He did not see any men on the deck of the junk. He heard cries from her as she went under the wheel of the steamer. He did not remember any thing that could have been done by the *Oregonian* to avert the collision which was not done. He attributed the cause of the collision on account of their changing the course of the junk. If the junk had refrained from starboarding her helm in the first instance the collision could not have taken place. He starboarded the helm enough to clear the junk. He did not dare to do more as his ship might have been swept ashore by the current. The land was not more than the eighth of a mile on the port side. The night was fairly clear. After the collision took place he kept forward to see that her head was kept to to the tide. He ordered the officer to get ready a boat. The men were put in it in case the junk sank. He did did not actually lower it. He sent the pilot and interpreter aft to hail the junk and see if they wanted assistance. The first officer and the interpreter said that on being hailed the junk people had replied that they did not want assistance as there were junks and sampans around. He saw several junks. He had often been through the passage and his experience was that there are generally plenty of boats and junks about. He saw the junk after the collision. He only saw that the junk's nose had been broken off. He did not notice any other damage to the junk. The land being close the other boats could easily have towed the junk ashore. He then went on. After the collision he did not see any signals of distress or hear any cries. The junk was a very small one and he thought that it had no deck. There are numbers of fishing boats constantly in this passage. The junk came into collision with the starboard side of the steamer. He could not tell if the starboard bow of the junk struck the steamer. As long as the junk was in sight there appeared to be no signs of her sinking. One of the crew of the junk got on board the steamer. After the steamer had gone ahead again he found out that a man had climbed up into the steamer through the wheel. Mr. Hart first told him of this claim against the *Oregonian* last month after the collision and previous to hearing of the claim he was frequently in Yokohama. Previous to this claim he knew nothing about the junk, its owner or its cargo. If the junk had carried a light he would have seen her earlier. At the time he was not making more than five knots as the tide was running so strong: he gave the order to stop the ship when he saw the collision was imminent.

Cross-examined by Mr Wills:—He was in the employ of P.M.S.Co. He was a mariner. He ported his helm first. He heard no cries from the junk previous to her getting under the *Oregonian's* wheel. He lowered no boat after striking the junk. He would not lower boats after a collision if the other vessel did not want assistance. He knew it was the rule for steamers to give way to sailing vessels. In this case he endeavoured to do so. He used a glass to look at the boats as he could see better; it was not daylight and the tide was setting towards the land. He did not lower his boats because the junk did not want any assistance from them. There were places on this coast where it would endanger his ship if he put the helm hard up either way. On all occasions in this passage he had met with Japanese craft. The steamer would run

only about three times her length after the engine was stopped if the tide was running about five knots. He did not see the man come up through the wheel. He saw no lights nor did he hear any cries. He might have had some conversation with the man who got on board. He had never run into a junk and not put it down in his log-book. In cases where he had had collisions with boats, &c., he always found out if they wanted any assistance. He did not know the name of the interpreter he had with him. Events were always entered in the ship's log as well as his own. No person came to him at the time of the collision and told him some Japanese were drowning.

Re-examined by Mr. Dickins.—The northern passage is the one usually taken by steamers. There are places where it is dangerous to hard a port or *vice versa*. They are narrow places with strong currents. He could have lowered a boat if necessary. He was quite sure that none of the passengers came and told him the junk or her people were in danger.

To Court.—The sail of the junk might have been lowered at the instant of the collision. The last time he saw the junk she was under sail. There was no great shock to the steamer by the collision. There was no considerable noise or confusion. He looked over the steamer's side to see if any damage was done. The shadow of the land sometimes prevents a vessel being seen as easily as she might be if it was not there.

The case was here adjourned and it was intimated that a day would be fixed for its further hearing.

THE CONDITIONS OF PROGRESS IN JAPAN.

We particularly commend the following article to the notice of those Japanese, in or out of office, who are in earnest about the development of this country and its future power and prosperity. And we may be pardoned for referring to the article in our issue of last week bearing on the same subject.

THE present condition of Japan, as illustrated in the commercial reports of Her Majesty's Consuls at the treaty ports of that country, is not so satisfactory as might be wished, though perhaps quite as good as, under the circumstances, there was any real reason to expect. The readiness with which, once the contact with Western civilisation became an unalterable fact, the Japanese availed themselves of the advantages, and assimilated to their own the forms, of that civilisation, has inspired some people with unreasonable hopes as to their progress. But, just as French experience proves that the adoption of constitutional forms cannot give constitutional freedom all at once to a people who have lived for centuries under very opposite conditions, so the present circumstances of Japan show that merely by accepting the material products of European science and invention, this remarkable nation cannot step in a day into the European grooves of advancement, or be animated by the spirit of European enlightenment. Railways, and telegraphs can do much, but their influence has its limits, and, moreover, it must have time to work. Japan is, in truth, just now in a state of transition. The old order of things has been rudely modified and displaced, while the people are not yet prepared to accept the new.
